April 1, 2009

ISIS Memorandum 09-022

To: ISIS Technical Coordinators

Subject: Version 7.10 of SAPGUI

[SAP GUI Version 7.10](#) is now available for download and installation. This version of the GUI software is SAP certified to be compatible with a VISTA operating system, and is recommended, although not required, if your agency runs Microsoft Office 2007. Since this new release of SAP GUI also includes security patches and enhancements, we strongly suggest that agencies consider migrating to this version when possible and immediately begin installing this on new or replacement machines that require this software.

The link above takes you to a **GUI Support page** that includes installation instructions and a link to the software. Questions if any can be submitted to the ISIS HR Help Desk via [web ticket](#).
