ENVIRONMENTAL QUALITY

Part V. Hazardous Waste and Hazardous Materials

Subpart 1. Department of Environmental Quality—Hazardous Waste

Part V. Hazardous Waste and Hazardous Materials.....	1
Subpart 1. Department of Environmental Quality—Hazardous Waste.....	1
Chapter 1. General Provisions and Definitions.....	1
§101. Authority.....	1
§103. Purpose.....	1
§105. Program Scope.....	1
§106. Hazardous Waste Determination for Contaminated Media.....	26
§107. Enforcement.....	28
§109. Definitions.....	29
§110. Incorporation by Reference.....	50
§111. Use of Number and Gender in These Regulations.....	52
§199. Appendices—Appendices A and B.....	52
Chapter 3. General Conditions for Treatment, Storage, and Disposal Facility Permits.....	55
§301. Authority.....	55
§303. Overview of the Permit Program.....	56
§305. Scope of the Permit.....	58
§307. Effect of a Permit.....	61
§309. Conditions Applicable to All Permits.....	61
§311. Establishing Permit Conditions.....	63
§313. Requirements for Recording and Reporting of Monitoring Results.....	64
§315. Duration of Permit.....	64
§317. Availability and Retention of Records.....	65
§319. Confidentiality.....	65
§321. Modification of Permits.....	65
§322. Classification of Permit Modifications.....	70
§323. Suspension, Modification or Revocation and Reissuance, and Termination of Permits.....	75
§325. Compliance Schedule for Facilities Existing on the Effective Date of These Regulations.....	77
§327. Fees.....	77
§329. Research, Development, and Demonstration Permits.....	78
Chapter 4. Requirements for Commercial Treatment, Storage, and Disposal Facility Permits.....	78
§401. Applicability.....	78
§403. Definitions.....	78
§405. Requirements for Commercial TSD Facilities.....	79
§407. Guidelines for the Infrastructure Assessment Report Prepared by Local Government.....	80
§409. Departmental Action on Commercial Hazardous Waste TSD Permit Applications.....	81
Chapter 5. Permit Application Contents.....	81
Subchapter A. General Requirements for Permit Applications.....	81
§501. Permit Application.....	81
§503. Completeness.....	82
§505. Recordkeeping.....	82

Table of Contents

Subchapter B. Signatories to Permit Applications and Reports, Changes of Authorizations, and Certifications	82
§507. Applications.....	82
§509. Reports.....	82
§511. Changes in Authorization	83
§513. Certification	83
Subchapter C. Permit Applications: Parts I and II	83
§515. Part I Information Requirements	83
Subchapter D. Part II General Permit Information Requirements	84
§516. Information Requirements for Solid Waste Management Units	84
§517. Part II Information Requirements (the Formal Permit Application)	85
Subchapter E. Specific Information Requirements.....	89
§519. Contents of Part II: General Requirements	89
§520. Specific Part II Information Requirements for Groundwater Protection	89
§521. Specific Part II Information Requirements for Containers.....	91
§523. Specific Part II Information Requirements for Tanks	91
§525. Specific Part II Information Requirements for Surface Impoundments.....	92
§526. Specific Part II Information Requirements for Air Emission Controls for Tanks, Surface Impoundments, and Containers	93
§527. Specific Part II Information Requirements for Waste Piles	93
§528. Part II Information Requirements for Post-Closure Permits	94
§529. Specific Part II Information Requirements for Incinerators.....	94
§530. Specific Part II Information Requirements for Process Vents	96
§531. Specific Part II Information Requirements for Land Treatment Facilities.....	97
§532. Special Part II Information Requirements for Drip Pads	98
§533. Specific Part II Information Requirements for Landfills	99
§534. Specific Part II Information Requirements for Miscellaneous Units	99
§535. Specific Part II Information Requirements for Boilers and Industrial Furnaces Burning Hazardous Waste for Energy or Material Recovery and Not for Destruction	100
§536. Specific Part II Information Requirements for Equipment	102
Subchapter F. Special Forms of Permits.....	103
§537. Permits for Boiler and Industrial Furnaces Burning Hazardous Waste for Recycling Purposes Only (Boilers and industrial furnaces burning hazardous waste for destruction are subject to permit requirements for incinerators.).....	103
§540. Remedial Action Plans (RAPs)	107
Subchapter G. Remedial Action Plans (RAPs)—General Information	107
§545. Why is this Subchapter written in a special format?	107
§550. What is a RAP?	107
§555. When do I need a RAP?	107
§560. Does my RAP grant me any rights or relieve me of any obligations?	107
§565. How do I apply for a RAP?	108
§570. Who must obtain a RAP?	108
§575. Who must sign the application and any required reports for a RAP?	108
§580. What must I include in my application for a RAP?.....	108
§585. What if I want to keep this information confidential?.....	108
§590. To whom must I submit my RAP application?	108
§595. If I submit my RAP application as part of another document, what must I do?	109
§600. What is the process for approving or denying my application for a RAP?	109
§605. What must the administrative authority include in a draft RAP?.....	109

Table of Contents

§610.	What else must the administrative authority prepare in addition to the draft RAP or Notice of Intent to Deny?	109
§615.	What are the procedures for public comment on the draft RAP or Notice of Intent to Deny?.....	110
§620.	How will the administrative authority make a final decision on my RAP application?	110
§625.	May the decision to approve or deny my RAP application be administratively appealed? ...	111
§630.	When does my RAP become effective?	111
§635.	When may I begin physical construction of new units permitted under the RAP?.....	111
§640.	After my RAP is issued, how may it be modified, revoked and reissued, or terminated?.....	111
§645.	For what reasons may the administrative authority choose to modify my final RAP?	111
§650.	For what reasons may the administrative authority choose to revoke and reissue my final RAP?.....	112
§655.	For what reasons may the administrative authority choose to terminate my final RAP, or deny my renewal application?.....	112
§660.	May the decision to approve or deny a modification, revocation and reissuance, or termination of my RAP be administratively appealed?	112
§665.	When will my RAP expire?.....	112
§670.	How may I renew my RAP if it is expiring?	113
§675.	What happens if I have applied correctly for a RAP renewal but have not received approval by the time my old RAP expires?.....	113
§680.	What records must I maintain concerning my RAP?	113
§685.	How are time periods in the requirements in this Subchapter and my RAP computed?.....	113
§690.	How may I transfer my RAP to a new owner or operator?	113
§695.	What must the state or EPA region report about noncompliance with RAPs?	113
§699.	May I perform remediation waste management activities under a RAP at a location removed from the area where the remediation wastes originated?	114
Chapter 7.	Administrative Procedures for Treatment, Storage, and Disposal Facility Permits	114
Subchapter A.	Permits	114
§701.	Emergency Permits.....	114
§703.	Permit Evaluation	114
§705.	Issuance and Effective Date of Permit	116
§706.	Permit Denial.....	116
Subchapter B.	Hearings.....	116
§707.	Public Comments and Requests for Public Hearings	116
§708.	Preapplication Public Meeting and Notice, Public Notice Requirements at the Application Stage, and Information Repository	117
§709.	Evidentiary Hearings on Operating Permit Applications for Commercial Hazardous Waste Treatment, Storage, Disposal, or Recycling Facilities	118
§711.	Public Hearings	119
Subchapter C.	Public Notice of Permit Actions and Public Comment Period.....	120
§713.	Scope	120
§715.	Timing	120
§717.	Methods	120
§719.	Contents	121
§721.	Additional Information.....	121
Chapter 10.	Generators of Hazardous Waste	121
Subchapter A.	General	121
§1001.	Definitions Used in Chapter	121
§1003.	Purpose, Scope and Applicability.....	121
§1005.	Hazardous Waste Determination and Recordkeeping.....	123

Table of Contents

§1007.	Generator Category Determination	124
§1009.	Conditions for Exemption for Very Small Quantity Generators.....	125
§1011.	Satellite Accumulation Area Regulations for Small Quantity Generators and Large Quantity Generators.....	126
§1013.	Conditions for Exemption for Small Quantity Generators.....	127
§1015.	Conditions for Exemption for Large Quantity Generators.....	132
§1017.	EPA Identification Numbers and Notification of Hazardous Waste Activities for Generators.....	142
Subchapter B.	Recordkeeping and Reporting for Small Quantity Generators and Large Quantity Generators.....	142
§1019.	Recordkeeping	142
§1021.	Annual Report for Large Quantity Generators	143
§1023.	Exception Reporting.....	143
§1025.	Additional Reporting.....	144
§1027.	Recordkeeping and Reporting for Small Quantity Generators.....	144
Subchapter C.	Alternative Standards for Episodic Generation.....	144
§1029.	Applicability	144
§1031.	Definitions for this Subchapter.....	144
§1033.	Conditions for Generators Managing Hazardous Waste from an Episodic Event	144
§1035.	Petition to Manage One Additional Episodic Event per Calendar Year	146
Subchapter D.	Preparedness, Prevention and Emergency Procedures for Large Quantity Generators	147
§1037.	Applicability	147
§1039.	Maintenance and Operation of Facility	147
§1041.	Required Equipment.....	147
§1043.	Testing and Maintenance of Equipment.....	147
§1045.	Access to Communication or Alarm Systems	147
§1047.	Required Aisle Space	147
§1049.	Arrangements with Local Authorities	148
§1051.	Purpose and Implementation of Contingency Plan	148
§1053.	Content of Contingency Plan.....	148
§1055.	Copies of Contingency Plan	149
§1057.	Amendment of Contingency Plan	149
§1059.	Emergency Coordinator.....	149
§1061.	Emergency Procedures	150
Subchapter E.	Pre-transportation Requirements for Small Quantity Generators and Large Quantity Generators.....	151
§1063.	Packaging, Labeling, Marking, and Placarding.....	151
§1065.	Liquids in Landfills Prohibition	152
§1067.	Spills.....	152
Chapter 11.	Manifest, Import and Export Requirements	152
Subchapter A.	General	152
§1101.	Applicability	152
§1107.	Manifest Requirements.....	152
§1108.	Manifest Tracking Numbers, Manifest Printing, and Obtaining Manifests	155
§1113.	Exports of Hazardous Waste	155
§1123.	Imports of Foreign Hazardous Waste.....	158
§1125.	Unmanifested Foreign Hazardous Waste	159
Subchapter B.	Transboundary Shipments of Hazardous Waste.....	159
§1127.	Transboundary Shipments of Hazardous Waste for Recovery within the OECD.....	159

Table of Contents

Chapter 13. Transporters	167
§1301. Applicability	167
§1303. EPA Identification Number	167
§1305. Transfer Facility Requirements	167
§1307. The Manifest System	168
§1309. Compliance with the Manifest	170
§1311. Recordkeeping	171
§1313. Financial Responsibility	171
§1315. Spills	171
§1317. Discharge Cleanup	172
§1319. Use of Containers	172
§1321. Hazardous Waste That Is Also a Hazardous Material	172
§1323. Vehicle Markings and Placards	172
Chapter 15. Treatment, Storage, and Disposal Facilities	173
§1501. Applicability	173
§1503. Site Requirements	175
§1504. Construction Quality Assurance Program	176
§1505. Discharges from the Site	177
§1507. Security	177
§1509. General Inspection Requirements	178
§1511. Preparedness and Prevention	179
§1513. Contingency Plan and Emergency Procedures	180
§1515. Personnel Training	182
§1516. Manifest System for Treatment, Storage, and Disposal (TSD) Facilities	183
§1517. General Requirements for Ignitable, Reactive, or Incompatible Wastes	187
§1519. General Waste Analysis	187
§1521. Chemical, Physical, and Biological Treatment Facilities (Wastes Only)	188
§1523. Surveillance and Monitoring	189
§1525. Emergency Response	189
§1527. Receiving and Monitoring Incoming Waste	189
§1529. Operating Record and Reporting Requirements	190
§1531. Required Notices	193
§1533. Relationship to Interim Status Standards	193
§1535. Imminent Hazard Action	193
Chapter 17. Air Emission Standards	193
§1701. Applicability	193
§1703. Definitions	194
Subchapter A. Process Vents	197
§1705. Applicability	197
§1707. Standards: Process Vents	197
§1709. Standards: Closed-Vent Systems and Control Devices	198
§1711. Test Methods and Procedures	202
§1713. Recordkeeping Requirements	204
§1715. Reporting Requirements	207
Subchapter B. Equipment Leaks	207
§1717. Applicability	207
§1719. Standards: Pumps in Light Liquid Service	208
§1721. Standards: Compressors	209
§1723. Standards: Pressure Relief Devices in Gas/Vapor Service	209
§1725. Standards: Sampling Connection Systems	210

Table of Contents

§1727.	Standards: Open-Ended Valves or Lines.....	210
§1729.	Standards: Valves in Gas/Vapor Service or in Light Liquid Service	210
§1731.	Standards: Pumps and Valves in Heavy Liquid Service, Pressure Relief Devices in Light Liquid or Heavy Liquid Service, and Flanges and Other Connectors	211
§1733.	Standards: Delay of Repair.....	211
§1735.	Standards: Closed-Vent Systems and Control Devices.....	212
§1737.	Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Percentage of Valves Allowed to Leak	212
§1739.	Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Skip Period Leak Detection and Repair	212
§1741.	Test Methods and Procedures.....	213
§1743.	Recordkeeping Requirements.....	214
§1745.	Reporting Requirements.....	216
Subchapter C.	Air Emission Standards for Tanks, Surface Impoundments, and Containers	216
§1747.	Applicability.....	216
§1749.	Definitions	217
§1751.	Standards: General.....	217
§1753.	Waste Determination Procedures	220
§1755.	Standards: Tanks	220
§1757.	Standards: Surface Impoundments.....	227
§1759.	Standards: Containers.....	230
§1761.	Standards: Closed-Vent Systems and Control Devices.....	234
§1763.	Inspection and Monitoring Requirements	236
§1765.	Recordkeeping Requirements.....	236
§1767.	Reporting Requirements.....	239
§1799.	Appendix—Table 1, Compounds with Henry’s Law Constant Less than 0.1 Y/X [At 25°C]	239
Chapter 18.	Containment Buildings.....	241
§1801.	Applicability.....	241
§1802.	Design and Operating Standards	242
§1803.	Closure and Post-Closure Care.....	244
Chapter 19.	Tanks	244
§1901.	Applicability.....	244
§1903.	Assessment of Existing Tank System’s Integrity.....	244
§1905.	Design and Installation of New Tank Systems or Components.....	245
§1907.	Containment and Detection of Releases.....	246
§1909.	General Operating Requirements	251
§1911.	Inspections.....	252
§1913.	Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems	253
§1915.	Closure and Post-Closure Care.....	254
§1917.	Special Requirements for Ignitable or Reactive Wastes	255
§1919.	Special Requirements for Incompatible Wastes.....	255
§1921.	Air Emission Standards	255
Chapter 20.	Integration with Maximum Achievable Control Technology (MACT) Standards	255
§2001.	Options for Incinerators, Cement and Lightweight Aggregate Kilns, Solid Fuel and Liquid Fuel Boilers, and Hydrochloric Acid Production Furnaces to Minimize Emissions from Startup, Shutdown, and Malfunction Events	255
Chapter 21.	Containers.....	257
§2101.	Applicability.....	257
§2103.	Condition of Containers	257

Table of Contents

§2105.	Compatibility of Waste with Containers	257
§2107.	Management of Containers.....	257
§2109.	Inspections.....	258
§2111.	Containment	258
§2113.	Special Requirements for Ignitable or Reactive Wastes	258
§2115.	Special Requirements for Incompatible Wastes.....	258
§2117.	Closure.....	259
§2119.	Air Emission Standards	259
Chapter 22.	Prohibitions on Land Disposal	259
Subchapter A.	Land Disposal Restrictions.....	259
§2201.	Purpose, Scope, and Applicability.....	259
§2203.	Definitions Applicable to This Chapter.....	260
§2205.	Storage of Prohibited Wastes	262
§2207.	Dilution Prohibited as a Substitute for Treatment.....	263
§2208.	Waste-Specific Prohibitions—Dyes and/or Pigments Production Wastes.....	263
§2209.	Waste-Specific Prohibitions—Wood Preserving Wastes.....	264
§2211.	Waste-Specific Prohibitions—Dioxin-Containing Wastes	264
§2213.	Waste-Specific Prohibitions—Chlorinated Aliphatic Wastes.....	265
§2215.	Waste Specific Prohibitions—Soils Exhibiting the Toxicity Characteristic for Metals and Containing PCBs	265
§2216.	Waste-Specific Prohibitions—Toxicity Characteristic Metal Wastes	265
§2218.	Waste-Specific Prohibitions—Petroleum Refining Wastes	266
§2219.	Waste Specific Prohibitions—Inorganic Chemical Wastes	266
§2221.	Schedule of Wastes Identified or Listed after November 8, 1984	267
§2223.	Applicability of Treatment Standards	268
§2227.	Treatment Standards Expressed as Specified Technologies	270
§2230.	Treatment Standards for Hazardous Debris	270
§2231.	Variance from a Treatment Standard	271
§2233.	Universal Treatment Standards	272
§2236.	Alternative Land Disposal Restriction (LDR) Treatment Standards for Contaminated Soil.....	272
§2237.	Exemption for Surface Impoundments Treating Hazardous Waste	273
§2239.	Procedures for Case-by-Case Extensions of an Effective Date.....	274
§2241.	Exemptions to Allow Land Disposal of a Prohibited Waste Except by Deep Well Injection.....	275
§2243.	Administrative Procedures for Exemptions under LAC 33:V.2271 and No-Alternative Determinations under LAC 33:V.2273	275
§2245.	Generators' Waste Analysis, Recordkeeping, and Notice Requirements	275
§2246.	Special Rules Regarding Wastes That Exhibit a Characteristic	278
§2247.	Owners or Operators of Treatment or Disposal Facilities: Testing, Waste Minimization, Recordkeeping and Notice Requirements	279
Subchapter B.	Hazardous Waste Injection Restrictions.....	281
§2249.	Purpose, Scope, and Applicability.....	281
§2251.	Dilution Prohibited as a Substitute for Treatment.....	281
§2253.	Procedures for Case-by-Case Extensions to an Effective Date.....	281
§2255.	Waste Analysis	281
§2257.	Waste-Specific Prohibitions—Solvent Wastes	281
§2259.	Waste-Specific Prohibitions—Dioxin-Containing Wastes	282
§2261.	Waste-Specific Prohibitions—California List Wastes	282
§2263.	Waste-Specific Prohibitions—First Third Wastes	283

Table of Contents

§2265.	Waste-Specific Prohibitions—Second Third Wastes	283
§2267.	Waste-Specific Prohibitions—Third Third Wastes	284
§2269.	Waste-Specific Prohibitions—Newly Listed Wastes	284
§2271.	Exemptions to Allow Land Disposal of a Prohibited Waste by Deep Well Injections	285
§2273.	Petition for Determinations Concerning No Alternatives to Land Disposal of a Prohibited Waste by Deep Well Injection.....	289
§2299.	Appendix—Tables 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12.....	291
Chapter 23.	Waste Piles	335
§2301.	Applicability	335
§2303.	Design and Operating Requirements.....	335
§2304.	Action Leakage Rate	337
§2305.	Exemptions	338
§2306.	Response Actions	338
§2307.	Inspection of Synthetic Liners.....	338
§2309.	Monitoring and Inspection	339
§2311.	Special Requirements for Ignitable or Reactive Waste	339
§2313.	Special Requirements for Incompatible Wastes.....	339
§2315.	Closure and Post-Closure Care.....	339
§2317.	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027	340
Chapter 24.	Hazardous Waste Munitions and Explosives Storage	340
§2401.	Applicability	340
§2403.	Design and Operating Standards	340
§2405.	Closure and Post-Closure Care.....	341
Chapter 25.	Landfills.....	341
§2501.	Applicability	341
§2503.	Design and Operating Requirements.....	341
§2504.	Action Leakage Rate	344
§2505.	Exemption.....	344
§2507.	Monitoring and Inspection	344
§2508.	Response Actions	345
§2509.	Surveying and Recordkeeping.....	345
§2511.	Special Requirements for Ignitable or Reactive Waste	346
§2513.	Special Requirements for Incompatible Wastes.....	346
§2515.	Special Requirements for Bulk and Containerized Liquids	346
§2517.	Special Requirements for Containers	347
§2519.	Disposal of Small Containers of Hazardous Waste in Overpacked Drums (Lab Packs)	347
§2521.	Closure and Post-Closure Care.....	347
§2523.	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027	348
Chapter 26.	Corrective Action Management Units and Special Provisions for Cleanup	348
§2601.	Applicability of Corrective Action Management Unit (CAMU) Regulations	348
§2602.	Grandfathered Corrective Action Management Units (CAMUs)	348
§2603.	Corrective Action Management Units (CAMUs).....	350
§2604.	Temporary Units (TU).....	354
§2605.	Staging Piles	355
§2607.	Disposal of CAMU-Eligible Wastes in Permitted Hazardous Waste Landfills	357
Chapter 27.	Land Treatment	358
§2701.	Applicability	358
§2703.	Design and Operating Requirements.....	358
§2705.	Treatment Program.....	359
§2707.	Treatment Demonstration.....	359

Table of Contents

§2709.	Food-Chain Crops	361
§2711.	Unsaturated Zone Monitoring	361
§2713.	Recordkeeping.....	362
§2715.	Special Requirements for Ignitable or Reactive Waste	362
§2717.	Special Requirements for Incompatible Wastes.....	363
§2719.	Closure and Post-Closure Care.....	363
§2723.	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026 and F027.....	364
Chapter 28.	Drip Pads	364
§2801.	Applicability	364
§2803.	Assessment of Existing Drip Pad Integrity	364
§2804.	Design and Installation of New Drip Pads	365
§2805.	Design and Operating Requirements.....	365
§2807.	Inspections.....	367
§2809.	Closure.....	367
Chapter 29.	Surface Impoundments	367
§2901.	Applicability	367
§2903.	Design and Operating Requirements.....	368
§2904.	Action Leakage Rate	370
§2905.	Exemption.....	370
§2906.	Response Actions	371
§2907.	Monitoring and Inspection	371
§2909.	Emergency Repairs; Contingency Plans	372
§2911.	Closure and Post-Closure Care.....	372
§2913.	Special Requirements for Ignitable or Reactive Waste	373
§2915.	Special Requirements for Incompatible Wastes.....	373
§2917.	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027.....	373
§2919.	Air Emission Standards	374
Chapter 30.	Hazardous Waste Burned in Boilers and Industrial Furnaces	374
§3001.	Applicability	374
§3003.	Management Prior to Burning	377
§3005.	Permit Standards for Burners	377
§3007.	Interim Status Standards for Burners	382
§3009.	Standards to Control Organic Emissions.....	393
§3011.	Standards to Control Particulate Matter	395
§3013.	Standards to Control Metals Emissions.....	395
§3015.	Standards to Control Hydrogen Chloride (HCl) and Chlorine Gas (Cl ₂) Emissions	398
§3017.	Small Quantity On-Site Burner Exemption.....	399
§3019.	Low Risk Waste Exemption.....	400
§3021.	Waiver of DRE Trial Burn for Boilers	401
§3023.	Standards for Direct Transfer	402
§3025.	Regulation of Residues.....	403
§3099.	Appendices—Appendix A, B, C, D, E, F, G, H, I, J, K, and L.....	405
Chapter 31.	Incinerators	406
§3101.	Purpose	406
§3103.	General Requirements	406
§3105.	Applicability	406
§3107.	Waste Analysis	413
§3109.	Principal Organic Hazardous Constituents (POHCs).....	413
§3111.	Performance Standards.....	414
§3113.	Hazardous Waste Permits.....	414

Table of Contents

§3115.	Incinerator Permits for New or Modified Facilities	415
§3117.	Operating Requirements	417
§3119.	Monitoring and Inspections	418
§3121.	Closure	418
Chapter 32.	Miscellaneous Units	418
§3201.	Applicability	418

Title 33
ENVIRONMENTAL QUALITY

Part V. Hazardous Waste and Hazardous Materials

Subpart 1. Department of Environmental Quality—Hazardous Waste

Chapter 1. General Provisions and Definitions

§101. Authority

A. Rules and regulations for a hazardous waste management system are hereby established by the Department of Natural Resources as mandated by Act 449 of the 1979 Legislature as amended, which is the state's response to P.L. 94-580, the Resource Conservation and Recovery Act of 1976 (RCRA).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§103. Purpose

A. These rules and regulations serve a fourfold purpose:

1. first, to protect the health and well-being of the people of the state of Louisiana and to prevent damage to property or to the environment by the improper management of hazardous waste;

2. second, to provide incentives for the maximum recovery and reuse of substances in hazardous waste streams that are possible through the use of the most advanced technology;

3. third, to carefully consider the impact of the program on the economic vitality of the state and to achieve a proper balance that protects the health of the citizens and the environment of the state while meeting the needs of industry; and

4. fourth, to establish minimum state standards that define the acceptable management of hazardous waste.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§105. Program Scope

These rules and regulations apply to owners and operators of all facilities that generate, transport, treat, store, or dispose of hazardous waste, except as specifically provided otherwise herein. The procedures of these regulations also apply to the denial of a permit for the active life of a hazardous waste management facility or individual unit at a treatment, storage, and disposal (TSD) facility under LAC 33:V.706. Definitions appropriate to these rules and

regulations, including *solid waste* and *hazardous waste*, appear in LAC 33:V.109. Wastes that are excluded from regulation are found in this Section.

A. EPA Identification Numbers and Notification of Hazardous Waste Activity

1. Within 90 days after the promulgation or revision of these regulations anyone subject to these regulations who has not previously notified the department on the Notification of Hazardous Waste Activity Form (HW-1), or whose notification on the HW-1 form is not approved, must notify the Office of Environmental Services, using the HW-1 form.

2. Within 90 days after changes in waste characteristics or changes in these regulations that result in changes in the notification, interim status facilities must revise their notification form by resubmitting a corrected copy of the HW-1 form.

3. All notifications of hazardous waste activity received must be in accordance with the department's notification procedures and must receive an active EPA identification number issued through the state of Louisiana.

4. All facilities with an active EPA identification number shall be subject to requirements in LAC 33:V.Subpart 1.

5. Approved Forms for Notification of Hazardous Waste Activity

a. Notification of Hazardous Waste Activity Form (HW-1). All notifications of hazardous waste activity shall be made on the most current HW-1 form approved by the department and found on the department's website. The department may provide the HW-1 form in either a hardcopy or web-based format or both.

b. Other forms approved by the department. At the discretion of the department, other forms may be approved for use. In these instances, the official notification of approval forms will be found on the department's website.

6. Out-of-date forms and forms not approved by the department. Notification of hazardous waste activity submitted on forms not approved by the department, or on forms that are not current, will be rejected.

a. If rejected, the applicant shall resubmit the notification using the appropriate, approved form.

b. Resubmittals shall be submitted timely to the Office of Environmental Services. Original due dates will

ENVIRONMENTAL QUALITY

not be extended for resubmittals due to an unapproved or out-of-date form.

7. See LAC 33:V.1017 for additional notification requirements for generators of hazardous waste.

8. Facilities who cease hazardous waste activities shall notify the Office of Environmental Services within 30 days using the department's Notification of Hazardous Waste Activity Form (HW-1) or other forms approved by the department in accordance with Subparagraph 105.A.5.b of this Section.

9. Failure to submit a timely and complete Notification of Hazardous Waste Activity Form (HW-1), obtain an active EPA identification number or notify the department of changes to the notification shall constitute a violation of these regulations and subject the applicant to enforcement action up to and including the assessment of civil penalties.

B. Classification of Hazardous Wastes. Hazardous wastes are classified into two categories.

1. Category I wastes are those known chemicals and process streams whose hazardous nature has been prescribed by prior determination and which are presented in LAC 33:V.Chapter 49.

2. Category II wastes are those wastes possessing any of the characteristics of the hazard classes listed in LAC 33:V.Chapter 49. Hazard classes of concern for these wastes are ignitability, corrosivity, reactivity and toxicity.

C. Control of Wastes. Wastes generated, transported, treated, stored, and/or disposed of in Louisiana are controlled by the state of Louisiana according to the appropriate statutes of the state of Louisiana as follows, and provided that nothing contained herein shall limit the authority granted to the Department of Natural Resources (hereinafter referred to as the department) under Title 30 of the Louisiana revised statutes or to its successor (scheduled to be the Department of Environmental Quality after February 1, 1984).

1. The department's hazardous waste program is responsible for the following, subject to these rules and regulations and to Title 30 of the Louisiana Revised Statutes:

a. surface installations and areas associated with the disposal of wastes in injection wells, excluding the injection well proper;

b. all wastes listed as hazardous in LAC 33:V.Chapter 49 or having the hazardous characteristics identified in LAC 33:V.Chapter 49, which are generated, treated, stored, and/or disposed of in Louisiana.

2. The Office of Environmental Services is responsible for nonhazardous solid wastes treated, stored, and/or disposed of in public and private solid waste facilities.

3. The Department of Natural Resources, Office of Conservation, which is under the authority of the commissioner, is subject to rules and regulations

promulgated by the Office of Conservation. Their responsibilities include:

a. salt water injection wells including related surface installations, mud pits, and other areas associated with the exploration and production of oil and gas; and

b. injection wells, less related surface installations and areas, for industrial on-site or commercial disposal of hazardous wastes, until the effective date of Act 97 of 1983 (scheduled to be February 1, 1984), after which time they shall be regulated by the Department of Environmental Quality in accordance with the provisions of Title 30 of the Louisiana Revised Statutes.

4. The department is responsible for radioactive materials.

5. The Louisiana Department of Public Safety (LDPS) is responsible for transportation of wastes.

6. The Department of Agriculture is responsible for waste pesticides, including pesticide containers at point of mixing, loading, application, equipment cleansing or base of operation.

D. Exclusions

1. Materials that are not Solid Wastes. The following materials are not solid wastes for the purpose of this Subpart:

a.i. domestic sewage; and

ii. any mixture of domestic sewage and other wastes that pass through a sewer system to a publicly owned treatment works (POTW) for treatment. *Domestic Sewage* means untreated sanitary wastes that pass through a sewer system;

b. industrial wastewater discharges that are point source discharges subject to regulation under Section 402 of the Clean Water Act, as amended;

COMMENT: This exclusion applies only to the actual point source discharge. It does not exclude industrial wastewaters while they are being collected, stored, or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.

c. irrigation return flows;

d. source, special nuclear, or by-product material as defined by the Atomic Energy Act of 1954, as amended, 42 U.S.C. 2011 et seq.;

e. material subjected to in-situ mining techniques that are not removed from the ground as part of the extraction process;

f. pulping liquors (i.e., black liquor) that are reclaimed in a pulping liquor recovery furnace and then reused in the pulping process, unless they are accumulated speculatively as defined in LAC 33:V.109.*Solid Waste*;

g. spent sulfuric acid used to produce virgin sulfuric acid provided it is not *accumulated speculatively* as defined in LAC 33:V.109.*Solid Waste*;

h. secondary materials that are reclaimed and returned to the original process or processes in which they were generated where they are reused in the production process provided:

i. only tank storage is involved, and the entire process through completion of reclamation is closed by being entirely connected with pipes or other comparable enclosed means of conveyance;

ii. reclamation does not involve controlled flame combustion (such as occurs in boilers, industrial furnaces, or incinerators);

iii. the secondary materials are never accumulated in such tanks for over 12 months without being reclaimed; and

iv. the reclaimed material is not used to produce a fuel, or used to produce products that are used in a manner constituting disposal;

i.i. spent wood preserving solutions that have been reclaimed and are reused for their original intended purpose;

ii. wastewaters from the wood preserving process that have been reclaimed and are reused to treat wood; and

iii. prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in Clauses D.1.i.i and ii of this Section, so long as they meet all of the following conditions:

(a). the wood preserving wastewaters and spent wood preserving solutions are reused on-site at water borne plants in the production process for their original intended purpose;

(b). prior to reuse, the wastewaters and spent wood preserving solutions are managed to prevent release to either land or groundwater or both;

(c). any unit used to manage wastewaters and/or spent wood preserving solutions, prior to reuse, can be visually or otherwise determined to prevent such releases;

(d). any drip pad used to manage the wastewaters and/or spent wood preserving solutions, prior to reuse, complies with the standards in LAC 33:V.Chapter 43.Subchapter S, regardless of whether the plant generates a total of less than 100 kg/month of hazardous waste; and

(e). prior to operating pursuant to this exclusion, the plant owner or operator submits to the Office of Environmental Services a one-time notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language:

"I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation."

The plant must maintain a copy of that document in its on-site records until closure of the facility. The exclusion applies so long as the plant meets all of the conditions. If the

plant goes out of compliance with any condition, it may apply to the administrative authority for reinstatement. The administrative authority may reinstate the exclusion upon finding that the plant has returned to compliance with all conditions and that violations are not likely to recur;

j. EPA Hazardous Waste Numbers K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke by-products processes that are hazardous only because they exhibit the toxicity characteristic (TC) specified in LAC 33:V.4903.E when, subsequent to generation, these materials are recycled to coke ovens, or to the tar recovery process as a feedstock to produce coal tar, or mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the wastes from the point they are generated to the point they are recycled to coke ovens, tar recovery, or refining processes, or mixed with coal tar;

k. nonwastewater splash condenser dross residue from the treatment of K061 in high-temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery;

l.i. oil-bearing hazardous secondary materials (i.e., sludges, by-products, or spent materials) that are generated at a petroleum refinery (SIC code 2911) and are inserted into the petroleum refining process (SIC code 2911, including, but not limited to, distillation, catalytic cracking, fractionation, or thermal cracking units [i.e., cokers]) unless the material is placed on the land or speculatively accumulated before being so recycled. Materials inserted into thermal cracking units are excluded under this Paragraph, provided that the coke product also does not exhibit a characteristic of hazardous waste. Oil-bearing hazardous secondary materials may be inserted into the same petroleum refinery where they are generated, or sent directly to another petroleum refinery, and still be excluded under this provision. Except as provided in Clause D.1.1.ii of this Section, oil-bearing hazardous secondary materials generated elsewhere in the petroleum industry (i.e., from sources other than petroleum refineries) are not excluded under this Section. Residuals generated from processing or recycling materials excluded under this Subsection, where such materials as generated would have otherwise met a listing under LAC 33:V.Chapter 49, are designated as F037 listed wastes when disposed of or intended for disposal;

ii. recovered oil that is recycled in the same manner and with the same conditions as described in Clause D.1.1.i of this Section. Recovered oil is oil that has been reclaimed from secondary materials (including wastewater) generated from normal petroleum industry practices, including refining, exploration and production, bulk storage, and transportation incident thereto (SIC codes 1311, 1321, 1381, 1382, 1389, 2911, 4612, 4613, 4922, 4923, 4789, 5171, and 5172). Recovered oil does not include oil-bearing hazardous wastes listed in LAC 33:V.Chapter 49; however, oil recovered from such wastes may be considered recovered oil. Recovered oil does not include used oil as defined in LAC 33:V.4001;

ENVIRONMENTAL QUALITY

m. excluded scrap metal (processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal) being recycled;

n. shredded circuit boards being recycled provided that they are:

i. stored in containers sufficient to prevent a release to the environment prior to recovery; and

ii. free of mercury switches, mercury relays, nickel-cadmium batteries, and lithium batteries;

o. condensates derived from the overhead gases from kraft mill steam strippers that are used to comply with 40 CFR 63.446(e). The exemption applies only to combustion at the mill generating the condensates;

p. spent materials (as defined in LAC 33:V.109) (other than hazardous wastes listed in LAC 33:V.Chapter 49) generated within the primary mineral processing industry from which minerals, acids, cyanide, water, or other values are recovered by mineral processing or by beneficiation, provided that:

i. the spent material is legitimately recycled to recover minerals, acids, cyanide, water, or other values;

ii. the spent material is not accumulated speculatively;

iii. except as provided in Clause D.1.p.iv of this Section, the spent material is stored in tanks, containers, or buildings meeting the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof all of which are made of nonearthen materials providing structural support (except smelter buildings may have partially earthen floors provided the secondary material is stored on the nonearthen portion) and have a roof suitable for diverting rainwater away from the foundation; a tank must be freestanding, not be a surface impoundment (as defined in LAC 33:V.109), and be manufactured of a material suitable for containment of its contents; a container must be free standing and be manufactured of a material suitable for containment of its contents. If tanks or containers contain any particulate that may be subject to wind dispersal, the owner/operator must operate these units in a manner that controls fugitive dust. Tanks, containers, and buildings must be designed, constructed, and operated to prevent significant releases to the environment of these materials;

iv. the administrative authority may make a site-specific determination, after public review and comment, that only solid mineral processing spent materials may be placed on pads, rather than in tanks, containers, or buildings. Solid mineral processing spent materials do not contain any free liquid. The decision-maker must affirm that pads are designed, constructed, and operated to prevent significant releases of the spent material into the environment. Pads must provide the same degree of containment afforded by the non-RCRA tanks, containers, and buildings eligible for exclusion:

(a). the decision-maker must also consider if storage on pads poses the potential for significant releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, air exposure pathways are: the volume and physical and chemical properties of the spent material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway; and the possibility and extent of harm to human and environmental receptors via each exposure pathway;

(b). pads must meet the following minimum standards: be designed of nonearthen material that is compatible with the chemical nature of the mineral processing spent material; be capable of withstanding physical stresses associated with placement and removal; have run-on/runoff controls; be operated in a manner which controls fugitive dust; and have integrity assurance through inspections and maintenance programs;

(c). before making a determination under this Subsection, the administrative authority must provide notice and the opportunity for comment to all persons potentially interested in the determination. This can be accomplished by placing notice of this action in major local newspapers or broadcasting notice over local radio stations;

v. the owner or operator provides notice to the Office of Environmental Services, providing the following information: the types of materials to be recycled; the type and location of the storage units and recycling processes; and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process; and

vi. for purposes of Subparagraph D.2.h of this Section, mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by non-mineral processing industries are not eligible for the conditional exclusion from the definition of solid waste;

q. Reserved.

r. petrochemical recovered oil from an associated organic chemical manufacturing facility, where the oil is to be inserted into the petroleum refining process (SIC code 2911) along with normal petroleum refinery process streams, provided:

i. the oil is hazardous only because it exhibits the characteristic of ignitability (as defined in LAC 33:V.4903.B) and/or toxicity for benzene (LAC 33:V.4903.E, waste code D018); and

ii. the oil generated by the organic chemical manufacturing facility is not placed on the land, or speculatively accumulated before being recycled into the petroleum refining process. An *associated organic chemical manufacturing facility* is a facility: where the primary SIC code is 2869, but where operations may also include SIC

codes 2821, 2822, and 2865; and is physically co-located with a petroleum refinery; and where the petroleum refinery to which the oil being recycled is returned also provides hydrocarbon feedstocks to the organic chemical manufacturing facility. *Petrochemical recovered oil* is oil that has been reclaimed from secondary materials (i.e., sludges, by-products, or spent materials, including wastewater) from normal organic chemical manufacturing operations, as well as oil recovered from organic chemical manufacturing processes;

s. spent caustic solutions from petroleum refining liquid treating processes used as a feedstock to produce cresylic or naphthenic acid, unless the material is placed on the land or *accumulated speculatively*, as defined in LAC 33:V.109;

t. hazardous secondary materials used to make zinc fertilizers, provided that the following conditions are satisfied:

i. hazardous secondary materials used to make zinc micronutrient fertilizers must not be *accumulated speculatively*, as defined in LAC 33:V.109;

ii. generators and intermediate handlers of zinc-bearing hazardous secondary materials that are to be incorporated into zinc fertilizers must:

(a). submit a one-time notice to the Office of Environmental Services that contains the name, address, and EPA ID number of the generator or intermediate handler facility, provides a brief description of the secondary material that will be subject to the exclusion, and identifies when the manufacturer intends to begin managing excluded, zinc-bearing hazardous secondary materials under the conditions specified in this Subparagraph;

(b). store the excluded secondary material in tanks, containers, or buildings that are constructed and maintained in a way that prevents releases of the secondary materials into the environment. At a minimum, any building used for this purpose must be an engineered structure made of non-earthen materials that provide structural support and must have a floor, walls, and a roof that prevent wind dispersal and contact with rainwater. Tanks used for this purpose must be structurally sound and, if outdoors, must have roofs or covers that prevent contact with wind and rain. Containers used for this purpose must be kept closed except when it is necessary to add or remove material and must be in sound condition. Containers that are stored outdoors must be managed within storage areas that:

(i). have containment structures or systems sufficiently impervious to contain leaks, spills, and accumulated precipitation;

(ii). provide for effective drainage and removal of leaks, spills, and accumulated precipitation; and

(iii). prevent run-on into the containment system;

(c). with each off-site shipment of excluded hazardous secondary materials, provide written notice to the

receiving facility that the material is subject to the conditions of this Subparagraph;

(d). maintain, at the generator's or intermediate handler's facility, for no less than three years, records of all shipments of excluded hazardous secondary materials. For each shipment these records must, at a minimum, contain the following information:

(i). the name of the transporter and the date of the shipment;

(ii). the name and address of the facility that received the excluded material and documentation confirming receipt of the shipment; and

(iii). the type and quantity of excluded secondary material in each shipment;

iii. manufacturers of zinc fertilizers or zinc fertilizer ingredients made from excluded hazardous secondary materials must:

(a). store excluded hazardous secondary materials in accordance with the storage requirements for generators and intermediate handlers, as specified in Subclause D.1.t.ii.(b) of this Section;

(b). submit a one-time notification to the Office of Environmental Services that, at a minimum, specifies the name, address, and EPA ID number of the manufacturing facility and identifies when the manufacturer intends to begin managing excluded, zinc-bearing hazardous secondary materials under the conditions specified in this Subparagraph;

