

Linear Asset (Agile) Upgrade Improvements

Improvements:

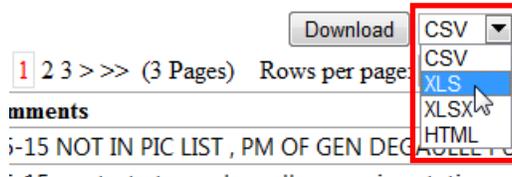

- A Back button has been added to the Wizard screens.

- PARISH is now a field available in the Work Order header on the Progress>Daycards screen. Once an inventory element is attached, a work parish must be chosen. Also, if parish is designated first, this will reduce the number of choices in the inventory element table. **NOTE!!!** This will restrict the user to **one parish per work order** and, therefore, assets in only one parish on that work order!!

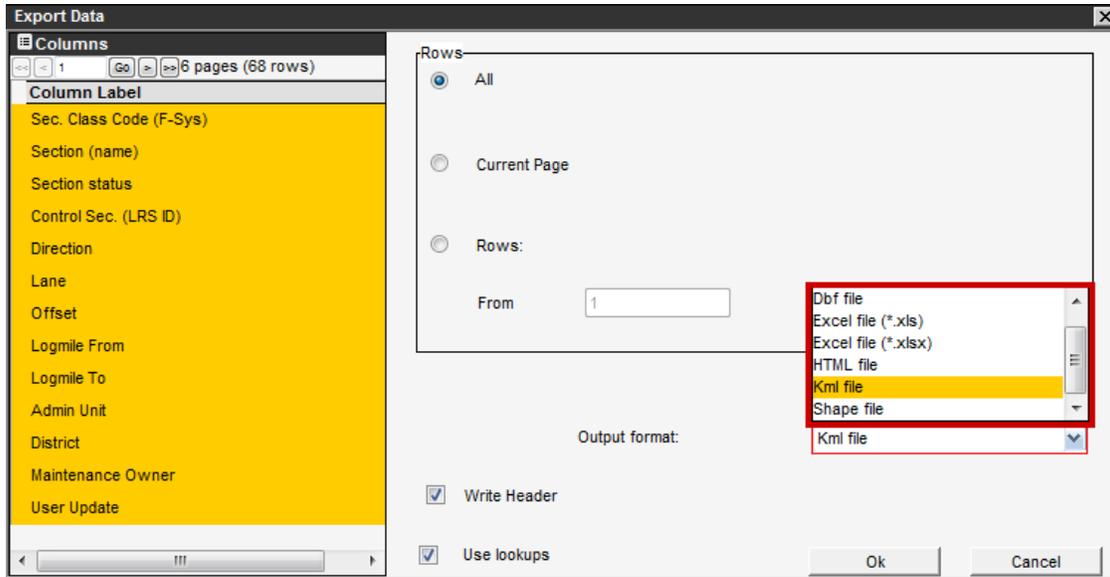

The screenshot shows the header of a table titled 'Activated Work Orders'. The table has columns for Date, End Hour, Calendar, Responsible Crew, Budget Category, WO Priority, Percent Complete (%), Parish, Source, and Comments. The 'Parish' column header is highlighted with a red box.

- Where applicable, reports can now be downloaded in .CSV, .XLS and .XLSX formats.

Linear Asset (Agile) Upgrade Improvements

- GIS data can be exported in shape files and in Google Earth (.kml) format.

- In the gutter toolbar, there is now a CREATE NEW SESSION button that will open a second session for your use, to eliminate the need to exit one screen in order to move to another.

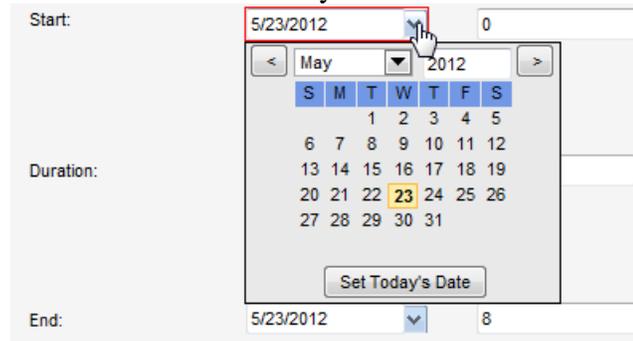

- Screen Customization and Sorting is now stored, by UserId, so that the settings do not have to be redefined at each login.
- Also, there is a Restore Default Settings button in the gutter toolbar that will remove customizations and set the screen back to its default setting.

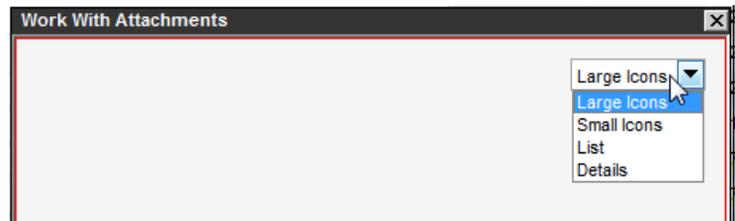

Linear Asset (Agile) Upgrade Improvements

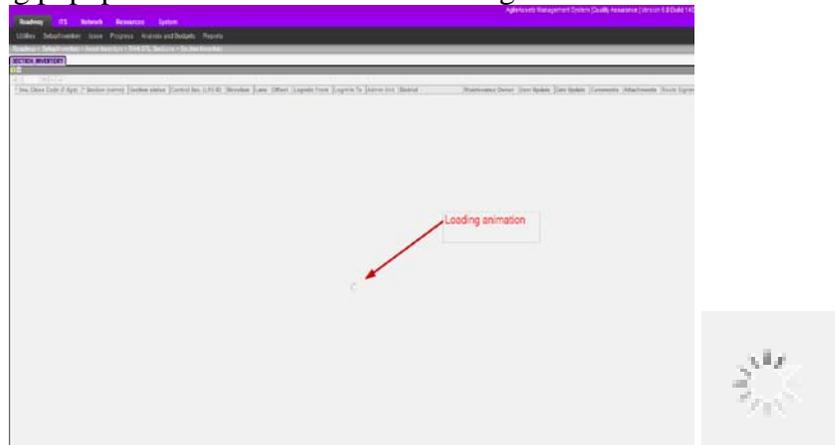

- System calendar fields now have a Set Today's Date button at the bottom of the screen.

- Attachment window now has 4 ways to see the “list of attachments”
 1. Large icons (old way)
 2. Small icons
 3. List
 4. Details

- The “Report Window” that opens and presents report output will now remain open if you choose to navigate to another screen in the system. The user will have to manually close the report screen.
- All dropdowns are now set to support type ahead (this allows the user to begin typing and reduces the list of choices in a dropdown) with only a few exceptions.
- The recurring popup window between screen changes has been eliminated

Linear Asset (Agile) Upgrade Improvements

- The SHOW ON GOOGLE MAPS function is now available for mapping.