(c). maintain, for a minimum of three years, records of all shipments of excluded hazardous secondary materials received by the manufacturer that must, at a minimum, identify for each shipment the name and address of the generating facility, the name of the transporter, the date the materials were received, the quantity received, and a brief description of the industrial process that generated the material; and

(d). submit to the Office of Environmental Services an annual report that identifies the total quantities of all excluded hazardous secondary materials that were used to manufacture zinc fertilizers or zinc fertilizer ingredients in the previous year, the name and address of each generating facility, and the industrial processes from which they were generated;

iv. nothing in this Section preempts, overrides, or otherwise negates the provision in LAC 33:V.1005 that requires any person who generates a solid waste to determine if that waste is a hazardous waste; and

v. interim status and permitted storage units that have been used to store only zinc-bearing hazardous wastes prior to the submission of the one-time notice described in Subclause D.1.t.iii.(b) of this Section, and that afterward will be used only to store hazardous secondary materials excluded under this Subparagraph, are not subject to the

ENVIRONMENTAL QUALITY

closure requirements of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, 37 and 43;

u. zinc fertilizers made from hazardous wastes or hazardous secondary materials that are excluded under this Paragraph, provided that:

i. the fertilizer meets the following contaminant limits:

(a). for metal contaminants:

Constituent	Maximum Allowable Total Concentration in Fertilizer, per Unit (1% of Zinc (ppm))
Arsenic	0.3
Cadmium	1.4
Chromium	0.6
Lead	2.8
Mercury	0.3

(b). for dioxin contaminants, the fertilizer must contain no more than 8 parts per trillion of dioxin, measured as toxic equivalent (TEQ);

ii. the manufacturer performs sampling and analysis of the fertilizer product to determine compliance with the contaminant limits for metals no less than every 6 months, and for dioxins no less than every 12 months. Testing must also be performed whenever changes occur to manufacturing processes or ingredients that could significantly affect the amounts of contaminants in the fertilizer product. The manufacturer may use any reliable analytical method to demonstrate that no constituent of concern is present in the product at a concentration above the applicable limit. It is the responsibility of the manufacturer to ensure that the sampling and analysis are unbiased, precise, and representative of the products introduced into commerce; and

iii. the manufacturer maintains, for no less than three years, records of all sampling and analyses performed for purposes of determining compliance with the requirements of Clause D.1.u.ii of this Section. Such records must, at a minimum, include:

(a). the dates and times product samples were taken and the dates the samples were analyzed;

(b). the names and qualifications of the persons taking the samples;

(c). a description of the methods and equipment used to take the samples;

(d). the name and address of the laboratory facility at which analyses of the samples were performed;

(e). a description of the analytical methods used, including any cleanup and sample preparation; and

(f). all laboratory analytical results used to determine compliance with the contaminant limits specified in this Subparagraph;

v. used cathode ray tubes (CRTs) meeting the following requirements:

i. *used, intact CRTs* as defined in LAC 33:V.109.Cathode Ray Tube or CRT, unless they are disposed, or unless they are *accumulated speculatively* as defined in LAC 33:V.109 by CRT collectors or glass processors;

ii. *used, intact CRTs* that are exported for recycling provided that they meet the requirements of LAC 33:V.4913;

iii. *used, broken CRTs* as defined in LAC 33:V.109.Cathode Ray Tube or CRT that meet the requirements of LAC 33:V.4911;

iv. glass removed from CRTs, provided that it meets the requirements of LAC 33:V.4911;

w. solvent-contaminated wipes that are sent for cleaning and reuse are not solid wastes from the point of generation, provided that:

i. the solvent-contaminated wipes, when accumulated, stored, and transported, are contained in nonleaking, closed containers that are labeled "Excluded Solvent-Contaminated Wipes." The containers shall be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, or when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container shall be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

ii. the solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for cleaning;

iii. at the point of being sent for cleaning on-site or at the point of being transported off-site for cleaning, the solvent-contaminated wipes shall contain *no free liquids* as defined in LAC 33:V.109;

iv. free liquids removed from the solvent-contaminated wipes or from the container holding the wipes shall be managed according to the applicable regulations found in LAC 33:V.Subpart 1;

v. generators shall maintain, at their sites, the following documentation:

(a). the name and address of the laundry or dry cleaner that is receiving the solvent-contaminated wipes;

(b). documentation that the 180-day accumulation time limit in LAC 33:V.105.D.1.w.ii is being met; and

(c). the description of the process the generator is using to ensure the solvent-contaminated wipes contain no free liquids at the point of being laundered or dry cleaned on-site or at the point of being transported off-site for laundering or dry cleaning; and

vi. the solvent-contaminated wipes are sent to a laundry or dry cleaner whose discharge, if any, is regulated under sections 301 and 402, or section 307 of the Clean Water Act.

x. hazardous secondary material generated and legitimately reclaimed within the United States of America or its territories and under the control of the generator is not a solid waste, provided that the material complies with the following conditions:

i. the hazardous secondary material is generated and reclaimed at the generating facility (for purposes of this definition, *generating facility* means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator); or

ii. the hazardous secondary material is generated and reclaimed at different facilities, if the reclaiming facility is controlled by the generator or if both the generating facility and the reclaiming facility are controlled by a *person*, as defined in LAC 33:V.109; and

(a). the generator provides one of the following certifications:

(i). “On behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], which is controlled by [insert generator facility name] and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material.”; or

(ii). “On behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], that both facilities are under common control, and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material.” For purposes of this Paragraph, *control* means the power to direct the policies of the facility, whether by the ownership of stock, voting rights, or otherwise, except that contractors who operate facilities on behalf of a different *person* as defined in LAC 33:V.109 shall not be deemed to “control” such facilities;

(b). the generating and receiving facilities must both maintain at their facilities for no less than three years records of hazardous secondary materials sent or received under this exclusion. In both cases, the records must contain:

(i). the name of the transporter;

(ii). the date of the shipment; and

(iii). the type and quantity of the hazardous secondary material shipped or received under the exclusion;

(iv). these record-keeping requirements may be satisfied by maintaining routine business records (e.g., financial records, bills of lading, copies of DOT shipping papers, or electronic confirmations); or

iii. the hazardous secondary material is generated pursuant to a written contract between a tolling contractor

and a toll manufacturer and is reclaimed by the tolling contractor, if the tolling contractor certifies the following: “On behalf of [insert tolling contractor name], I certify that [insert tolling contractor name] has a written contract with [insert toll manufacturer name] to manufacture [insert name of product or intermediate] which is made from specified unused materials, and that [insert tolling contractor name] will reclaim the hazardous secondary materials generated during this manufacture. On behalf of [insert tolling contractor name], I also certify that [insert tolling contractor name] retains ownership of, and responsibility for, the hazardous secondary materials that are generated during the course of the manufacture, including any releases of hazardous secondary materials that occur during the manufacturing process.”; and

(a). the tolling contractor must maintain at its facility for no less than three years records of hazardous secondary materials received pursuant to its written contract with the tolling manufacturer; and

(b). the tolling manufacturer must maintain at its facility for no less than three years records of hazardous secondary materials shipped pursuant to its written contract with the tolling contractor; and

(c). for both the tolling contractor and the tolling manufacturer, the records must contain the name of the transporter, the date of the shipment, and the type and quantity of the hazardous secondary material shipped or received pursuant to the written contract. These requirements may be satisfied by routine business records (e.g., financial records, bills of lading, copies of DOT shipping papers, or electronic confirmations). For purposes of this Paragraph:

(i). *tolling contractor*—a person who arranges for the production of a product or intermediate made from specified unused materials through a written contract with a toll manufacturer;

(ii). *toll manufacturer*—a person who produces a product or intermediate made from specified unused materials pursuant to a written contract with a tolling contractor;

iv. the hazardous secondary material is contained as defined in LAC 33:V.109, *contained*. A hazardous secondary material released to the environment is discarded and a solid waste unless it is immediately recovered for the purpose of reclamation. Hazardous secondary material managed in a unit with leaks or other continuing or intermittent unpermitted releases is discarded and a solid waste;

v. the hazardous secondary material is not speculatively accumulated, as defined in LAC 33:V.109, *accumulated speculatively*;

vi. notice is provided as required by LAC 33:V.105.Q;

vii. the material is not otherwise subject to material-specific management conditions under LAC

ENVIRONMENTAL QUALITY

33:V.105.D.1 when reclaimed (except as provided for in LAC 33:V.105.R.6.e) and it is not a spent lead-acid battery;

viii. persons performing the recycling of hazardous secondary materials under this exclusion must maintain documentation of their legitimacy determination on-site. Documentation must be a written description of how the recycling meets all four factors in LAC 33:V.105.R. Documentation shall be maintained for three years after the recycling operation has ceased;

ix. persons operating under this exclusion must meet the requirements of the *Code of Federal Regulations* at 40 CFR 261, subpart M (emergency preparedness and response for management of excluded hazardous secondary materials), July 1, 2017, which are hereby incorporated by reference;

y. hazardous secondary material that is generated and then transferred to a verified reclamation facility for the purpose of reclamation is not a solid waste, provided that:

i. the material is not speculatively accumulated, as defined in LAC 33:V.109, *accumulated speculatively*;

ii. the material is not handled by any person or facility other than the hazardous secondary material generator, the transporter, an intermediate facility or a reclaimer and, while in transport, is not stored for more than 10 days at a transfer facility, as defined in LAC 33:V.109, *transfer facility*, and is packaged according to applicable United States Department of Transportation regulations at 49 CFR parts 173, 178, and 179 while in transport;

iii. the material is not otherwise subject to material-specific management conditions under LAC 33:V.105.D.1 when reclaimed (except as provided for in LAC 33:V.105.R.6.e), and it is not a spent lead-acid battery;

iv. the reclamation of the material is legitimate, as specified under LAC 33:V.105.R;

v. the hazardous secondary material generator satisfies all of the following conditions:

(a). the material must be *contained* as defined in LAC 33:V.109, *contained*. A hazardous secondary material released to the environment will be considered discarded and a solid waste unless it is immediately recovered for the purpose of recycling. Hazardous secondary material managed in a unit with leaks or other continuing releases is discarded and a solid waste;

(b). the hazardous secondary material generator must arrange for transport of hazardous secondary materials to a verified reclamation facility (or facilities) in the United States of America. A verified reclamation facility is a facility that has been granted a variance under LAC 33:V.105.O.2.d or a reclamation facility where the management of the hazardous secondary materials is addressed under a RCRA part B permit or interim status standards. If the hazardous secondary material will be passing through an intermediate facility, the intermediate facility must have been granted a variance under LAC 33:V.105.O.2.d or the management of the hazardous secondary materials at that facility must be

addressed under a RCRA part B permit or interim status standards, and the hazardous secondary material generator must make contractual arrangements with the intermediate facility to ensure that the hazardous secondary material is sent to the reclamation facility identified by the hazardous secondary material generator;

(c). the hazardous secondary material generator must maintain at the generating facility for no less than three years records of all off-site shipments of hazardous secondary materials. For each shipment, these records must, at a minimum, contain the following information:

(i). name of the transporter and date of the shipment;

(ii). name and address of each reclaimer and, if applicable, the name and address of each intermediate facility to which the hazardous secondary material was sent;

(iii).the type and quantity of hazardous secondary material in the shipment;

(d). the hazardous secondary material generator must maintain at the generating facility for no less than three years confirmations of receipt from each reclaimer and, if applicable, each intermediate facility for all off-site shipments of hazardous secondary materials. Confirmations of receipt must include the name and address of the reclaimer (or intermediate facility), the type and quantity of the hazardous secondary materials received and the date which the hazardous secondary materials were received. This requirement may be satisfied by routine business records (e.g., financial records, bills of lading, copies of U.S. Department of Transportation shipping papers, or electronic confirmations of receipt);

(e). the hazardous secondary material generator must comply with the emergency preparedness and response conditions in 40 CFR 261, subpart M (emergency preparedness and response for management of excluded hazardous secondary materials), July 1, 2017; these requirements are hereby incorporated by reference for this exclusion;

vi. reclaimers of hazardous secondary material excluded from regulation under this exclusion and *intermediate facilities*, as defined in LAC 33:V.109, shall satisfy all of the following conditions:

(a). the reclaimer and intermediate facility shall maintain at its facility for no less than three years records of all shipments of hazardous secondary material that were received at the facility and, if applicable, for all shipments of hazardous secondary materials that were received and subsequently sent off-site from the facility for further reclamation. For each shipment, these records shall at a minimum contain the following information:

(i). name of the transporter and date of the shipment;

(ii). name and address of the hazardous secondary material generator and, if applicable, the name

and address of the reclaimer or intermediate facility which the hazardous secondary materials were received from;

(iii).the type and quantity of hazardous secondary material in the shipment; and

(iv).for hazardous secondary materials that, after being received by the reclaimer or intermediate facility, were subsequently transferred off-site for further reclamation, the name and address of the (subsequent) reclaimer and, if applicable, the name and address of each intermediate facility to which the hazardous secondary material was sent;

(b). the intermediate facility shall send the hazardous secondary material to the reclaimer(s) designated by the hazardous secondary materials generator;

(c). the reclaimer and intermediate facility shall send to the hazardous secondary material generator confirmations of receipt for all off-site shipments of hazardous secondary materials. Confirmations of receipt shall include the name and address of the reclaimer (or intermediate facility), the type and quantity of the hazardous secondary materials received and the date which the hazardous secondary materials were received. This requirement may be satisfied by routine business records (e.g., financial records, bills of lading, copies of DOT shipping papers, or electronic confirmations of receipt);

(d). the reclaimer and intermediate facility shall manage the hazardous secondary material in a manner that is at least as protective as that employed for analogous raw material and shall be contained. An “analogous raw material” is a raw material for which a hazardous secondary material is a substitute and serves the same function and has similar physical and chemical properties as the hazardous secondary material;

(e). any residuals that are generated from reclamation processes will be managed in a manner that is protective of human health and the environment. If any residuals exhibit a hazardous characteristic according to LAC 33:V.4903, or if they themselves are specifically listed in LAC 33:V.4901, such residuals are hazardous wastes and must be managed in accordance with the applicable requirements of this Subpart when disposed or intended for disposal;

(f). the reclaimer and intermediate facility shall provide financial assurance as required under subpart H of 40 CFR part 261, July 2015, which is hereby incorporated by reference;

(g). the reclaimer and intermediate facility have been granted a variance under LAC 33:V.105.O and/or LAC 33:V.105.K, as applicable, or have a RCRA part B permit or interim status standards that address the management of the hazardous secondary materials; and

vii. all persons claiming the exclusion under LAC 33:V.105.D.1.y shall provide notification as required under LAC 33:V.105.Q;

z. hazardous secondary materials that are generated and then transferred to another person for the purpose of remanufacturing are not solid waste, provided there is compliance with the standards and requirements for this conditional exclusion, which are published in the *Code of Federal Regulations* at 40 CFR 261.4(a)(27)-261.4(a)(27)(vi)(F). Additional requirements, as applicable to this exclusion, are located in 40 CFR 261, subpart I (use and management of containers), 40 CFR 261, subpart J (tank systems), 40 CFR 261, subpart AA (air emission standards for process vents), 40 CFR 261, subpart BB (air emission standards for equipment leaks), and 40 CFR 261, subpart CC (air emission standards for tanks and containers), July 1, 2015, and are hereby incorporated by reference for the purposes of this exclusion.

2. Solid Wastes That Are Not Hazardous Wastes. The following solid wastes are not hazardous wastes:

a. household waste, including household waste that has been collected, transported, stored, treated, disposed, recovered (e.g., refuse-derived fuel), or reused. *Household waste* means any material (including garbage, trash, and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day use recreation areas). A resource recovery facility managing municipal solid waste shall not be deemed to be treating, storing, disposing of, or otherwise managing hazardous wastes for the purposes of regulation under this Subpart if such facility:

i. receives and burns only:

(a). household waste (from single and multiple dwellings, hotels, motels, and other residential sources); and

(b). solid waste from commercial or industrial sources that does not contain hazardous waste; and

ii. such facility does not accept hazardous wastes and the owner or operator of such facility has established contractual requirements or other appropriate notification or inspection procedures to assure that hazardous wastes are not received at or burned in such facility;

b. solid wastes generated by any of the following and which are returned to the soils as fertilizers:

i. the growing and harvesting of agricultural crops; and

ii. the raising of animals, including animal manures;

c. mining overburden returned to the mine site;

d. coal combustion residuals include:

i. fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste, generated primarily from the combustion of coal or other fossil fuels, except as provided in LAC 33:V.3025 for facilities that burn or process hazardous waste;

ENVIRONMENTAL QUALITY

ii. the following wastes generated primarily from processes that support the combustion of coal or other fossil fuels that are co-disposed with the wastes in Clause D.2.d.i of this Section, except as provided in LAC 33:V.3025 for facilities that burn or process hazardous waste for the purpose of Subparagraph D.2.d of this Section include:

(a). *coal pile runoff*—any precipitation that drains off coal piles;

(b). *boiler cleaning solutions*—water solutions and chemical solutions used to clean the fireside and waterside of the boiler;

(c). *boiler blowdown*—water purged from boilers used to generate steam;

(d). *process water treatment and demineralizer regeneration wastes*—sludges, rinses, and spent resins generated from processes to remove dissolved gases, suspended solids, and dissolved chemical salts from combustion system process water;

(e). *cooling tower blowdown*—water purged from a closed cycle cooling system, which includes cooling towers, cooling ponds, or spray canals;

(f). *air preheater and precipitator washes*—wastes from cleaning air preheaters and electrostatic precipitators;

(g). *effluents from floor drains, yard drains, and sumps*—wastewaters (e.g., wash water) collected by or from floor drains, equipment drains, and sumps located inside the power plant building; and wastewaters (e.g., rain runoff) collected by yard drains and sumps located outside the power plant building;

(h). *wastewater treatment sludges*—refers to sludges generated from the treatment of wastewaters specified in Subclauses (a) through (f) of this Clause;

e. drilling fluids, produced waters, and other wastes associated with the exploration, development, or production of crude oil, natural gas, or geothermal energy;

f. wastes that fail the test for the toxicity characteristic because chromium is present or are listed in LAC 33:V.Chapter 49, due to the presence of chromium, which do not fail the test for the toxicity characteristic for any other constituent, or are not listed due to the presence of any other constituent, and which do not fail the test for any other characteristic, if it is shown by a waste generator or waste generators that:

i. the chromium in the waste is exclusively (or nearly exclusively) trivalent chromium; and

ii. the waste is generated from an industrial process which uses trivalent chromium exclusively (or nearly exclusively) and the process does not generate hexavalent chromium; and

iii. the waste is typically and frequently managed in nonoxidizing environments;

g. specific wastes which meet the standard in Clauses D.1.f.i, ii and iii (so long as they do not fail the test for the toxicity characteristic for any other constituent, and do not exhibit any other characteristic) are:

i. chrome (blue) trimmings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearing;

ii. chrome (blue) shavings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearing;

iii. buffing dust generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue;

iv. sewer screenings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearing;

v. wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearing;

vi. wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; and through-the-blue;

vii. waste scrap leather from the leather tanning industry, the shoe manufacturing industry, and other leather product manufacturing industries; and

viii. wastewater treatment sludges from the production of TiO₂ pigment using chromium-bearing ores by the chloride process;

h. solid waste from the extraction, beneficiation, and processing of ores and minerals (including coal, phosphate rock, and overburden from the mining of uranium ore), except as provided in LAC 33:V.3025 for facilities that burn or process hazardous waste:

i. for purposes of this Paragraph, beneficiation of ores and minerals is restricted to the following activities: crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water and/or carbon dioxide; roasting, autoclaving, and/or chlorination in preparation for leaching (except where the roasting and/or autoclaving and/or chlorination/leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; flotation; ion exchange;

solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat, tank, and in situ leaching;

ii. for the purpose of this Paragraph, solid waste from the processing of ores and minerals includes only the following wastes as generated:

- (a). slag from primary copper processing;
- (b). slag from primary lead processing;
- (c). red and brown muds from bauxite refining;
- (d). phosphogypsum from phosphoric acid production;
- (e). slag from elemental phosphorus production;
- (f). gasifier ash from coal gasification;
- (g). process wastewater from coal gasification;
- (h). calcium sulfate wastewater treatment plant sludge from primary copper processing;
- (i). slag tailings from primary copper processing;
- (j). fluorogypsum from hydrofluoric acid production;
- (k). process wastewater from hydrofluoric acid production;
- (l). air pollution control dust/sludge from iron blast furnaces;
- (m). iron blast furnace slag;
- (n). treated residue from roasting/leaching of chrome ore;
- (o). process wastewater from primary magnesium processing by the anhydrous process;
- (p). process wastewater from phosphoric acid production;
- (q). basic oxygen furnace and open hearth furnace air pollution control dust/sludge from carbon steel production;
- (r). basic oxygen furnace and open hearth furnace slag from carbon steel production;
- (s). chloride process waste solids from titanium tetrachloride production; and
- (t). slag from primary zinc processing;

iii. a residue derived from coprocessing mineral processing secondary materials with normal beneficiation raw materials or with normal mineral processing raw materials remains excluded under Subclause D.2.h.iii.(b) of this Section if the owner or operator:

- (a). processes at least 50 percent by weight normal beneficiation raw materials or normal mineral processing raw materials; and

(b). legitimately reclaims the secondary mineral processing materials;

i. cement kiln dust waste, except as provided in LAC 33:V.3025 for facilities that burn or process hazardous waste;

j. solid waste that consists of discarded arsenical-treated wood or wood products which fails the test for the toxicity characteristic for Hazardous Waste Codes D004-D017 and which is not a hazardous waste for any other reason, if the waste is generated by persons who utilize the arsenical-treated wood and wood product for these materials' intended end use;

k. petroleum-contaminated media and debris that fail the test for the toxicity characteristic (Hazardous Waste Numbers D018-D043 only) and are subject to the corrective action regulations under underground storage tanks rules and regulations (LAC 33:XI);

l. injected groundwater that is hazardous only because it exhibits the toxicity characteristic (Hazardous Waste Codes D018-D043 only) in LAC 33:V.4903.E and that is re-injected through an underground injection well pursuant to free phase hydrocarbon recovery operations undertaken at petroleum refineries, petroleum marketing terminals, petroleum bulk plants, petroleum pipelines, and petroleum transportation spill sites until January 25, 1993. This extension applies to recovery operations in existence, or for which contracts have been issued, on or before March 25, 1991. Groundwater that is returned through infiltration galleries from such operations at petroleum refineries, marketing terminals, and bulk plants, is not a hazardous waste until January 1, 1993. New operations involving injection wells (beginning after March 25, 1991) will qualify for this compliance date extension (until January 25, 1993) only if:

i. operations are performed pursuant to a written state agreement that includes a provision to assess the groundwater and the need for further remediation once the free phase recovery is completed; and

ii. a copy of the written agreement has been submitted to: Characteristics Section (OS-333), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave, NW, Washington, DC 20460;

m. used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment, including mobile air conditioning systems, mobile refrigeration, and commercial and industrial air conditioning and refrigeration systems that use chlorofluorocarbons as the heat transfer fluid in a refrigeration cycle, provided the refrigerant is reclaimed for further use;

n. non-terneplated used oil filters that are not mixed with wastes listed in LAC 33:V.4901 if these oil filters have been gravity hot-drained using one of the following methods:

i. puncturing the filter anti-drain back valve or the filter dome end and hot-draining;

ENVIRONMENTAL QUALITY

- ii. hot-draining and crushing;
- iii. dismantling and hot-draining; or
- iv. any other equivalent hot-draining method that will remove used oil; and

o. used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products;

p. leachate or gas condensate collected from landfills where certain solid wastes have been disposed, provided that:

i. the solid wastes disposed would meet one or more of the listing descriptions for Hazardous Waste Codes K169, K170, K171, K172, K174, K175, K176, K177, K178, and K181 if these wastes had been generated after the effective date of the listing;

ii. the solid wastes described in Clause D.2.p.i of this Section were disposed prior to the effective date of the listing;

iii. the leachate or gas condensate do not exhibit any characteristic of hazardous waste nor are derived from any other listed hazardous waste;

iv. discharge of the leachate or gas condensate, including leachate or gas condensate transferred from the landfill to a POTW by truck, rail, or dedicated pipe, is subject to regulation under Sections 307(b) or 402 of the Clean Water Act; and

v. as of February 13, 2001, the leachate or gas condensate derived from K169-K172 is no longer exempt if it is stored or managed in a surface impoundment prior to discharge. After November 21, 2003, leachate or gas condensate derived from K176, K177, and K178 will no longer be exempt if it is stored or managed in a surface impoundment prior to discharge. After February 26, 2007, leachate or gas condensate derived from K181 will no longer be exempt if it is stored or managed in a surface impoundment prior to discharge. There is one exception: if the surface impoundment is used to temporarily store leachate or gas condensate in response to an emergency situation (e.g., shutdown of wastewater treatment system), provided the impoundment has a double liner, and provided the leachate or gas condensate is removed from the impoundment and continues to be managed in compliance with the conditions of this Clause after the emergency ends.

q. solvent-contaminated wipes, except for wipes that are hazardous waste due to the presence of trichloroethylene, that are sent for disposal are not hazardous wastes from the point of generation provided that:

i. the solvent-contaminated wipes, when accumulated, stored, and transported, are contained in nonleaking, closed containers that are labeled "Excluded Solvent-Contaminated Wipes." The containers shall be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated

wipes. When the container is full, or when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container shall be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

ii. the solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for disposal;

iii. at the point of being transported for disposal, the solvent-contaminated wipes shall contain *no free liquids* as defined in LAC 33:V.109;

iv. free liquids removed from the solvent-contaminated wipes or from the container holding the wipes shall be managed according to the applicable regulations found in LAC 33:V.Subpart 1;

v. generators shall maintain at their sites the following documentation:

(a). the name and address of the landfill or combustor that is receiving the solvent-contaminated wipes;

(b). documentation that the 180 day accumulation time limit in LAC 33:V.105.D.2.q.ii is being met; and

(c). a description of the process the generator is using to ensure solvent-contaminated wipes contain no free liquids at the point of being transported for disposal;

vi. the solvent-contaminated wipes are sent for disposal:

(a). to a municipal solid waste landfill regulated under LAC 33:VII.711, or to a hazardous waste landfill regulated under LAC 33:V.Chapter 25 or LAC 33:V.Chapter 43.Subchapter M; or

(b). to a municipal waste combustor or other combustion facility regulated under section 129 of the Clean Air Act or to a hazardous waste combustor, boiler, or industrial furnace regulated under LAC 33:V.Chapter 30.

3. Hazardous Wastes That Are Exempted from Certain Regulations. A hazardous waste which is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, or in a manufacturing process unit or an associated non-waste-treatment-manufacturing unit, is not subject to regulation under LAC 33:V.Subpart 1 or to the notification requirements of Subsection A of this Section, until it exits the unit in which it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than 90 days after the unit ceases to be operated for manufacturing, or for storage or transportation of product or raw materials.

4. Samples

a. Except as provided in Subparagraph D.4.b of this Section, a sample of solid waste or a sample of water, soil,

or air, which is collected for the sole purpose of testing to determine its characteristics or composition, is not subject to any requirements of LAC 33:V.Subpart 1 or to the notification requirements of Subsection A of this Section, when:

- i. the sample is being transported to a laboratory for the purpose of testing; or
- ii. the sample is being transported back to the sample collector after testing; or
- iii. the sample is being stored by the sample collector before transport to a laboratory for testing; or
- iv. the sample is being stored in a laboratory before testing; or
- v. the sample is being stored in a laboratory after testing but before it is returned to the sample collector; or
- vi. the sample is being stored temporarily in the laboratory after testing for a specific purpose (e.g., until conclusion of a court case or enforcement action where further testing of the sample may be necessary).

b. In order to qualify for the exemption in Clauses D.4.a.i-ii of this Section, a sample collector shipping samples to a laboratory and a laboratory returning samples to a sample collector must:

- i. comply with Louisiana Department of Public Safety (LDPS), U.S. Postal Service (USPS), or any other applicable shipping requirements; or
- ii. comply with the following requirements if the sample collector determines that LDPS, USPS, or other shipping requirements do not apply to the shipment of the sample:

(a). assure that the following information accompanies the sample:

- (i). the sample collector's name, mailing address, and telephone number;
- (ii). the laboratory's name, mailing address, and telephone number;
- (iii). the quantity of the sample;
- (iv). the date of shipment; and
- (v). a description of the sample; and

(b). package the sample so that it does not leak, spill, or vaporize from its packaging.

c. This exemption does not apply if the laboratory determines that the waste is hazardous but the laboratory is no longer meeting any of the conditions stated in Subparagraph D.4.a of this Section.

5. Treatability Study Samples

a. Except as provided in Subparagraph D.5.b of this Section, persons who generate or collect samples for the purpose of conducting *treatability studies* as defined in LAC 33:V.109 are not subject to any requirement of LAC

33:V.Chapters 10, 11, 13, 15, or 49, or to the notification requirements of Subsection A of this Section, nor are such samples included in the quantity determinations of LAC 33:V.1009 and 1013.C when:

- i. the sample is being collected and prepared for transportation by the generator or sample collector; or
- ii. the sample is being accumulated or stored by the generator or sample collector prior to transportation to a laboratory or testing facility; or
- iii. the sample is being transported to the laboratory or testing facility for the purpose of conducting a treatability study.

b. The exemption in Subparagraph D.5.a of this Section is applicable to samples of hazardous waste being collected and shipped for the purpose of conducting treatability studies, provided that:

i. the generator or sample collector uses (in "treatability studies") no more than 10,000 kg of media contaminated with nonacute hazardous waste, 1,000 kg of nonacute hazardous waste other than contaminated media, 1 kg of acute hazardous waste, or 2,500 kg of media contaminated with acute hazardous waste for each process being evaluated for each generated waste stream; and

ii. the mass of each sample shipment does not exceed 10,000 kg; the 10,000 kg quantity may be all media contaminated with nonacute hazardous waste, or may include 2,500 kg of media contaminated with acute hazardous waste, 1,000 kg of hazardous waste, and 1 kg of acute hazardous waste; and

iii. the sample is packaged so that it will not leak, spill, or vaporize from its packaging during shipment, and the requirements of Subclause D.5.b.iii.(a) or (b) of this Section are met:

(a). the transportation of each sample shipment complies with the shipping requirements of the LDPS and USPS, or any other applicable shipping requirements; or

(b). if the LDPS, the USPS, or other shipping requirements do not apply to the shipment of the sample, the following information must accompany the sample:

(i). the name, mailing address, and telephone number of the originator of the sample;

(ii). the name, address, and telephone number of the facility that will perform the treatability study;

(iii). the quantity of the sample;

(iv). the date of shipment; and

(v). a description of the sample, including its EPA Hazardous Waste Number;

iv. the sample is shipped to a laboratory or testing facility that is exempt under Paragraph D.6 of this Section or has an appropriate LAC 33:V.Subpart 1 permit or interim status;

ENVIRONMENTAL QUALITY

v. the generator or sample collector maintains the following records for a period ending three years after completion of the treatability study:

- (a). copies of the shipping documents;
- (b). a copy of the contract with the facility conducting the treatability study; and
- (c). documentation showing:
 - (i). the amount of waste shipped under this exemption;
 - (ii). the name, address, and EPA identification number of the laboratory or testing facility that received the waste;
 - (iii). the date the shipment was made;
 - (iv). whether or not unused samples and residues were returned to the generator; and

vi. the generator reports the information required under Subclause D.5.b.v.(c) of this Section in its biennial report.

c. The administrative authority may grant requests on a case-by-case basis for up to an additional two years for treatability studies involving bioremediation. The administrative authority may grant requests on a case-by-case basis for quantity limits in excess of those specified in Clauses D.5.b.i and ii and Subparagraph D.6.d of this Section for up to an additional 5,000 kg of media contaminated with nonacute hazardous waste, 500 kg of nonacute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, and 1 kg of acute hazardous waste:

i. in response to requests for authorization to ship, store, and conduct treatability studies on additional quantities in advance of commencing treatability studies. Factors to be considered in reviewing such requests include the nature of the technology, the type of process (e.g., batch versus continuous), the size of the unit undergoing testing (particularly in relation to scale-up considerations), the time/quantity of material required to reach steady state operating conditions, or test design considerations such as mass balance calculations;

ii. in response to requests for authorization to ship, store, and conduct treatability studies on additional quantities after initiation or completion of initial treatability studies when: there has been an equipment or mechanical failure during the conduct of a treatability study; there is a need to verify the results of a previously conducted treatability study; there is a need to study and analyze alternative techniques within a previously evaluated treatment process; or there is a need to do further evaluation of an ongoing treatability study to determine final specifications for treatment; and

iii. the additional quantities and time frames allowed in Clauses D.5.c.i and ii of this Section are subject to all the provisions in Subparagraph D.5.a and Clauses D.5.b.iii-vi of this Section. The generator or sample collector

must apply to the Office of Environmental Services and provide in writing the following information:

(a). the reason why the generator or sample collector requires additional time or quantity of sample for the treatability study evaluation and the additional time or quantity needed;

(b). documentation accounting for all samples of hazardous waste from the waste stream which have been sent for or undergone treatability studies including the date each previous sample from the waste stream was shipped, the quantity of each previous shipment, the laboratory or testing facility to which it was shipped, what treatability study processes were conducted on each sample shipped, and the available results of each treatability study;

(c). a description of the technical modifications or change in specifications that will be evaluated and the expected results;

(d). if such further study is being required due to equipment or mechanical failure, the applicant must include information regarding the reason for the failure or breakdown and also include what procedures or equipment improvements have been made to protect against further breakdowns; and

(e). such other information that the administrative authority considers necessary.

6. Samples Undergoing Treatability Studies at Laboratories and Testing Facilities. Samples undergoing treatability studies and the laboratory or testing facility conducting such treatability studies (to the extent such facilities are not otherwise subject to LAC 33:V.Subpart 1 requirements) are not subject to any requirement of LAC 33:V.Chapters 3, 5, 10, 11, 13, 15, 22, 41, and 43 or to the notification requirements of Subsection A of this Section, provided that the following conditions are met. A mobile treatment unit may qualify as a testing facility subject to Subparagraphs D.6.a-k of this Section. Where a group of mobile treatment units is located at the same site, the limitations specified in Subparagraphs D.6.a-k of this Section apply to the entire group of mobile treatment units collectively as if the group were one mobile treatment unit:

a. no less than 45 days before conducting treatability studies, the facility notifies the Office of Environmental Services in writing that it intends to conduct treatability studies under this Subsection;

b. the laboratory or testing facility conducting the treatability study has an EPA identification number;

c. no more than a total of 10,000 kg of “as received” media contaminated with nonacute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, or 250 kg of other “as received” hazardous waste is subjected to initiation of treatment in all treatability studies in any single day. “As received” waste refers to the waste as received in the shipment from the generator or sample collector;

d. the quantity of “as received” hazardous waste stored at the facility for the purpose of evaluation in treatability studies does not exceed 10,000 kg, the total of which can include 10,000 kg of media contaminated with nonacute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, 1,000 kg of nonacute hazardous wastes other than contaminated media, and 1 kg of acute hazardous waste. This quantity limitation does not include treatment materials (including nonhazardous solid waste) added to “as received” hazardous waste;

e. no more than 90 days have elapsed since the treatability study for the sample was completed, or no more than one year (two years for treatability studies involving bioremediation) has elapsed since the generator or sample collector shipped the sample to the laboratory or testing facility, whichever date first occurs. Up to 500 kg of treated material from a particular waste stream from treatability studies may be archived for future evaluation up to five years from the date of initial receipt. Quantities of materials archived are counted against the total storage limit for the facility;

f. the treatability study does not involve the placement of hazardous waste on the land or open burning of hazardous waste;

g. the facility maintains records for three years following completion of each study that show compliance with the treatment rate limits and the storage time and quantity limits. The following specific information must be included for each treatability study conducted:

i. the name, address, and EPA identification number of the generator or sample collector of each waste sample;

ii. the date shipment was received;

iii. the quantity of waste accepted;

iv. the quantity of “as received” waste in storage each day;

v. the date the treatment study was initiated and the amount of “as received” waste introduced to treatment each day;

vi. the date the treatability study was concluded; and

vii. the date any unused sample or residues generated from the treatability study were returned to the generator or sample collector or, if sent to a designated facility, the name of the facility and the EPA identification number;

h. the facility keeps, on-site, a copy of the treatability study contract and all shipping papers associated with the transport of treatability study samples to and from the facility for a period ending three years from the completion date of each treatability study;

i. the facility prepares and submits a report to the Office of Environmental Services, by March 15 of each year,

that includes the following information for the previous calendar year:

i. the name, address, and EPA identification number of the facility conducting the treatability studies;

ii. the types (by process) of treatability studies conducted;

iii. the names and addresses of persons for whom studies have been conducted (including their EPA identification numbers);

iv. the total quantity of waste in storage each day;

v. the quantity and types of waste subjected to treatability studies;

vi. when each treatability study was conducted; and

vii. the final disposition of residues and unused sample from each treatability study;

j. the facility determines whether any unused sample or residues generated by the treatability study are hazardous waste under LAC 33:V.109. *Hazardous Waste* and, if so, are subject to LAC 33:V.Chapters 3, 5, 10, 11, 13, 15, 22, 41, 43, and 49, unless the residue and unused samples are returned to the sample originator under the Paragraph D.5 of this Section exemption; and

k. the facility notifies the Office of Environmental Services by letter when the facility is no longer planning to conduct any treatability studies at the site.

7. The following wastes are exempt from regulation under this Subpart, except as specified in LAC 33:V.Chapter 38, and therefore, are not fully regulated as hazardous waste. The wastes listed in this Section are subject to regulation under LAC 33:V.Chapter 38:

a. batteries as described in LAC 33:V.3803;

b. pesticides as described in LAC 33:V.3805;

c. mercury-containing equipment as described in LAC 33:V.3807;

d. lamps as described in LAC 33:V.3809; and

e. antifreeze as described in LAC 33:V.3811.

8. PCB Wastes Regulated under Toxic Substance Control Act. PCB-containing dielectric fluid and electric equipment containing such fluid authorized for use and regulated by the United States Environmental Protection Agency under 40 CFR 761, and that are hazardous only because they fail the test for the toxicity characteristic (Hazardous Waste Numbers D018-D043 only) are exempt from regulation under LAC 33:V.Subpart 1.

9. Dredged Material That Is Not a Hazardous Waste. Dredged material that is subject to the requirements of a permit that has been issued under Section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) or Section 103 of the Marine Protection, Research, and Sanctuaries Act of

ENVIRONMENTAL QUALITY

1972 (33 U.S.C. 1413) is not a hazardous waste. For this Subsection, the following definitions apply:

- a. the term *dredged material* has the same meaning as defined in 40 CFR 232.2; and
- b. the term *permit* means:
 - i. a permit issued by the U.S. Army Corps of Engineers (Corps) or an approved state under Section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344);
 - ii. a permit issued by the Corps under Section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1413); or
 - iii. in the case of Corps civil works projects, the administrative equivalent of the permits referred to in Clauses D.9.b.i and ii of this Section, as provided for in Corps regulations (for example, see 33 CFR 336.1, 336.2, and 337.6).

10. Carbon Dioxide Stream Injected for Geologic Sequestration. A carbon dioxide stream that is captured and transported for purposes of injection into an underground injection well subject to the requirements for Class VI Underground Injection Control wells, including the requirements in 40 CFR Parts 144 and 146 of the Underground Injection Control Program of the Safe Drinking Water Act (or LAC 43:XVII.Subpart 6.Chapter 36 of the Louisiana Underground Injection Control Program for underground injection wells located in Louisiana), is not a hazardous waste, provided the following conditions in Subparagraphs a-d are met.

a. Transportation of the carbon dioxide stream shall be in compliance with U.S. Department of Transportation requirements, including the pipeline safety laws (49 U.S.C. 60101 et seq.) and regulations (49 CFR Parts 190-199) of the U.S. Department of Transportation, and pipeline safety regulations (LAC 33:V.Subpart 2.Chapter 301) adopted and administered by the Louisiana Department of Natural Resources, Office of Conservation, pursuant to a certification under 49 U.S.C. 60105, as applicable.

b. Injection of the carbon dioxide stream shall be in compliance with the applicable requirements for Class VI Underground Injection Control wells, including the applicable requirements in 40 CFR Parts 144 and 146 (or LAC 43:XVII.Subpart 6.Chapter 36 of the Louisiana Underground Injection Control Program for underground injection wells located in Louisiana).

c. No hazardous wastes shall be mixed with, or otherwise co-injected with, the carbon dioxide stream.

d. Certification statements are required from the generator of the carbon dioxide stream and the owner or operator of the well, as stated below in Clauses d.i–iii.

i. Any generator of a carbon dioxide stream, who claims that a carbon dioxide stream is excluded under Paragraph D.10 of this Section, shall have an *authorized representative*, as defined in LAC 33:V.109, sign a certification statement worded as follows:

I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under LAC 33:V.105.D.10 has not been mixed with hazardous wastes, and I have transported the carbon dioxide stream in compliance with (or have contracted with a pipeline operator or transporter to transport the carbon dioxide stream in compliance with) U.S. Department of Transportation requirements, including the pipeline safety laws (49 U.S.C. 60101 et seq.) and regulations (49 CFR Parts 190-199) of the U.S. Department of Transportation, and pipeline safety regulations (LAC 33:V.Subpart 2.Chapter 301) adopted and administered by the Louisiana Department of Natural Resources, Office of Conservation, pursuant to a certification under 49 U.S.C. 60105, as applicable, for injection into a well subject to the requirements for the Class VI Underground Injection Control Program of the Safe Drinking Water Act.

ii. Any Class VI Underground Injection Control well owner or operator, who claims that a carbon dioxide stream is excluded under Paragraph D.10 of this Section, shall have an *authorized representative*, as defined in LAC 33:V.109, sign a certification statement worded as follows:

I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under LAC 33:V.105.D.10 has not been mixed with, or otherwise co-injected with, hazardous waste at the Underground Injection Control (UIC) Class VI permitted facility, and that injection of the carbon dioxide stream is in compliance with the applicable requirements for UIC Class VI wells, including the applicable requirements in 40 CFR Parts 144 and 146 (or LAC 43:XVII.Subpart 6.Chapter 36 of the Louisiana Underground Injection Control Program for underground injection wells located in Louisiana).

iii. The signed certification statement shall be kept on-site for no less than three years, and shall be made available within 72 hours of a written request from a duly designated representative of the department. The signed certification statement shall be renewed every year that the exclusion is claimed, by having an *authorized representative*, as defined in LAC 33:V.109, annually prepare and sign a new copy of the certification statement within one year of the date of the previous statement. The signed certification statement shall also be readily accessible on the facility's publicly-available website, if such website exists, as a public notification with the title of "Carbon Dioxide Stream Certification" at the time the exclusion is claimed.

E. Judicial Review. Any person has the right to file a lawsuit to reverse any act or failure to act by the administrative authority pursuant to these regulations or the act in accordance with the provisions of the Administrative Procedure Act (R.S. 49:951 et seq.) or any other applicable provision of law.

F. Relationship to Interim Status Standards. A facility owner or operator who has fully complied with the requirements for interim status must comply with these regulations until final administrative disposition of his permit application is made. After the effective date of these regulations, the treatment, storage, or disposal of hazardous waste is prohibited except in accordance with a permit (standard or interim). The administrative authority may provide for the continued operation of an existing facility which meets the requirements of these regulations and certain conditions until final administrative disposition of the owner's or operator's permit application is made.

G. Imminent Hazard Action. Notwithstanding any other provisions of these regulations, enforcement actions may be brought pursuant to the Act.

H. General Procedures to Petition the Administrative Authority. The procedure that must be followed to petition for rulemaking can be found in LAC 33:I.Chapter 9 and other applicable chapters in this Subpart.

I. Petitions for Equivalent Testing or Analytical Methods

1. Any person seeking approval of an equivalent testing or analytical method may petition for a regulatory amendment under this Subsection and LAC 33:I.Chapter 9. To be successful, the petitioner must demonstrate to the satisfaction of the administrative authority that the proposed method is equal to or superior to the corresponding method prescribed in these regulations, in terms of its sensitivity, accuracy, and precision (i.e., reproducibility).

2. In addition to the information required by LAC 33:I.Chapter 9, each petition must include:

a. a full description of the proposed method, including all procedural steps and equipment used in the method;

b. a description of the types of wastes or waste matrices for which the proposed method may be used;

c. comparative results obtained from using the proposed method with those obtained from using the relevant or corresponding methods prescribed in these regulations;

d. an assessment of any factors which may interfere with or limit the use of the proposed method; and

e. a description of the quality control procedures necessary to ensure the sensitivity, accuracy, and precision of the proposed method.

3. After receiving a petition for an equivalent method, the administrative authority may request any additional information on the proposed method which it may reasonably require to evaluate the method.

J. Discharge Reporting Requirements

1. Emergency Conditions. For any unauthorized discharge of a Hazardous Waste, in contravention of the Louisiana Hazardous Waste Control Law (R.S. 30:2171 et seq.) or of the regulations, or of the terms and conditions of a permit or license issued thereunder, which results or threatens to result in an emergency condition (a condition which could reasonably be expected to endanger the health and safety of the public, cause significant adverse impact to the land, water or air environment, or cause severe damage to property), the discharger shall immediately, but in no case later than one hour, notify the Department of Public Safety 24-hour Louisiana Emergency Hazardous Materials Hotline at (225) 925-6595 (collect calls accepted 24 hours a day) and in accordance with other provisions of LAC 33:I.Chapter 39.

2. Non-Emergency Conditions. For any unauthorized discharge of a hazardous waste that does not cause an emergency condition, the discharger shall notify SPOC within 24 hours of learning of the discharge and in accordance with other provisions of LAC 33:I.Chapter 39.

K. Variances from Classification as a Solid Waste, Non-Waste Determinations and/or Variance to be Classified as a Boiler

1. Variance to be Classified as a Boiler. In accordance with the standards and criteria in LAC 33:V.109, *boiler* and the procedures in Paragraph K.2 of this Section, the administrative authority may determine on a case-by-case basis that certain enclosed devices using controlled flame combustion are boilers, even though they do not otherwise meet the definition of *boiler* contained in LAC 33:V.109 after considering the following criteria:

a. the extent to which the unit has provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases; and

b. the extent to which the combustion chamber and energy recovery equipment are of integral design; and

c. the efficiency of energy recovery, calculated in terms of the recovered energy compared with the thermal value of the fuel; and

d. the extent to which exported energy is utilized; and

e. the extent to which the device is in common and customary use as a "boiler" functioning primarily to produce steam, heated fluids, or heated gases; and

f. other factors, as appropriate.

2. Procedures for Variances from Classification as a Solid Waste, or Variances to be Classified as a Boiler, or for Non-waste Determinations. The administrative authority will use the following procedures in evaluating applications for variances from classification as a solid waste, applications to classify particular enclosed controlled flame combustion devices as boilers, or applications for non-waste determinations:

a. the applicant must apply to the administrative authority for the variance or non-waste determination. The application must address the relevant criteria contained in this Subsection or LAC 33:V.105.O as applicable;

b. the administrative authority will evaluate the application and issue a draft notice tentatively granting or denying the application. Notification of this tentative decision will be provided by newspaper advertisement and/or radio broadcast in the locality where the recycler is located. The administrative authority will accept comment on the tentative decision for 30 days and may also hold a public hearing upon request or at his discretion. The administrative authority will issue a final decision after receipt of comments and after a hearing (if any);

c. in the event of a change in circumstances that affect how a hazardous secondary material meets the

ENVIRONMENTAL QUALITY

relevant criteria contained in LAC 33:V.105.K or LAC 33:V.105.O upon which a variance or non-waste determination has been based, the applicant shall send a description of the change in circumstances to the administrative authority. The administrative authority may issue a determination that the hazardous secondary material continues to meet the relevant criteria of the variance or non-waste determination or may require the facility to re-apply for the variance or non-waste determination;

d. variances and non-waste determinations issued after June 20, 2017 shall be effective for a fixed term not to exceed 10 years. If a facility re-applies for a variance or non-waste determination within 180 days prior to the end of the term, the facility may continue to operate under an expired variance or non-waste determination until receiving a decision on their re-application from the administrative authority; and

e. facilities receiving a variance or non-waste determination issued after June 20, 2017 must provide notification as required by LAC 33:V.105.Q. Facilities that have already been granted a variance or non-waste determination prior to June 20, 2017 by the administrative authority under LAC 33:V.105.K or LAC 33:V.105.O shall continue to operate under the previously granted variance or determination, unless there is a change in the facility's process or materials.

3. Standards and criteria for non-waste determinations are listed below.

a. An applicant may apply to the administrative authority for a formal determination that a hazardous secondary material is not discarded and therefore not a solid waste. The determinations will be based on the criteria contained in Subparagraphs b or c of this Paragraph, as applicable. If an application is denied, the hazardous secondary material might still be eligible for a solid waste variance or exclusion (e.g., one of the solid waste variances under LAC 33:V.105.O.2.c).

b. The administrative authority may grant a non-waste determination for hazardous secondary material which is reclaimed in a continuous industrial process if the applicant demonstrates that the hazardous secondary material is a part of the production process and is not discarded. The determination will be based on whether the hazardous secondary material is legitimately recycled as specified in LAC 33:V.105.R and on the following criteria:

i. the extent that the management of the hazardous secondary material is part of the continuous primary production process and is not waste treatment;

ii. whether the capacity of the production process would use the hazardous secondary material in a reasonable time frame and ensure that the hazardous secondary material will not be abandoned (for example, based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);

iii. whether the hazardous constituents in the hazardous secondary material are reclaimed rather than

released to the air, water or land at significantly higher levels from either a statistical or from a health and environmental risk perspective than would otherwise be released by the production process; and

iv. other relevant factors that demonstrate the hazardous secondary material is not discarded, including why the hazardous secondary material cannot meet, or should not have to meet, the conditions of an exclusion under LAC 33:V.109, *solid waste* and/or LAC 33:V.105.D.1.

c. The administrative authority may grant a non-waste determination for hazardous secondary material which is indistinguishable in all relevant aspects from a product or intermediate if the applicant demonstrates that the hazardous secondary material is comparable to a product or intermediate and is not discarded. The determination will be based on whether the hazardous secondary material is legitimately recycled as specified in LAC 33:V.105.R and on the following criteria:

i. whether market participants treat the hazardous secondary material as a product or intermediate rather than a waste (e.g., based on the current positive value of the hazardous secondary material, stability of demand, or any contractual arrangements);

ii. whether the chemical and physical identity of the hazardous secondary material is comparable to commercial products or intermediates;

iii. whether the capacity of the market would use the hazardous secondary material in a reasonable time frame and ensure that the hazardous secondary material will not be abandoned (e.g., based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);

iv. whether the hazardous constituents in the hazardous secondary material are reclaimed rather than released to the air, water or land at significantly higher levels from either a statistical or from a health and environmental risk perspective than would otherwise be released by the production process; and

v. other relevant factors that demonstrate the hazardous secondary material is not discarded, including why the hazardous secondary material cannot meet, or should not have to meet, the conditions of an exclusion under LAC 33:V.109, *solid waste* and/or LAC 33:V.105.D.1.

L. Additional Regulation of Certain Hazardous Waste Recycling Activities on a Case-by-Case Basis

1. Additional Regulation of Certain Hazardous Waste Recycling Activities on a Case-by-Case Basis. The administrative authority may decide on a case-by-case basis that persons accumulating or storing the recyclable materials described in LAC 33:V.4143 should be regulated under LAC 33:V.4105.B and C. The basis for this decision is that the materials are being accumulated or stored in a manner that does not protect human health and the environment because the materials or their toxic constituents have not been adequately contained, or because the materials being

accumulated or stored together are incompatible. In making this decision, the administrative authority will consider the following factors:

- a. the types of materials accumulated or stored and the amounts accumulated or stored;
- b. the method of accumulation or storage;
- c. the length of time the materials have been accumulated or stored before being reclaimed;
- d. whether any contaminants are being released into the environment, or are likely to be so released; and
- e. other relevant factors.

2. Procedures for Case-by-Case Regulation of Hazardous Waste Recycling Activities. The administrative authority will use the following procedures when determining whether to regulate hazardous waste recycling activities described in LAC 33:V.4143 under the provisions of LAC 33:V.4105.B and C, rather than under the provisions of LAC 33:V.4143:

- a. if a generator is accumulating the waste, the administrative authority will issue a notice setting forth the factual basis for the decision and stating that the person must comply with the applicable requirements of LAC 33:V.Chapters 10 and 11. The notice will become final within 30 days, unless the person served requests a public hearing to challenge the decision. Upon receiving such a request, the administrative authority will hold a public hearing. The administrative authority will provide notice of the hearing to the public and allow public participation at the hearing. The administrative authority will issue a final order after the hearing stating whether or not compliance with LAC 33:V.Chapters 10 and 11 is required. The order becomes effective 30 days after service of the decision unless the administrative authority specifies a later date or unless review by the administrative authority is requested. The order may be appealed to the administrative authority by any person who participated in the public hearing. The administrative authority may choose to grant or to deny the appeal. Final department action occurs when a final order is issued and department review procedures are exhausted; and

- b. if the person is accumulating the recyclable material as a storage facility, the notice will state that the person must obtain a permit in accordance with all applicable provisions of these regulations. The owner or operator of the facility must apply for a permit within no less than 60 days and no more than 180 days of notice, as specified in the notice. If the owner or operator of the facility wishes to challenge the administrative authority's decision, he may do so in his permit application, in a public hearing held on the draft permit, or in comments filed on the draft permit or on the notice of intent to deny the permit. The fact sheet accompanying the permit will specify the reasons for the department's determination. The question of whether the administrative authority's decision was proper will remain open for consideration during the public comment period discussed under LAC 33:V.707 and in any subsequent hearing.

M. Petitions to Exclude a Waste Produced at a Particular Facility

1. Any person seeking to exclude a waste at a particular generating facility from the lists in LAC 33:V.4901 may petition for a regulatory amendment under this Subsection and LAC 33:I.Chapter 9. To be successful:

- a. the petitioner must demonstrate to the satisfaction of the administrative authority that the waste produced by a particular generating facility does not meet any of the criteria under which the waste was listed as a hazardous or an acutely hazardous waste;

- b. based on a complete application, the administrative authority must determine, where he has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste. A waste which is so excluded, however, still may be a hazardous waste by operation of LAC 33:V.4903; and

- c. facilities that have successfully petitioned are listed in LAC 33:V.4999.Appendix E.

2. If the waste is listed with codes "I", "C", "R", or "E", in LAC 33:V.4901:

- a. the petitioner must show that the waste does not exhibit the relevant characteristic for which the waste was listed as defined in LAC 33:V.4903 using any applicable methods prescribed therein. The petitioner also must show that the waste does not exhibit any of the other characteristics defined in LAC 33:V.4903 using any applicable methods prescribed therein;

- b. based on a complete application, the administrative authority must determine, where he has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste. A waste which is so excluded, however, still may be a hazardous waste by operation of LAC 33:V.4903.

3. If the waste is listed with Code "T" in LAC 33:V.4901:

- a. the petitioner must demonstrate that the waste:

- i. does not contain the constituent or constituents (as defined in LAC 33:V.4901.G, Table 6) that caused the administrative authority to list the waste; or

- ii. although containing one or more of the hazardous constituents (as defined in LAC 33:V.4901.G, Table 6) that caused the administrative authority to list the waste, does not meet the criterion of LAC 33:V.4907.A.3 when considering the factors used by the administrative authority in LAC 33:V.4907.A.3.a-k under which the waste was listed as hazardous; and

- b. based on a complete application, the administrative authority must determine, where he has a

ENVIRONMENTAL QUALITY

reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste; and

c. the petitioner must demonstrate that the waste does not exhibit any of the characteristics defined in LAC 33:V.4903 using any applicable methods prescribed therein;

d. a waste which is so excluded, however, still may be a hazardous waste by operation of LAC 33:V.4903.

4. If the waste is listed with the Code "H" in LAC 33:V.4901:

a. the petitioner must demonstrate that the waste does not meet the criterion of LAC 33:V.4907.A.2; and

b. based on a complete application, the administrative authority must determine, where he has a reasonable basis to believe that additional factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste; and

c. the petitioner must demonstrate that the waste does not exhibit any of the characteristics defined in LAC 33:V.4903 using any applicable methods prescribed therein;

d. a waste which is so excluded, however, still may be a hazardous waste by operation of LAC 33:V.4903.

5. The procedures in LAC 33:V.105.M and LAC 33:I.Chapter 9 may also be used to petition the administrative authority for a regulatory amendment to exclude from LAC 33:V.109.Hazardous Waste.2.c or 4, a waste which is described in LAC 33:V.109.Hazardous Waste.2.c or 4 and is either a waste listed in LAC 33:V.4901, or is derived from a waste listed in LAC 33:V.4901. This exclusion may only be issued for a particular generating, storage, treatment, or disposal facility. The petitioner must make the same demonstration as required by LAC 33:V.105.M.1. Where the waste is a mixture of solid waste and one or more listed hazardous wastes or is derived from one or more hazardous wastes, his demonstration must be made with respect to the waste mixture as a whole. Analyses must be conducted for not only those constituents for which the listed waste contained in the mixture was listed as hazardous, but also for factors (including additional constituents) that could cause the waste mixture to be a hazardous waste. A waste which is so excluded may still be a hazardous waste by LAC 33:V.4903.

6. Demonstration samples must consist of enough representative samples, but in no case less than four samples, taken over a period of time sufficient to represent the variability or the uniformity of the waste.

7. Each petition must include, in addition to the information required by LAC 33:I.Chapter 9:

a. the name and address of the independent laboratory facility, accredited by the state of Louisiana in accordance with LAC 33:I.Subpart 3, performing the sampling or tests of the waste;

b. the names and qualifications of the persons sampling and testing the waste;

c. the dates of sampling and testing;

d. the location of the generating facility;

e. a description of the manufacturing processes or other operations and feed materials producing the waste and an assessment of whether such processes, operations, or feed materials can or might produce a waste that is not covered by the demonstration;

f. a description of the waste and an estimate of the average and maximum monthly and annual quantities of waste covered by the demonstration;

g. pertinent data on and discussion of the factors delineated in the respective criterion for listing a hazardous waste, where the demonstration is based on the factors in LAC 33:V.4907.A.3;

h. a description of the methodologies and equipment used to obtain the representative samples;

i. a description of the sample handling and preparation techniques, including techniques used for extraction, containerization and preservation of the samples;

j. a description of the tests performed (including results):

i. during the first sampling round, these tests must include the Toxicity Characteristic Leaching Procedure (TCLP) analysis of all the groundwater monitoring constituents listed in LAC 33:V.3325, Table 4 and analysis of total volatiles, semi-volatiles, and metals;

ii. all four sampling rounds must include analyses of dioxins and furans;

iii. all lab data, including instrument tuning, method blanks, field blanks, trip blanks, calibration data, chromatograms, duplicates, matrix spikes, and matrix spike duplicates, must be included;

k. the names and model numbers of the instruments used in performing the tests;

l. a report indicating that the data was reviewed by an independent data validator before being submitted to the department; and

m. the following statement signed by the generator of the waste or his authorized representative:

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this demonstration and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

8. After receiving a petition for an exclusion, the administrative authority may request any additional information which he may reasonably require to evaluate the petition.

9. An exclusion will only apply to the waste generated at the individual facility covered by the demonstration and will not apply to waste from any other facility.

10. The administrative authority may exclude only part of the waste for which the demonstration is submitted where he has reason to believe that variability of the waste justifies a partial exclusion.

N. Petitions to Amend LAC 33:V.Chapter 38 to Include Additional Hazardous Wastes

1. Any person seeking to add a hazardous waste or a category of hazardous waste to the universal waste regulations of LAC 33:V.Chapter 38 may petition for a regulatory amendment under LAC 33:I.Chapter 9 and LAC 33:V.Chapter 38.

2. To be successful, the petitioner must demonstrate to the satisfaction of the administrative authority that regulation under the universal waste regulations of LAC 33:V.Chapter 38:

- a. is appropriate for the waste or category of waste;
- b. will improve management practices for the waste or category of waste; and
- c. will improve implementation of the hazardous waste program.

3. The petition must include the information required by LAC 33:I.Chapter 9. The petition should also address as many of the factors listed in LAC 33:V.3883 as are appropriate for the waste or category of waste addressed in the petition.

4. The administrative authority will grant or deny a petition using the factors listed in LAC 33:V.3883. The decision will be based on the weight of evidence showing that regulation under LAC 33:V.3883 is appropriate for the waste or category of waste, will improve management practices for the waste or category of waste, and will improve implementation of the hazardous waste program.

5. The administrative authority may request additional information needed to evaluate the merits of the petition.

O. Variances from Classification as a Solid Waste

1. In accordance with the standards and criteria in Paragraph O.2 and the procedures in LAC 33:V.105.K.2 of this Section, the administrative authority may determine on a case-by-case basis that the following recycled materials are not solid waste(s):

a. materials that are accumulated speculatively without sufficient amounts being recycled, as defined in LAC 33:V.109;

b. materials that are reclaimed and then reused within the original production process in which they were generated;

c. materials that have been reclaimed, but must be reclaimed further before the materials are completely recovered.

d. hazardous secondary materials that are reclaimed in a continuous industrial process;

e. hazardous secondary materials that are indistinguishable in all relevant aspects from a product or intermediate; and

f. hazardous secondary materials that are transferred for reclamation under LAC 33:V.105.D.1.y and are managed at a verified reclamation facility or intermediate facility where the management of the hazardous secondary materials is not addressed under a RCRA part B permit or interim status standards.

2. Standards and Criteria for Variances from Classification as a Solid Waste

a. The administrative authority may grant requests for a variance from classifying as a solid waste those materials that are accumulated speculatively without sufficient amounts being recycled if the applicant demonstrates that sufficient amounts of the material will be recycled or transferred for recycling in the following year. If a variance is granted, it is valid only for the following year, but can be renewed, on an annual basis, by filing a new application. The administrative authority's decision will be based on the following criteria:

i. the manner in which the material is expected to be recycled, when the material is expected to be recycled, and whether this expected disposition is likely to occur (e.g., because of past practice, market factors, the nature of the material, or contractual arrangements for recycling);

ii. the reason that the applicant has accumulated the material for one or more years without recycling 75 percent of the volume accumulated at the beginning of the year;

iii. the quantity of material already accumulated and the quantity expected to be generated and accumulated before the material is recycled;

iv. the extent to which the material is handled to minimize loss; and

v. other related factors.

b. The administrative authority may grant requests for a variance from classifying as a solid waste those materials that are reclaimed and then reused as feedstock within the original primary production process in which the materials were generated if the reclamation operation is an essential part of the production process. This determination will be based on the following criteria:

ENVIRONMENTAL QUALITY

i. how economically viable the production process would be if it were to use virgin materials, rather than reclaimed materials;

ii. the extent to which the material is handled before reclamation to minimize loss;

iii. the time periods between generating the material and its reclamation and between reclamation and return to the original primary production process;

iv. the location of the reclamation operation in relation to the production process;

v. whether the reclaimed material is used for the purpose for which it was originally produced when it is returned to the original process, and whether it is returned to the process in substantially its original form;

vi. whether the person who generates the material also reclaims it; and

vii. other relevant factors.

c. The administrative authority may grant requests for a variance from classifying as a solid waste those hazardous secondary materials that have been partially reclaimed, but must be reclaimed further before recovery is completed, if the partial reclamation has produced a commodity-like material. A determination that a partially-reclaimed material for which the variance is sought is commodity-like will be based on whether the hazardous secondary material is legitimately recycled as specified in LAC 33:V.105.R and on whether all of the following decision criteria are satisfied:

i. whether the degree of partial reclamation the material has undergone is substantial as demonstrated by using a partial reclamation process other than the process that generated the hazardous waste;

ii. whether the partially-reclaimed material has sufficient economic value that it will be purchased for further reclamation;

iii. whether the partially-reclaimed material is a viable substitute for a product or intermediate produced from virgin or raw materials which is used in subsequent production steps;

iv. whether there is a market for the partially-reclaimed material as demonstrated by known customer(s) who are further reclaiming the material (e.g., records of sales and/or contracts and evidence of subsequent use, such as bills of lading); and

v. whether the partially-reclaimed material is handled to minimize loss.

d. The administrative authority may grant requests for a variance from classifying as a solid waste those hazardous secondary materials that are transferred for reclamation under LAC 33:V.105.D.1.y and are managed at a verified reclamation facility or intermediate facility where the management of the hazardous secondary materials is not addressed under a RCRA part B permit or interim status

standards. The administrative authority's decision will be based on the following criteria:

i. the reclamation facility or intermediate facility shall demonstrate that the reclamation process for the hazardous secondary materials is legitimate pursuant to LAC 33:V.105.R;

ii. the reclamation facility or intermediate facility shall satisfy the financial assurance as required under subpart H of 40 CFR part 261, July 2015, which is hereby incorporated by reference;

iii. the reclamation facility or intermediate facility shall not be subject to a formal enforcement action in the previous three years and not be classified as a significant non-complier under RCRA subtitle C, or must provide credible evidence that the facility will manage the hazardous secondary materials properly. Credible evidence may include a demonstration that the facility has taken remedial steps to address the violations and prevent future violations, or that the violations are not relevant to the proper management of the hazardous secondary materials;

iv. the intermediate or reclamation facility shall have the equipment and trained personnel needed to safely manage the hazardous secondary material and shall meet emergency preparedness and response requirements under 40 CFR part 261, subpart M, July 1, 2017, which is hereby incorporated by reference;

v. if residuals are generated from the reclamation of the excluded hazardous secondary materials, the reclamation facility shall have the permits required (if any) to manage the residuals, have a contract with an appropriately permitted facility to dispose of the residuals or present credible evidence that the residuals will be managed in a manner that is protective of human health and the environment; and

vi. the intermediate or reclamation facility must address the potential for risk to proximate populations from unpermitted releases of the hazardous secondary material to the environment (i.e., releases that are not covered by a permit, such as a permit to discharge to water or air), which may include, but are not limited to, potential releases through surface transport by precipitation runoff, releases to soil and groundwater, wind-blown dust, fugitive air emissions, and catastrophic unit failures), and must include consideration of potential cumulative risks from other nearby potential stressors.

P. Criteria for Hazardous Waste Being Managed Within an Area of Contamination. An area of contamination (AOC) is a discrete area of generally dispersed contamination, the designation of which has been approved by the administrative authority. Under certain conditions, environmental media impacted with hazardous waste may be moved within an AOC without triggering land disposal restrictions or minimum technology requirements. This approach encourages and expedites remedial actions where hazardous waste releases have occurred.

1. Any person who proposes to manage contaminated media within an AOC must submit the definition of the project's AOC to the Office of Environmental Services. Approval from the administrative authority concerning the extent of the AOC must occur prior to movement of contaminated media. In general the AOC should be consistent with the area impacted by the release.

2. Use of an AOC to manage hazardous waste may be appropriate where the additional flexibility of a corrective action management unit pursuant to LAC 33:V.Chapter 26 is not needed. Movement and consolidation of contaminated media, treating contaminated media in situ, or leaving contaminated media in place in a single area or engineered unit within an AOC will not trigger the hazardous waste land disposal restrictions or minimum technology requirements of LAC 33:V.Subpart 1.

Q. Notification Requirements for Hazardous Secondary Materials

1. Facilities managing hazardous secondary materials under variances or non-waste determinations granted under LAC 33:V.105.O or LAC 33:V.105.K (or the exclusions of LAC 33:V.105.D.1.x, LAC 33:V.105.D.1.y, or LAC 33:V.105.D.1.z), issued after June 20, 2017 must send a notification prior to operating under the regulatory provision and by March 1 of each even-numbered year thereafter to the administrative authority using hazardous waste activity Form HW-1 that includes the following information:

- a. the name, address, and EPA ID number (if applicable) of the facility;
- b. the name and telephone number of a contact person;
- c. the NAICS code of the facility;
- d. the regulation under which the hazardous secondary materials will be managed;
- e. when the facility began or expects to begin managing the hazardous secondary materials in accordance with the regulation;
- f. a list of hazardous secondary materials that will be managed according to the regulation (reported as the EPA hazardous waste numbers that would apply if the hazardous secondary materials were managed as hazardous wastes);
- g. for each hazardous secondary material, whether the hazardous secondary material, or any portion thereof, will be managed in a land-based unit;
- h. the quantity of each hazardous secondary material to be managed annually; and
- i. the certification (included in hazardous waste activity Form HW-1) signed and dated by an authorized representative of the facility.

2. If a facility managing hazardous secondary materials has submitted a notification, but then subsequently stops managing hazardous secondary materials in accordance with the regulation(s) listed above, the facility

must notify the administrative authority within 30 days using hazardous waste activity Form HW-1. For purposes of this Section, a facility has stopped managing hazardous secondary materials if the facility no longer generates, manages and/or reclaims hazardous secondary materials under the regulation(s) above and does not expect to manage any amount of hazardous secondary materials for at least one year.

R. Legitimate Recycling of Hazardous Secondary Materials

1. Recycling of hazardous secondary materials for the purpose of the exclusions or exemptions from the hazardous waste regulations must be legitimate. Hazardous secondary material that is not legitimately recycled is discarded material and is a solid waste. In determining if their recycling is legitimate, persons must address all the requirements of this Subsection.

2. Factor 1 requires that legitimate recycling shall involve a hazardous secondary material that provides a useful contribution to the recycling process or to a product or intermediate of the recycling process. The hazardous secondary material provides a useful contribution if it:

- a. contributes valuable ingredients to a product or intermediate; or
- b. replaces a catalyst or carrier in the recycling process; or
- c. is the source of a valuable constituent recovered in the recycling process; or
- d. is recovered or regenerated by the recycling process; or
- e. is used as an effective substitute for a commercial product.

3. Factor 2 requires that the recycling process shall produce a valuable product or intermediate. The product or intermediate is valuable if it is:

- a. sold to a third party; or
- b. used by the recycler or the generator as an effective substitute for a commercial product or as an ingredient or intermediate in an industrial process.

4. Factor 3 requires that the generator and the recycler must manage the hazardous secondary material as a valuable commodity when it is under their control. Where there is an analogous raw material, the hazardous secondary material shall be managed, at a minimum, in a manner consistent with the management of the raw material or in an equally protective manner. Where there is no analogous raw material, the hazardous secondary material must be contained. Hazardous secondary materials that are released to the environment and are not recovered immediately are discarded.

5. Factor 4 requires that the product of the recycling process must be comparable to a legitimate product or intermediate:

ENVIRONMENTAL QUALITY

a. where there is no analogous product, the product of the recycling process is comparable to a legitimate product or intermediate if:

i. the product of the recycling process is a commodity that meets widely recognized commodity standards and specifications (e.g., commodity specification grades for common metals, common acids, common chemicals, or refined petroleum products); or

ii. the hazardous secondary materials being recycled are returned to the original process or processes from which they were generated to be reused (e.g., closed loop recycling); or

b. where there is an analogous product or intermediate, the product of the recycling process is comparable to a legitimate product or intermediate if:

i. the product of the recycling process does not exhibit a hazardous characteristic as defined in LAC 33:V.4903 that analogous products do not exhibit; and

ii. the concentrations of any hazardous constituents found in LAC 33:V.3105, Table 1 that are in the product or intermediate are at levels that are comparable to or lower than those found in analogous products or at levels that meet widely-recognized commodity standards and specifications, in the case where the commodity standards and specifications include levels that specifically address those hazardous constituents; or

c. if the product of the recycling process has levels of hazardous constituents that are not comparable to or unable to be compared to a legitimate product or intermediate per Subparagraphs a or b of this Paragraph, the recycling still may be shown to be legitimate, if it meets the following specified requirements.

i. The person performing the recycling shall conduct the necessary assessment and prepare documentation showing why the recycling is, in fact, still legitimate.

ii. The recycling can be shown to be legitimate based on: lack of exposure from toxics in the product, or lack of the bioavailability of the toxics in the product, or other relevant considerations which show that the product made using recycled material does not contain levels of hazardous constituents that pose a significant human health or environmental risk; and the documentation must include a certification statement that the recycling is legitimate and must be maintained on-site for three years after the recycling operation has ceased.

iii. The person performing the recycling must notify the administrative authority of this activity using hazardous waste activity Form HW-1.

d. The product of the recycling process is comparable to a legitimate product or intermediate if the requirements of LAC 33:V.105.R.5.a, b, or c of this Section are met. Once the requirements of one of these Subparagraphs are met, there is no need to determine

whether the requirements of any other of these Subparagraphs are also met.

6. Pre-2008 exclusions and their relationship to the legitimacy factors are described in this Paragraph.

a. All four legitimacy factors of LAC 33:V.105.R apply to the pre-2008 exclusions.

b. Determination of legitimacy is a self-implementing process; documentation is not required for the pre-2008 exclusions, except when the recycling of the hazardous secondary material must be evaluated under LAC 33:V.105.R.5.c.

c. Pre-2008 exclusions are not subject to the notification requirements of LAC 33:V.105.Q unless the hazardous secondary material is unable to meet the technical requirements of LAC 33:V.105.R.5.a or b. Solvent wipes managed under the exclusion at LAC 33:V.105.D.1.w are not subject to notification unless the requirements of the exclusion are not met.

d. The option for a recycling facility to be verified under the exclusion of LAC 33:V.105.D.1.y applies to the recycling of those hazardous secondary materials that would otherwise be regulated as hazardous waste and does not apply to materials already excluded under one or more of the pre-2008 exclusions (except as provided in LAC 33:V.105.R.6.e).

e. If a hazardous secondary material is subject to material-specific or facility-specific management conditions in LAC 33:V.105.D.1 when reclaimed, such a material is not eligible for exclusion under LAC 33:V.105.D.1.x or y ("under control of generator" or "verified recycler" exclusions). The exclusions in LAC 33:V.105.D.1 that are subject to material-specific management conditions when reclaimed and are thus not eligible for exclusion under LAC 33:V.105.D.1.x or y are the following:

i. spent wood preserving solutions (LAC 33:V.105.D.1.i) if recycled on site; shredded circuit boards (LAC 33:V.105.D.1.n);

ii. mineral processing spent materials (LAC 33:V.105.D.1.p);

iii. spent caustic solutions from petroleum refining liquid treating processes (LAC 33:V.105.D.1.s);

iv. cathode ray tubes (LAC 33:V.105.D.1.v);

v. oil-bearing hazardous secondary materials that are generated at a petroleum refinery and recovered oil, (LAC 33:V.105.D.1.l) if reclaimed at a refinery and petrochemical recovered oil from an associated organic chemical manufacturing facility (LAC 33:V.105.D.1.r); and

vi. oil-bearing hazardous secondary materials that are generated at a petroleum refinery and recovered oil (LAC 33:V.105.D.1.l) that are reclaimed at a facility other than a refinery are eligible for exclusion under LAC 33:V.105.D.1.x or y.

7. General information pertaining to solid waste exclusions, materials contained in units, and pre-existing variances and non-waste determinations are described in this Paragraph.

a. The “contained” standard defined in LAC 33:V.109 does not require a specific type of management unit like a container (i.e., all materials are not required to be stored in containers). This is a performance-based standard. The specific technical requirements depend on the type of material that is being managed.

b. Materials subject to the pre-2008 exclusions do not have to be *contained*, as defined in LAC 33:V.109. However, hazardous secondary materials that have no analogous raw material, even if subject to one or more of the pre-2008 exclusions, shall be contained.

c. If there has been an accidental release from a unit used to manage secondary hazardous materials, it does not create a presumption that the material remaining in the unit is not *contained* as defined in LAC 33:V.109.

d. The new requirements for variances and waste determinations do not supersede any of the pre-2008 solid waste exclusions, or other prior solid waste determinations or variances, including determinations made in letters of interpretation and inspection reports. If a hazardous secondary material has been determined not to be a solid waste for whatever reason, such a determination remains in effect, unless there is a change in process or materials. Facilities that have already been granted a variance or non-waste determination by the department prior to June 20, 2017 shall continue to operate under the conditions of the previously granted variance or determination.

8. Closed-loop recycling, analytical testing requirements, and legitimate recycling under LAC 33:V.105.R.5 are described in this Paragraph.

a. Analytical testing is not generally required to make legitimacy determinations under LAC 33:V.105.R.5. A company may use its knowledge of the material it uses and of the recycling process to make its legitimacy determinations. As with any solid and hazardous waste determination, a person may use knowledge of the materials used, the hazardous secondary material, product, or intermediate he recycles and of the recycling process to make legitimate recycling determinations.

b. Recycling meets legitimacy factor 4 of LAC 33:V.105.R.5 with no analytical testing and/or with no further demonstration of meeting this legitimacy factor required under any one of the following circumstances:

i. the hazardous secondary materials are returned to the original process or processes from which they were generated, such as in concentrating metals in minerals processing;

ii. the recycled product meets widely-recognized commodity specifications and there is no analogous product made from raw materials (such as scrap metal being reclaimed into metal commodities). For specialty products

such as specialty batch chemicals or specialty metal alloys, customer specifications would be sufficient;

iii. the recycled product has an analogous product made from virgin materials, but meets widely-recognized commodity specifications which address the hazardous constituents (such as spent solvents being reclaimed into solvent products); or

iv. the person recycling has the necessary knowledge, such as knowledge about the incoming hazardous secondary material and the recycling process, to be able to demonstrate that the product of recycling does not exhibit a hazardous characteristic and contains hazardous constituents at levels comparable to or lower than those in products made from virgin materials.

c. If the hazardous secondary materials are being returned to the original production process, then there is no analogous product and legitimacy factor 4 of LAC 33:V.105.R.5 is met. The person conducting the recycling does not need to do any further analysis for the purpose of determining compliance with this factor. For example, recycling that takes place under the closed loop recycling exclusion is an example of manufacturing that consistently includes the hazardous secondary material being returned to the original process from which it was generated and that would therefore automatically meet legitimacy factor 4 of LAC 33:V.105.R.5. Materials re-used within an ongoing industrial process are neither disposed of nor abandoned. Another example includes primary metals production where hazardous secondary materials are returned to the production process to ensure that all the valuable metals are extracted from the ore. This would be another process that would meet legitimacy factor 4 of LAC 33:V.105.R.5 with no further analysis needed.

d. If a chemical product made from a hazardous secondary material has an analogous product made from raw materials and does not exhibit a hazardous characteristic that the analogous product does not exhibit, and the concentration of hazardous constituents are comparable to those in analogous products, the fourth legitimacy factor of LAC 33:V.105.R.5 is met. For example, weak acid by-products that are concentrated into stronger acids and undergo extensive QA/QC processes to assure the quality of the concentrated acids.

e. For the purposes of LAC 33:V.105.R.5 widely-recognized commodity standards and specifications include those standards and specifications that are used throughout an industry, and that are widely available to anyone producing the product e.g., in safety data sheets (SDSs), on-line vendor specifications, sales literature, customer specifications, ASTM standards, and others.

f. Valid comparisons for the purpose of LAC 33:V.105.R.5 include, but are not limited to:

i. the hazardous secondary material that is being recycled directly (i.e., without reclamation) as compared to the virgin raw material or ingredient that the hazardous secondary material is replacing;

ii. the hazardous secondary material after reclamation that is being recycled as compared to the virgin raw material or ingredient that the reclaimed hazardous secondary material is replacing;

iii. the product/intermediate that results from recycling the hazardous secondary material as compared to the product/intermediate that results from using the virgin raw material or ingredient that the hazardous secondary material is replacing; or

iv. the product/intermediate that results from recycling the hazardous secondary material as compared to a substitute product/intermediate that is made without the hazardous secondary material by a different company or by the same company at a different site or through a different process.

g. Closed-loop recycling is an example of a manufacturing process where the hazardous secondary material is returned to the original process from which it was generated. The reference in LAC 33:V.105.R.5 to hazardous secondary materials returned to the original process is not limited to closed-loop recycling, nor must the hazardous secondary material be returned to the same unit in which it was generated. For the purposes of LAC 33:V.105.R.5, a hazardous secondary material is returned to the original process if it is returned to the same production process or processes where it was generated; if it is returned to other production processes from which it was derived; if it is returned via closed-loop or open-loop; if it is returned from on-site or off-site; if it is returned from second, third, or later generation use of the hazardous secondary material, product, or intermediate; or if it is returned as part of the long-established recycling of such hazardous secondary material in connection with the manufacturing or use, both on-site and off-site, of a product or intermediate made with the hazardous secondary material. Production process or processes include those activities that tie directly into the manufacturing operation and those activities that are the primary operation at the establishment.

h. Recycling meets legitimacy factor 4 of LAC 33:V.105.R.5 if the hazardous secondary material is returned to the original production process to produce a product.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq., and in particular, 2186(A)(2).

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 11:1139 (December 1985), LR 12:319 (May 1986), LR 13:84 (February 1987), LR 13:433 (August 1987), LR 13:651 (November 1987), LR 14:790 (November 1988), LR 15:181 (March 1989), LR 16:47 (January 1990), LR 16:217, LR 16:220 (March 1990), LR 16:398 (May 1990), LR 16:614 (July 1990), LR 17:362, 368 (April 1991), LR 17:478 (May 1991), LR 17:883 (September 1991), LR 18:723 (July 1992), LR 18:1256 (November 1992), LR 18:1375 (December 1992), amended by the Office of the Secretary, LR 19:1022 (August 1993), amended by the Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 20:1000 (September 1994), LR 21:266 (March 1995), LR 21:944 (September 1995), LR 22:813, 831 (September 1996), amended by the Office of the Secretary, LR 23:298 (March 1997),

§106. Hazardous Waste Determination for Contaminated Media

A. Except as otherwise provided in this Section, environmental media that contain hazardous waste subject to regulation under LAC 33:V.4901 or LAC 33:V.4903, shall be managed as hazardous waste. An environmental medium (soil/sediment, surface water, or groundwater) no longer contains a hazardous waste when:

1. the concentration of the hazardous constituent that serves as the basis for the waste being listed as hazardous (as defined in LAC 33:V.109 or as determined by the department on a case-by-case basis, e.g., creosote) remaining in the medium meets the appropriate standards described in this Section; and

2. the medium no longer exhibits any of the characteristics of hazardous waste identified in LAC 33:V.4903. Land disposal treatment standards (LAC 33:V.2299) shall continue to apply to contaminated environmental media that are treated and then determined to no longer contain hazardous waste. Contaminated environmental media determined not to contain any hazardous waste prior to treatment are not subject to any RCRA Subtitle C requirement, including the standards in LAC 33:V.2299.

B. Nonhazardous Environmental Medium (NHEM) Determination

1. Upon written request, the department may make a site-specific determination that an environmental medium contaminated with a listed hazardous waste at a concentration of the hazardous constituent at or below the level described in this Section no longer contains hazardous waste. Such a determination shall be known as a NHEM determination. A site-specific NHEM determination may be granted by the department contingent upon management of

the environmental medium in accordance with any institutional control or other requirement described in the letter granting the request.

2. When a NHEM determination would be useful to expedite site remediation, a written request and payment of the fee in accordance with LAC 33:V.5147 may be submitted to the Office of Environmental Services. The request must demonstrate application of the process described in Paragraphs B.3-4 of this Section and that land disposal treatment standards are met when applicable.

3. A NHEM determination does not authorize the placement of contaminated media in, or establish remedial standards for, a particular area. Approval for placement of the contaminated medium in a specific area must be obtained from the Office of Environmental Services, unless it is otherwise allowed by regulation. Remedial standards for areas of contamination shall be established in accordance with the Risk Evaluation/Corrective Action Program (RECAP) as incorporated by reference in LAC 33:I.1307.

4. The identification, development, and application of the standards for media to be determined to no longer contain hazardous waste shall comply with the following process.

a. Determine the area of investigation (AOI). The AOI is a zone contiguous to and including impacted media, defined vertically and horizontally by the presence of one or more constituents in concentrations exceeding a limiting standard.

b. Identify the area of investigation concentration (AOIC). The AOIC is to be identified by the maximum detected concentration of the constituent of concern (COC) in the AOI or the upper bound estimate (e.g. upper confidence limit) of the arithmetic mean concentration of the COC.

NOTE: The department recommends that the upper bound estimate of the arithmetic mean concentration be identified as the concentration recommended by the *ProUCL* program, a software program available from EPA's Technical Support Center for Monitoring and Site Characterization (www.epa.gov/nerlesd1/tsc/form.htm).

c. Determine the soil standard (Soil_{NHEM}). The soil standards are presented in Table 1 of this Section. For a constituent not included in Table 1, the applicant shall calculate a value using the appropriate equation and input values from LAC 33:V.199.Appendix A. Compare the soil standard to the AOIC. If the AOIC detected for a COC does not exceed the soil standard, then a NHEM determination may be made.

d. Identify the groundwater exposure concentration (EC). The EC shall be identified as the maximum concentration of COC detected in the groundwater AOI.

e. Determine the groundwater standard (GW_{NHEM}). The groundwater standards are presented in Table 1 of this Section. If a detected groundwater constituent cannot be found in Table 1, then the maximum contaminant level (MCL), contained in the National Primary Drinking Water

regulations (40 CFR Part 141), multiplied by 100 is to be used as the groundwater standard. If an MCL is not available then a groundwater standard is to be calculated in accordance with appropriate equations and input values from LAC 33:V.199.Appendix A. Compare the groundwater EC to the groundwater standard. If quantitative values for constituents are less than the limiting standards, the groundwater may qualify for a NHEM determination.

Table 1. Soil and Groundwater Standards			
Compound	CAS #	Soil _{NHEM} (mg/kg)	GW _{NHEM} (mg/l)

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq. and, in particular, 2186(A)(2).

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs Division, LR 33:450 (March 2007), amended LR 33:2098 (October 2007).

§107. Enforcement

A. Failure to comply with any of the provisions of these regulations or of the terms and conditions of any permit granted or order issued hereunder constitutes a violation of the Act.

B. Investigations into Reports of Violations

1. Upon the receipt of any information concerning a violation of the requirements of the Act or these regulations, the administrative authority shall cause an investigation to be conducted into the alleged violation within seven days.

2. All facts concerning any violation developed in such an investigation shall be fully documented in a report of investigation and presented to the administrative authority within seven days of completion of the investigation. A copy of this report shall be furnished to the Louisiana Department of Justice for use in any civil or criminal proceedings under the Act.

C. Upon receipt of any report of investigation which substantiates a violation of the requirements of the Act or these regulations, the administrative authority shall commence enforcement proceedings under the Act.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§109. Definitions

For all purposes of these rules and regulations, the terms defined in this Chapter shall have the following meanings, unless the context of use clearly indicates otherwise.

Aboveground Tank—a device meeting the definition of *tank* in this Section and that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) is able to be visually inspected.

Accumulated Speculatively—a material is accumulated speculatively if it is accumulated before being recycled. A material is not accumulated speculatively, however, if the person accumulating it can show that the material is potentially recyclable and has a feasible means of being recycled; and that, during the calendar year (commencing on January 1), the amount of material that is recycled, or transferred to a different site for recycling, equals at least 75 percent by weight or volume of the amount of that material accumulated at the beginning of the period. Materials must be placed in a storage unit with a label indicating the first date that the material began to be accumulated. If placing a label on the storage unit is not practicable, (such as where material is stored in batch tanks, continuous-flow tanks, waste piles, or containment buildings), the accumulation period must be documented through an inventory log or other appropriate method. In calculating the percentage of turnover, the 75 percent requirement is to be applied to each material of the same type (e.g., slags from a single smelting process) that is recycled in the same way (i.e., from which the same material is recovered or that is used in the same way). Materials accumulating in units that would be exempt from regulation under LAC 33:V.105.D.3 are not to be included in making the calculation. (Materials that are already defined as solid wastes also are not to be included in making the calculation.) Materials are no longer in this category once they are removed from accumulation for recycling, however. For example, the following materials are either excluded from the definition of solid waste, or are solid wastes, and therefore are not included in any speculative accumulation calculations:

1. scrap metal that is excluded under LAC 33:V.105.D.1.m;
2. commercial chemical products that are not used in a manner constituting disposal (unless they are applied to the land and that is their ordinary use), and are not burned for energy recovery (unless they are themselves fuels) (LAC 33:V.109, solid waste, 3);
3. industrial ethyl alcohol that is reclaimed (LAC 33:V.4105.A.1.a);
4. fuels produced from the refining of oil-bearing hazardous waste (LAC 33:V.4105.A.1.c);
5. wastes from growing and harvesting of agricultural crops (LAC 33:V.105.D.2.b.i);

6. wastes from raising of animals, including animal manures (LAC 33:V.105.D.2.b.ii);

7. mining overburden returned to the mine site (LAC 33:V.105.D.2.c);

8. used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment (LAC 33:V.105.D.2.m);

9. used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products (LAC 33:V.105.D.2.o);

10. materials excluded under closed loop recycling with reclamation (LAC 33:V.105.D.1.h) or closed loop recycling without reclamation (LAC 33:V.109, solid waste, 5.a.iii);

11. solvent wipes excluded under LAC 33:V.105.D.1.w.

Act—the Louisiana Environmental Quality Act, R.S. 30:2001, et seq.

Active Life—of a facility means the period from the initial receipt of hazardous waste at the facility until the administrative authority receives certification of final closure.

Active Portion—that portion of a facility where treatment, storage, or disposal operations are being or have been conducted after August 1, 1979, and which is not a closed portion. (See also *closed portion* and *inactive portion*.)

Active Range—a military range that is currently in service and is being regularly used for range activities.

Acute Hazardous Waste—hazardous wastes that meet the listing criteria in LAC 33:4907.A.2 and therefore are either listed in LAC 33:4901.B with the assigned hazard code of (H) or are listed in LAC 33:4901.E.

Administrative Authority—the Secretary of the Department of Environmental Quality or his designee or the appropriate assistant secretary or his designee.

Analogous Product—a product made of raw materials or made by competing companies with similar specifications for which a hazardous secondary material substitutes.

Analogous Raw Material—a material for which a hazardous secondary material substitutes and which serves the same function and has similar physical and chemical properties as the hazardous secondary material.

Ancillary Equipment—any device including, but not limited to, such devices as piping, fittings, flanges, valves and pumps that is used to distribute, meter, or control the flow of hazardous waste from its point of generation to a storage or treatment tank(s), between hazardous waste storage and treatment tanks to a point of disposal onsite, or to a point of shipment for disposal off-site.

Aquifer—a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of groundwater to wells or springs.

ENVIRONMENTAL QUALITY

Assets—all existing and all probable future economic benefits obtained or controlled by a particular entity.

Authorized Representative—the person responsible for the overall operation of a facility or an operational unit (i.e., part of a facility), e.g., the plant manager, superintendent, or person of equivalent responsibility.

Barrier—a physical separation by natural or constructed means which prevents or restricts the penetration to adjacent areas of the harmful effects of hazardous wastes.

Basin—any uncovered area constructed to retain hazardous wastes.

Batch Tank—a device meeting the definition of *tank* in this Section that receives a batch (or batches) of hazardous waste on a one-time or intermittent basis.

Boiler—an enclosed device using controlled flame combustion and having the following characteristics:

1. the unit must have physical provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases and:

- a. the unit's combustion chamber and primary energy recovery section(s) must be of integral design. To be of integral design, the combustion chamber and the primary energy recovery section(s) (such as waterwalls and superheaters) must be physically formed into one manufactured or assembled unit. A unit in which the combustion chamber and the primary energy recovery section(s) are joined only by ducts or connections carrying flue gas is not integrally designed; however, secondary energy recovery equipment (such as economizers or air preheaters) need not be physically formed into the same unit as the combustion chamber and the primary energy recovery section. The following units are not precluded from being boilers solely because they are not of integral design: process heaters (units that transfer energy directly to a process stream), and fluidized bed combustion units; and

- b. while in operation, the unit must maintain a thermal energy recovery efficiency of at least 60 percent, calculated in terms of the recovered energy compared with the thermal value of the fuel; and

- c. the unit must export and utilize at least 75 percent of the recovered energy, calculated on an annual basis. In this calculation, no credit shall be given for recovered heat used internally in the same unit. (Examples of internal use are the preheating of fuel or combustion air, and the driving of induced or forced draft fans or feedwater pumps); or

2. the unit is one which the administrative authority has determined, on a case-by-case basis, to be a boiler, after considering the standards in LAC 33:V.105.K.

By-Product—a material that is not one of the primary products of a production process and is not solely or separately produced by the production process. Examples are process residues such as slags or distillation column bottoms. The term does not include a coproduct that is

produced for the general public's use and is ordinarily used in the form it is produced by the process.

Carbon Dioxide Stream—carbon dioxide that has been captured from an emission source (e.g., power plant), plus incidental associated substances derived from the source materials and the capture process, and any substances added to the stream to enable or improve the injection process.

Carbon Regeneration Unit—any enclosed thermal treatment device used to regenerate spent activated carbon.

Caretaker Management—management by the administrative authority, through an appointed manager to operate a hazardous waste facility during the time the permit of the facility is revoked.

Category I Wastes—chemicals and process streams whose hazardous nature has been prescribed by prior determination and which are presented in LAC 33:V.Chapter 49, i.e., from non-specific sources, specific sources, acute hazardous wastes and toxic wastes.

Category II Wastes—wastes possessing any of the characteristics of the hazard classes listed in LAC 33:V.Chapter 49. Hazard classes of concern for these wastes are ignitability, corrosivity, reactivity and toxicity. Analytical protocols are detailed in LAC 33:V.Chapter 49.

Cathode Ray Tube or CRT—a vacuum tube, composed primarily of glass, that is the visual or video display component of an electronic device. A *used, intact CRT* means a CRT whose vacuum has not been released. A *used, broken CRT* means a CRT that has had the glass removed from its housing or casing and whose vacuum has been released.

Central Accumulation Area—any on-site hazardous waste accumulation area with hazardous waste accumulating in units subject to either LAC 33:V.1013 (for small quantity generators) or LAC 33:V.1015 (for large quantity generators).

Chemical Agents and Munitions—defined in 50 U.S.C. Section 1521(j)(1).

Closed Portion—that portion of a facility which an owner or operator has closed in accordance with the approved facility closure plan and all applicable closure requirements. (See also *active portion* and *inactive portion*.)

Closure—the act of securing and rendering harmless a site which has been used to treat, store or dispose of a hazardous waste so that it will pose no significant threat to human health or the environment.

Closure Plan—the plan for closure prepared in accordance with the requirements of LAC 33:V.Chapter 35.

Commercial Boiler—an industrial boiler that recycles hazardous waste for a fee by means of combustion.

Commercial Facility—a hazardous waste treatment, storage or disposal facility which receives, treats, stores or disposes of waste for a fee or other consideration.

Commercial Industrial Furnace—an industrial furnace that recycles hazardous waste for a fee by means of combustion.

Competent Authorities—the regulatory authorities of concerned countries having jurisdiction over *transboundary movements* of waste destined for *recovery operations*.

Compliance Schedule—remedial measures including an enforceable sequence of events, operations, or milestone actions leading to compliance with these rules and regulations and the Act.

Component—either the tank or ancillary equipment of a tank system.

Component—any constituent part of a unit or any group of constituent parts of a unit which are assembled to perform a specific function (e.g., a pump seal, pump, kiln liner, kiln thermocouple).

Concerned Countries—the exporting and importing Organization for Economic Cooperation and Development (OECD) member countries and any OECD member countries of transit.

Confined Aquifer—an aquifer bounded above and below by aquicludes or by beds of distinctly lower permeability than that of the aquifer itself; an aquifer containing confined groundwater.

Consignee—the ultimate treatment, storage, or disposal facility in a receiving country to which the hazardous waste will be sent.

Constituent or Hazardous Waste Constituent—any substance specified as a hazardous waste in any list in these rules and regulations.

Contained—held in a unit (including *land-based unit* as defined LAC 33:V.109) that meets the following criteria:

1. the unit is in good condition, with no leaks or other continuing or intermittent unpermitted releases of the hazardous secondary materials to the environment, and is designed, as appropriate for the hazardous secondary materials, to prevent releases of hazardous secondary materials to the environment. Unpermitted releases are releases that are not covered by a permit (such as a permit to discharge to water or air) and may include, but are not limited to, releases through surface transport by precipitation runoff, releases to soil and groundwater, wind-blown dust, fugitive air emissions, and catastrophic unit failures;

2. the unit is properly labeled or otherwise has a system (such as a log) to immediately identify the hazardous secondary materials in the unit;

3. the unit holds hazardous secondary materials that are compatible with other hazardous secondary materials placed in the unit and is compatible with the materials used to construct the unit and addresses any potential risks of fires or explosions;

4. hazardous secondary materials in units that meet the applicable requirements of LAC 33:V.Subpart 1 are presumptively contained.

Container—any portable device in which a material is stored, transported, treated, disposed of or otherwise handled.

Containment Building—a hazardous waste management unit that is used to store or treat hazardous waste under the provisions of LAC 33:V.1801 or 4701.

Contingency Plan—a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

Continuous-Flow Tank—a device meeting the definition of *tank* in this Section that receives hazardous waste on an ongoing, continuous basis.

Corrosion Expert—a person who, by reason of his knowledge of the physical sciences and the principles of engineering and mathematics, acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be certified as being qualified by the National Association of Corrosion Engineers (NACE) or be a registered professional engineer who has certification or licensing in the state of Louisiana that includes education and experience in corrosion control on buried or submerged metal piping systems and metal tanks.

Corrosive Waste—a waste subject to these regulations pursuant to provisions of LAC 33:V.4903.C which, because of such properties as acidity or alkalinity, would tend to weaken or erode a common construction material.

Country of Export—any designated *OECD* member country listed in LAC 33:V.1113.I.1.a from which a *transboundary movement of hazardous waste* is planned to be initiated, or is initiated.

Country of Import—any designated *OECD* member country listed in LAC 33:V.1113.I.1.a to which a *transboundary movement of hazardous waste* is planned, or takes place, for the purpose of submitting the waste to *recovery operations* therein.

Country of Transit—any designated *OECD* member country listed in LAC 33:V.1113.I.1.a and b other than the exporting or importing country across which a *transboundary movement of hazardous waste* is planned or takes place.

CRT Collector—a person who receives used, intact CRTs for recycling, repair, resale, or donation.

CRT Exporter—any person in the United States who initiates a transaction to send used CRTs outside the United States or its territories for recycling or reuse, or an intermediary in the United States arranging for such export.

ENVIRONMENTAL QUALITY

CRT Glass Manufacturer—an operation or part of an operation that uses a furnace to manufacture CRT glass.

CRT Processing—conducting any of the following activities:

1. receiving broken or intact CRTs;
2. intentionally breaking intact CRTs or further breaking or separating broken CRTs; or
3. sorting or otherwise managing glass removed from CRTs.

Current Assets—cash, other assets, or resources commonly identified as those which are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

Current Closure Cost Estimate—the most recent of the estimates prepared in accordance with LAC 33:V.3705.

Current Liabilities—obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities.

Current Plugging and Abandonment Cost Estimates—the most recent cost estimate for plugging and abandonment of disposal wells prepared for 40 CFR 144.62, Office of Conservation, or other substantially equivalent state program(s).

Current Post-Closure Cost Estimate—the most recent of the estimates prepared in accordance with LAC 33:V.3709.

Date of Issuance of the Hazardous Waste Permit—the date shown on the hazardous waste permit as the date of issue.

Department—Department of Natural Resources, or after February 1, 1984, Department of Environmental Quality, pursuant to Act 97 of 1983.

Designated Facility—

1. A designated facility is a hazardous waste treatment, storage, or disposal facility that:

- a. has received a permit (or interim status) in accordance with the requirements of LAC 33:V.Chapters 1, 3, 5, 7, 27, 31, and 43;
- b. has received a permit (or interim status) from a state authorized in accordance with 40 CFR 271; or
- c. is regulated under the applicable Sections of 40 CFR 266, LAC 33:V.Chapter 41, or equivalent regulation of other states; and
- d. has been designated on the manifest by the generator in accordance with LAC 33:V.105.H.

2. Designated facility also means a generator site designated on the manifest to receive its waste as a return shipment from a facility that has rejected the waste in accordance with LAC 33:V.1516.C.

3. If a waste is destined for a facility in an authorized state that has not yet obtained authorization to regulate that particular waste as hazardous, then the designated facility must be a facility allowed by the receiving state to accept such waste.

Dike—an embankment, levee, or ridge of either natural or man-made materials used to prevent the movement of liquids, sludges, solids or other materials.

Dioxins and Furans (D/F)—tetra, penta, hexa, hepta, and octa-chlorinated dibenzo dioxins and furans.

Discarded—a material is discarded if it is abandoned (and not used, re-used, reclaimed, or recycled) by being disposed of; or burned or incinerated, except where the material is being burned as a fuel for the purpose of recovering usable energy; or physically, chemically, or biologically treated (other than burned or incinerated) in lieu of or prior to being disposed of.

Discharge or Hazardous Waste Discharge—the placing, spilling, releasing, percolating, draining, seeping, disposing, bypassing, or other escaping of pollutants into the air, waters, subsurface water, or the ground as the result of a prior act or omission; or the placing of pollutants into natural or man-made pits or drums, barrels or similar containers under conditions and circumstances that leaking, seeping, draining or escaping of the pollutants can be reasonably anticipated.

Displacement—the relative movement of any two sides of a fault measured in any direction.

Disposal—the discharge, deposit, injection, dumping, spilling, leaking or placing of any hazardous waste into or on any land or water so that such hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including groundwaters of the state.

Disposal Facility—a facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water and at which the waste will remain after closure. The term disposal facility does not include a corrective action management unit into which remediation wastes are placed.

Disposer—any person or agency who operates a treatment, storage and/or disposal facility.

Domestic Sewage—untreated sanitary wastes that pass through a sewer system.

Drip Pad—an engineered structure consisting of a curbed, free-draining base, constructed of non-earthen materials and designed to convey preservative kick-back or drippage from treated wood, precipitation, and surface water run-on to an associated collection system at wood preserving plants.

Electronic Manifest (or e-Manifest)—the electronic format of the hazardous waste manifest that is obtained from EPA's national e-manifest system and transmitted electronically to

the system, and that is the legal equivalent of EPA Forms 8700-22 (manifest) and 8700-22A (continuation sheet).

Electronic Manifest System (or *e-Manifest System*)—EPA’s national information technology system through which the electronic manifest may be obtained, completed, transmitted, and distributed to users of the electronic manifest and to regulatory agencies.

Elementary Neutralization Unit—a device that:

1. is used for neutralizing wastes that are hazardous only because they exhibit the corrosivity characteristic defined in LAC 33:V.4903.C, or they are listed in LAC 33:V.4901 only for this reason; and

2. meets the definition of tank, tank system, container, transport vehicle, or vessel in LAC 33:V.109.

Emergency Action—a situation in which there is no feasible alternative, other than the extraordinary actions authorized, to avoid loss of life, serious injury to human health or the environment, or severe damage to property.

Empty Container—

1.a. any hazardous waste remaining in either of the following is not subject to regulation under LAC 33:V.Chapters 1-38, 41, 43, 49, or to the notification requirements of LAC 33:V.105.A:

- i. an empty container; or
- ii. an inner liner removed from an empty container, as defined in Paragraph 2 of this definition;

b. any hazardous waste in either of the following is subject to regulation under LAC 33:V.Chapters 1-38, 41, 43, 49, or to the notification requirements of LAC 33:V.105.A:

- i. a container that is not empty; or
- ii. an inner liner removed from a container that is not empty, as defined in Paragraph 2 of this definition;

2.a. a container or an inner liner removed from a container that has held any hazardous waste, except a waste that is a compressed gas or that is identified as an acutely hazardous waste listed in LAC 33:V.4901.B or E, is empty if:

i.(a). all wastes have been removed that can be removed using the practices commonly employed to remove materials from that type of container, e.g., pouring, pumping, and aspirating; and

(b). no more than 2.5 centimeters (1 inch) of residue remain on the bottom of the container or inner liner; or

ii.(a). no more than 3 percent by weight of the total capacity of the container remains in the container or inner liner if the container is less than or equal to 119 gallons in size; or

(b). no more than 0.3 percent by weight of the total capacity of the container remains in the container or inner liner if the container is greater than 119 gallons in size;

b. a container that has held a hazardous waste that is a compressed gas is empty when the pressure in the container approaches atmospheric;

c. a container or an inner liner removed from a container that has held an acutely hazardous waste listed in LAC 33:V.4901.B or E, is empty if:

i. the container or inner liner has been triple rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;

ii. the container or inner liner has been cleaned by another method that has been shown in the scientific literature, or by tests conducted by the generator, to achieve equivalent removal; or

iii. in the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container has been removed.

EPA Acknowledgement of Consent—the cable sent to the EPA from the United States Embassy in a receiving country that acknowledges the written consent of the receiving country to accept the hazardous waste and describes the terms and conditions of the receiving country’s consent to the shipment.

EPA Hazardous Waste Number—the number assigned by EPA to each hazardous waste (see LAC 33:V.Chapter 49).

EPA Identification Number—the number assigned by EPA to each generator, transporter, and treatment, storage, or disposal facility. An EPA identification number is site-specific. If a facility moves to another location, the owner/operator must obtain a new EPA identification number for the facility.

Equivalent Method—any testing or analytical method approved by the administrative authority.

Excluded Scrap Metal—processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal.

Existing Facilities—hazardous waste facilities in operation or for which construction commenced on or before August 1, 1979. A facility has commenced construction if the owner or operator has obtained the federal, state and local approvals or permits necessary to begin physical construction; and either: a continuous on-site, physical construction program has begun; or the owner or operator has entered into contractual obligations (which cannot be canceled or modified without substantial loss) for physical construction of the facility to be completed within a reasonable time.

Existing Hazardous Waste Management (HWM) Facility or *Existing Facility*—a facility which was in operation or for which construction commenced on or before November 19, 1980. A facility has commenced construction if:

ENVIRONMENTAL QUALITY

1. the owner or operator has obtained the federal, state and local approvals or permits necessary to begin physical construction, and either:

a. a continuous on-site, physical construction program has begun; or

b. the owner or operator has entered into contractual obligations—which cannot be canceled or modified without substantial loss—for physical construction of the facility to be completed within a reasonable time.

Existing Portion—that land surface area of an existing waste management unit, included in the original Part I permit application, on which wastes have been placed prior to the issuance of a permit.

Existing Tank System or Existing Component—a tank system or component that is used for the storage or treatment of hazardous waste and that is in operation, or for which installation has commenced on or prior to July 14, 1986. Installation will be considered to have commenced if the owner or operator has obtained all federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system and if either:

1. a continuous on-site physical construction or installation program has begun; or

2. the owner or operator has entered into contractual obligations—which cannot be canceled or modified without substantial loss—for physical construction of the site or installation of the tank system to be completed within a reasonable time.

Explosives or Munitions Emergency—a situation involving the suspected or detected presence of unexploded ordnance (UXO), damaged or deteriorated explosives or munitions, an improvised explosive device (IED), other potentially explosive materials or devices, or other potentially harmful military chemical munitions or devices, that creates an actual or potential imminent threat to human health, including safety, or the environment, including property, as determined by an explosives or munitions emergency response specialist. Such situations may require immediate and expeditious action by an explosives or munitions emergency response specialist to control, mitigate, or eliminate the threat.

Explosives or Munitions Emergency Response—all immediate response activities by an explosives and munitions emergency response specialist to control, mitigate, or eliminate the actual or potential threat encountered during an explosives or munitions emergency. An explosives or munitions emergency response may include in-place render-safe procedures, treatment or destruction of the explosives or munitions, and/or transporting those items to another location to be rendered safe, treated, or destroyed. Any reasonable delay in the completion of an explosives or munitions emergency response caused by a necessary, unforeseen, or uncontrollable circumstance will not terminate the explosives or munitions emergency.

Explosives and munitions emergency responses can occur on either public or private lands and are not limited to responses at RCRA facilities.

Explosives or Munitions Emergency Response Specialist—an individual trained in chemical or conventional munitions or explosives handling, transportation, render-safe procedures, or destruction techniques. Explosives or munitions emergency response specialists include Department of Defense (DOD) emergency explosive ordnance disposal (EOD), technical escort unit (TEU), DOD-certified civilian or contractor personnel, and other federal, state, or local government or civilian personnel similarly trained in explosives or munitions emergency responses.

Exporter—the person under the jurisdiction of the *country of export* who has, or will have at the time of the *transboundary movement*, possession or other forms of legal control of the waste and who proposes *transboundary movement* of the *hazardous waste* for the ultimate purpose of submitting it to *recovery operations*. When the United States (U.S.) is the *country of export*, *exporter* is interpreted to mean a person domiciled in the United States.

Exporting Country—any designated *OECD* member country listed in LAC 33:V.1113.I.1.a from which a *transboundary movement* of waste is planned or has commenced.

Facilities—a group of units (each an individual facility) on a site operated to treat, store, and/or dispose of hazardous waste.

Facility—

1. all contiguous land and structures, other appurtenances, and improvements on the land used for treating, storing, or disposing of hazardous waste, or for managing hazardous secondary materials prior to reclamation. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments or a combination of them); or

2. for the purpose of implementing corrective action under LAC 33:V.3322, all the contiguous property under the control of the owner or operator seeking a permit under subtitle C of RCRA. This definition also applies to facilities implementing corrective actions under RCRA section 3008(h);

3. notwithstanding Paragraph 2 of this definition, a remediation waste management site is not a facility that is subject to LAC 33:V.3322, but is subject to corrective action requirements if the site is located within such a facility.

Facility Mailing List—the mailing list for a facility maintained by the department in accordance with LAC 33:V.717.A.1.e.

Fault—a fracture along which rocks or soils on one side have been displaced with respect to those on the other side.

Federal Agency—any department, agency, or other instrumentality of the federal government, any independent agency or establishment of the federal government including any government corporation, and the Government Printing Office.

Federal, State, and Local Approvals or Permits Necessary to Begin Physical Construction—permits and approvals required under federal, state, or local statutes, regulations or ordinances.

Final Closure—the closure of all hazardous waste management units at the facility in accordance with all applicable closure requirements so that hazardous waste management activities under LAC 33:V.Chapters 15, 19, 21, 23, 25, 27, 29, 31, 33, 35 and 43 are no longer conducted unless subject to provisions of LAC 33:V.1011, 1013, and 1015.

Final Permit—same as Permit.

Food-Chain Crops—tobacco, crops grown for human consumption, and crops grown for feed for animals whose products are consumed by humans.

Foreign Source—any hazardous waste originating from other than the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands, or any other territory or protectorate.

Freeboard—the vertical distance between the top of a tank or surface impoundment dike, and the surface of the waste contained therein.

Free Liquids—liquids which readily separate from the solid portion of a waste under ambient temperature and pressure.

Fresh-Water Aquifer—water-bearing formations capable of yielding usable quantities of groundwater with dissolved minerals less than 10,000 mg/L to drinking water wells, pumps, springs, or streams.

Functionally Equivalent Component—a component that performs the same function or measurement and that meets or exceeds the performance specifications of another component.

Generator—any person, by site, whose act or process produces hazardous waste identified or listed, or whose act first causes a hazardous waste to become subject to regulation.

Groundwater—water located beneath the ground surface or below a surface water body in a saturated zone or stratum.

Hazardous Material—a material designated under Louisiana Department of Public Safety regulations or its successor agency to be capable of posing an unreasonable risk to health, safety, or property when transported.

Hazardous Secondary Material—a secondary material (e.g., spent material, by-product, or sludge) that, when

discarded, would be identified as hazardous waste under LAC 33:V.Subpart 1.

Hazardous Secondary Material Generator—any person whose act or process produces hazardous secondary materials at the generating facility. For purposes of this LAC 33:V.Subpart 1, “generating facility” means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator. Under LAC 33:V.105.D.1.x (“hazardous secondary materials reclaimed under the control of the generator”), a facility that collects hazardous secondary materials from other persons is not the hazardous secondary material generator.

Hazardous Waste—a *solid waste*, as defined in this Section, is a hazardous waste if:

1. it is not excluded from regulation as a hazardous waste under LAC 33:V.105.D; and

2. it meets any of the following criteria:

a. it exhibits any of the characteristics of hazardous waste identified in LAC 33:V.4903. However, any mixture of a waste from the extraction, beneficiation, or processing of ores and minerals excluded under LAC 33:V.105.D.2.h and any other solid waste exhibiting a characteristic of hazardous waste under LAC 33:V.4903 is a hazardous waste only if it exhibits a characteristic that would not have been exhibited by the excluded waste alone if such mixture had not occurred; or if it continues to exhibit any of the characteristics exhibited by the nonexcluded wastes prior to mixture. Further, for the purposes of applying the toxicity characteristic to such mixtures, the mixture is also a hazardous waste if it exceeds the maximum concentration for any contaminant listed in LAC 33:V.4903.E, Table 5 that would not have been exceeded by the excluded waste alone if the mixture had not occurred or if it continues to exceed the maximum concentration for any contaminant exceeded by the nonexempt waste prior to mixture;

b. it is listed in LAC 33:V.4901 and has not been excluded from the lists in LAC 33:V.4901 by the Environmental Protection Agency or the administrative authority;

c. it is a mixture of solid waste and one or more hazardous wastes listed in LAC 33:V.4901 and has not been excluded from Paragraph 2 or Subparagraphs 4.e and f of this definition under LAC 33:V.105.D and M; however, the following mixtures of solid wastes and hazardous wastes listed in LAC 33:V.4901 are not hazardous wastes (except by application of Subparagraph 2.a or b of this definition) if the generator can demonstrate that the mixture consists of wastewater, the discharge of which is subject to regulation under either Section 402 or Section 307(b) of the Clean Water Act (including wastewater at facilities that have eliminated the discharge of wastewater), and:

i. one or more of the following spent solvents listed in LAC 33:V.4901.B—benzene, carbon tetrachloride, tetrachloroethylene, trichloroethylene, or scrubber waters derived from the combustion of these spent solvents provided that the maximum total weekly usage of these

solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 1 part per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act as amended, at 40 CFR Part 60, 61, or 63, as incorporated by reference at LAC 33:III.3003, 5116, and 5122, respectively, or at facilities subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 1 part per million on an average weekly basis. Any facility that uses benzene as a solvent and claims this exemption must use an aerated biological wastewater treatment system and must use only lined surface impoundments or tanks prior to secondary clarification in the wastewater treatment system. Facilities that choose to measure concentration levels must file a copy of their sampling and analysis plan with the administrative authority. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the administrative authority. The administrative authority may reject the sampling and analysis plan if it finds that the sampling and analysis plan fails to include the above information, or the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the administrative authority rejects the sampling and analysis plan or if the administrative authority finds that the facility is not following the sampling and analysis plan, the administrative authority shall notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected; or

ii. one or more of the following spent solvents listed in LAC 33:V.4901.B—methylene chloride, 1,1,1-trichloroethane, chlorobenzene, o-dichlorobenzene, cresols, cresylic acid, nitrobenzene, toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents, 2-ethoxyethanol, or the scrubber waters derived from the combustion of these spent solvents—provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 25 parts per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act as amended, at 40 CFR Part 60, 61, or 63, as incorporated by reference at LAC 33:III.3003, 5116, and 5122, respectively, or at facilities subject to an enforceable limit in a federal

operating permit that minimizes fugitive emissions) does not exceed 25 parts per million on an average weekly basis. Facilities that choose to measure concentration levels must file a copy of their sampling and analysis plan with the administrative authority. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the administrative authority. The administrative authority may reject the sampling and analysis plan if it finds that the sampling and analysis plan fails to include the above information, or the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the administrative authority rejects the sampling and analysis plan or if the administrative authority finds that the facility is not following the sampling and analysis plan, the administrative authority shall notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected; or

iii. one of the following wastes listed in LAC 33:V.4901.C, provided that the wastes are discharged to the refinery oil recovery sewer before primary oil/water/solids separation—heat exchanger bundle cleaning sludge from the petroleum refining industry (EPA Hazardous Waste Number K050), crude oil storage tank sediment from petroleum refining operations (EPA Hazardous Waste Number K169), clarified slurry oil tank sediment and/or in-line filter/separation solids from petroleum refining operations (EPA Hazardous Waste Number K170), spent hydrotreating catalyst (EPA Hazardous Waste Number K171), and spent hydrorefining catalyst (EPA Hazardous Waste Number K172); or

iv. a discarded hazardous waste, commercial chemical product, or chemical intermediate listed in LAC 33:V.4901.A, B.1-2, and C-F arising from de minimis losses of these materials. For purposes of this Clause, de minimis losses are inadvertent releases to a wastewater treatment system, including those from normal material handling operations (e.g., spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves, or other devices used to transfer materials); minor leaks of process equipment, storage tanks, or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; and rinsate from empty containers or from containers rendered empty by that rinsing. Any manufacturing facility that claims an exemption for de minimis quantities of wastes listed in LAC 33:V.4901.B and C, or any nonmanufacturing facility that claims an exemption for de minimis quantities of wastes listed in LAC 33:V.Chapter 49, must either have eliminated the discharge of wastewaters or have included in its Clean Water Act permit application or submission to its

pretreatment control authority the constituents for which each waste was listed in LAC 33:V.4901.G and the constituents in LAC 33:V.2299.Table 2, Treatment Standards for Hazardous Wastes, for which each waste has a treatment standard (i.e., Land Disposal Restriction constituents). A facility is eligible to claim the exemption once the administrative authority has been notified of possible de minimis releases via the Clean Water Act permit application or the pretreatment control authority submission. A copy of the Clean Water Act permit application or the submission to the pretreatment control authority must be placed in the facility's on-site files; or

v. wastewater resulting from laboratory operations containing toxic (T) wastes listed in LAC 33:V.4901, provided that the annualized average flow of laboratory wastewater does not exceed 1 percent of total wastewater flow into the headworks of the facility's wastewater treatment or pretreatment system, or provided the wastes' combined annualized average concentration does not exceed 1 part per million in the headworks of the facility's wastewater treatment or pretreatment facility. Toxic (T) wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation; or

vi. one or more of the following wastes listed in LAC 33:V.4901.C—wastewaters from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste Number K157)—provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine (including all amounts that cannot be demonstrated to be reacted in the process, destroyed through treatment, or recovered, i.e., what is discharged or volatilized) divided by the average weekly flow of process wastewater prior to any dilution into the headworks of the facility's wastewater treatment system does not exceed a total of 5 parts per million by weight, or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act as amended, at 40 CFR Part 60, 61, or 63, as incorporated by reference at LAC 33:III.3003, 5116, and 5122, respectively, or at facilities subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 5 parts per million on an average weekly basis. Facilities that choose to measure concentration levels must file a copy of their sampling and analysis plan with the administrative authority. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the administrative authority. The administrative authority may reject the sampling and analysis plan if it finds that the sampling and analysis plan fails to include the above information, or the plan parameters would not enable the facility to calculate the weekly average

concentration of these chemicals accurately. If the administrative authority rejects the sampling and analysis plan or if the administrative authority finds that the facility is not following the sampling and analysis plan, the administrative authority shall notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected; or

vii. wastewaters derived from the treatment of one or more of the following wastes listed in LAC 33:V.4901.C—organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste Number K156)—provided that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 milligrams per liter, or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act as amended, at 40 CFR Part 60, 61, or 63, as incorporated by reference at LAC 33:III.3003, 5116, and 5122, respectively, or at facilities subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 5 milligrams per liter on an average weekly basis. Facilities that choose to measure concentration levels must file a copy of their sampling and analysis plan with the administrative authority. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the administrative authority. The administrative authority may reject the sampling and analysis plan if it finds that the sampling and analysis plan fails to include the above information, or the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the administrative authority rejects the sampling and analysis plan or if the administrative authority finds that the facility is not following the sampling and analysis plan, the administrative authority shall notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected; and

d. Rebuttable Presumption for Used Oil. Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in LAC 33:V.4901. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (e.g., by showing that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in LAC 33:V.3105, Table 1):

ENVIRONMENTAL QUALITY

i. the rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed through a tolling agreement, to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner or disposed;

ii. the rebuttable presumption does not apply to used oils contaminated with Chlorofluorocarbons (CFCs) removed from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units;

3. a solid waste which is not excluded from regulation under LAC 33:V.105.D becomes a hazardous waste when any of the following events occur:

a. in the case of a waste listed in LAC 33:V.4901, when the waste first meets the listing description set forth in LAC 33:V.4901;

b. in the case of a mixture of solid waste and one or more listed hazardous wastes, when a hazardous waste listed in LAC 33:V.4901 is first added to the solid waste; and

c. in the case of any other waste (including a waste mixture), when the waste exhibits any of the characteristics identified in LAC 33:V.4903;

4. unless and until a hazardous waste meets the criteria of Paragraph 5 of this definition:

a. a hazardous waste will remain a hazardous waste;

b.i. except as otherwise provided in Clause 4.b.ii, Subparagraph 4.f, or Paragraph 6 of this definition, any solid waste generated from the treatment, storage, or disposal of a hazardous waste, including any sludge, spill residue, ash, emission control dust, or leachate (but not including precipitation runoff) is a hazardous waste (However, materials that are reclaimed from solid waste and that are used beneficially are not solid wastes and hence are not hazardous wastes under this provision unless the reclaimed material is burned for energy recovery or used in a manner constituting disposal.);

ii. the following solid wastes are not hazardous even though they are generated from the treatment, storage, or disposal of hazardous waste, unless they exhibit one or more of the characteristics of hazardous wastes:

(a). waste pickle liquor sludge generated by lime stabilization of spent pickle liquor from the iron and steel industry (SIC Codes 331 and 332);

(b). waste from burning any of the materials exempted from regulation by LAC 33:V.4105.A.1.c and d.i;

(c).i. nonwastewater residues, such as slag, resulting from High-Temperature Metals Recovery (HTMR) processing of K061, K062, or F006 waste, in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations, or industrial furnaces (as defined in Industrial

Furnace, Paragraphs 6, 7 and 13, in this Section), that are disposed of in Subtitle D units, provided that these residues meet the generic exclusion levels identified in Tables A and B of this definition for all constituents and exhibit no characteristics of hazardous waste. Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan; at a minimum, composite samples of residues must be collected and analyzed quarterly and/or when the process or operation generating the waste changes. Persons claiming this exclusion in an enforcement action will have the burden of proving, by clear and convincing evidence, that the material meets all of the exclusion requirements;

Table A	
Generic Exclusion Levels for K061 and K062 Nonwastewater HTMR Residues	
Constituent	Maximum for Any Single Composite Sample-TCLP (mg/L)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Zinc	70.0

Table B	
Generic Exclusion Levels for F006 Nonwastewater HTMR Residues	
Constituent	Maximum for Any Single Composite Sample-TCLP (mg/L)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Cyanide (total) (mg/kg)	1.8
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Zinc	70.0

(ii). a one-time notification and certification must be placed in the facility's files and sent to the Office of Environmental Services for K061, K062, or F006 HTMR residues that meet the generic exclusion levels for all constituents and do not exhibit any characteristics that are sent to Subtitle D units. The notification and certification that is placed in the generators' or treaters' files must be updated if the process or operation generating the waste changes and/or if the Subtitle D unit receiving the waste changes. However, the generator or treater needs only to notify the administrative authority on an annual basis if such changes occur. Such notification and certification should be

sent to the EPA region or authorized state by the end of the calendar year, but no later than December 31. The notification must include the following information:

[a]. the name and address of the Subtitle D unit receiving the waste shipments;

[b]. the EPA hazardous waste number(s) and treatability group(s) at the initial point of generation;

[c]. the treatment standards applicable to the waste at the initial point of generation; and

[d]. the certification must be signed by an authorized representative and must state as follows:

“I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.”

c. biological treatment sludge from the treatment of one of the following wastes listed in LAC 33:V.4901.C: organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste Number K156), and wastewaters from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste Number K157);

d. catalyst inert support media separated from one of the following wastes listed in LAC 33:V.4901.C: spent hydrotreating catalyst (EPA Hazardous Waste Number K171) and spent hydrorefining catalyst (EPA Hazardous Waste Number K172);

e. a hazardous waste that is listed in LAC 33:V.4901 solely because it exhibits one or more characteristics of ignitability as defined under LAC 33:V.4903.B, corrosivity as defined under LAC 33:V.4903.C, or reactivity as defined under LAC 33:V.4903.D is not a hazardous waste if the waste no longer exhibits any characteristic of hazardous waste identified in LAC 33:V.4903. The exclusion also pertains to any mixture of a solid waste and a hazardous waste listed in LAC 33:V.4901 solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity, as regulated under Subparagraph 2.c of this definition, and any solid waste generated from treating, storing, or disposing of a hazardous waste listed in LAC 33:V.4901 solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity, as regulated under Clause 4.b.i of this definition. Wastes excluded under this Subparagraph are subject to LAC 33:V.Chapter 22 (as applicable), even if they no longer exhibit a characteristic at the point of land disposal. Any mixture of a solid waste excluded from regulation under LAC 33:V.105.D.2.h and a hazardous waste listed in LAC 33:V.Chapter 49 solely because it exhibits one or more of the characteristics of ignitability, corrosivity, or reactivity, as regulated under Subparagraph 2.d of this definition, is not a hazardous waste if the mixture no longer exhibits any characteristic of hazardous waste identified in

LAC 33:V.Chapter 49 for which such hazardous waste was listed;

f. hazardous waste containing radioactive waste is no longer a hazardous waste when it meets the eligibility criteria and conditions of LAC 33:V.Chapter 42. This exemption also pertains to any mixture of a solid waste and an eligible radioactive mixed waste and any solid waste generated from treating, storing, or disposing of an eligible radioactive mixed waste. Waste exempted under this Subparagraph must meet the eligibility criteria and specified conditions in LAC 33:V.4205 and 4207 (for storage and treatment) and in LAC 33:V.4223 and 4225 (for transportation and disposal). Waste that fails to satisfy these eligibility criteria and conditions is regulated as hazardous waste;

5. any solid waste described in Paragraph 4 of this definition is not a hazardous waste if it meets the following criteria:

a. in the case of any solid waste, it does not exhibit any of the characteristics of hazardous waste identified in LAC 33:V.4903. (However, wastes that exhibit a characteristic at the point of generation may still be subject to the requirements of LAC 33:V.Chapter 22, even if they no longer exhibit a characteristic at the point of land disposal);

b. in the case of a waste which is a listed waste under LAC 33:V.4901, contains a waste listed under LAC 33:V.4901 or is derived from a waste listed in LAC 33:V.4901, and it also has been excluded from Paragraph 4 of this definition under LAC 33:V.105.H and M;

6. notwithstanding Paragraphs 1-4 of this definition and provided the debris as defined in LAC 33:V.2203 does not exhibit a characteristic identified at LAC 33:V.4903.B-E, the following materials are not subject to regulation under LAC 33:V.Subpart 1:

a. hazardous debris as defined in LAC 33:V.2203 that has been treated using one of the required extraction or destruction technologies specified in LAC 33:V.2299.Appendix, Table 8. Persons claiming this exclusion in an enforcement action will have the burden of proving, by clear and convincing evidence, that the material meets all of the exclusion requirements; or

b. debris as defined in LAC 33:V.2203 that the administrative authority, considering the extent of contamination, has determined is no longer contaminated with hazardous waste.

Hazardous Waste Management—the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery and disposal of hazardous wastes.

Hazardous Waste Management Unit—is a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area. Examples of hazardous waste management units include a surface impoundment, a waste pile, a land treatment area, a landfill cell, an incinerator, a tank and its associated piping and

ENVIRONMENTAL QUALITY

underlying containment system and a container storage area. A container alone does not constitute a unit; the unit includes containers and the land or pad upon which they are placed.

Hazardous Waste Permit—same as *permit*.

Health Care Waste—infectious or other hazardous waste resulting from operations of a health care facility.

Holocene—the most recent epoch of the quaternary period, extending from the end of the Pleistocene to the present.

Home Scrap Metal—scrap metal as generated by steel mills, foundries, and refineries such as turnings, cuttings, punchings, and borings.

Household Waste—any waste material (including garbage, trash, and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels, and motels).

Ignitable Waste—a waste subject to these regulations pursuant to provisions of LAC 33:V.4903.B of such properties as to constitute a potential fire hazard during its management.

Importer—the person to whom possession or other form of legal control of the waste is assigned at the time the waste is received in the *country of import*.

Importing Country—any designated *OECD* member country listed in LAC 33:V.1113.I.1.a to which a *transboundary movement* of waste is planned or takes place for the purpose of submitting the waste to *recovery operations* therein.

Inactive Portion—that portion of a facility which is not operated after August 1, 1979. (See also *active portion* and *closed portion*.)

Inactive Range—a military range that is not currently being used, but that is still under military control and considered by the military to be a potential range area, and that has not been put to a new use that is incompatible with range activities.

Incinerator—any enclosed device that:

1. uses controlled flame combustion that neither meets the criteria for classification as a boiler, sludge dryer, or carbon regeneration unit, nor is listed as an industrial furnace; or

2. meets the definition of infrared incinerator or plasma arc incinerator.

Incompatible Waste—a hazardous waste that is unsuitable for placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., container inner liners or tank walls), or that is unsuitable for commingling with another waste or material under uncontrolled conditions because the commingling might produce heat or pressure; fire or explosion; violent reaction; toxic dusts, mists, fumes, or gases; or flammable fumes or gases. For examples of potentially incompatible wastes, see LAC 33:V.199.Appendix B.

Individual Generation Site—the contiguous site at or on which one or more hazardous wastes are generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste but is considered a single or individual generation site if the property is contiguous.

Industrial Furnace—any of the following enclosed devices that are integral components of manufacturing processes and that use thermal treatment to accomplish recovery of materials or energy:

1. cement kilns;
2. lime kilns;
3. aggregate kilns;
4. phosphate kilns;
5. coke ovens;
6. blast furnaces;
7. smelting, melting and refining furnaces (including pyrometallurgical devices such as cupolas, reverberator furnaces, sintering machine, roasters, and foundry furnaces);
8. titanium dioxide chloride process oxidation reactors;
9. methane reforming furnaces;
10. pulping liquor recovery furnaces;
11. combustion devices used in the recovery of sulfur values from spent sulfuric acid;
12. halogen acid furnaces (HAFs) for the production of acid from halogenated hazardous waste generated by chemical production facilities where the furnace is located on the site of a chemical production facility, the acid product has a halogen acid content of at least 3 percent, the acid product is used in a manufacturing process and, except for hazardous waste burned as a fuel, hazardous waste fed to the furnace has a minimum halogen content of 20 percent as generated;
13. such other devices as the administrative authority, after notice and comment, adds to this list on the basis of one or more of the following factors:
 - a. the design and use of the device primarily to accomplish recovery of material products;
 - b. the use of the device to burn or reduce raw materials to make a material product;
 - c. the use of the device to burn or reduce secondary materials as effective substitutes for raw materials in processes using raw materials as principal feedstocks;
 - d. the use of the device to burn or reduce secondary materials as ingredients in an industrial process to make a material product;
 - e. the use of the device in common industrial practice to produce a material product; and

f. other factors as appropriate.

Infectious Waste—a waste which has the potential to endanger humans or other living organisms by the communication of diseases caused by microorganisms and/or viruses.

Infrared Incinerator—any enclosed device that uses electric-powered resistance heaters as a source of radiant heat followed by an afterburner using controlled flame combustion and which is not listed as an industrial furnace.

Inground Tank—a device meeting the definition of *tank* in LAC 33:V.109 whereby a portion of the tank wall is situated to any degree within the ground, thereby preventing visual inspection of that external surface area of the tank that is in the ground.

Injection Well—those wells, intended or used for disposal of hazardous waste, drilled to a strata below any fresh-water aquifer and permitted, or required to be permitted, by the Office of Conservation or after February 1, 1984, by the Department of Environmental Quality.

In Operation—a facility which is treating, storing or disposing of hazardous waste.

Inner Liner—a continuous layer of material placed inside a tank or container which protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste.

Installation Inspector—a person who, by reason of his knowledge of the physical sciences and the principles of engineering, acquired by a professional education and related practical experience, is qualified to supervise the installation of tank systems.

Interim Permit—the hazardous waste permit issued by Louisiana to facilities with interim status.

Interim Status—all facilities that have met the requirements established by §3005e of the Resource Conservation and Recovery Act et seq. and as such has been recognized by the U.S. Environmental Protection Agency (EPA) and approved by the administrative authority in accordance with the Louisiana Environmental Affairs Act.

Intermediate—(as used in LAC 33:V.105.R) a substance formed as a stage in the manufacture of a desired end-product.

Intermediate Facility—any facility that stores hazardous secondary materials for more than 10 days, other than a hazardous secondary material generator or reclaimer of such material.

International Shipment—the transportation of hazardous waste into or out of the jurisdiction of the United States.

Lab Pack—an overpacked container (such as a drum) containing small, tightly-sealed containers of hazardous waste with an absorbent material filling the voids in the outer container (drum).

Lagoon—a shallow sound, channel, or pond near, or communicating with, a larger body of water, either natural or man-made.

Land-Based Unit—an area where hazardous secondary materials are placed in or on the land before recycling. This definition does not include land-based production units.

Landfarm—a facility for the application of waste onto land and/or incorporation into the surface soil for the purpose of biological reduction and soil attenuation, including the use of such waste as a fertilizer or soil conditioner.

Landfill—a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a pile, land treatment facility, surface impoundment, underground injection well, salt dome formation, salt bed formation, underground mine, cave, or corrective action management unit.

Landfill Cell—a discrete volume of a hazardous waste landfill which uses a liner to provide isolation of wastes from adjacent cells or wastes. Examples of landfill cells are trenches and pits.

Land Treatment Facility—a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure.

Large Quantity Generator—a generator who generates any of the following amounts in a calendar month:

1. greater than or equal to 1,000 kilograms (2200 lbs) of nonacute hazardous waste; or
2. greater than 1 kilogram (2.2 lbs) of acute hazardous waste listed in LAC 33:V.4901.B with the assigned hazard code of (H) or LAC 33:V.4901.E; or
3. greater than 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in LAC 33:V.4901. with the assigned hazard code of (H) or LAC 33:V.4901.E.

Leachate—any liquid, including any suspended components in the liquid, that has percolated through, or drained from hazardous waste.

Leak-Detection System—a system capable of detecting the failure of either the primary or secondary containment structure by the detection of a release of hazardous waste or accumulated liquid in the secondary containment structure. Such a system must employ operational controls (e.g., daily visual inspections for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to detect continuously and automatically the failure of the primary or secondary containment structure by the detection of a release of hazardous waste into the secondary containment structure.

Liner—a continuous layer of natural or man made materials, beneath and on the sides of a surface impoundment, landfill, or landfill cell, which restricts the

downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate.

Management or Hazardous Waste Management—the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery and disposal of hazardous waste.

Manifest—the shipping document EPA Form 8700-22 (including, if necessary, EPA Form 8700-22A), or the electronic manifest, originated and signed by the generator or offeror in accordance with the instructions in the appendix to 40 CFR part 262 and the applicable requirements of 40 CFR parts 262-265.

Manifest Tracking Number—the alphanumeric identification number that is pre-printed in Item 4 of the manifest.

Military—the Department of Defense (DOD), the Armed Services, Coast Guard, National Guard, Department of Energy (DOE), or other parties under contract or acting as an agent for the foregoing, who handle military munitions.

Military Munitions—all ammunition products and components produced or used by or for the DOD or the U.S. Armed Services for national defense and security, including military munitions under the control of the DOD, the U.S. Coast Guard, the DOE, and National Guard personnel. The term *military munitions* includes: confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, smokes, and incendiaries used by DOD components, including bulk explosives and chemical warfare agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components thereof. Military munitions do not include wholly inert items, improvised explosive devices, and nuclear weapons, nuclear devices, and nuclear components thereof. However, the term does include non-nuclear components of nuclear devices managed under DOE's nuclear weapons program after all required sanitization operations under the Atomic Energy Act of 1954, as amended, have been completed.

Military Range—designated land and water areas set aside, managed, and used to conduct research on, develop, test, and evaluate military munitions and explosives, other ordnances, or weapon systems or to train military personnel in their use and handling. Ranges include firing lines and positions, maneuver areas, firing lanes, test pads, detonation pads, impact areas, and buffer zones with restricted access and exclusionary areas.

Mining Overburden Returned to the Mine Site—any material overlying an economic mineral deposit, which is removed to gain access to that deposit and is then used for reclamation of a surface mine.

Miscellaneous Unit—a hazardous waste management unit where hazardous waste is treated, stored, or disposed of and that is not a container, tank, surface impoundment, pile, land

treatment unit, landfill, incinerator, boiler, industrial furnace, underground injection well (with appropriate technical standards under 40 CFR Part 146), containment building, corrective action management unit, unit eligible for a research, development, and demonstration permit under LAC 33:V.329, or staging pile.

Monitoring—inspection and collection of data following a predesigned schedule and system on operational parameters of the facility or on the quality of the environment including the air, groundwater, surface water or soils.

New Hazardous Waste Management Facility or New Facility—a facility which began operation, or for which construction commenced after November 19, 1980.

New Tank System or New Tank Component—a tank system or component that will be used for the storage or treatment of hazardous waste and for which installation has commenced after July 14, 1986; except, however, for purposes of LAC 33:V.1907.G.2 and 4435, a new tank system is one for which construction commences after July 14, 1986. (see also *Existing Tank System*)

No Free Liquids—as used in LAC 33:V.105.D.1.w and LAC 33:V.105.D.2.q, means that solvent-contaminated wipes may not contain free liquids as determined by method 9095B (paint filter liquids test), included in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (EPA Publication SW-846), which is incorporated by reference at LAC 33:V.110, and that there is no free liquid in the container holding the wipes. No free liquids may also be determined using another standard or test method as defined by the administrative authority.

Nonacute Hazardous Waste—all hazardous wastes that are not acute hazardous waste, as defined in this Section.

OECD—Organization for Economic Cooperation and Development.

One-Hundred Year Flood—a flood that has a 1 percent chance of being equaled or exceeded in any given year.

One-Hundred Year Floodplain—the lowland and relatively flat areas adjoining inland and coastal areas of the mainland and off-shore islands, including, at a minimum, areas subject to a 1 percent or greater chance of flooding in any given year.

Onground Tank—a device meeting the definition of *tank* in LAC 33:V.109 and that is situated in such a way that the bottom of the tank is on the same level as the adjacent surrounding surface so that the external tank bottom cannot be visually inspected.

On-Site—the same or geographically contiguous property which may be divided by public or private right-of-way, provided the entrance and exit between the properties is at a cross-roads intersection, and access is by crossing as opposed to going along, the right-of-way. Non-contiguous properties, owned by the same person, but connected by a right-of-way which he controls and to which the public does not have access, are also considered on-site property.

Open Burning—the combustion of any material without the following characteristics: control of combustion air to maintain adequate temperature for efficient combustion; containment of the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion; and control of emission of the gaseous combustion products.

Operator, Owner, Licensee, Manager, etc.—whoever has legal authority and responsibility for a facility that generates, transports, treats, stores or disposes of any hazardous waste.

Organization for Economic Cooperation and Development (OECD) Area—all land or marine areas under the national jurisdiction of any *OECD* member country listed in LAC 33:V.1113.I.1.a. When the regulations refer to shipments to or from an *OECD* country, this means *OECD* area.

Owner—the person who owns a facility or part of a facility.

Parent Corporation—a corporation which directly owns at least 50 percent of the voting stock of the corporation which is the facility owner or operator; the latter corporation is deemed a “subsidiary” of the parent corporation.

Partial Closure—the closure of a hazardous waste management unit in accordance with the applicable closure requirements of LAC 33:V.Chapters 10, 11, 13, 15, 17, 18, 19, 23, and 43 at a facility that contains other active hazardous waste management units. For example, a partial closure may include the closure of a tank (including its associated piping and underlying containment systems), landfill cell, surface impoundment, waste pile, or other hazardous waste management unit, while other units of the same facility continue to operate.

Permit—the permit issued by the state of Louisiana to a facility to treat, store, and/or dispose of hazardous waste under the conditions specified in the permit and the conditions required by the Act and these regulations.

Person—an individual, trust, firm, joint stock company, corporation (including a government corporation), partnership, association, state, municipality, commission, political subdivision of a state, an interstate body, or the federal government or any agency of the federal government.

Personnel or Facility Personnel—all persons who work at or oversee the operations of a hazardous waste facility, and whose actions or failure to act may result in noncompliance with the requirements of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, 37, and 43.

Petition—a written request made to the administrative authority.

Pile—any noncontainerized accumulation of solid, nonflowing hazardous waste that is used for treatment or storage and that is not a containment building.

Plasma Arc Incinerator—any enclosed device using a high-intensity electrical discharge or arc as a source of heat

followed by an afterburner using controlled flame combustion and which is not listed as an industrial furnace.

Point Source—any discernible, confined, and discrete conveyance, including, but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture.

Pond—a confined body of standing water usually smaller than a lake, either natural or man-made.

Post-Closure Plan—the plan for the post-closure care prepared in accordance with the requirements of LAC 33:V.Chapter 35.

Potable-Water Aquifer—water-bearing formations capable of yielding usable quantities of groundwater with dissolved minerals less than 10,000 mg/L to drinking water wells, pumps, springs or streams.

Pre-2008 Exclusions—the exclusions from the definition of solid waste and hazardous waste exemptions in effect prior to EPA’s 2008 promulgation of revisions to the definition of solid waste to exclude certain hazardous secondary materials from hazardous waste regulation in 73 *Federal Register* 64668 et seq., October 30, 2008, effective December 29, 2008.

Primary Exporter—any person who is required to originate the manifest for a shipment of hazardous waste in accordance with LAC 33:V.1107, which specifies a treatment, storage or disposal facility in a receiving country as the facility to which the hazardous waste will be sent and any intermediary arranging for the export.

Processed Scrap Metal—scrap metal that has been manually or physically altered to either separate it into distinct materials to enhance economic value or to improve the handling of materials. Processed scrap metal includes, but is not limited to, scrap metal which has been baled, shredded, sheared, chopped, crushed, flattened, cut, melted, or separated by metal type (i.e., sorted), and fines, drosses, and related materials which have been agglomerated.

NOTE: Shredded circuit boards being sent for recycling are not considered processed scrap metal. They are covered under the exclusion from the definition of solid waste for shredded circuit boards being recycled (LAC 33:V.105.D.1.n).

Prompt Scrap Metal—scrap metal as generated by the metal working/fabrication industries and includes such scrap metal as turnings, cuttings, punchings, and borings. Prompt scrap is also known as industrial or new scrap metal.

Proper—a qualifying adjective requiring consistency with any operating procedures published by the department.

Public Water Supply Well—a well of piped water for consumption by the public if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

ENVIRONMENTAL QUALITY

Publicly-Owned Treatment Works or POTW—any device or system used in the treatment (including recycling and reclamation) of municipal sewage or industrial wastes of a liquid nature which is owned by the state, parish, municipality, or other governmental subdivision. This definition includes sewers, pipes, or other conveyances only if they convey wastewater to POTW providing treatment.

Qualified Groundwater Scientist—a scientist or engineer who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields as may be demonstrated by state registration, professional certifications, or completion of accredited university courses that enable that individual to make sound professional judgements regarding groundwater monitoring and contaminant fate and transport.

Reactive Waste—a waste subject to these regulations pursuant to provisions of LAC 33:V.4903.D which is normally unstable or which may endanger life or property in the presence of other substances likely to be encountered in the management of waste.

Receiving Country—a foreign country to which a hazardous waste is sent for the purpose of treatment, storage, or disposal (except short-term storage incidental to transportation).

Reclaimed Material—a material is reclaimed if it is processed to recover a usable product, or if it is regenerated. Examples are recovery of lead values from spent batteries and regeneration of spent solvents. In addition, for purposes of LAC 33:V.105.D.1.x and LAC 33:V.105.D.1.y, smelting, melting, and refining furnaces are considered to be solely engaged in metals reclamation if the metal recovery from the hazardous secondary materials meets the same requirements as those specified for metals recovery from hazardous waste found in LAC 33:V.3001.D.1-3 of this Subpart, and if the residuals meet the requirements specified in LAC 33:V.3025 (Regulation of Residues).

Reclaimer—any person or agency who processes materials or wastes to recover a usable product or who regenerates materials or wastes.

Recognized Trader—a person who, with appropriate authorization of *concerned countries*, acts in the role of principal to purchase and subsequently sell waste; this person has legal control of such waste from time of purchase to time of sale; such a person may act to arrange and facilitate *transboundary movements* of waste destined for *recovery operations*.

Recovery Facility—an entity which, under applicable domestic law, is operating or is authorized to operate in the importing country to receive wastes and to perform recovery operations on them.

Recovery Operations—activities leading to resource recovery, recycling, reclamation, direct reuse or alternative uses, which include the following operations.

Code	Recovery Operations
R1	Use as a fuel (other than in direct incineration) or other means to generate energy
R2	Solvent reclamation/regeneration
R3	Recycling/reclamation of organic substances that are not used as solvents
R4	Recycling/reclamation of metals and metal compounds
R5	Recycling/reclamation of other inorganic materials
R6	Regeneration of acids or bases
R7	Recovery of components used for pollution abatement
R8	Recovery of components used from catalysts
R9	Used oil re-refining or other reuses of previously used oil
R10	Land treatment resulting in benefit to agriculture or ecological improvement
R11	Uses of residual materials obtained from any of the operations numbered R1-R10
R12	Exchange of wastes for submission to any of the operations numbered R1-R11
R13	Accumulation of material intended for any operation numbered R1-R12

Recyclable Material—a recyclable material is a material meeting the definition of a solid waste and which is used, reused, recycled, or reclaimed.

Remanufacturing—processing a higher-value hazardous secondary material in order to manufacture a product that serves a similar functional purpose as the original commercial-grade material. For the purpose of this definition, a hazardous secondary material is considered higher-value if it was generated from the use of a commercial-grade material in a manufacturing process and can be remanufactured into a similar commercial-grade material.

Remedial Action Plan (RAP)—a special form of RCRA permit that a facility owner or operator may obtain instead of a permit issued under LAC 33:V.303-329 and 501-537, to authorize the treatment, storage, or disposal of hazardous *remediation waste* (as defined in this Section) at a remediation waste management site.

Remediation Waste—all solid and hazardous wastes, and all media (including groundwater, surface water, soils, and sediments) and debris that are managed for implementing cleanup.

Remediation Waste Management Site—a facility where an owner or operator is or will be treating, storing, or disposing of hazardous remediation wastes. A remediation waste management site is not a facility that is subject to corrective action under LAC 33:V.3322, but is subject to corrective action requirements if the site is located in such a facility.

Replacement Unit—a landfill, surface impoundment, or waste pile unit from which all or substantially all of the waste is removed and that is subsequently reused to treat, store, or dispose of hazardous waste. Replacement unit does not apply to a unit from which waste is removed during closure, if the subsequent reuse solely involves the disposal of waste from that unit and other closing units or corrective action areas at the facility, in accordance with an approved closure plan or EPA- or state-approved corrective action.

Table 1

Representative Sample—a sample of a universe or whole (e.g., waste pile, lagoon, groundwater) which can be expected to exhibit the average properties of the universe or whole.

Resource Recovery—recovery of useful material or energy from hazardous waste.

Reused Material—see Used or Reused Material.

Run-Off—any rainwater, leachate, or other liquid that drains overland from any part of a facility.

Run-On—any rainwater, leachate, or other liquid that drains overland onto any part of a facility.

Rural—all areas zoned rural or not zoned at all by a municipality or parish.

Saturated Zone or *Zone of Saturation*—that part of the earth's crust in which all voids are filled with water.

Scrap Metal—bits and pieces of metal parts (e.g., bars, turnings, rods, sheets, wire) or metal pieces that may be combined together with bolts or soldering (e.g., radiators, scrap automobiles, railroad box cars), which when worn or superfluous can be recycled.

Sham Recycling—a hazardous secondary material found to be sham recycled is considered discarded and a solid waste. Sham recycling is recycling that is not legitimate recycling as defined in LAC 33:V.105.R.

SIC—Standard Industrial Classification Code.

Site—land area and appurtenances, thereon and thereto, used for the treatment, storage, and/or disposal of hazardous waste.

Sludge—any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility exclusive of the treated effluent from a wastewater treatment plant.

Sludge Dryer—any enclosed thermal treatment device that is used to dehydrate sludge and that has a maximum total thermal input, excluding the heating value of the sludge itself, of 2,500 Btu/lb of sludge treated on a wet-weight basis.

Small Quantity Generator—a generator who generates the following amounts in a calendar month:

1. greater than 100 kilograms (220 lbs) but less than 1,000 kilograms (2200 lbs) of nonacute hazardous waste; and
2. less than or equal to 1 kilogram (2.2 lbs) of acute hazardous waste listed in LAC 33:V.4901.B with the assigned hazard code of (H) or LAC 33:V.4901.E; and
3. less than or equal to 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in LAC 33:V.4901. with the assigned hazard code of (H) or LAC 33:V.4901.E.

Solid Waste—

- 1.a. any discarded material that is not excluded by LAC 33:V.105.D.1 or that is not excluded by a variance or non-waste determination granted under LAC 33:V.105.K or O;
 - b. a discarded material is any material which is:
 - i. abandoned as explained in Paragraph 2 of this definition;
 - ii. recycled as explained in Paragraph 3 of this definition;
 - iii. considered inherently waste-like, as explained in Paragraph 4 of this definition; or
 - iv. a military munition identified as a solid waste in LAC 33:V.5303;
2. materials are solid waste if they are abandoned by being:
 - a. disposed of; or
 - b. burned or incinerated; or
 - c. accumulated, stored, or treated (but not recycled) before or in lieu of being abandoned by being disposed of, burned, or incinerated;
 - d. sham recycled as defined under LAC 33:V.109, *sham recycling*;
3. materials are solid wastes if they are recycled, or accumulated, stored, or treated before recycling, as specified in Subparagraphs 3.a-d of this definition:
 - a. used in a manner constituting disposal:
 - i. materials noted with an “*” in Column 1 of Table 1 in this Chapter are solid wastes when they are:
 - (a). applied to or placed on the land in a manner that constitutes disposal; or
 - (b). used to produce products that are applied to or placed on the land (in which cases the product itself remains a solid waste);
 - ii. however, commercial chemical products listed in LAC 33:V.4901.D and E are not solid wastes if they are applied to the land and that is their ordinary manner of use;
 - b. burning for energy recovery:
 - i. materials noted with an “*” in Column 2 of Table 1 in this Chapter are solid wastes when they are burned to recover energy, used to produce a fuel, or otherwise contained in fuels (in which case the fuel itself remains a solid waste);
 - ii. however, commercial chemical products listed in LAC 33:V.4901.D and E are not solid wastes if they are themselves fuels;
 - c. *reclaimed*—materials noted with an “*” in column 3 of Table 1 in this Chapter are solid wastes when reclaimed, except as provided under LAC 33:V.105.D.1.p, or unless they meet the requirements of LAC 33:V.105.D.1.x,

ENVIRONMENTAL QUALITY

LAC 33:V.105.D.1.y, or 261.4(a)(27), as incorporated by reference at LAC 33:V.105.D.1.z. Materials noted with a “---” in column 3 of Table 1 are not solid wastes when reclaimed;

d. *accumulated speculatively*—materials noted with an “*” in Column 4 of Table 1 in this Chapter are solid wastes when accumulated speculatively.

4. Inherently Waste-Like Materials. The following materials are solid wastes when they are recycled in any manner:

a. Hazardous Waste Numbers F020, F021 (unless used as an ingredient to make a product at the site of generation), F022, F023, F026, and F028;

b. secondary materials fed to a halogen acid furnace that exhibit a characteristic of a hazardous waste or are listed as a hazardous waste as defined in LAC 33:V.4901 or 4903, except for brominated material that meets the following criteria:

i. the material must contain a bromine concentration of at least 45 percent;

ii. the material must contain less than a total of 1 percent of toxic organic compounds listed in LAC 33:V.3105, Table 1; and

iii. the material is processed continually on-site in the halogen acid furnace via direct conveyance (hard piping); and

c. the administrative authority will use the following criteria to add wastes to that list:

i. the materials are ordinarily disposed of, burned, or incinerated; or

ii. the materials contain toxic constituents listed in LAC 33:V.3105, Table 1 and these constituents are not ordinarily found in raw materials or products for which the materials substitute (or are found in raw materials or products in smaller concentrations) and are not used or reused during the recycling process; and

iii. the material may pose a substantial hazard to human health and the environment when recycled;

5. Materials That Are Not Solid Waste When Recycled

a. materials are not solid wastes when they can be shown to be recycled by being:

i. used or reused as ingredients in an industrial process to make a product, provided the materials are not being reclaimed; or

ii. used or reused as effective substitutes for commercial products; or

iii. returned to the original process from which they are generated, without first being reclaimed or land disposed. The material must be returned as a substitute for feedstock materials. In cases where the original process to which the material is returned is a secondary process, the

materials must be managed such that there is no placement on land. In cases where the materials are generated and reclaimed within the primary mineral processing industry, the conditions of the exclusion found at LAC 33:V.105.D.1.p apply rather than this Paragraph;

b. the following materials are solid wastes, even if the recycling involves use, reuse, or return to the original process (described in preceding paragraphs of this definition):

i. materials used in a manner constituting disposal, or used to produce products that are applied to the land; or

ii. materials burned for energy recovery, used to produce a fuel, or otherwise contained in fuels; or

iii. materials accumulated speculatively; or

iv. inherently waste-like materials listed in Paragraph 4 of this definition;

6. respondents in actions to enforce regulations who raise a claim that a certain material is not a solid waste, or is conditionally exempt from regulation, must demonstrate that there is a known market or disposition for the material, and that they meet the terms of the exclusion or exemption. In doing so, they must provide appropriate documentation (such as contracts showing that a second person uses the material as an ingredient in a production process) to demonstrate that the material is not a waste, or is exempt from regulation. In addition, owners or operators of facilities claiming that they actually are recycling materials must show that they have the necessary equipment to do so:

Table 1				
	Use Constituting Disposal	Energy Recovery/ Fuel	Reclamation except as Provided in LAC 33:V. 105.D.1.p for Mineral Processing Secondary Materials, LAC 33:V.105.D.1.x, LAC 33:V.105.D.1.y, or LAC 33:V.105.D.1.z.	Speculative Accumulation

Solvent-Contaminated Wipe—

1. a wipe that, after use or after cleaning up a spill:
 - a. contains one or more of the F001 through F005 solvents listed in LAC 33:V.4901.C, or the corresponding P- or U-listed solvents listed in LAC 33:V.4901.E or F;
 - b. exhibits a hazardous characteristic found in LAC 33:V.4903, when that characteristic results from a solvent listed in LAC 33:V.4901; and/or
 - c. exhibits only the hazardous waste characteristic of ignitability found in LAC 33:V.4903.B;
2. solvent-contaminated wipes that contain listed hazardous waste other than solvents, or exhibit the characteristic of toxicity, corrosivity, or reactivity due to contaminants other than solvents, are not eligible for the exclusions at LAC 33:V.105.D.1.w and LAC 33:V.105.D.2.q.

Sorbent—a material that is used to soak up free liquids by either adsorption or absorption, or both. *Sorb* means to either adsorb or absorb, or both.

Spent Material—a spent material is any material that has been used and as a result of contamination can no longer serve the purpose for which it was produced without processing.

Spill—the accidental or intentional spilling, leaking, pumping, pouring, emitting or dumping of hazardous wastes or materials which, when spilled, become hazardous wastes into or on any land, air or water.

SPOC—the Office of Environmental Compliance, Emergency and Radiological Services Division, Single Point of Contact (SPOC).

Staging Pile—an accumulation of solid, nonflowing remediation waste (as defined in this Section) that is not a containment building and that is used only during remedial

operations for temporary storage at a facility. Staging piles must be designated by the administrative authority according to the requirements of LAC 33:V.2605.

Standards—performance criteria established by department to govern the hazardous waste program.

Storage—the containment of hazardous waste for such time as may be permitted by regulations in such a manner as not to constitute disposal of hazardous waste.

Storage Facility—any environmentally sound facility used to store hazardous waste.

Sump—any pit or reservoir that meets the definition of tank and those troughs/trenches connected to it that serve to collect hazardous waste for transport to hazardous waste storage, treatment, or disposal facilities; except that, as used in the landfill, surface impoundment, and waste pile rules, *sump* means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system or leak detection system for subsequent removal from the system.

Surface Impoundment or Impoundment—a facility or part of a facility, which is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials), which is designed to hold an accumulation of liquid wastes or wastes containing free liquids, and which is not an injection well. Examples of surface impoundments are holding, storage, settling, and aeration pits, ponds and lagoons.

Tank—a stationary device designed to contain an accumulation of hazardous waste which is constructed primarily of non-earthen materials (e.g., wood, concrete, steel, plastic) which provide structural support.

Tank System—a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system.

Temporary Storage—storage of a generator’s waste on-site for less than 90 days.

TEQ—toxicity equivalence, the international method of relating the toxicity of various dioxin/furan congeners to the toxicity of 2,3,7,8-tetrachlorodibenzo-p-dioxin.

Thermal Treatment—the processing of hazardous waste in a device which uses elevated temperatures as the primary means to change the chemical, physical, or biological character or composition of the hazardous waste. Examples of thermal treatment processes are incineration, molten salt, pyrolysis, calcination, wet air oxidation, and microwave discharge. (See also *incinerator* and *open burning*.)

Toll Manufacturer—(for purposes of LAC 33:V.105.D.1.x) a person who produces a product or intermediate made from specified unused materials pursuant to a written contract with a tolling contractor.

Tolling Contractor—(for purposes of LAC 33:V.105.D.1.x) a person who arranges for the production of

ENVIRONMENTAL QUALITY

a product or intermediate made from specified unused materials through a written contract with a toll manufacturer.

Totally Enclosed Treatment Facility—a facility for the treatment of hazardous waste which is directly connected to an industrial production process and which is constructed and operated in a manner which prevents the release of any hazardous waste or any constituent thereof into the environment during treatment. An example is a pipe in which waste acid is neutralized.

Toxic Waste—a waste subject to these regulations pursuant to provisions of LAC 33:V.4903.E which, by its chemical properties, has the potential to endanger human health or other living organisms by means of acute or chronic adverse effects, including poisoning, mutagenic, teratogenic, or carcinogenic effects.

Transboundary Movement—any movement of waste from an area under the national jurisdiction of one OECD member country to an area under the national jurisdiction of another OECD member country.

Transfer Facility—any transportation-related facility, including loading docks, parking areas, storage areas and other similar areas where shipments of hazardous waste or hazardous secondary materials are held during the normal course of transportation.

Transit Country—any foreign country, other than a receiving country, through which a hazardous waste is transported.

Transporter—a person engaged in the off-site transportation of hazardous waste by air, rail, highway, or water.

Transports or Transportation—the movement of hazardous waste from the point of generation or storage to the point of treatment, storage or disposal by any means of commercial or private transport. The term does not apply to the movement of hazardous wastes on the premises of a hazardous waste generator or on the premises of a permitted hazardous waste treatment, storage or disposal facility.

Transport Vehicle—a motor vehicle, aircraft, rail freight car, freight container, cargo tank, portable tank, or vessel used for the transportation of hazardous waste. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle.

Treatability Study—a study in which a hazardous waste is subjected to a treatment process to determine:

- 1.a. whether the waste is amenable to the treatment process;
- b. what pretreatment (if any) is required;
- c. the optimal process conditions needed to achieve the desired treatment;
- d. the efficiency of a treatment process for a specific waste or wastes; or

e. the characteristics and volumes of residuals from a particular treatment process;

2. also included in this definition for the purpose of the LAC 33:V.105.D.5 and 6 exemptions are liner compatibility, corrosion, and other material compatibility studies and toxicological and health effects studies. A treatability study is not a means of commercially treating or disposing of hazardous waste.

Treatment—(when used in connection with hazardous waste) any method, technique, or process, including neutralization, designed to change the physical or chemical character or composition of any hazardous waste so as to neutralize such waste or so as to render such waste nonhazardous, safer for transport, amenable for recovery, amenable for storage, or reduced in volume. Such term includes any activity or processing designed to change the physical form or chemical composition of hazardous waste so as to render it nonhazardous.

Treatment Zone—a soil area of the unsaturated zone of a land treatment unit within which hazardous constituents are degraded, transformed or immobilized.

Type of Waste—waste description by category as classified in LAC 33:V.Chapter 49 to these rules and regulations.

Underground Injection—the subsurface emplacement of fluids through a bored, drilled or driven well; or through a dug well, where the depth of the dug well is greater than the largest surface dimension. (See also *injection well*.)

Underground Source of Drinking Water or USDW—an aquifer or its portion:

1. which supplies any public water system; or
2. which contains a sufficient quantity of groundwater to supply a public water system; and
 - a. currently supplies drinking water for human consumption; or
 - b. contains fewer than 10,000 mg/L total dissolved solids; and
3. which is not an aquifer exempted by the Department of Natural Resources, Office of Conservation.

Underground Tank—a device meeting the definition of *tank* in LAC 33:V.109 whose entire surface area is totally below the surface of and covered by the ground.

Unexploded Ordnance (UXO)—military munitions that have been primed, fused, armed, or otherwise prepared for action and have been fired, dropped, launched, projected, or placed in such a manner as to constitute a hazard to operations, installation, personnel, or material and remain unexploded either by malfunction, design, or any other cause.

Unfit for Use Tank System—a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating

hazardous waste without posing a threat of release of hazardous waste to the environment.

Unsaturated Zone or Zone of Aeration—the zone between the land surface and the water table.

Uppermost Aquifer—the geological formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer.

Used Oil—any oil that has been refined from crude oil or any synthetic oil that has been used and, as a result of such use, is contaminated by physical or chemical impurities.

Used or Reused Material—a material is used or reused if it is either:

1. employed as an ingredient (including use as an intermediate) in an industrial process to make a product (for example, distillation bottoms from one process used as feedstock in another process). However, a material will not satisfy this condition if distinct components of the material are recovered as separate end products (as when metals are recovered from metal-containing secondary materials); or

2. employed in a particular function or application as an effective substitute for a commercial product (for example, spent pickle liquor used as phosphorus precipitant and sludge conditioner in wastewater treatment).

User of the Electronic Manifest System—a hazardous waste generator; a hazardous waste transporter; an owner or operator of a hazardous waste treatment, storage, recycling, or disposal facility; or any other person that:

1. is required to use a manifest to comply with:

- a. any federal or state requirement to track the shipment, transportation, and receipt of hazardous waste or other waste material that is shipped from the site of generation to an off-site designated facility for treatment, storage, recycling, or disposal; or

- b. any federal or state requirement to track the shipment, transportation, and receipt of rejected wastes or regulated container residues that are shipped from a designated facility to an alternative facility, or returned to the generator; and

2. elects to use the system to obtain, complete, and transmit an electronic manifest format supplied by the EPA electronic manifest system; or

3. elects to use the paper manifest form and submits to the system for data processing purposes a paper copy of the manifest (or data from such a paper copy), in accordance with LAC 33:V.1516.B.1.e.

[NOTE: These paper copies are submitted for data exchange purposes only and are not the official copies of record for legal purposes.]

Very Small Quantity Generator—a generator who generates less than or equal to the following amounts in a calendar month:

1. 100 kilograms (220 lbs) of nonacute hazardous waste; and

2. 1 kilogram (2.2 lbs) of acute hazardous waste listed in in LAC 33:V.4901.B with the assigned hazard code of (H) or LAC 33:V.4901.E; and

3. 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in in LAC 33:V.4901.B with the assigned hazard code of (H) or LAC 33:V.4901.E.

Vessel—any type of watercraft used, or capable of being used, as a means of transportation on the water.

Volatile Waste—hydrocarbon or other waste with a vapor pressure greater than or equal to 1.5 psia.

Washout—the movement of hazardous waste from the active portion of the facility as a result of flooding.

Waste Reduction—in-plant practices that reduce, avoid or eliminate the generation of hazardous or solid waste so as to reduce the risks to human health and the environment:

1. when recycling is environmentally acceptable and is an integral part of the waste-generating industrial process or operation, such as a closed-loop application which returns potential waste as it is generated for reuse within the process, it shall be considered waste reduction. Recycling is not considered waste reduction if waste exits a process, exists as a separate identity, undergoes significant handling, or is transported from the waste-generating location;

2. actions that reduce waste volume by concentrating the hazardous content of a waste or that reduce hazard level by diluting the hazardous content are not considered waste reduction;

3. actions that change the chemical composition and the concentrations of the components of the waste, but do not change the degree of hazard of the waste are not considered waste reduction.

Wastewater Treatment Unit—a device that:

1. is part of a wastewater treatment facility that is subject to regulation under either Section 402 or 307(b) of the Clean Water Act or subject to regulation under LAC 33:IX.Chapter 3; and

2. receives and treats or stores an influent wastewater that is a hazardous waste as defined in LAC 33:V.109, or that generates and accumulates a wastewater treatment sludge that is a hazardous waste as defined in LAC 33:V.109, or treats or stores a wastewater treatment sludge that is a hazardous waste as defined in LAC 33:V.109; and

3. meets the definition of a tank or tank system in LAC 33:V.109.

All sludges, floats, oils, residues, recovered organics, and inorganics from such units shall be considered to be hazardous and managed according to the applicable regulations, unless the wastes do not exhibit the characteristics of a hazardous

ENVIRONMENTAL QUALITY

waste, except for those specifically listed as hazardous, or the wastes are excluded under LAC 33:V.105.D.

Well—any shaft or pit dug or bored into the earth, generally of a cylindrical form, and often walled with bricks or tubing to prevent the earth from caving in.

Wipe—a woven or nonwoven shop towel, rag, pad, or swab made of wood pulp, fabric, cotton, polyester blends, or other material.

Zone of Engineering Control—an area under the control of the owner/operator that, upon detection of a hazardous waste release, can be readily cleaned up prior to the release of hazardous waste or hazardous constituents to groundwater or surface water.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 11:1139 (December 1985), LR 12:319 (May 1986), LR 13:84 (February 1987), LR 13:433 (August 1987), LR 13:651 (November 1987), LR 14:790, 791 (November 1988), LR 15:378 (May 1989), LR 15:737 (September 1989), LR 16:218, 220 (March 1990), LR 16:399 (May 1990), LR 16:614 (July 1990), LR 16:683 (August 1990), LR 17:362 (April 1991), LR 17:478 (May 1991), LR 18:723 (July 1992), LR 18:1375 (December 1992), repromulgated by the Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 19:626 (May 1993), amended LR 20:1000 (September 1994), LR 20:1109 (October 1994), LR 21:266 (March 1995), LR 21:944 (September 1995), LR 22:814 (September 1996), LR 23:564 (May 1997), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:655 (April 1998), LR 24:1101 (June 1998), LR 24:1688 (September 1998), LR 25:433 (March 1999), repromulgated LR 25:853 (May 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:269 (February 2000), LR 26:2465 (November 2000), LR 27:291 (March 2001), LR 27:708 (May 2001), LR 28:999 (May 2002), LR 28:1191 (June 2002), LR 29:318 (March 2003); amended by the Office of the Secretary, Legal Affairs Division, LR 31:2452 (October 2005), LR 31:3116 (December 2005), LR 32:606 (April 2006), LR 32:822 (May 2006), LR 33:1625 (August 2007), LR 33:2098 (October 2007), LR 34:71 (January 2008), LR 34:615 (April 2008), LR 34:1009 (June 2008), LR 34:1894 (September 2008), LR 34:2396 (November 2008), LR 36:1235 (June 2010), repromulgated LR 36:1535 (July 2010), amended LR 36:2554 (November 2010), LR 38:774, 781 (March 2012), repromulgated LR 38:1009 (April 2012), amended by the Office of the Secretary, Legal Division, LR 40:1338 (July 2014), LR 41:2600 (December 2015), LR 42:565 (April 2016), LR 42:2178 (December 2016), LR 43:1138 (June 2017), repromulgated by the Office of the Secretary, Legal Affairs and Criminal Investigation Division, LR 43:1531 (August 2017), LR 46:898 (July 2020), LR 47:1852 (December 2021).

§110. Incorporation by Reference

A. When used in LAC 33:V.Subpart 1 the publications and methods listed in this Section shall be used to comply with these regulations.

B. The following materials are available for purchase from the American Society for Testing and Materials, 100 Barr Harbor Drive, Box C700, West Conshohocken, PA 19428-2959, or go to: <http://www.astm.org>:

1. ASTM D-3278-78, “Standard Test Methods for Flash Point for Liquids by Setaflash Closed Tester,” approved for LAC 33:V.4903.B;

2. ASTM D-93-79 or D-93-80, “Standard Test Methods for Flash Point by Pensky-Martens Closed Cup Tester,” approved for LAC 33:V.4903.B;

3. ASTM D-1946-82, “Standard Method for Analysis of Reformed Gas by Gas Chromatography,” approved for LAC 33:V.1709 and 4555;

4. ASTM D 2382-83, “Standard Test Method for Heat of Combustion of Hydrocarbon Fuels by Bomb Calorimeter (High-Precision Method),” approved for LAC 33:V.1709 and 4555;

5. ASTM E 169-87, “Standard Practices for General Techniques of Ultraviolet-Visible Quantitative Analysis,” approved for LAC 33:V.1741;

6. ASTM E 168-88, “Standard Practices for General Techniques of Infrared Quantitative Analysis,” approved for LAC 33:V.1741;

7. ASTM E 260-85, “Standard Practice for Packed Column Gas Chromatography,” approved for LAC 33:V.1741;

8. ASTM D 2267-88, “Standard Test Method for Aromatics in Light Naphthas and Aviation Gasolines by Gas Chromatography,” approved for LAC 33:V.1741;

9. ASTM D 2879-92, “Standard Test Method for Vapor Pressure—Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope,” approved for LAC 33:V.4727;

10. ASTM E 926-88, “Standard Test Methods for Preparing Refuse-Derived Fuel (RDF) Samples for Analyses of Metals,” Test Method C—Bomb, Acid Digestion Method.

C. The following materials are available for purchase from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161; or from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, (202) 512-1800:

1. “APTI Course 415: Control of Gaseous Emissions,” EPA Publication EPA-450/2-81-005, December 1981, approved for LAC 33:V.1713 and 4559;

2. “Method 1664, Revision A, n-Hexane Extractable Material (HEM; Oil and Grease) and Silica Gel Treated n-Hexane Extractable Material (SGT-HEM; Non-polar Material) by Extraction and Gravimetry, PB99-121949,” approved for LAC 33:V.4999.Appendix E;

3. the following methods as published in the test methods compendium known as Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846, Third Edition. A suffix “A” in the method number indicates revision one (the method has been revised once). A suffix “B” in the method number indicates revision two (the method has been revised twice). A suffix “C” in the method number indicates revision three (the

method has been revised three times). A suffix “D” in the method number indicates revision four (the method has been revised four times):

- a. Method 0010, dated September 1986 and in the Basic Manual, approved for LAC 33:V.4999.Appendix E;
- b. Method 0020, dated September 1986 and in the Basic Manual, approved for LAC 33:V.4999.Appendix E;
- c. Method 0030, dated September 1986 and in the Basic Manual, approved for LAC 33:V.4999.Appendix E;
- d. Method 1320, dated September 1986 and in the Basic Manual, approved for LAC 33:V.4999.Appendix E;
- e. Method 1311, dated September 1992 and in Update I, approved for LAC 33:V.2223, 2245, 2247, 4903.E, and 4999.Appendix E;
- f. Method 1330A, dated September 1992 and in Update I, approved for LAC 33:V.4999.Appendix E;
- g. Method 1312 dated September 1994 and in Update II, approved for LAC 33:V.4999.Appendix E;
- h. Method 0011, dated December 1996 and in Update III, approved for LAC 33:V.3099.Appendix I and 4999.Appendix E;
- i. Method 0023A, dated December 1996 and in Update III, approved for LAC 33:V.3009, 3099.Appendix I, and 4999.Appendix E;
- j. Method 0031, dated December 1996 and in Update III, approved for LAC 33:V.4999.Appendix E;
- k. Method 0040, dated December 1996 and in Update III, approved for LAC 33:V.4999.Appendix E;
- l. Method 0050, dated December 1996 and in Update III, approved for LAC 33:V.3015, 3099.Appendix I, and 4999.Appendix E;
- m. Method 0051, dated December 1996 and in Update III, approved for LAC 33:V.3015, 3099.Appendix I, and 4999.Appendix E;
- n. Method 0060, dated December 1996 and in Update III, approved for LAC 33:V.3013, 3099.Appendix I, and 4999.Appendix E;
- o. Method 0061, dated December 1996 and in Update III, approved for LAC 33:V.3013, 3099.Appendix I, and 4999.Appendix E;
- p. Method 9071B, dated April 1998 and in Update IIIA, approved for LAC 33:V.4999.Appendix E;
- q. Method 1010A, dated November 2004 and in Update IIIB, approved for LAC 33:V.4999.Appendix E;
- r. Method 1020B, dated November 2004 and in Update IIIB, approved for LAC 33:V.4999.Appendix E;
- s. Method 1110A, dated November 2004 and in Update IIIB, approved for LAC 33:V.4903.C and 4999.Appendix E;

t. Method 1310B, dated November 2004 and in Update IIIB, approved for LAC 33:V.4999.Appendix E;

u. Method 9010C, dated November 2004 and in Update IIIB, approved for LAC 33:V.2299, Tables 2, 7, and 10, and 4999.Appendix E;

v. Method 9012B, dated November 2004 and in Update IIIB, approved for LAC 33:V.2299, Tables 2, 7, and 10, and 4999.Appendix E;

w. Method 9040C, dated November 2004 and in Update IIIB, approved for LAC 33:V.4903.C and 4999.Appendix E;

x. Method 9045D, dated November 2004 and in Update IIIB, approved for LAC 33:V.4999.Appendix E;

y. Method 9060A, dated November 2004 and in Update IIIB, approved for LAC 33:V.1711, 1741, 4557, 4587, and 4999.Appendix E;

z. Method 9070A, dated November 2004 and in Update IIIB, approved for LAC 33:V.4999.Appendix E;

aa. Method 9095B, dated November 2004 and in Update IIIB, approved, LAC 33:V.1901, 2515, 4431, 4507, 4721, and 4999.Appendix E.

D. The following materials are available for purchase from the National Fire Protection Association, 1 Batterymarch Park, Box 9101, Quincy, MA 02269-9101:

1. "Flammable and Combustible Liquids Code" (NFPA 30) (1977 or 1981), approved for LAC 33:V.1013.C, 1917.B, and 4443;

2. Reserved.

E. The following materials are available for purchase from the American Petroleum Institute, 1220 L Street, Northwest, Washington, DC 20005:

1. API Publication 2517, Third Edition, February 1989, "Evaporative Loss from External Floating-Roof Tanks," approved for LAC 33:V.4727;

2. Reserved.

F. The following materials are available for purchase from the Environmental Protection Agency, Research Triangle Park, NC:

1. "Screening Procedures for Estimating the Air Quality Impact of Stationary Sources, Revised," October 1992, EPA Publication Number EPA-450/R-92-019, approved for LAC 33:V.3099.Appendix I;

2. Reserved.

G. The following materials are available for purchase from the Organisation for Economic Co-operation and Development, Environment Directorate, 2 rue Andre Pascal, 75775 Paris Cedex 16, France:

1. The OECD Green List of Wastes (revised May 1994), the Amber List of Wastes and Red List of Wastes (both revised May 1993) as set forth in Appendix 3, Appendix 4, and Appendix 5, respectively, to the OECD

ENVIRONMENTAL QUALITY

Council Decision C(92)39/FINAL (Concerning the Control of Transfrontier Movements of Wastes Destined for Recovery Operations), approved for LAC 33:V.1127.I;

2. Reserved.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:814 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:656 (April 1998), LR 24:1690 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:270 (February 2000), LR 27:291 (March 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1010 (June 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:899 (July 2020).

§111. Use of Number and Gender in These Regulations

A. As used in these regulations:

- words in the masculine gender also include the feminine and neuter genders; and
- words in the singular include the plural; and
- words in the plural include the singular.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:220 (March 1990).

§199. Appendices—Appendices A and B

A. Appendix A—Equations for the Development of Soil and Groundwater Standards

Soil_{NHEM}—Carcinogenic Effects—Organic Constituents (mg/kg):

(EQ1)

$$EF_i \times ED_i \times \left[\left(SF_o \times 10^{-6} \frac{kg}{mg} \times IRS_i \right) + \left(SF_i \times IRA_a \times \left(\frac{1}{VF_i} \right) \right) + \left(SF_o \times SA_i \times AF_i \times ABS \times 10^{-6} \frac{kg}{mg} \right) \right]$$

Parameter	Definition (units)	Input Value
Soil _{NHEM}	NHEM industrial risk-based chemical concentration in soil/ sediment (mg/kg)	--
TR	Target excess individual lifetime cancer risk (unitless)	10 ⁻⁵
SF _o	Oral cancer slope factor ((mg/kg-day) ⁻¹)	CS ^a
SF _i	Inhalation cancer slope factor ((mg/kg-day) ⁻¹)	CS ^a
BW _a	Average adult body weight (kg)	70 ^b
AT _c	Averaging time—carcinogens (yr)	70 ^b
EF _i	Industrial exposure frequency (days/yr)	250 ^b
ED _i	Industrial exposure duration (yr)	25 ^b
IRS _i	Industrial soil ingestion rate (mg/day)	50 ^b
IRA _a	Adult inhalation rate (m ³ /day)	20 ^c
VF _i	Industrial soil-to-air volatilization factor (m ³ /kg)	CS ^d
SA _i	Skin surface area for an industrial worker (cm ² /day)	3,300 ^e
AF _i	Soil-to-skin adherence factor for an industrial worker (mg/cm ²)	0.2 ^c
ABS	Dermal absorption factor (unitless)	CS ^c

^a Chemical-specific; refer to EPA's Integrated Risk Information System (<http://www.epa.gov/iris/subst/index.html>) or other appropriate EPA reference.

^e Chemical-specific; refer to Table A-1.

VF_i—Volatilization Factor—Organic Constituents (m³/kg):

(EQ5)

$$\frac{(Q/C) \times (3.14 \times D_A \times T)^{1/2} \times 10^{-4} \text{ (m}^2 \text{ / cm}^2\text{)}}{(2 \times \rho_b \times D_A)}$$

where:

(EQ6)

$$D_s \text{ (cm}^2 \text{ / s)} = \frac{[(\theta_a^{10/3} \times D_i \times H' + \theta_w^{10/3} \times D_w) / n^2]}{\rho_b \times K_d + \theta_w + \theta_a \times H'}$$

Parameter	Definition (units)	Input Value
VF _i	Industrial soil-to-air volatilization factor (m ³ /kg)	--
D _A	Apparent diffusivity (cm ² /s)	--
Q/C	Inverse of the mean concentration at the center of source (g/m ² -s per kg/m ³)	79.25
T	Exposure interval—industrial (s)	7.9E+08 ^a
ρ _b	Dry soil bulk density (g/cm ³)	1.7 ^b
θ _a	Air-filled soil porosity (L _{air} /L _{soil})	n - θ _w
n	Total soil porosity (L _{por} /L _{soil})	1 - (ρ _v /ρ _s)
θ _w	Water-filled soil porosity (L _{water} /L _{soil})	0.21 ^b

Parameter	Definition (units)	Input Value
ρ _s	Soil particle density (g/cm ³)	2.65 ^b
D _i	Diffusivity in air (cm ² /s)	CS ^c
H'	Henry's Law Constant (dimensionless)	CS ^{c,d}
D _w	Diffusivity in water (cm ² /s)	CS ^c
K _d	Soil-water partition coefficient (cm ³ /g) = K _{oc} × f _{oc}	CS ^c
K _{oc}	Soil organic carbon partition coefficient (cm ³ /g)	CS ^c
f _{oc}	Fractional organic carbon in soil (g/g) = percent organic matter/174 (ASTM 2974)	0.006 ^b

^a Soil Screening Guidance: User's Guide, EPA 1996.

^b LDEQ default value.

^c Chemical-specific.

^d H' = H × 41 where: H = Henry's Law Constant (atm·m³/mol);

R = Universal Law Constant (0.0000821 atm·m³/mole·°K); and

T = Absolute temperature of soil (°K) [273 + °C (25°C)].

Table A-1 Dermal Absorption Factors ¹	
Constituent	ABS (unitless)
Arsenic	0.03
Cadmium	0.001
Chlordane	0.04
2,4-D	0.05
DDT	0.03
Gamma-hexachlorocyclohexane	0.04
TCDD	0.03
Pentachlorophenol	0.25
Polychlorinated biphenyls	0.14
Polycyclic aromatic hydrocarbons	0.13
Other semivolatile organic constituents	0.10
Other inorganic constituents (metals)	0
Volatile constituents	0

B. Appendix B—Examples of Potentially Incompatible Waste¹

1. Many hazardous wastes, when mixed with other waste or materials at a hazardous waste facility, can produce effects that are harmful to human health and the environment, such as:

- a. heat or pressure;
- b. fire or explosion;
- c. violent reaction;
- d. toxic dusts, mists, fumes, or gases; or
- e. flammable fumes or gases.

2. Paragraph 5 of this Appendix contains examples of potentially incompatible wastes, waste components, and materials, along with the harmful consequences that result from mixing materials in one group with materials in another group. Paragraph 5 is intended as a guide to owners or operators of treatment, storage, and disposal facilities, and to enforcement and permit-granting officials, to indicate the need for special precautions when managing these potentially incompatible waste materials or components.

3. The tables in Paragraph 5 are not intended to be exhaustive. An owner or operator must, as the regulations require, adequately analyze his wastes so that he can avoid creating uncontrolled substances or reactions of the types listed in Paragraph 5, whether they are listed in Paragraph 5 or not.

4. It is possible for potentially incompatible wastes to be mixed in a way that precludes a reaction (e.g., adding acid to water rather than water to acid) or that neutralizes them (e.g., a strong acid mixed with a strong base), or that controls substances produced (e.g., by generating flammable gases in a closed tank equipped so that ignition cannot occur, and burning the gases in an incinerator).

5. In the tables below, the mixing of a Group A material with a Group B material may have the potential consequence as noted.

Group 1 Materials	
Group 1-A:	
Acetylene sludge	
Alkaline caustic liquids	
Alkaline cleaner	
Alkaline corrosive liquids	
Alkaline corrosive battery fluid	
Caustic wastewater	
Lime sludge and other corrosive alkalis	
Lime wastewater	
Lime and water	
Spent caustic	
Group 1-B:	
Acid sludge	
Acid and water	
Battery acid	
Chemical cleaners	
Electrolyte, acid	
Etching acid liquid or solvent	
Pickling liquor and other corrosive acids	
Spent acid	
Spent mixed acid	
Spent sulfuric acid	
Potential Consequences:	
Heat generation or violent reaction	

Group 2 Materials	
Group 2-A:	
Aluminum	
Beryllium	
Calcium	
Lithium	
Magnesium	
Potassium	
Sodium	
Zinc powder	
Other reactive metals and metal hydrides	
Group 2-B:	
Any waste in Group 1-A or 1-B	
Potential Consequences:	
Fire or explosion; generation of flammable hydrogen gas	

Group 3 Materials	
Group 3-A:	
Alcohols	
Water	
Group 3-B:	
Any concentrated waste in Group 1-A or 1-B	
Calcium	
Lithium	
Metal hydrides	
Potassium	
SO ₂ Cl ₂ , SOCl ₂ , PCI ₃ , CH ₃ SiCl ₃	
Other water-reactive waste	
Potential Consequences:	
Fire, explosion, or heat generation; generation of flammable or toxic gases	

Group 4 Materials	
Group 4-A:	
Alcohols	
Aldehydes	
Halogenated hydrocarbons	
Nitrated hydrocarbons	
Unsaturated hydrocarbons	

Group 4 Materials	
Other reactive organic compounds and solvents	
Group 4-B:	
Concentrated Group 1-A or 1-B wastes	
Group 2-A wastes	
Potential Consequences:	
Fire, explosion, or violent reaction	

Group 5 Materials	
Group 5-A:	
Spent cyanide and sulfide solutions	
Group 5-B:	
Group 1-B wastes	
Potential Consequences:	
Generation of toxic hydrogen cyanide or hydrogen sulfide gas	

Group 6 Materials	
Group 6-A:	
Chlorates	
Chlorine	
Chlorites	
Chromic acid	
Hypochlorites	
Nitrates	
Nitric acid, fuming	
Perchlorates	
Permanganates	
Peroxides	
Other strong oxidizers	
Group 6-B:	
Acetic acid and other organic acids	
Concentrated mineral acids	
Group 2-A wastes	
Group 4-A wastes	
Other flammable and combustible wastes	
Potential Consequences:	
Fire, explosion, or violent reaction

Chapter 3. General Conditions for Treatment, Storage, and Disposal Facility Permits

§301. Authority

A. The Louisiana Environmental Affairs Act (Acts 1979, 449) authorizes the department to administer this permit program.

B. This Chapter establishes general conditions for permit standards applicable to treatment, storage, and disposal (TSD) facilities. LAC 33:V.Chapter 5 establishes the contents of the permit application and LAC 33:V.Chapter 7 establishes the administrative procedures for receipt, evaluation, and issuance of TSD permits. LAC 33:V.Chapters 10 and 11 establishes standards applicable to generators of hazardous waste. LAC 33:V.Chapter 13 establishes standards applicable to transporters of hazardous

waste. LAC 33:V.Chapter 15 establishes general standards for TSD facilities. LAC 33:V.Chapters 19-32 establish specific technical requirements for various disposal facility components.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:900 (July 2020).

§303. Overview of the Permit Program

A. General Application Requirements

1. **Permit Application.** Any person who is required to have a permit (including new applicants and permittees with expiring permits) shall complete, sign, and submit an application to the Office of Environmental Services, as described in this Section and LAC 33:V.4301, 4303, and 4305. Persons currently authorized with interim status shall apply for permits when required by the administrative authority. Persons covered by permits by rule (LAC 33:V.305.D) need not apply. Procedures for applications, issuance, and administration of emergency permits are found exclusively in LAC 33:V.701 and 703. Procedures for application, issuance, and administration of research, development, and demonstration permits are found exclusively in LAC 33:V.329.

2. No later than 90 days after the promulgation or revision of these regulations, all generators and transporters of hazardous waste, and all owners or operators of hazardous waste treatment, storage, or disposal facilities must file or have on file a notification of that activity using Notification Form HW-1, available from the Office of Environmental Services or through the department's website. For generators of hazardous waste, the Notification Form HW-1 shall be deemed a registration upon acceptance and approval by the administrative authority.

3. The administrative authority shall not begin the processing of a permit until the applicant has fully complied with the application requirements for that permit. See this Chapter and LAC 33:V.Chapter 5 for permit standards and requirements for the contents of permit applications.

4. Permit applications must comply with the signature and certification requirements of LAC 33:V.507 and 513.

B. Treatment, storage, or disposal of hazardous waste is prohibited by any person who has not received an interim status or a standard permit.

C. A hazardous waste permit application consists of two parts.

1. Part I requirements are listed in LAC 33:V.515.
2. Part II requirements are listed in LAC 33:V.517.

D. No facility may be used to treat, store, and/or dispose of hazardous waste without a permit for the specific activities, procedures, and classification of waste handled as

outlined in their permit, or in emergency situations under the direction of the administrative authority as provided in LAC 33:V.701 or 703.

E. Requirements for Existing TSD Facilities

1. Owners and operators of existing TSD facilities must submit Part I of their permit application requirements listed in LAC 33:V.515 to the administrative authority no later than 30 days after the date they first become subject to the permitting standards set forth in LAC 33:V.Subpart 1. Generators generating greater than 100 kg, but less than 1000 kg, of hazardous waste in a calendar month who treat, store, or dispose of these wastes on-site must submit a Part I RCRA permit application by March 24, 1987.

2. The owner or operator of an existing TSD facility may be required to submit a permit application at any time. Any owner or operator shall be allowed at least six months from the date of request to submit the application. Any owner or operator of an existing TSD facility may voluntarily submit the application at any time.

3. The administrative authority may by compliance order extend the date by which the owner or operator of an existing TSD facility must submit a permit application. In no instance will the administrative authority grant an extension of permit submission for more than 180 days.

4. Failure to furnish a requested Part II application on time, or to finish in full the information required by the Part II application, is grounds for termination of interim status under LAC 33:V.Chapter 43.

F. **Part II Formal Permit Application.** The formal permit application must follow all outline, numbering system, and other format requirements established by the administrative authority.

G. **Requirements for Interim Status Facilities.** Facility owners and operators with interim status must comply with interim status standards set forth in LAC 33:V.Chapter 43.

H. **Requirements for New TSD Facilities.** Owners or operators of new TSD facilities must submit Part I and Part II of the permit application at least 180 days before physical construction is expected to commence except as provided in LAC 33:V.303.H.3.

1. No person shall begin physical construction of a new TSD facility or begin major modifications to an existing facility without having submitted Parts I and II of the permit application and received a final effective TSD permit.

2. An application for a permit for a new TSD facility (including both Parts I and II) may be filed any time after promulgation of these standards, applicable to such facility. The application shall be filed with the Office of Environmental Services.

3. Notwithstanding LAC 33:V.303.H.1, a person may construct a facility for the incineration of polychlorinated biphenyls pursuant to and after an approval issued by the administrative authority under Section (6)(e) of the Toxic Substances Control Act, and any person owning or operating

such a facility shall, at any time after construction or operation of such a facility has begun, file an application for a RCRA permit to incinerate hazardous waste authorizing such facility to incinerate waste identified or listed under LAC 33:V.Chapter 49.

4. A new facility must obtain an EPA identification number. EPA identification numbers will be issued only by the EPA. However, application for an EPA Identification Number shall be made by completing the Hazardous Waste Notification form provided by the Office of Environmental Services.

I. No new facility or major modification of an existing facility may commence treatment, storage, or disposal of hazardous waste until the facility is complete and:

1. the permittee has submitted to the administrative authority by certified mail or hand delivery a letter signed by the permittee and an engineer licensed in Louisiana stating that the facility is complete and built in accordance with terms of the permit; and

2. the facility has been inspected by the department following a "request to make final inspection" by the operator, and an order to proceed is issued.

J. Timely Permit Submission. Failure to furnish a requested application on time or failure to furnish in full the information required by the application is grounds for termination of interim status.

K. Updating Permit Applications

1. If any owner or operator of a TSD facility has filed Part I of the permit application and has not yet filed a Part II permit application, the owner or operator shall file an amended Part I permit application.

2. The owner or operator of a facility who fails to comply with the updating requirements of LAC 33:V.303.K may be subject to termination of interim status with respect to those wastes not reported in duly filed notifications.

L. Incomplete Applications. Applications which lack information necessary for proper evaluation will be returned by the administrative authority to the operator within 60 days of receipt of application with a list of additional data required and the timeframe for submission of additional data.

M. Completeness. The administrative authority shall not issue a permit before receiving a complete application for a permit except for permits by rule, or emergency permits. An application for a permit is complete when the administrative authority receives an application form and any supplemental information which are completed to his or her satisfaction. An application for a permit is complete notwithstanding the failure of the owner or operator to submit the exposure information described in LAC 33:V.303.P. The administrative authority may deny a permit for the active life of a hazardous waste management facility or unit before receiving a complete application for a permit. Applications which are complete will be accepted for review. Operators

will be notified of such acceptance for review within 60 days of receipt of application.

N. Reapplications. Any TSD facility with an effective permit shall submit a new permit application at least 180 days before the expiration date of the effective permit, unless permission for later filing is granted by the administrative authority. (The administrative authority shall not grant permission for applications to be submitted later than the expiration date of the existing permit.)

O. Application Submitted. All formal permit applications (Part II) shall be submitted in quintuplicate in the form presented in LAC 33:V.515, 517, 519, and 521 and in conformance with all requirements established by the administrative authority. An additional 15 copies shall be provided for any application upon which an evidentiary hearing is to be held by the administrative authority.

P. Exposure Information

1. After August 8, 1985, any Part II permit application submitted by an owner or operator of a facility that stores, treats, or disposes of hazardous waste in a surface impoundment or a landfill must be accompanied by information, reasonably ascertainable by the owner or operator, on the potential for the public to be exposed to hazardous wastes or hazardous constituents through releases related to the unit. At a minimum, such information must address:

a. reasonably foreseeable potential releases from both normal operations and accidents at the unit, including releases associated with transportation to or from the unit;

b. the potential pathways of human exposure to hazardous wastes or constituents resulting from the releases described in LAC 33:V.303.P.1.a; and

c. the potential magnitude and nature of the human exposure resulting from such releases.

2. By August 8, 1985, owners and operators of a landfill or a surface impoundment who have already submitted a Part II application must submit the exposure information required in LAC 33:V.303.P.1.

Q. Other Information. The administrative authority may require a permittee or an applicant to submit relevant information in order to establish permit conditions under LAC 33:V.311.E-F and 315.

R. If the administrative authority concludes, based on one or more of the factors listed in Paragraphs R.1-9 of this Section, that compliance with the standards of 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122, alone may not be protective of human health or the environment, the administrative authority shall require the additional information or assessment necessary to determine whether additional controls are necessary to ensure protection of human health and the environment. This includes information necessary to evaluate the potential risk to human health and/or the environment resulting from both direct and indirect exposure pathways. The administrative authority may also require a permittee or applicant to

ENVIRONMENTAL QUALITY

provide information necessary to determine whether such an assessment should be required. The administrative authority shall base the evaluation of whether compliance with the standards of 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122, alone is protective of human health or the environment on factors relevant to the potential risk from a hazardous waste combustion unit, including, as appropriate, any of the following factors:

1. particular site-specific considerations such as proximity to receptors (such as schools, hospitals, nursing homes, day care centers, parks, community activity centers, or other potentially sensitive receptors), unique dispersion patterns, etc.;

2. identities and quantities of emissions of persistent, bioaccumulative, or toxic pollutants considering enforceable controls in place to limit those pollutants;

3. identities and quantities of nondioxin products of incomplete combustion most likely to be emitted and to pose significant risk based on known toxicities (confirmation of which should be made through emissions testing);

4. identities and quantities of other off-site sources of pollutants in proximity to the facility that significantly influence interpretation of a facility-specific risk assessment;

5. presence of significant ecological considerations, such as the proximity of a particularly sensitive ecological area;

6. volume and types of wastes, for example wastes containing highly toxic constituents;

7. other on-site sources of hazardous air pollutants that significantly influence interpretation of the risk posed by the operation of the source in question;

8. the adequacy of any previously conducted risk assessment, given any subsequent changes in conditions likely to affect risk; and

9. such other factors as may be appropriate.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 14:790 (November 1988), LR 16:220 (March 1990), LR 17:478 (May 1991), LR 17:658 (July 1991), LR 20:1000 (September 1994), LR 21:564 (June 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2466 (November 2000), LR 27:708 (May 2001), amended by the Office of Environmental Assessment, LR 30:2023 (September 2004), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2453 (October 2005), LR 33:2099 (October 2007), LR 34:619 (April 2008).

§305. Scope of the Permit

A. A permit is required for the treatment, storage, and disposal of any hazardous waste as identified or listed in LAC 33:V.Chapter 49. The terms *treatment*, *storage*, *disposal*, and *hazardous waste* are defined in LAC 33:V.109. Owners and operators of hazardous waste management units

must have permits during the active life (including the closure period) of the unit. Owners or operators of surface impoundments, landfills, land treatment units, and waste pile units that received wastes after July 26, 1982, or that certified closure (according to LAC 33:V.4387) after January 26, 1983, must have post-closure permits, unless they demonstrate closure by removal or decontamination as provided under Subsections F and G of this Section, or obtain an enforceable document in lieu of a post-closure permit, as provided under Subsection H of this Section. If a post-closure permit is required, the permit must address applicable groundwater monitoring, unsaturated zone monitoring, corrective action, and post-closure care requirements. The denial of a permit for the active life of a hazardous waste management facility or unit does not affect the requirement to obtain a post-closure permit under this Section.

B. Specific Inclusions. Owners and operators of certain facilities require hazardous waste permits as well as permits under other programs for certain aspects of the facility operation. Permits are required for:

1. facilities which treat, store, and/or dispose of hazardous wastes controlled by this program, as listed in LAC 33:V.105, less listed exclusions in LAC 33:V.105.D;

2. all associated surface facilities for injection wells that treat, store, and/or dispose of hazardous waste;

3. treatment, storage, or disposal of hazardous waste at facilities requiring a National Pollution Discharge Elimination System (NPDES) permit;

4. barges or vessels that dispose of hazardous waste under a valid federal permit by ocean disposal and onshore hazardous waste treatment, or storage facilities associated with an ocean disposal operation. However, the facility will be deemed to have a permit for ocean disposal from the barge or vessel itself if it complies with the requirements of LAC 33:V.305.C.

C. Specific Exclusions and Exemptions. The following persons are not required to obtain a hazardous waste permit:

1. facilities with injection wells that dispose of hazardous waste. Those wells are regulated by the Office of Conservation prior to February 1, 1984. After that date, such permits shall be issued by the Department of Environmental Quality pursuant to Act 97 of 1983;

2. generators who accumulate hazardous waste on-site in compliance with all of the conditions for exemption provided in LAC 33:V.1009, 1011, 1013, and 1015;

3. farmers who dispose of hazardous waste pesticides from their own use as provided in LAC 33:V.1003.C;

4. persons who own or operate facilities solely for the treatment, storage, or disposal of hazardous waste excluded from regulation under LAC 33:V.105.D or 1009 (very small quantity generator exemption);

5. owners or operators of totally enclosed treatment facilities (see definition in LAC 33:V.Chapter 1);

6. owners and operators of elementary neutralization units or wastewater treatment units (see definitions in LAC 33:V.Chapter 1);

7. transporters storing manifested shipments of hazardous waste in containers meeting all applicable requirements at a transfer facility for a period of 10 days or less, if so approved by the administrative authority (see definition in LAC 33:V.109);

8. persons adding absorbent material to waste in a container and persons adding waste to absorbent material, provided that this action occurs at the time waste is first placed in the container and that the action complies with all applicable sections in LAC 33:V.Chapter 21;

9. a person is not required to obtain a permit for those activities he carries out to immediately contain or treat a spill of hazardous waste or material which, when spilled, becomes a hazardous waste. This exclusion is intended to relieve persons of the necessity of obtaining a RCRA permit where the treatment or storage of hazardous waste is undertaken as part of an immediate response to a spill. After the immediate response activities are completed, any treatment, storage, or disposal of spilled material or spill residue or debris that is undertaken must be covered by interim status, permit or emergency permit;

10. owners and operators of facilities granted a research development and demonstration permit under Section 3005(g) of Subtitle C of RCRA, is so specifically exempted by the administrative authority;

11. universal waste handlers and universal waste transporters (as defined in LAC 33:V.3813) handling the wastes listed below. These handlers are subject to regulation under LAC 33:V.Chapter 38, when handling the below listed universal wastes:

- a. batteries as described in LAC 33:V.3803;
- b. pesticides as described in LAC 33:V.3805;
- c. mercury-containing equipment as described in LAC 33:V.3807;
- d. lamps as described in LAC 33:V.3809;
- e. electronics as described in LAC 33:V.3810; and
- f. antifreeze as described in LAC 33:V.3811;

12. the owner or operator of a facility permitted, licensed, or registered to manage municipal or industrial solid waste, if the only hazardous waste the facility treats, stores, or disposes of is excluded from regulation by LAC 33:V.Subpart 1;

13. a person, not required to obtain a RCRA permit for treatment or containment activities taken during immediate response to any of the following situations:

- a. a discharge of a hazardous waste;
- b. an imminent and substantial threat of a discharge of hazardous waste;

c. a discharge of a material which, when discharged, becomes a hazardous waste;

d. an immediate threat to human health, public safety, property, or the environment from the known or suspected presence of military munitions, other explosive material, or an explosive device, as determined by an *explosives or munitions emergency response specialist* as defined in LAC 33:V.109;

14. any person who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of LAC 33:V.Chapters 3, 5, and 7 for those activities; or

15. in the case of emergency responses involving military munitions, the responding military emergency response specialist's organizational unit must retain records for three years identifying the dates of the response, the responsible persons responding, the type and description of material addressed, and its disposition.

D. RCRA Permits by Rule

1. Notwithstanding any other provision, the following shall be deemed to have a permit if the conditions listed are met.

a. The owner or operator of a barge or other vessel which accepts hazardous waste for ocean disposal, if he or she has a valid federal permit for ocean dumping which is duly authorized and meets permit conditions, hazardous waste regulations, identification numbers, uses the manifest system, reports manifest discrepancies, operating records, annual reports, and reports of any unmanifested waste. Where required by the administrative authority, evidence of the above conditions must be presented. On-shore storage or treatment facilities shall be permitted as required by LAC 33:V.Subpart 1.

b. The owner or operator of an injection well disposing of hazardous waste if he or she has a valid permit for underground injection issued under LAC 43:XVII.Subparts 1 and 2 and is in compliance with such permit and LAC 43:XVII.203.F, and associated surface facilities are permitted under LAC 33:V.Subpart 1. For underground injection permits issued after November 8, 1984, the owner or operator must comply with LAC 33:V.3322. Where the underground injection well is the only unit at a facility which requires a RCRA permit, the owner or operator must comply with LAC 33:V.516 and with the following information requirements for solid waste management units.

i. The following information is required for each solid waste management unit at a facility seeking a permit:

- (a). the location of the unit on the topographic map;
- (b). designation of type of unit;
- (c). general dimensions and structural description (supply any available drawings);

ENVIRONMENTAL QUALITY

(d). information on when the unit was operated; and

(e). specification of all wastes that have been managed at the unit, to the extent available.

ii. The owner or operator of any facility containing one or more solid waste management units must submit all available information pertaining to any release of hazardous wastes or hazardous constituents from such unit or units.

iii. The owner/operator must conduct and provide the results of sampling and analysis of groundwater, land surface, and subsurface strata, surface water, or air, which may include the installation of wells, where the administrative authority ascertains it is necessary to complete a RCRA Facility Assessment that will determine if a more complete investigation is necessary.

2. Publicly Owned Treatment Works. The owner or operator of a POTW can accept hazardous waste for treatment, if the owner or operator has an NPDES permit, complies with the conditions of that permit, and complies with the following regulations:

a. receives an identification number as provided in LAC 33:V.303.H.4;

b. receives all hazardous waste under a designated manifest system;

c. provides a mechanism by which discrepancies in manifested discharges and receipts can be reconciled;

d. maintains a description and quantity of each hazardous waste received and subsequent treatment including methods and dates;

e. submits annual reports summarizing activities relating to receptions and treatment of each hazardous waste;

f. submits a complete report within five days of receiving any hazardous waste on an unmanifested basis;

g. complies with all recordkeeping requirements of LAC 33:V.Subpart 1; and

h. for NPDES permits issued after November 8, 1984, complies with LAC 33:V.3322.

3. The owner or operator can accept the hazardous waste if it meets all federal, state, and local pretreatment requirements which would be applicable to the waste and if it is discharged into the POTW through a sewer, pipe, or similar conveyance.

E. Permits for Less Than an Entire Facility. The administrative authority may issue or deny a permit for one or more units at a facility without simultaneously issuing or denying a permit to all of the units at the facility. The interim status of any unit for which a permit has not been issued or denied is not affected by the issuance or denial of a permit to any other unit at the facility.

F. Closure by Removal. Owners/operators of surface impoundments, land treatment units, and waste piles closing

by removal or decontamination under LAC 33:V.Chapter 43 standards must obtain a post-closure permit unless they can demonstrate to the administrative authority that the closure met the standards for closure by removal or decontamination in LAC 33:V.2911, 2719.D.4, or 2315, respectively. The demonstration may be made in the following ways.

1. If the owner/operator has submitted an application for a post-closure permit, the owner/operator may request a determination, based on information contained in the application, that LAC 33:V.Subpart 1 closure-by-removal standards were met. If the administrative authority believes that LAC 33:V.Subpart 1 standards were met, he or she will notify the public of this proposed decision, allow for public comment, and reach a final determination according to the procedures in LAC 33:V.305.G.

2. If the owner/operator has not submitted a Part II application for a post-closure permit, the owner/operator may petition the administrative authority for a determination that a post-closure permit is not required because the closure met the applicable LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37 closure standards.

a. The petition must include data demonstrating that closure met removal or decontamination standards, or it must demonstrate that the unit was closed under state requirements that met or exceeded the applicable LAC 33:V.Subpart 1 closure-by-removal standards.

b. The administrative authority shall approve or deny the petition according to the procedures outlined in LAC 33:V.305.G.

G. Procedures for Closure Equivalency Determination

1. If a facility owner/operator seeks an equivalency demonstration under LAC 33:V.305.F, the administrative authority will provide the public through a newspaper notice, the opportunity to submit written comments on the information submitted by the owner/operator within 30 days from the date of the notice. The administrative authority will also, in response to a request or at his or her own discretion, hold a public hearing whenever such a hearing might clarify one or more issues concerning the equivalence of the LAC 33:V.Chapter 43 closure to the LAC 33:V.Chapter 35 closure. The administrative authority will give public notice of the hearing at least 30 days before it occurs. (Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the two notices may be combined.)

2. The administrative authority will determine whether the LAC 33:V.Chapter 43 closure met the requirements of LAC 33:V.Chapter 35 closure by removal or decontamination within 90 days of its receipt. If the administrative authority finds that the closure did not meet the applicable LAC 33:V.Chapter 35 standards, he or she will provide the owner/operator with a written statement of the reasons why the closure failed to meet LAC 33:V.Chapter 35 standards. The owner/operator may submit additional information in support of an equivalency demonstration within 30 days after receiving such written

statement. The administrative authority will review any additional information submitted and make a final determination within 60 days.

3. If the administrative authority determines that the facility did not close in accordance with LAC 33:V.Chapter 35 closure-by-removal standards, the facility is subject to post-closure permitting requirements.

H. Enforceable Documents for Post-Closure Care. At the discretion of the administrative authority, an owner or operator may obtain, in lieu of a post-closure permit, an enforceable document imposing the requirements of LAC 33:V.4396. *Enforceable document* means an order, plan, or other document issued by EPA or by the department under an authority that meets the requirements of 40 CFR 271.16(e) including, but not limited to, a corrective action order issued by EPA under Section 3008(h), a CERCLA remedial action, or a closure or post-closure plan.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 13:84 (February 1987), LR 13:433 (August 1987), LR 16:220 (March 1990), LR 16:614 (July 1990), LR 17:658 (July 1991), LR 20:1000 (September 1994), LR 20:1109 (October 1994), LR 21:944 (September 1995), LR 23:567 (May 1997), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1105 (June 1998), LR 24:1690, 1759 (September 1998), LR 25:435 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 27:708 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 31:3116 (December 2005), LR 33:1625 (August 2007), LR 34:619 (April 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:900 (July 2020).

§307. Effect of a Permit

A. Compliance with a RCRA permit during its term constitutes compliance, for purposes of enforcement, with LAC 33:V.Subpart 1, except for those requirements not included in the permit which:

1. become effective by statute;
2. are promulgated under LAC 33:V.Chapter 22 restricting the placement of hazardous wastes in or on the land;
3. are promulgated under LAC 33:V.Chapters 23, 25, and 29 regarding leak detection systems for new and replacement surface impoundment, waste pile, and landfill units and lateral expansions of surface impoundment, waste pile, and landfill units. The leak detection system requirements include double liners, CQA programs, monitoring, action leakage rates, and response action plans and will be implemented through the procedures of LAC 33:V.321.C Class 1 permit modifications; or
4. are promulgated under LAC 33:V.Chapter 43.Subchapters Q, R, and V limiting air emissions.

B. A permit may be modified, revoked and reissued, or terminated during its term for cause as set forth in LAC

33:V.323.B.2 and 3, or the permit may be modified upon the request of the permittee as set forth in LAC 33:V.321.C.

C. The issuance of a permit does not authorize any injury to persons or property, or invasion of other private rights, or any infringement of state or local law or regulations.

D. The issuance of a permit does not convey any property rights of any sort, or any exclusive privilege.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:614 (July 1990), LR 17:658 (July 1991), LR 21:266 (March 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:435 (March 1999), amended by the Office of the Secretary, Legal Affairs Division, LR 38:775 (March 2012).

§309. Conditions Applicable to All Permits

Each permit shall include permit conditions necessary to achieve compliance with the Act and these regulations, including each of the applicable requirements specified in LAC 33:V.Subpart 1. In satisfying this provision, the administrative authority may incorporate applicable requirements of LAC 33:V.Subpart 1 directly into the permit or establish other permit conditions that are based on LAC 33:V.Subpart 1. The following conditions apply to all hazardous waste permits. All conditions applicable to permits shall be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to these regulations must be given in the permit.

A. Duty to Comply. The permittee must comply with all conditions of this permit except that the permittee need not comply with the conditions of this permit to the extent and for the duration such noncompliance is authorized in an emergency permit. Any permit noncompliance constitutes a violation of the Act and any amendments and is grounds for enforcement action, permit termination, revocation and reissuance or modification, or denial of a permit renewal application.

B. Duty to Reapply. If the permittee wishes to continue an activity regulated by the permit after the expiration date of the permit, the permittee must reapply for the permit as required in LAC 33:V.303.N. If the administrative authority does not issue a final decision on the reapplication on or before the expiration date of the permit, it shall remain in effect until the administrative authority issues a final decision.

C. Need to Halt or Reduce Activity Not a Defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

D. Duty to Mitigate. The permittee shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this permit.

ENVIRONMENTAL QUALITY

E. Proper Operation and Maintenance

1. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures.

2. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.

F. Permit Actions. This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

G. Property Rights. This permit does not convey any property rights of any sort, or any exclusive privilege.

H. Duty to Provide Information. The permittee shall furnish to the administrative authority, within a reasonable time, any information which may be requested to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish, upon request, copies of records required to be kept by this permit.

I. Inspection and Entry. The permittee shall allow the administrative authority, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:

1. enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

2. have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

3. inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and

4. sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the appropriate act, any substances or parameters at any location.

J. Monitoring and Records

1. Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

2. The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by the permit, the certification required by

LAC 33:V.1529.B.19, and records of all data used to complete the application for this permit, for a period of at least three years from the date of the sample, measurement, report, certification, or application. This period may be extended by request of the administrative authority at any time. The permittee shall maintain records from all groundwater monitoring wells and associated groundwater surface elevations, for the active life of the facilities, and for disposal facilities for the post-closure care period as well.

3. Records of monitoring information shall include:

a. the date, exact place, and time of sampling or measurements;

b. the individual(s) who performed the sampling or measurements;

c. the date(s) analyses were performed;

d. the individual(s) who performed the analyses;

e. the analytical techniques of methods used; and

f. the results of such analyses.

K. Signatory Requirement. All applications, reports, or information submitted to the administrative authority shall be signed and certified (see also LAC 33:V.507).

L. Reporting Requirements

1. Planned Changes. The permittee shall give notice to the Office of Environmental Services, as soon as possible, of any planned physical alterations or additions to the permitted facility.

2. Anticipated Noncompliance. The permittee shall give advance notice to the Office of Environmental Services of any planned changes in the permitted facility or activity that may result in noncompliance with permit requirements.

3. For a new facility, the permittee may not treat, store, or dispose of hazardous waste; and for a facility being modified, the permittee may not treat, store, or dispose of hazardous waste in the modified portion of the facility except as provided in LAC 33:V.321.C until:

a. the permittee has submitted to the administrative authority by certified mail or hand delivery a letter signed by the permittee and a registered professional engineer stating that the facility has been constructed or modified in compliance with the permit; and

b. the administrative authority has inspected the newly modified or newly constructed facility and finds it is in compliance with the conditions of the permit or within 15 days of the date of receipt of the letter in LAC 33:V.303.I.1, the permittee has not received notice from the administrative authority of his or her intent to inspect, prior inspection is waived and the permittee may commence treatment, storage, or disposal of hazardous waste.

4. Transfers. The permit is not transferable to any person except with the written approval of the administrative authority. The administrative authority may require modification, or revocation and reissuance of the permit to

change the name of the permittee and incorporate such other requirements as may be necessary. In some cases, modification, or revocation and reissuance could be mandatory under LAC 33:V.Subpart 1.

5. **Monitoring Reports.** Monitoring results shall be reported at the intervals specified elsewhere in LAC 33:V.Subpart 1.

6. **Compliance Schedules.** Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule shall be submitted no later than 14 days after each schedule date.

7. The permittee shall report any noncompliance which may endanger health or the environment within 24 hours except as more immediate notification is required by the "Notification Regulations and Procedures for Unauthorized Discharges" (see LAC 33:I.Chapter 39). At a minimum such notification must include:

a. information concerning release of any hazardous waste that may cause an endangerment to public drinking water supplies;

b. any information of a release or discharge of hazardous waste or of a fire or explosion from the HWM facility, which could threaten the environment or human health outside the facility;

c. the description of the occurrence and its cause shall include:

i. name, address, and telephone number of the owner or operator;

ii. name, address, and telephone number of the facility;

iii. date, time, and type of incident;

iv. name and quantity of material(s) involved;

v. the extent of injuries, if any;

vi. an assessment of actual or potential hazards to the environment and human health outside the facility, where this is applicable; and

vii. estimated quantity and disposition of recovered material that resulted from the incident;

d. a written submission shall also be provided within five days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. The administrative authority may waive the five-day written notice requirement in favor of a written report within 15 days.

8. **Manifest Discrepancy Report.** If a significant discrepancy in a manifest is discovered, the permittee must

attempt to reconcile the discrepancy. If not resolved within 15 days, the permittee must submit a report including a copy of the manifest to the Office of Environmental Services.

9. **Unmanifested Waste Report.** An unmanifested waste report must be submitted to the Office of Environmental Services within five days of receipt of unmanifested waste.

10. **Annual Report.** An annual report must be submitted to the Office of Environmental Services covering facility activities during the previous calendar year.

11. **Other Noncompliance.** The permittee shall report all instances of noncompliance not reported under LAC 33:V.309.L.1, 2, 6, and 7 at the time monitoring reports are submitted. The reports shall contain the information listed in LAC 33:V.309.L.1 and 7.

12. **Other Information.** If the permittee becomes aware that he failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application, or in any report to the administrative authority, he shall promptly submit such facts or information to the Office of Environmental Services.

M. **Information Repository.** The administrative authority may require the permittee to establish and maintain an information repository at any time, based on the factors set forth in LAC 33:V.708.C.2. The information repository will be governed by the provisions in LAC 33:V.708.C.3-6.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 16:220 (March 1990), LR 16:614 (July 1990), LR 18:1256 (November 1992), LR 20:1000 (September 1994), LR 21:944 (September 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:657 (April 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2466 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2453 (October 2005), LR 33:2099 (October 2007), amended by the Office of the Secretary, Legal Division, LR 43:1139 (June 2017).

§311. Establishing Permit Conditions

A. In addition to conditions required in all permits, the administrative authority shall establish conditions, as required on a case-by-case basis, under duration of permits, schedules of compliance, monitoring, for considerations under federal law, and to provide for and assure compliance with all applicable requirements of LAC 33:V.Subpart 1 and its regulations.

B. New or reissued permits, modified, or revoked and reissued permits, shall incorporate each of the applicable requirements referenced in LAC 33:V.309.

C. All permit conditions shall be incorporated expressly, or with specific citation to the applicable regulations or specific permit requirements.

D. All permits for facilities with pre-existing groundwater contamination shall contain a permit condition containing the concentration limits of hazardous constituents established consistent with LAC 33:V.3305, 3307 and 3309. In no case shall other than background concentration limits be listed in the initial permit. Compliance with corrective action programs required in LAC 33:V.3303, 3319 and 3321 of the chapter will constitute a permitted variance. Corrective action programs shall be reviewed annually and may be based on predictive computer modeling. Alternate concentrations provided in LAC 33:V.3309.A or B may be set by permit amendment should the original concentration limits be unattainable within a 36-month timeframe.

E. Each RCRA permit shall include permit conditions necessary to achieve compliance with Subtitle II of Title 30 of the Louisiana Revised Statutes and LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 22, 23, 25, 27, 28, 29, 30, 31, 32, 33, 35, 37, and 41. In satisfying this provision the administrative authority may incorporate applicable requirements of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 22, 23, 25, 27, 28, 29, 30, 31, 32, 33, 35, 37, and 41 directly by reference into the permit or establish other permit conditions that are based on these regulations. Each permit issued under Subtitle II of Title 30 of the Louisiana Revised Statutes shall contain terms and conditions as the administrative authority determines necessary to protect human health and the environment.

F. RCRA Permits for Hazardous Waste Combustion Units. If, as the result of an assessment or other information, the administrative authority determines that conditions are necessary in addition to those required under 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122, or LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 22, 23, 25, 27, 28, 29, 30, 31, 32, 33, 35, 37, and 41, to ensure protection of human health and the environment, the administrative authority shall include those conditions in a RCRA permit for a hazardous waste combustion unit.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 16:220 (March 1990), LR 18:1256 (November 1992), LR 20:1000 (September 1994), amended by the Office of the Secretary, Legal Affairs Division, LR 34:619 (April 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:900 (July 2020).

§313. Requirements for Recording and Reporting of Monitoring Results

A. All permits shall specify:

1. requirements concerning the proper use, maintenance, and installation, when appropriate, of monitoring equipment or methods (including biological monitoring methods when appropriate);

2. required monitoring including type, intervals, and frequency sufficient to yield data which are representative of

the monitored activity including, when appropriate, continuous monitoring; and

3. applicable reporting requirements based upon the impact of the regulated activity as specified in LAC 33:V.Subpart 1. Reporting shall be no less frequent than specified in the regulations.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992).

§315. Duration of Permit

Hazardous waste permits shall be effective for a fixed term not to exceed 10 years. Except as provided in LAC 33:V.315.A, the term of a permit shall not be extended by modification beyond the maximum duration specified in this Section. The administrative authority may issue any permit for a duration that is less than the full allowable term under this Section. Each permit for a land disposal facility shall be reviewed by the administrative authority five years after the date of permit issuance or reissuance and shall be modified, suspended, or terminated, as necessary, as provided in LAC 33:V.323.

A. Continuation of Expiring Permits. The conditions of an expired permit continue in force until the effective date of a new permit if:

1. the permittee has submitted a timely application under LAC 33:V.517 and the applicable sections in LAC 33:V.519-533 which is a complete (under LAC 33:V.503) application for a new permit; and

2. the administrative authority through no fault of the permittee, does not issue a new permit with an effective date under LAC 33:V.705 on or before the expiration date of the previous permit (for example, when issuance is impracticable due to time or resource constraints).

B. Effect. Permits continued under this Section remain fully effective and enforceable.

C. Enforcement. When the permittee is not in compliance with the conditions of the expiring or expired permit, the administrative authority may choose to do any or all of the following:

1. initiate enforcement action based upon the permit which has been continued;

2. issue a notice of intent to deny the new permit under LAC 33:V.703.C.2. If the permit is denied, the owner or operator would then be required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit;

3. issue a new permit under LAC 33:V.303 with appropriate conditions; or

4. take other actions authorized by these regulations.

D. An EPA issued permit does not continue in force beyond its expiration date under federal law if at that time a state is the permitting authority. States authorized to administer the RCRA program may continue either EPA or state-issued permits until the effective date of the new permits.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 16:220 (March 1990), LR 20:1000 (September 1994).

§317. Availability and Retention of Records

A. The administrative authority or his representative, upon presentation of proper credentials, shall have access to the premises of all facilities permitted and to all pertinent records, and shall have the right to take samples from any facility or waste stream covered under this permit, as provided in R.S. 30:2012.

B. File copies of all manifests, annual reports, exception reports, waste tests or analyses, and other logs or records required hereunder shall be kept for department inspection for a period of not less than three years from date of completion or receipt, whichever is later.

C. Any information provided to the administrative authority will be made available to the public to the extent and in the manner authorized by the Freedom of Information Act except as provided otherwise in LAC 33:V.319.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:220 (March 1990).

§319. Confidentiality

A. Provisions for confidential information may be found in LAC 33:I.Chapter 5.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:84 (February 1987), amended by the Office of the Secretary, LR 22:344 (May 1996).

§321. Modification of Permits

A. Any proposed major modification of a facility or a site, any change in wastes handled in either volume or composition, and any other change in the site, facility, or operations that materially deviates from a permit or materially increases danger to the public health or the environment must be reported in writing to the Office of Environmental Services prior to such an occurrence, and a permit modification must be obtained in accordance with the application, public notice, and permit requirements of this Chapter and in accordance with LAC 33:I.Chapter 15. Any

operator or ownership change shall be made in accordance with LAC 33:I.Chapter 19.

B. Transfer of Permits

1. A permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or revoked and reissued under LAC 33:V.321.B.2 or 323.B.2 to identify the new permittee and incorporate such other requirements as may be necessary.

2. Changes in the ownership or operational control of a facility shall be made in accordance with LAC 33:I.Chapter 19.

C. Permit Modification at the Request of the Permittee

1. Class 1 Modifications

a. Except as provided in LAC 33:V.321.C.1.b, the permittee may put into effect Class 1 modifications listed in LAC 33:V.322 under the following conditions.

i. The permittee must notify the Office of Environmental Services concerning the modification by certified mail or other means that establish proof of delivery within seven calendar days after the change is put into effect. This notice must specify the changes being made to permit conditions or supporting documents referenced by the permit and must explain why they are necessary. Along with the notice, the permittee must provide the applicable information required by LAC 33:V.515-533, 2707, and 3115.

ii. The permittee must send a notice of the modification to all persons on the facility mailing list, maintained by the administrative authority in accordance with LAC 33:V.717.A.1.e, and the appropriate units of state and local government, as specified in LAC 33:V.717.A.1.b and d. This notification must be made within 90 calendar days after the change is put into effect. For the Class 1 modifications that require prior administrative authority approval, the notification must be made within 90 calendar days after the administrative authority approves the request.

iii. Any person may request that the administrative authority review, and the administrative authority may for cause reject, any Class 1 modification. The administrative authority must inform the permittee by certified mail that a Class 1 modification has been rejected, explaining the reasons for the rejection. If a Class 1 modification has been rejected, the permittee must comply with the original permit conditions.

b. Class 1 permit modifications identified in LAC 33:V.322 by a superscript "1" may be made only with the prior written approval of the administrative authority.

c. For a Class 1 permit modification, the permittee may elect to follow the procedures in LAC 33:V.321.C.2 for Class 2 modifications instead of the Class 1 procedures. The permittee must inform the administrative authority of this decision in the notice required in LAC 33:V.321.C.2.a.

2. Class 2 Modifications

ENVIRONMENTAL QUALITY

a. For Class 2 modifications, listed in LAC 33:V.322, the permittee must submit a modification request to the Office of Environmental Services that:

- i. describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;
- ii. identifies the modification as a Class 2 modification;
- iii. explains why the modification is needed; and
- iv. provides the applicable information required by LAC 33:V.515-533, 2707, and 3115.

b. The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the administrative authority and to the appropriate units of state and local government as required in LAC 33:V.717.A.1.b and must publish this notice in a major local newspaper of general circulation. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the administrative authority evidence of the mailing and publication. The notice must include:

- i. announcement of a 60-day comment period, in accordance with LAC 33:V.321.C.2.e, and the name and address of a department contact to whom comments must be sent;
- ii. announcement of the date, time, and place for a public meeting held in accordance with LAC 33:V.321.C.2.d;
- iii. name and telephone number of the permittee's contact person;
- iv. name and telephone number of a department contact person;
- v. location where copies of the modification request and any supporting documents can be viewed and copied; and
- vi. the following statement:

"The permittee's compliance history during the life of the permit being modified is available from the department contact person."

c. The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.

d. The permittee must hold a public meeting no earlier than 15 days after the publication of the notice required in LAC 33:V.321.C.2.b and no later than 15 days before the close of the 60-day comment period. The meeting must be held to the extent practicable in the vicinity of the permitted facility.

e. The public shall be provided 60 days to comment on the modification request. The comment period will begin on the date the permittee publishes the notice in the local

newspaper. Comments should be submitted to the department contact identified in the public notice.

f. No later than 90 days after receipt of the notification request, the administrative authority must do one of the following:

- i. approve the modification request with or without changes, and modify the permit accordingly;
- ii. deny the request;
- iii. determine that the modification request must follow the procedures in LAC 33:V.321.C.3 for Class 3 modifications for the following reasons:

(a). there is significant public concern about the proposed modification; or

(b). the complex nature of the change requires the more extensive procedures of Class 3;

iv. approve the request, with or without changes, as a temporary authorization having a term of up to 180 days;

v. notify the permittee that the administrative authority will decide the request within the next 30 days.

g. If the administrative authority notifies the permittee of a 30-day extension for a decision, the administrative authority must, no later than 120 days after receipt of the modification request, take one of the following actions:

- i. approve the modification request, with or without changes, and modify the permit accordingly;
- ii. deny the request;
- iii. determine that the modification request must follow the procedures in LAC 33:V.321.C.3 for Class 3 modifications for the following reasons:

(a). there is significant public concern about the proposed modification; or

(b). the complex nature of the change requires the more extensive procedures of Class 3;

iv. approve the request, with or without changes, as a temporary authorization having a term of up to 180 days.

h. If the administrative authority fails to make one of the decisions specified in LAC 33:V.321.C.2.g by the 120th day after receipt of the modification request, the permittee is automatically authorized to conduct the activities described in the modification request for up to 180 days, without formal department action. The authorized activities must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of LAC 33:V.Chapter 43. If the administrative authority approves, with or without changes, or denies the modification request during the term of the temporary or automatic authorization provided for in LAC 33:V.321.C.2.f, g, and h, such action cancels the temporary or automatic authorization.

i. In the case of an automatic authorization under LAC 33:V.321.C.2.h, or a temporary authorization under LAC 33:V.321.C.2.f.iv or C.2.g.iv, if the administrative authority has not made a final approval or denial of the modification request by the date 50 days prior to the end of the temporary or automatic authorization, the permittee must within seven days of that time send a notification to persons on the facility mailing list, and make a reasonable effort to notify other persons who submitted written comments on the modification request, that:

i. the permittee has been authorized temporarily to conduct the activities described in the permit modification request; and

ii. unless the administrative authority acts to give final approval or denial of the request by the end of the authorization period, the permittee will receive authorization to conduct such activities for the life of the permit.

j. If the owner/operator fails to notify the public by the date specified in LAC 33:V.321.C.2.i, the effective date of the permanent authorization will be deferred until 50 days after the owner/operator notifies the public.

k. Except as provided in LAC 33:V.321.C.2.m, if the administrative authority does not finally approve or deny a modification request before the end of the automatic or temporary authorization period or reclassify the modification as a Class 3, the permittee is authorized to conduct the activities described in the permit modification request for up to 180 days. The activities authorized under this Subsection must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of LAC 33:V.Chapter 43.

l. In making a decision to approve or deny a modification request, including a decision to issue a temporary authorization or to reclassify a modification as a Class 3, the administrative authority must consider all written comments submitted to the department during the public comment period and must respond in writing to all significant comments in his or her decision.

m. With the written consent of the permittee, the administrative authority may extend indefinitely or for a specified period the time periods for final approval or denial of a modification request or for reclassifying a modification as a Class 3.

n. The administrative authority may deny or change the terms of a Class 2 permit modification request under LAC 33:V.321.C.2.f-h for the following reasons:

- i. the modification request is incomplete;
- ii. the requested modification does not comply with the appropriate requirements of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37 or other applicable requirements;
- iii. the conditions of the modification fail to protect human health and the environment.

o. The permittee may perform any construction associated with a Class 2 permit modification request beginning 60 days after the submission of the request unless the administrative authority establishes a later date for commencing construction and informs the permittee in writing before day 60.

3. Class 3 Modifications

a. For Class 3 modifications listed in LAC 33:V.322, the permittee must submit a modification request to the administrative authority that:

i. describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;

ii. identifies the modification as a Class 3 modification;

iii. explains why the modification is needed; and

iv. provides the applicable information required by LAC 33:V.515, 516, 517, 519, 520, 521, 523, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 537, 2707, and 3115 and LAC 33:V.Chapter 15.

b. The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the administrative authority and to the appropriate units of state and local government as required in LAC 33:V.717.A.1.b and must publish this notice in a major local newspaper of general circulation. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the administrative authority evidence of the mailing and publication. The notice must include:

i. announcement of a 60-day comment period, and a name and address of a department contact to whom comments must be sent;

ii. announcement of the date, time, and place for a public meeting on the modification request, in accordance with LAC 33:V.321.C.3.d;

iii. name and telephone number of the permittee's contact person;

iv. name and telephone number of a department contact person;

v. location where copies of the modification request and any supporting documents can be viewed and copied; and

vi. the following statement:

"The permittee's compliance history during the life of the permit being modified is available from the department contact person."

c. The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.

ENVIRONMENTAL QUALITY

d. The permittee must hold a public meeting no earlier than 15 days after the publication of the notice required in LAC 33:V.321.C.3.b and no later than 15 days before the close of the 60-day comment period. The meeting must be held to the extent practicable in the vicinity of the permitted facility.

e. The public shall be provided at least 60 days to comment on the modification request. The comment period will begin on the date the permittee publishes the notice in the local newspaper. Comments should be submitted to the department contact identified in the notice.

f. After the conclusion of the 60-day comment period, the administrative authority must grant or deny the permit modification request according to the permit modification procedures of LAC 33:V.Chapter 3. In addition, the administrative authority must consider and respond to all significant written comments received during the 60-day comment period.

4. Other Modifications

a. In the case of modifications not explicitly listed in LAC 33:V.322, the permittee may submit a Class 3 modification request to the department, or he or she may request a determination by the administrative authority that the modification should be reviewed and approved as a Class 1 or Class 2 modification. If the permittee requests that the modification be classified as a Class 1 or 2 modification, he or she must provide the department with the necessary information to support the requested classification.

b. The administrative authority shall make the determination described in LAC 33:V.321.C.4.a as promptly as practicable. In determining the appropriate class for a specific modification, the administrative authority shall consider the similarity of the modification to other modifications codified in LAC 33:V.322 and the following criteria.

i. Class 1 modifications apply to minor changes that keep the permit current with routine changes to the facility or its operation. These changes do not substantially alter the permit conditions or reduce the capacity of the facility to protect human health and the environment. In the case of Class 1 modifications, the administrative authority may require prior approval.

ii. Class 2 modifications apply to changes that are necessary to enable a permittee to respond, in a timely manner, to:

(a). common variations in the types and quantities of the wastes managed under the facility permit;

(b). technological advancements; and

(c). changes necessary to comply with new regulations, where these changes can be implemented without substantially changing design specifications or management practices in the permit.

iii. Class 3 modifications substantially alter the facility or its operation.

5. Temporary Authorizations

a. Upon request of the permittee, the administrative authority may, without prior public notice and comment, grant the permittee a temporary authorization in accordance with this Paragraph. Temporary authorizations must have a term of not more than 180 days.

b. The permittee may request a temporary authorization for:

i. any Class 2 modification meeting the criteria in LAC 33:V.321.C.5.d.ii; and

ii. any Class 3 modification that meets the criteria in LAC 33:V.321.C.5.d.ii.(a) or (b), or that meets the criteria in LAC 33:V.321.C.5.d.ii.(c)-(e) and provides improved management or treatment of a hazardous waste already listed in the facility permit.

c. The temporary authorization request must include:

i. a description of the activities to be conducted under the temporary authorization;

ii. an explanation of why the temporary authorization is necessary;

iii. sufficient information to ensure compliance with LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37 standards; and

iv. the permittee must send a notice about the temporary authorization request to all persons on the facility mailing list maintained by the administrative authority and to appropriate units of state and local governments. This notification must be made within seven days of submission of the authorization request.

d. The administrative authority shall approve or deny the temporary authorization as quickly as practicable. To issue a temporary authorization, the administrative authority must find the following:

i. the authorized activities are in compliance with the standards of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37; and

ii. the temporary authorization is necessary to achieve one of the following objectives before action is likely to be taken on a modification request:

(a). to facilitate timely implementation of closure or corrective action activities;

(b). to allow treatment or storage in tanks, containers, or containment buildings in accordance with LAC 33:V.Chapter 22;

(c). to prevent disruption of ongoing waste management activities;

(d). to enable the permittee to respond to sudden changes in the types or quantities of the wastes managed under the facility permit; or

(e). to facilitate other changes to protect human health and the environment.

e. A temporary authorization may be reissued for one additional term of up to 180 days provided that the permittee has requested a Class 2 or 3 permit modification for the activity covered in the temporary authorization, and:

i. the reissued temporary authorization constitutes the administrative authority's decision on a Class 2 permit modification in accordance with LAC 33:V.321.C.2.f.iv or C.2.g.iv; or

ii. the administrative authority determines that the reissued temporary authorization involving a Class 3 permit modification request is warranted to allow the authorized activities to continue while the modification procedures of LAC 33:V.321.C.3 are conducted.

6. Public Notice and Appeals of Permit Modification Decisions

a. The administrative authority shall notify persons on the facility mailing list and appropriate units of state and local government within 10 days of any decision under this Subsection to grant or deny a Class 2 or 3 permit modification request. The administrative authority shall also notify such persons within 10 days after an automatic authorization for a Class 2 modification goes into effect under LAC 33:V.321.C.2.h or k.

b. The administrative authority's decision to grant or deny a Class 2 or 3 permit modification request under this Subsection may be appealed under the permit appeal procedures of R.S. 30:2024.

c. An automatic authorization that goes into effect under LAC 33:V.321.C.2.h or k may be appealed under the permit appeal procedures of R.S. 30:2024; however, the permittee may continue to conduct the activities pursuant to the automatic authorization until the appeal has been granted pursuant to R.S. 30:2024, notwithstanding the provisions of LAC 33:V.705.B.2.

7. Newly Listed or Identified Wastes

a. The permittee is authorized to continue to manage wastes listed or identified as hazardous under LAC 33:V.Chapter 49, or to continue to manage hazardous waste in units newly regulated as hazardous waste management units, if he or she:

i. manages them at a facility that was in existence as a hazardous waste facility with respect to the newly listed or characterized waste or newly regulated waste management unit on the effective date of the final rule listing or identifying the waste, or regulating the unit;

ii. submits a Class 1 modification request on or before the date on which the waste or unit becomes subject to the new requirements;

iii. is in compliance with the standards of LAC 33:V.Chapters 41 and 43;

iv. also submits a complete Class 2 or 3 permit modification request within 180 days after the effective date of the rule listing or identifying the waste, or subjecting the unit to RCRA Subtitle C management standards; and

v. in the case of land disposal units, certifies that such unit is in compliance with all applicable requirements of LAC 33:V.4369 and 4397-4413 on the date 12 months after the effective date of the rule identifying or listing the waste as hazardous, or regulating the unit as a hazardous waste management unit. If the owner or operator fails to certify compliance with these requirements, he or she shall lose authority to operate under this Subsection.

b. New wastes or units added to a facility's permit under this Paragraph do not constitute expansions for the purpose of the 25 percent capacity expansion limit for Class 2 modifications.

8. Military Hazardous Waste Munitions Treatment and Disposal. The permittee is authorized to continue to accept waste military munitions, notwithstanding any permit conditions barring the permittee from accepting off-site wastes, if:

a. the facility was in existence as a hazardous waste facility, and the facility was already permitted to handle the waste military munitions on the date when the waste military munitions became subject to hazardous waste regulatory requirements;

b. on or before the date when the waste military munitions become subject to hazardous waste regulatory requirements, the permittee submits a Class 1 modification request to remove or amend the permit provision restricting the receipt of off-site waste munitions; and

c. the permittee submits a complete Class 2 modification request within 180 days of the date when the waste military munitions became subject to hazardous waste regulatory requirements.

9. Permit Modification List. The administrative authority must maintain a list of all approved permit modifications and must publish a notice once a year in a statewide newspaper that an updated list is available for review.

10. Combustion Facility Changes to Meet 40 CFR Part 63 Maximum Achievable Control Technology (MACT) Standards, as Incorporated by Reference at LAC 33:III.5122. The following procedures apply to hazardous waste combustion facility permit modifications requested under LAC 33:V.322.L.9.

a. Facility owners or operators must have complied with the Notification of Intent to Comply (NIC) requirements of 40 CFR 63.1210 that were in effect prior to October 11, 2000 (see 40 CFR 63.1200-1499, revised as of July 1, 2000) in order to request a permit modification under this Section for the purpose of technology changes needed to meet the standards under 40 CFR 63.1203-1205.

b. Facility owners or operators must comply with the NIC requirements of 40 CFR 63.1210(b) and 63.1212(a)

ENVIRONMENTAL QUALITY

before a permit modification can be requested under this Section for the purpose of technology changes needed to meet the 40 CFR 63.1215-1221 standards promulgated on October 12, 2005.

c. If the administrative authority does not approve or deny the request within 90 days of receiving it, the request shall be deemed approved. The administrative authority may, at his or her discretion, extend this 90-day deadline one time for up to 30 days by notifying the facility owner or operator.

11. Waiver of RCRA Permit Conditions in Support of Transition to the 40 CFR Part 63 MACT Standards, as Incorporated by Reference at LAC 33:III.5122

a. Facility owners or operators may request to have specific RCRA operating and emissions limits waived by submitting a Class 1 permit modification request under the requirements of this Section and LAC 33:V.322.L.10. As part of this request, the facility owner or operator must:

i. identify the specific RCRA permit operating and emissions limits which the facility owner or operator is requesting to waive;

ii. provide an explanation of why the changes are necessary in order to minimize or eliminate conflicts between the RCRA permit and MACT compliance; and

iii. provide an explanation of how the revised provisions will be sufficiently protective.

b. The administrative authority shall approve or deny the request within 30 days of receipt of the request. The administrative authority may extend, at his or her discretion, this 30-day deadline one time for up to 30 days by notifying the facility owner or operator.

c. The facility owner or operator may request this modification in conjunction with MACT performance testing where permit limits may only be waived during actual test events and pretesting, as defined in 40 CFR 63.1207(h)(2)(i) and (ii), for an aggregate time not to exceed 720 hours of operation (renewable at the discretion of the administrative authority). The modification request shall be submitted to the administrative authority at the same time that the test plans are submitted. The administrative authority may elect to approve or deny this request contingent upon approval of the test plans.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:433 (August 1987), LR 15:378 (May 1989), LR 16:614 (July 1990), LR 18:1375 (December 1992), LR 20:1000 (September 1994), LR 21:266 (March 1995), LR 21:944 (September 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1691 (September 1998), LR 25:435 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2466 (November 2000), LR 28:1000 (May 2002), LR 29:319 (March 2003), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2430, 2454 (October 2005), LR 33:2100 (October 2007), LR 34:619

(April 2008), LR 35:1879 (September 2009), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:900 (July 2020).

§322. Classification of Permit Modifications

The following is a listing of classifications of permit modifications made at the request of the permittee.

Modifications	Class
A. General Permit Provisions	
1. Administrative and informational changes	1
2. Correction of typographical errors	1
3. Equipment replacement or upgrading with functionally equivalent components (e.g., pipes, valves, pumps, conveyors, controls)	1
4. Changes in the frequency of or procedures for monitoring, reporting, sampling, or maintenance activities by the permittee:	
a. to provide for more frequent monitoring, reporting, sampling, or maintenance	1
b. other changes	2
5. Schedule of compliance:	
a. changes in interim compliance dates, with prior approval of the administrative authority	1 ¹
b. extension of final compliance date	3
6. Changes in expiration date of permit to allow earlier permit termination, with prior approval of the administrative authority	1 ¹
7. Changes in ownership or operational control of a facility, provided the procedures of LAC 33:V.321.B.2 are followed	1 ¹
8. Changes to remove permit conditions applicable to a unit excluded under the provisions of LAC 33:V.105.D.1.x, LAC 33:V.105.D.1.y, or LAC 33:V.105.D.1.z.	1 ¹
9. Changes in the expiration date of a permit issued to a facility at which all units are excluded under the provisions of LAC 33:V.105.D.1.x, LAC 33:V.105.D.1.y, or LAC 33:V.105.D.1.z.	1 ¹
B. General Facility Standards	
1. Changes to waste sampling or analysis methods:	
a. to conform with agency guidance or regulations	1
b. to incorporate changes associated with F039 (multi-source leachate) sampling or analysis methods	1 ¹
c. to incorporate changes associated with underlying hazardous constituents in ignitable or corrosive wastes	1 ¹
d. other changes	2
2. Changes to analytical quality assurance/control plan:	
a. to conform with agency guidance or regulations	1
b. other changes	2
3. Changes in procedures for maintaining the operating record	1
4. Changes in frequency or content of inspection schedules	2
5. Changes in the training plan:	
a. that affect the type or decrease the amount of training given to employees	2
b. other changes	1
6. Contingency plan:	
a. changes in emergency procedures (i.e., spill or release response procedures)	2
b. replacement with functionally equivalent equipment, upgrading, or relocation of emergency equipment listed	1
c. removal of equipment from emergency equipment list	2
d. changes in names, addresses, or phone numbers of coordinators or other persons or agencies identified in the plan	1
7. Construction quality assurance plan:	
a. changes that the CQA officer certifies in the operating record will provide equivalent or better certainty that the unit components meet the design specifications	1

Modifications	Class
b. other changes	2
8. Changes to remove permit conditions that are no longer applicable (i.e., because the standards upon which they are based are no longer applicable to the facility).	1 ¹
NOTE: When a permit modification (such as introduction of a new unit) requires a change in facility plans or other general facility standards, that change shall be reviewed under the same procedures as the permit modification.	
C. Groundwater Protection	
1. Changes to wells:	
a. changes in the number, location, depth, or design of upgradient or downgradient wells of a permitted groundwater monitoring system	2
b. replacement of an existing well that has been damaged or rendered inoperable, without change to location, design, or depth of the well	1
2. Changes in groundwater sampling or analysis procedures or monitoring schedule, with prior approval of the administrative authority	1 ¹
3. Changes in the statistical procedure for determining whether a statistically significant change in groundwater quality between the upgradient and downgradient wells has occurred, with prior approval of the administrative authority	1 ¹
4. Changes in point of compliance	2
5. Changes in indicator parameters, hazardous constituents, or concentration limits (including ACLs):	
a. as specified in the groundwater protection standard	3
b. as specified in the detection monitoring program	2
6. Changes to a detection monitoring program as required by LAC 33:V.3317, unless otherwise specified in this Section	2
7. Compliance monitoring program:	
a. addition of compliance monitoring program as required by LAC 33:V.3317 and 3319	3
b. changes to a compliance monitoring program as required by LAC 33:V.3319, unless otherwise specified in this Section	2
8. Corrective action program:	
a. addition of a corrective action program as required by LAC 33:V.3319.I.2, 3321 and 3322	3
b. changes to a corrective action program as required by LAC 33:V.3321.H, unless otherwise specified in this Section	2
D. Closure	
1. Changes to the closure plan:	
a. changes in the estimate of the maximum extent of operations or maximum inventory of waste on-site at any time during the active life of the facility, with prior approval of the administrative authority	1 ¹
b. changes in the closure schedule for any unit, changes in the final closure schedule for the facility, or extension of the closure period, with prior approval of the administrative authority	1 ¹
c. changes in the expected year of final closure, where other permit conditions are not changed, with prior approval of the administrative authority	1 ¹
d. changes in procedures for decontamination of facility equipment or structures, with prior approval of the administrative authority	1 ¹
e. changes in the approved closure plan resulting from unexpected events occurring during partial or final closure, unless otherwise specified in this Section	2
f. extensions of the closure period to allow a landfill, surface impoundment, or land treatment unit to receive nonhazardous wastes after final receipt of hazardous wastes under LAC 33:V.3513.D and E	2

Modifications	Class
g. changes in the approved closure plan allowing alternative risk assessment based closure protective of human health and the environment in accordance with LAC 33:V.Chapter 13.	3
2. Creation of a new landfill unit as part of the closure	3
3. Addition of the following new units to be used temporarily for closure activities:	
a. surface impoundments	3
b. incinerators	3
c. waste piles that do not comply with LAC 33:V.2301.C	3
d. waste piles that comply with LAC 33:V.2301.C	2
e. tanks or containers (other than specified in LAC 33:V.322.D.3.f)	2
f. tanks used for neutralization, dewatering, phase separation, or component separation, with prior approval of the administrative authority	1 ¹
g. staging piles	2
E. Post-Closure	
1. Changes in the name, address, or phone number of the contact for the post-closure plan	1
2. Extension of the post-closure care period	2
3. Reduction of the post-closure care period	3
4. Changes to the expected year of final closure, where other permit conditions are not changed	1
5. Changes in the post-closure plan necessitated by events occurring during the active life of the facility, including partial and final closure	2
F. Containers	
1. Modification or addition of container units:	
a. resulting in greater than 25 percent increase in the facility's container storage capacity, except as provided in LAC 33:V.322.F.1.c and F.4.a below	3
b. resulting in up to 25 percent increase in the facility's container storage capacity, except as provided in LAC 33:V.322.F.1.c and F.4.a below	2
c. or treatment processes necessary to treat wastes that are prohibited from land disposal to meet some or all of the applicable treatment standards or to treat wastes to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" contained in LAC 33:V.Chapter 22, with prior approval of the administrative authority. This modification may also involve addition of new waste codes or narrative descriptions of wastes. It is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027 and 028)	1 ¹
2. Other container modifications:	
a. modification of a container unit without increasing the capacity of the unit	2
b. addition of a roof to a container unit without alteration of the containment system	1
3. Storage of different wastes in containers, except as provided in LAC 33:V.322.F.4:	
a. that require additional or different management practices from those authorized in the permit	
b. that do not require additional or different management practices from those authorized in the permit	2
NOTE: See LAC 33:V.321.C.7 for modification procedures to be used for the management of newly listed or identified wastes.	
4. Storage or treatment of different wastes in containers:	

ENVIRONMENTAL QUALITY

Modifications	Class
a. that require addition of units or a change in treatment process or management standards, provided that the wastes are prohibited from land disposal and are to be treated to meet some or all of the applicable treatment standards, or that they are to be treated to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" contained in LAC 33:V.Chapter 22. This modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027, and 028)	1 ¹
b. that do not require the addition of units or a change in the treatment process or management standards, and provided that the units have previously received wastes of the same type (e.g., incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027, and 028)	1
G. Tanks	
1. Modification or addition of tank units:	
a. modification or addition of tank units resulting in greater than 25 percent increase in the facility's tank capacity, except as provided in LAC 33:V.322.G.1.c, G.1.d, and G.1.e	3
b. modification or addition of tank units resulting in up to 25 percent increase in the facility's tank capacity, except as provided in LAC 33:V.322.G.1.d and G.1.e	2
c. addition of a new tank that will operate for more than 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation, or component separation	2
d. after prior approval of the administrative authority, addition of a new tank that will operate for up to 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation or component separation	1 ¹
e. modification or addition of tank units or treatment processes necessary to treat wastes that are prohibited from land disposal to meet some or all of the applicable treatment standards, or to treat wastes to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" contained in LAC 33:V.Chapter 22, with prior approval of the administrative authority. This modification may also involve addition of new waste codes. It is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027, and 028)	1 ¹
2. Modification of a tank unit or secondary containment system without increasing the capacity of the unit	2
3. Replacement of a tank with a tank that meets the same design standards and has a capacity within ± 10 percent of that of the replaced tank, provided that:	
a. the capacity difference is not more than 1,500 gallons	1
b. the facility's permitted tank capacity is not increased, and	1
c. the replacement tank meets the same conditions in the permit	1
4. Modification of a tank management practice	2
5. Management of different wastes in tanks:	
a. that require additional or different management practices, tank design, different fire protection specifications, or a significantly different tank treatment process than that authorized in the permit, except as provided in LAC 33:V.322.G.5.c below	3
b. that do not require additional or different management practices or tank design, different fire protection specifications, or a significantly different tank treatment process than that authorized in the permit, except as provided in LAC 33:V.322.G.5.d	2

Modifications	Class
c. that require the addition of units or a change in treatment processes or management standards, provided that the wastes are prohibited from land disposal and are to be treated to meet some or all of the applicable treatment standards or that they are to be treated to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" contained in LAC 33:V.Chapter 22. The modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027, and 028)	1 ¹
d. that do not require the addition of units or a change in the treatment process or management standards and provided that the units have previously received wastes of the same type (e.g., incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027 and 028)	1
NOTE: See LAC 33:V.321.C.7 for modification procedures to be used for the management of newly listed or identified wastes.	
H. Surface Impoundments	
1. Modification or addition of surface impoundment units that results in increasing the facility's surface impoundment storage or treatment capacity	3
2. Replacement of a surface impoundment unit	3
3. Modification of a surface impoundment unit without increasing the facility's surface impoundment storage or treatment capacity and without modifying the unit's liner, leak detection system, or leachate collection system	2
4. Modification of a surface impoundment management practice	2
5. Treatment, storage, or disposal of different wastes in surface impoundments:	
a. that require additional or different management practices or different design of the liner or leak detection system than is authorized in the permit	3
b. that do not require additional or different management practices or different design of the liner or leak detection system than is authorized in the permit	2
c. that are wastes prohibited from land disposal that meet the applicable treatment standards or that are treated to satisfy the standard of "use of practically available technology that yields the greatest environmental benefit" contained in LAC 33:V.Chapter 22, and provided that the unit meets the minimum technological requirements stated in LAC 33:V.2239. This modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027, and 028)	1
d. that are residues from wastewater treatment or incineration, provided that disposal occurs in a unit that meets the minimum technological requirements stated in LAC 33:V.2239, and provided further that the surface impoundment has previously received wastes of the same type (for example, incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027, and 028)	1
6. Modifications of unconstructed units to comply with LAC 33:V.2903.J, 2904, 2906, and 2907.E	1 ¹
7. Changes in response action plan:	
a. increase in action leakage rate	3
b. change in a specific response reducing its frequency or effectiveness	3
c. other changes	2
NOTE: See LAC 33:V.321.C.7 for modification procedures to be used for the management of newly listed or identified wastes.	

Modifications	Class
I. Enclosed Waste Piles. For all waste piles except those complying with LAC 33:V.2301.C, modifications are treated the same as for a landfill. The following modifications are applicable only to waste piles complying with LAC 33:V.2301.C	
1. Modification or addition of waste pile units:	
a. resulting in greater than 25 percent increase in the facility's waste pile storage or treatment capacity	3
b. resulting in up to 25 percent increase in the facility's waste pile storage or treatment capacity	2
2. Modification of waste pile unit without increasing the capacity of the unit	2
3. Replacement of a waste pile unit with another waste pile unit of the same design and capacity that meets all waste pile conditions in the permit	1
4. Modification of a waste pile management practice	2
5. Storage or treatment of different wastes in waste piles:	
a. that require additional or different management practices, different design of the unit	3
b. that do not require additional or different management practices, different design of the unit	2
6. Conversion of an enclosed waste pile to a containment building unit	2
NOTE: See LAC 33:V.321.C.7 for modification procedures to be used for the management of newly listed or identified wastes.	
J. Landfills and Unenclosed Waste Piles	
1. Modification or addition of landfill units that results in increasing the facility's disposal capacity	3
2. Replacement of a landfill	3
3. Addition or modification of a liner, leachate collection system, leachate detection system, run-off control, or final cover system	3
4. Modification of a landfill unit without changing a liner, leachate collection system, leachate detection system, run-off control, or final cover system	2
5. Modification of a landfill management practice	2
6. Landfill different wastes:	
a. that require additional or different management practices, different design of the liner, leachate collection system, or leachate detection system	3
b. that do not require additional or different management practices, different design of the liner, leachate collection system, or leachate detection system	2
c. that are wastes prohibited from land disposal that meet the applicable treatment standards or that are treated to satisfy the standard of "use of practically available technology that yields the greatest environmental benefit" contained in LAC 33:V.Chapter 22, and provided that the landfill unit meets the minimum technological requirements stated in LAC 33:V.2239. This modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027, and 028)	1
d. that are residues from the wastewater treatment or incineration, provided that disposal occurs in a landfill unit that meets the minimum technological requirements stated in LAC 33:V.2239, and provided further that the landfill has previously received wastes of the same type (for example, incinerator ash). This modification is not applicable to dioxin-containing wastes (F020, 021, 022, 023, 026, 027 and 028)	1
7. Modifications of unconstructed units to comply with LAC 33:V.2303.C, 2304, 2306, 2309.C, 2503.L, 2504, 2507.D, and 2508.	1 ¹
8. Changes in response action plan:	
a. increase in action leakage rate	3
b. change in a specific response reducing its frequency or effectiveness	3
c. other changes	2

Modifications	Class
NOTE: See LAC 33:V.321.C.7 for modification procedures to be used for the management of newly listed or identified wastes.	
K. Land Treatment	
1. Lateral expansion of or other modification of a land treatment unit to increase areal extent	3
2. Modification of a run-on control system	2
3. Modification of a run-off control system	3
4. Other modifications of land treatment unit component specifications or standards required in the permit	2
5. Management of different wastes in land treatment units:	
a. that require a change in permit operating conditions or unit design specifications	3
b. that do not require a change in permit operating conditions or unit design specifications	2
NOTE: See LAC 33:V.321.C.7 for modification procedures to be used for the management of newly listed or identified wastes.	
6. Modification of a land treatment unit management practice to:	
a. increase the rate or change the method of waste application	3
b. decrease the rate of waste application	1
7. Modification of a land treatment unit management practice to change measures of pH or moisture content, or to enhance microbial or chemical reactions	2
8. Modification of a land treatment unit management practice to grow food chain crops, to add to or replace existing permitted crops with different food chain crops, or to modify operating plans or distribution of animal feeds resulting from such crops	3
9. Modification of operating practice due to detection of releases from the land treatment unit pursuant to LAC 33:V.2711.G.2	3
10. Changes in the unsaturated zone monitoring system resulting in a change to the location, depth, or number of sampling points, or replacement of unsaturated zone monitoring devices or components of devices with devices or components that have specifications different from permit requirements	3
11. Changes in the unsaturated zone monitoring system that do not result in a change to the location, depth, or number of sampling points, or that replace unsaturated zone monitoring devices or components of devices with devices or components having specifications different from permit requirements	2
12. Changes in background values for hazardous constituents in soil and soil-pore liquid	2
13. Changes in sampling, analysis, or statistical procedure	2
14. Changes in the land treatment demonstration program prior to or during the demonstration	2
15. Changes in any condition specified in the permit for a land treatment unit to reflect results of the land treatment demonstration, provided performance standards are met, and the administrative authority's prior approval has been received	1 ¹
16. Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, provided the conditions for the second demonstration are substantially the same as the conditions for the first demonstration and have received the prior approval of the administrative authority	1 ¹
17. Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, where the conditions for the second demonstration are not substantially the same as the conditions for the first demonstration	3
18. Changes in vegetative cover requirements for closure	2

ENVIRONMENTAL QUALITY

Modifications	Class
L. Incinerators, Boilers, and Industrial Furnaces	
1. Changes to increase by more than 25 percent any of the following limits authorized in the permit: a thermal feed rate limit a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The administrative authority will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means	3
2. Changes to increase by up to 25 percent any of the following limits authorized in the permit: a thermal feed rate limit, a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The administrative authority will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means	2
3. Modification of an incinerator, boiler, or industrial furnace unit by changing the internal size or geometry of the primary or secondary combustion units, by adding a primary or secondary combustion unit, by substantially changing the design of any component used to remove Hcl/Cl2, metals, or particulate from the combustion gases, or by changing other features of the incinerator, boiler, or industrial furnace that could affect its capability to meet the regulatory performance standards. The administrative authority will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means	3
4. Modification of an incinerator, boiler, or industrial furnace unit in a manner that would not be likely to affect the capability of the unit to meet the regulatory performance standards but that would change the operating conditions or monitoring requirements specified in the permit. The administrative authority may require a new trial burn to demonstrate compliance with the regulatory performance standards	2
5. Operating requirements:	
a. modification of the limits specified in the permit for minimum or maximum combustion gas temperature, minimum combustion gas residence time, or oxygen concentration in the secondary combustion chamber, flue gas carbon monoxide and hydrocarbon concentration, maximum temperature at the inlet to the particulate matter emission control system, or operating parameters for the air pollution control system. The administrative authority will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means	3
b. modification of any stack gas emission limits specified in the permit, or modification of any conditions in the permit concerning emergency shutdown or automatic waste feed cutoff procedures or controls	3
c. modification of any other operating condition or any inspection or recordkeeping requirement specified in the permit	2
6. Burning of different wastes:	
a. if the waste contains a POHC that is more difficult to burn than authorized by the permit or if burning of the waste requires compliance with different regulatory performance standards than specified in the permit. The administrative authority will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means	3
b. if the waste does not contain a POHC that is more difficult to burn than authorized by the permit and if burning of the waste does not require compliance with different regulatory performance standards than specified in the permit	2

Modifications	Class
NOTE: See LAC 33:V.321.C.7 for modification procedures to be used for the management of newly listed or identified wastes.	
7. Shakedown and trial burn:	
a. modification of the trial burn plan or any of the permit conditions applicable during the shakedown period for determining operational readiness after construction, the trial burn period, or the period immediately following the trial burn	2
b. authorization of up to an additional 720 hours of waste burning during the shakedown period for determining operational readiness after construction, with the prior approval of the administrative authority	1 ¹
c. changes in the operating requirements set in the permit for conducting a trial burn, provided the change is minor and has received the prior approval of the administrative authority	1 ¹
d. changes in the ranges of the operating requirements set in the permit to reflect the results of the trial burn, provided the change is minor and has received the prior approval of the administrative authority	1 ¹
8. Substitution of an alternate type of nonhazardous waste fuel that is not specified in the permit	2
9. Technology changes needed to meet standards under 40 CFR Part 63 (Subpart EEE--National Emission Standards for Hazardous Air Pollutants From Hazardous Waste Combustors), provided the procedures of LAC 33:V.321.C.10 are followed	1 ¹
10. Changes to RCRA permit provisions needed to support transition to 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122, provided the procedures of LAC 33:V.321.C.11 are followed	1 ¹
M. Containment Buildings	
1. Modification or addition of containment building units:	
a. resulting in greater than a 25 percent increase in the facility's containment building storage or treatment capacity	3
b. resulting in up to a 25 percent increase in the facility's containment building storage or treatment capacity	2
2. Modification of containment building unit or secondary containment system without increasing the capacity of the unit	2
3. Replacement of a containment building with another containment building of the same design, having no increased capacity and that meets all containment building conditions in the permit	1
4. Modification of a containment building management practice	2
5. Storage or treatment of different wastes in a containment building:	
a. in which those wastes require additional or different management practices	3
b. in which those wastes do not require additional or different management practices or different design of the unit	2
N. Corrective Action	
1. Approval of a corrective action management unit in accordance with LAC 33:V.2601	3
2. Approval of a temporary unit or time extension for a temporary unit in accordance with LAC 33:V.2603	2
3. Approval of a staging pile or staging pile operating term extension in accordance with LAC 33:V.2605	2
O. Burden Reduction	
1. Development of one contingency plan based on Integrated Contingency Plan Guidance pursuant to LAC 33:V.1513.B.2	1
2. Changes to recordkeeping and reporting requirements pursuant to LAC 33:V.1513.F.9, 1737.B.1, 1739.A.2, 1913.F, 3111.A.2, 3321.G, and 3513.E.5	1
3. Changes to inspection frequency for tank systems pursuant to LAC 33:V.1911.B	1

Modifications	Class
4. Changes to detection and compliance monitoring program pursuant to LAC 33:V.3317.D, G.2, and G.3, and 3319.F and G	1
Class 1 modifications requiring prior administrative authority approval.	

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:433 (August 1987), LR 16:614 (July 1990), LR 17:658 (July 1991), LR 21:266 (March 1995), LR 21:944 (September 1995), LR 22:815 (September 1996), amended by the Office of the Secretary, LR 24:2245 (December 1998), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:436 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:270 (February 2000), LR 27:292 (March 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 34:620 (April 2008), LR 34:992 (June 2008), amended by the Office of Secretary, Legal Division, LR 43:1161 (June 2017), repromulgated by the Office of the Secretary, Legal Affairs and Criminal Investigation Division, LR 43:1534 (August 2017).

§323. Suspension, Modification or Revocation and Reissuance, and Termination of Permits

A. When the administrative authority receives any information (for example, inspects the facility, receives information submitted by the permittee as required in the permit [see LAC 33:V.309], receives a request for revocation and reissuance under this Section, or conducts a review of the permit file), he or she may determine whether one or more of the causes listed in LAC 33:V.323.B.2.c, and B.3.b for suspension, modification or revocation and reissuance, or termination exist. If cause exists, the administrative authority may suspend, modify or revoke and reissue, or terminate the permit accordingly, subject to the limitations of LAC 33:V.323.A, B.1, B.2.c, d and e, or B.3.b, and may request an updated application, if necessary. Permits may be reviewed for potential modification, suspension, or termination either at the request of any interested person (including the permittee) or upon the administrative authority’s initiative. However, permits may be modified, or revoked and reissued, suspended or terminated only for the reasons specified in LAC 33:V.323.A, B.1, B.2.c, and B.3.b, or if the administrative authority receives notification of a proposed transfer of the permit (LAC 33:V.309.L.4). All requests shall be in writing, and shall contain facts or reasons supporting the request.

B. If the administrative authority decides the request is not justified, he or she shall send the requester a brief written response giving a reason for the decision. Denials of requests for modification, revocation and reissuance, or termination are not subject to public notice, comment, or hearings. Denials by the administrative authority may be appealed to the Office of the Secretary, in accordance with R.S. 30:2050.21.

1. Suspension

a. The administrative authority may temporarily suspend the operator’s right to accept additional hazardous

waste to treat, store, or dispose of until violations are corrected. If violations are corrected, the administrative authority may lift the enforcement. Suspension of a permit and/or subsequent corrections of the causes of the suspension by the permittee shall not preclude the administrative authority from terminating the permit, if necessary. The administrative authority shall give notice to the operator, by registered mail, return receipt requested, of violation of the permit or act, listing the specific violations. If the operator fails to comply with this notice by correcting the cited violations within 30 days from date of notice, the administrative authority may issue an order requiring compliance within a specified time, or may commence a civil action in the district court in the parish in which the violation occurred for appropriate relief, including a temporary or permanent injunction. If the operator fails to take corrective action within the time specified in the order, the administrative authority shall assess a civil penalty, and may suspend or terminate the permit, all pursuant to LAC 33:V.Chapter 1 of these regulations and the Act.

b. For major infractions of the terms of the permit, the administrative authority may suspend the permit and require:

i. the operator to cease accepting hazardous waste or contracting for its treatment, storage, or disposal; or

ii. the operator to agree to a caretaker management of operations involving wastes which are being treated, stored, or have been disposed of on-site. The caretaker management shall be selected by the administrative authority from the following:

(a). operator’s personnel acting under supervision of the administrative authority; or

(b). independent management firm operating under administrative authority supervision; or

(c). state operation;

iii. the total cost of the caretaker management shall be borne by the operator, by revenues from operation, or by calling upon the closure fund set up for this purpose;

iv. if the operator does not voluntarily agree to the caretaker management, appropriate legal action shall be taken by the administrative authority to institute the management operations to protect the public interest;

v. after exhausting all other remedies, the administrative authority shall request the attorney general to secure court authority to close the site, using closure funds for this purpose.

c. The operator may request reconsideration of the suspension order. The request shall stipulate the form requested: i.e., a staff conference, a public hearing, or an adjudicatory hearing.

2. Modification or Revocation and Reissuance

a. If the administrative authority tentatively decides to modify or revoke and reissue a permit under LAC 33:V.321.C.3 or 323, he or she shall prepare a draft

ENVIRONMENTAL QUALITY

permit under LAC 33:V.703.C incorporating the proposed changes. The administrative authority may request additional information and, in the case of a modified permit, may require the submission of an updated permit application. In the case of revoked and reissued permits, the administrative authority shall require the submission of a new application. When a permit is modified, only the conditions subject to modification are reopened. When a permit is revoked and reissued, the entire permit is reopened and subject to revision, and the permit is reissued for a new term.

b. If a permit modification is requested by the permittee, the administrative authority shall approve or deny the request according to the procedures of LAC 33:V.321.C. Otherwise, a draft permit must be prepared and other procedures followed.

c. The following are causes for modification, but not revocation and reissuance, suspension or termination of permits. The following may be causes for revocation and reissuance, as well as modification, when the permittee requests or agrees:

i. material and substantial alterations or additions to the permitted facility or activity which occurred after permit issuance which justify the application of permit conditions that are different or absent in the existing permit;

ii. the administrative authority has received information that justifies the application of different permit conditions;

iii. the standards or regulations on which the permit was based have been changed by statute, through promulgation of new or amended standards or regulations, or by judicial decision after the permit was issued. The owner or operator may request a permit modification for this cause only as follows:

(a). for promulgation of amended standards or regulations, when the administrative authority has revised, withdrawn, or modified that portion of the regulation or on which the permit condition was based, or has approved a state action with regard to standards on which the permit condition was based, and a permittee requests modification in accordance with LAC 33:V.323 within 90 days after notice of the action on which the request is based;

(b). for judicial decisions, a court of competent jurisdiction has remanded and stayed promulgated regulations, if the remand and stay concern that portion of the regulations or guidelines on which the permit condition was based, and a request is filed by the permittee in accordance with LAC 33:V.323 within 90 days of judicial remand;

iv. the administrative authority determines good cause exists for modification of a compliance schedule, such as an act of God, strike, flood, materials shortage, or other events over which the permittee has little or no control, and for which there is no reasonably available remedy.

d. Notwithstanding any other provision in this Section, when a permit for a land disposal facility is

reviewed by the administrative authority under LAC 33:V.315, the administrative authority shall modify the permit as necessary to assure that the facility continues to comply with the currently applicable requirements in LAC 33:V.Subpart 1.

e. Suitability of the facility location will not be considered a cause for permit modification or revocation and reissuance unless new information or standards indicate that a threat to human health or the environment exists which was unknown at the time of permit issuance.

3. Termination

a. If the administrative authority tentatively decides to terminate a permit under LAC 33:V.323.C.2, he shall issue a notice of intent to terminate. A notice of intent to terminate is a type of draft permit which follows the same procedures as any draft permit prepared under LAC 33:V.703.C. If a permit is terminated, the entire permit is reopened and subject to revision before the permit can be reissued for a new term.

b. The administrative authority may terminate a permit during its term or deny a permit renewal application for the following causes:

i. noncompliance by the permittee with any condition of the permit;

ii. the permittee's failure in the application or during the permit issuance process to disclose fully all relevant facts, or the permittee's misrepresentation of any relevant facts at any time;

iii. a determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by termination; or

iv. the administrative authority has received notification of a proposed transfer of the permit (see LAC 33:V.309.L.4).

c. The operator may request reconsideration of the termination order. The request shall stipulate the forum requested: i.e., a staff conference, a public hearing, or an adjudicatory hearing.

4. For major infractions of the terms of the permit, the administrative authority shall terminate the permit and require:

a. the operator to cease accepting hazardous waste or contracting for its treatment, storage, or disposal; or

b. the operator to agree to a caretaker management of operations involving wastes which are being treated, stored, or have been disposed of on-site. The caretaker management shall be selected by the administrative authority from the following:

i. operator's personnel acting under supervision of the administrative authority; or

ii. independent management firm operating under administrative authority supervision; or

iii. state operation.

c. The total cost of the caretaker management shall be borne by the operator, by revenues from operation, or by calling upon the closure fund set up for this purpose.

d. If the operator does not voluntarily agree to the caretaker management, appropriate legal action shall be taken by the administrative authority to institute the management operations to protect the public interest.

e. After exhausting all other remedies, the administrative authority shall request the attorney general to secure court authority to close the site, using closure funds for this purpose.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 14:790 (November 1988), LR 16:220 (March 1990), LR 16:614 (July 1990), LR 18:1256 (November 1992), LR 20:1109 (October 1994), LR 21:944 (September 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2467 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2454 (October 2005), LR 33:1625 (August 2007), LR 33:2100 (October 2007).

§325. Compliance Schedule for Facilities Existing on the Effective Date of These Regulations

A. Applicability

1. The permit may, when appropriate, specify a schedule of compliance leading to compliance with the Act and any other regulations. Any schedules of compliance shall require compliance as soon as possible.

2. If a permit establishes a schedule of compliance which exceeds one year from the date of permit issuance, the schedule shall set forth interim requirements and the dates, except that:

a. the time between interim dates shall not exceed one year; or

b. if the time necessary for completion of any interim requirement is more than one year and is not readily divisible into stages for completion, the permit shall specify interim dates for the submission of reports of progress toward completion of the interim requirements and indicate a projected completion date; and

c. the permit shall be written to require that no later than 14 days following such interim date and the final date of compliance, the permittee shall notify the administrative authority in writing of its compliance or noncompliance with the interim or final requirements. Surface facilities for hazardous waste UIC wells shall be written to require schedules of compliance not later than one year after the effective date of the permit.

B. Alternate Schedules of Compliance. A permit applicant or permittee may cease conducting regulated activities rather than continue to operate and meet permit requirements as follows.

1. If the permittee decides to cease conducting regulated activities at a given time within the term of a permit which has already been issued:

a. the permit may be modified to contain a new or additional schedule leading to timely cessation of activities; or

b. the permittee shall cease conducting permitted activities before noncompliance with any interim or final compliance schedule requirement already specified in the permit.

2. If the decision to cease conducting regulated activities is made before issuance of a permit whose term will include the termination date, the permit shall contain a schedule leading to termination which will insure timely compliance with applicable requirements.

3. If the permittee is undecided whether to cease conducting regulated activities, the administrative authority may issue or modify a permit to contain two schedules as follows:

a. both schedules shall contain an identical interim deadline requiring a final decision on whether to cease conducting regulated activities no later than a date which ensures sufficient time to comply with applicable requirements in a timely manner, if the decision is to continue conducting regulated activities;

b. one schedule shall lead to timely compliance with all applicable requirements; and the second schedule shall lead to cessation of regulated activities by a date which will ensure timely compliance with all applicable requirements; and

c. each permit containing two schedules shall include a requirement that after the permittee has made a final decision under this Section, it shall follow the schedule leading to compliance if the decision is to continue conducting regulated activities, and follow the schedule leading to termination if the decision is to cease conducting regulated activities.

4. The applicant's or permittee's decision to cease conducting regulated activities shall be evidenced by a firm public commitment satisfactory to the administrative authority, such as a resolution of the board of directors of a corporation.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§327. Fees

A. Fees are established by fee system rules and regulations of the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2014 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§329. Research, Development, and Demonstration Permits

A. The administrative authority may issue a research, development, and demonstration permit for any hazardous waste treatment facility which proposes to utilize an innovative and experimental hazardous waste treatment technology or process for which permit standards for such experimental activity have not been promulgated under LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 30, 31, 32, 33, 35, 37, or 41. Any such permit shall include such terms and conditions as will assure protection of human health and the environment. Such permits:

1. shall provide for the construction of such facilities as necessary, and for operation of the facility for not longer than one year unless renewed as provided in LAC 33:V.329.D;

2. shall provide for the receipt and treatment by the facility of only those types and quantities of hazardous waste which the administrative authority deems necessary for purposes of determining the efficacy and performance capabilities of the technology or process and the effects of such technology or process on human health and the environment; and

3. shall include such requirements as the administrative authority deems necessary to protect human health and the environment (including, but not limited to, requirements regarding monitoring, operation, financial responsibility, closure and remedial action), and such requirements as the administrative authority deems necessary regarding testing and providing of information to the administrative authority with respect to the operation of the facility.

B. For the purpose of expediting review and issuance of permits under this Section, the administrative authority may, consistent with the protection of human health and the environment, modify or waive permit application and permit issuance requirements in LAC 33:V.Chapters 3, 5, 7, 27, 31, and 43 except that there may be no modification or waiver of regulations regarding financial responsibility (including insurance) or of procedures regarding public participation.

C. The administrative authority may order an immediate termination of all operations at the facility at any time he determines that termination is necessary to protect human health and the environment.

D. Any permit issued under this Section may be renewed not more than three times. Each such renewal shall be for a period of not more than one year.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:220 (March 1990), amended LR 20:1000 (September 1994), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:901 (July 2020).

Chapter 4. Requirements for Commercial Treatment, Storage, and Disposal Facility Permits

§401. Applicability

A. This Chapter applies to proposed, nonexistent, commercial hazardous waste treatment, storage, and disposal (TSD) facilities. Existing facilities seeking major modification, permit renewal, conversion of noncommercial status to commercial, or interim permit to final permit status are not subject to the requirements in this Chapter. All other requirements in LAC 33:V for hazardous waste facilities also apply.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2178.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 27:285 (March 2001).

§403. Definitions

A. The definitions used in this Chapter are intended to apply to commercial hazardous waste facilities. Terms not defined herein shall have the meanings given them in LAC 33:V.109.

Aquifer Recharge Zone—a land area in which water reaches the zone of saturation from surface infiltration (e.g., an area where rainwater soaks through the earth to reach an aquifer).

Day Care Center—any place or facility operated by any institution, society, agency, corporation, person or persons, or any other group for the primary purpose of providing care, supervision, and guidance of seven or more children not related to the caregiver and unaccompanied by parent or guardian on a regular basis for at least 20 hours in a continuous seven-day week.

Entertainment Facility—any place where the primary purpose is to amuse, please, or provide hospitality to patrons or guests.

Food Storage Area—any facility or structure used to store or contain any foodstuff for human or animal consumption.

Hospital—a medical institution whose principal activity or business is the diagnosis, care, and treatment of human illness through the maintenance and operation of organized facilities therefor.

Nursing Home—a private home, institution, building, residence, or other place, serving two or more persons who are not related by blood or marriage to the operator, whether operated for profit or not, and including those places operated by a political subdivision of the state of Louisiana, which undertakes, through its ownership or management, to provide maintenance, personal care, or nursing for persons who, by reason of illness or physical infirmity or age, are unable to properly care for themselves.

Prison—a state or federal facility of confinement for convicted criminals, especially felons.

Public Building—a building or appurtenance to a building that is built in whole or in part or leased with public monies. Examples include, but are not limited to, federal, state, or parish office buildings, courthouses, post offices, custom houses, public record centers, public libraries, public schools, appraisers’ stores, and transportation facilities that accommodate traveling passengers.

Residential Area—those areas where people live or reside including the property on which housing is located, as well as playgrounds, roadways, sidewalks, parks, and other similar areas within a residential community.

School—any profit or nonprofit, public or private, day, night, or residential school that provides elementary, secondary, college, or post-graduate education as determined under state law or any school of any agency of the United States.

Wetland—open water areas or areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

Wildlife Management Area—any area set aside, maintained, and supervised by the Louisiana Department of Wildlife and Fisheries for the purpose of managing and harvesting wild birds, wild quadrupeds, fish, and other aquatic life under controlled conditions to afford maximum hunting and fishing opportunity.

Wildlife Preserve—any area set aside and designated by the Louisiana Department of Wildlife and Fisheries as a refuge on which wild birds and animals are protected.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2178.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 27:285 (March 2001).

§405. Requirements for Commercial TSD Facilities

A. Secretary’s Site Assessment and Report

1. The secretary shall assess the impact of the location of a commercial hazardous waste treatment, storage, or disposal facility on the citizens of the surrounding area, the local infrastructure, and the environment. The secretary shall issue a site assessment report summarizing his findings.

2. The site assessment shall be based upon information in the record including, but not limited to, information required by the regulations to be submitted by the permit applicant. Information regarding the topics listed under “Information Required” in Table 1 identifies and summarizes appropriate information for the site assessment. The “Regulatory Citation” section of the table identifies some of the regulatory requirements to submit information in the Part II hazardous waste permit application.

3. In addition to all other requirements, the permit applicant shall submit a stand-alone document entitled “Commercial Siting Assessment Report,” certified in accordance with LAC 33:V.513, that addresses the siting and location issues. In addition to the information otherwise required by the regulations to be submitted as part of the permit application, the applicant’s report shall provide sufficient information to address the topics in Table 1. The applicant shall expand these issues or elaborate its response as may be appropriate for some types of TSD facilities. If at any time during the application review process the “Commercial Siting Assessment Report” portion of the application is found, by the department, to contain technical deficiencies, the permit applicant shall submit an updated version of the report.

Item	Statutory Citation [All found in R.S. 30:2178]	Information Required	Regulatory Citation [All found in LAC 33:V]
1 ¹	A	Roads and Transportation	§517.K §517.T.6.e §1503.C.1 §1513
2 ¹	A	Schools	§517.B.5 §517.T.6.a
3 ¹	A	Medical Institutions	§517.B.5 §1503.C.2 §1513
4 ¹	A	Police and Fire Departments	§1503.C.2 §1513
5 ²	B.(2)(a)(i)	Wetlands	§517.T.5.a §1503.B.6

17 ⁵	B.(2)(c)	Impact on Economic Development	§517.T.6.c

¹Items 1-4 denote issues that may also be addressed through the local governmental subdivision Infrastructure Assessment Report.

²The applicant's responses to Items 5-15 must include an aerial photograph clearly identifying all required information as of the date of the submittal. The aerial photograph must extend 2 miles beyond the property line at a scale of 2.5 centimeters (1 inch) equal to not more than 61.0 meters (200 feet). The photograph date, scale, and orientation (north arrow) must be clearly identified on it.

³The applicant's responses to Items 14-15 must include, at a minimum, name, address, facility type (e.g., hazardous waste disposal facility, solid waste disposal facility, inactive and abandoned waste site, industrial code), waste/substance descriptions, type(s) of discharge permit(s), source of information, and documentation of the extent of the applicant's efforts to identify such facilities. Applicant must also discuss density of existing facilities in the 2-mile area and make comparisons as appropriate.

⁴The applicant's response to Item 16 must be answered in sufficient detail to assist the department in making a site assessment determination. The applicant must identify any existing community health problems that may be aggravated by the operation of a commercial hazardous waste disposal facility and include documentation of the extent of the applicant's efforts to identify such problems.

⁵The applicant's response to Item 17 must identify all potential positive and negative impacts on economic development and include documentation of the extent of the applicant's efforts to identify such impacts.

B. Specific Site Requirements for Commercial Facilities

1. Proximity and Location of Waste Management Units

a. No waste management unit shall be located within 200 feet of an environmentally sensitive area including, but not limited to:

- i. a wetland;
- ii. a wildlife management area or preserve; or
- iii. an aquifer recharge zone.

b. No waste management unit shall be located within 200 feet of any area that may result in an undue risk to human health including, but not limited to:

- i. a school or day care center;
- ii. a hospital or nursing home;
- iii. a facility or structure used to store or contain foodstuffs for human or animal consumption;
- iv. a public building or entertainment facility;
- v. a residential area;
- vi. a prison;
- vii. other hazardous waste disposal facilities, solid waste disposal facilities, and inactive and abandoned hazardous waste sites;
- viii. other industrial facilities that discharge hazardous or toxic substances into the air or water; or
- ix. a preexisting community health problem that may be aggravated by the operation of a commercial hazardous waste disposal facility.

c. No waste management unit shall be located in such a manner so as to preclude the further economic development of the area.

2. The administrative authority may approve, on a case-by-case basis, an alternative to the requirements in Subparagraph B.1.a or b of this Section if the applicant can affirmatively demonstrate that as a result of site-specific circumstances, the location of the proposed waste management unit will not adversely impact an environmentally sensitive area, impose an undue risk to human health, or preclude further economic development of the area.

3. The siting assessment, as determined by this Section, does not preclude any requirements the permit applicant must meet in order to satisfy local zoning ordinances in place at the time the application is submitted to the department.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2178.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 27:285 (March 2001).

§407. Guidelines for the Infrastructure Assessment Report Prepared by Local Government

A. The purpose of the Infrastructure Assessment Report shall be to adequately assess the capability of the local communities to effectively manage and monitor the ongoing operations of the proposed commercial facility and to respond to emergencies that may potentially threaten the health, safety, or welfare of the communities or any of their inhabitants.

B. The secretary shall submit a written request to the appropriate local governmental representative for a report detailing the impact of the proposed facility on the local infrastructure including, but not limited to, roads and transportation systems, schools, medical institutions, police and fire departments, economic development, and such matters as the local government may determine will be impacted by the facility. A copy of the applicant's Commercial Siting Assessment Report, as required by this Chapter, will be provided to the local governmental subdivision. This request shall be made as soon as the permit application is deemed administratively complete and shall allow local government 180 days to provide the Infrastructure Assessment Report. Any revisions made to the "Commercial Siting Assessment Report" by the permit applicant during the technical review process shall be forwarded to the appropriate local governmental representative. The administrative authority may allow local government additional time to submit the report if a written request, which provides justification for the extension, is received prior to the 180-day deadline; however, in no case shall an extension be granted that extends beyond the date of the evidentiary hearing.

C. The Infrastructure Assessment Report may propose alternate siting for the facility and propose actions to mitigate any infrastructure deficiencies found by the report.

D. Any Infrastructure Assessment Report prepared by the local governmental subdivision shall be submitted prior to the evidentiary hearing held in accordance with LAC 33:V.709. The department may request additional supporting information from the local governmental subdivision or permit applicant before using the report for the secretary's assessment of the suitability of the proposed commercial hazardous waste TSD site.

E. The secretary may reimburse the local governmental subdivision for reasonable and necessary costs of preparation of the Infrastructure Assessment Report, provided the reimbursement request is made in writing and supported with documentation of report preparation costs.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2178 and 2182.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 27:287 (March 2001).

§409. Departmental Action on Commercial Hazardous Waste TSD Permit Applications

A. The secretary's report shall be issued in conjunction with the draft permit decision for commercial hazardous waste treatment, storage, or disposal facilities. The report will assess the impact of the location of the facility on the citizens in the surrounding area, the local infrastructure, economic development, and on the environment. The sources of information for the report include the permit application contents required in LAC 33:V, the Infrastructure Assessment Report prepared by the local governmental subdivision, and other information sources as appropriate.

B. Based upon information supplied in the permit application and other information sources, as appropriate, the department shall assess site suitability. Consideration shall be given to the following:

1. the number and density of existing hazardous waste disposal facilities in an area extending 2 miles from the facility property line;

2. the number and density of solid waste disposal facilities in an area extending 2 miles from the facility property line;

3. the number and density of inactive and abandoned hazardous waste sites in an area extending 2 miles from the facility property line;

4. the number and density of existing industrial facilities that discharge hazardous or toxic substances into the air or water in an area extending 2 miles from the facility property line;

5. the existence of any community health problem in the area that may be aggravated by the operation of a commercial hazardous waste disposal facility;

6. the negative impact of the proposed facility on economic development of the area by adjacent businesses or industries;

7. whether the area is environmentally sensitive (see LAC 33:V.405.B.1.a); and

8. whether the proximity of the facility may pose undue health risks (see LAC 33:V.405.B.1.b).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2178.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division LR 27:287 (March 2001).

Chapter 5. Permit Application Contents

Subchapter A. General Requirements for Permit Applications

§501. Permit Application

A. Any person who is required to have a permit (including new applicants and permittees with expiring permits) shall complete, sign, and submit a permit application to the Office of Environmental Services, as described in this Section and LAC 33:V.4301, 4303, and 4305. Persons currently authorized with interim status shall apply for permits when required by the administrative authority. Persons covered by RCRA permits by rule (LAC 33:V.305.D) need not apply. Procedures for applications, issuance, and administration of emergency permits are found exclusively in LAC 33:V.701 and 703. Procedures for application, issuance, and administration of research, development, and demonstration permits are found exclusively in LAC 33:V.329.

B. When a facility or activity is not owned and operated by one person, it is the operator's duty to obtain a permit. The owner must also sign the permit application.

C. Existing Hazardous Waste Management Facilities and Interim Status Qualifications

1. Owners and operators of existing hazardous waste management facilities or of hazardous waste management facilities in existence on the effective date of statutory or regulatory amendments under the Act that render the facility subject to the requirement to have a RCRA permit must submit Part I of their permit application no later than:

a. six months after the date of publication of regulations which first require them to comply with LAC 33:V.Chapters 10, 11, 15, 25, 30, 41 or 43; or

b. thirty days after the date they first become subject to the standards set forth in LAC 33:V.Chapters 10, 11, 15, 25, 30, 41, or 43, whichever first occurs.

2. The owner and operator of an existing hazardous waste management facility may be required to submit Part II of their permit application. The administrative authority may require submission of Part II. Any owner or operator shall be allowed at least 120 days from the date of request to submit Part II of the application. Any owner or operator of an existing hazardous waste management facility may voluntarily submit Part II of the application at any time.

Notwithstanding the above, any owner or operator of an existing hazardous waste management facility must submit a Part II permit application in accordance with the dates specified in LAC 33:V.4305. Any owner or operator of a land disposal facility in existence on the effective date of statutory or regulatory amendments under the Act that render the facility subject to the requirement to have a RCRA permit must submit a Part II application in accordance with the dates specified in LAC 33:V.4305.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:220 (March 1990), LR 20:1000 (September 1994), LR 20:1109 (October 1994), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:300 (February 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2467 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2454 (October 2005), LR 33:2100 (October 2007), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:901 (July 2020).

§503. Completeness

A. The administrative authority shall not issue a permit before receiving a complete application for a permit except for permits by rule (LAC 33:V.305.D) or emergency permits (LAC 33:V.701). An application for a permit is complete when the administrative authority receives an application form and any supplemental information which are completed to his or her satisfaction. The administrative authority may deny a permit for the active life of a hazardous waste management facility or TSD unit before receiving a complete application for the permit. An application for a permit is complete notwithstanding the failure of the owner or operator to submit the exposure information described in this Section.

1. Any Part II permit application submitted by an owner or operator of a facility that stores, treats, or disposes of hazardous waste in a surface impoundment or a landfill must be accompanied by information, reasonably ascertainable by the owner or operator, on the potential for the public to be exposed to hazardous wastes or hazardous constituents through releases related to the unit. At a minimum, such information must address:

a. reasonably foreseeable potential releases from both normal operations and accidents at the unit, including releases associated with transportation to or from the unit;

b. the potential pathways of human exposure to hazardous wastes or constituents resulting from the releases described under Subparagraph A.1.a of this Section; and

c. the potential magnitude and nature of the human exposure resulting from such releases.

2. By August 8, 1985, owners and operators of a landfill or a surface impoundment who have already submitted a Part II application must submit the exposure information required in Paragraph A.1 of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 16:220 (March 1990), LR 16:614 (July 1990), LR 17:658 (July 1991), LR 20:1000 (September 1994), LR 20:1109 (October 1994).

§505. Recordkeeping

A. Applicants shall keep records of all data used to complete permit applications and of any supplemental information submitted under this Chapter, as required in LAC 33:V.309.J.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

Subchapter B. Signatories to Permit Applications and Reports, Changes of Authorizations, and Certifications

§507. Applications

A. All permit applications shall be signed as follows:

1. for a corporation: by a responsible corporate officer; for the purpose of this Section, a responsible corporate officer means:

a. a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions for the corporation; or

b. the manager of one or more manufacturing, production or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

2. for a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

3. for a municipality, state, federal, or other public agency: by either a principal executive officer or ranking elected official.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 12:319 (May 1986).

§509. Reports

A. All reports required by permits, and other information requested by the administrative authority shall be signed by a person described in LAC 33:V.507, or by a duly authorized representative of that person. A person is a duly authorized representative only if: the authorization is made in writing by a person described in LAC 33:V.507; and the

authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, superintendent, or position of equivalent responsibility. (A duly authorized representative may thus be either a named individual or any individual occupying a named position). The written authorization is submitted to the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992).

§511. Changes in Authorization

A. If an authorization under LAC 33:V.509 is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of LAC 33:V.509 must be submitted to the administrative authority prior to or together with any reports, information, or applications to be signed by an authorized representative.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§513. Certification

A.1. Any person signing a document under LAC 33:V.507 or 509 shall make the following certification.

“I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”

2. For remedial action plans (RAPs) under LAC 33:V.Chapter 5.Subchapter G, if the operator certifies according to Paragraph A.1 of this Section, then the owner may choose to make the following certification instead of the certification in Paragraph A.1 of this Section.

“Based on my knowledge of the conditions of the property described in the RAP and my inquiry of the person or persons who manage the system referenced in the operator’s certification, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”

B.1. Certification of an owner who is not the operator:

“I certify that I understand that this application is submitted for the purpose of obtaining a permit to operate a hazardous waste management facility on the property as described. As owner of the property/facility, I understand fully that the facility operator and I are jointly and severally responsible for

compliance with both LAC 33:V.Subpart 1 and any permit issued pursuant to those regulations.”

2. For owners of land disposal facilities, add:

“I further understand that I am responsible for providing the notice in the deed to the property required by LAC 33:V.3525.”

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:271 (February 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 34:620 (April 2008).

**Subchapter C. Permit Applications:
Parts I and II**

§515. Part I Information Requirements

A. All applicants for TSD permits shall provide the following information to the administrative authority using the application form provided. Other formatting requirements may be specified by the administrative authority:

1. date of application;
2. EPA identification number;
3. a brief description of the nature of the business;
4. the activities conducted by the applicant which require it to obtain a TSD permit;
5. name, mailing address, and location of the facility for which the application is submitted;
6. the latitude and longitude of the facility and a legal description of the site;
7. up to four SIC codes which best reflect the principal products or services provided by the facility;
8. an indication of whether the facility is new or existing and whether it is a first or revised application;
9. the operator’s name, address, telephone number, ownership status, and status as federal, state, private, public, or other entity;
10. owner’s name, address, and phone number if different from operator’s;
11. contact: name of individual to be contacted concerning hazardous waste management;
12. telephone number of contact;
13. whether the facility is located on Indian lands;
14. a listing of all permits or construction approvals received or applied for under any of the following programs:
 - a. hazardous waste management program;
 - b. Underground Injection Control (UIC) program;

ENVIRONMENTAL QUALITY

c. National Pollution Discharge Elimination System (NPDES) program;

d. Prevention of Significant Deterioration (PSD) program under the Federal Clean Air Act;

e. nonattainment program under the Clean Air Act;

f. National Emission Standards for Hazardous Air Pollutants (NESHAP) preconstruction approval under the Clean Air Act;

g. ocean dumping permits under the Marine Protection Research and Sanctuaries Act;

h. dredge or fill permits under Section 404 of the federal Clean Water Act (CWA); or

i. other relevant environmental permits;

15. a topographic map (or other map if a topographic map is unavailable) extending 2 miles beyond the property boundaries of the facility indicating the following; each hazardous waste treatment, storage, and disposal facility; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant;

16. for existing facilities, a scale drawing of the facility showing the location of all past, present, and future treatment, storage, and disposal areas;

17. for existing facilities, photographs of the facility clearly delineating all existing structures; existing treatment, storage, and disposal areas; and sites of future treatment, storage, and disposal areas;

18. a description of the processes to be used for treating, storing, and disposing of hazardous waste, and the design capacity of these items;

19. a specification of the hazardous wastes listed or designated to be treated, stored, or disposed of at the facility; an estimate of the quantity of such wastes to be treated, stored, or disposed of annually; and a general description of the processes to be used for such wastes;

20. status: ownership status of existing site or land for proposed site (federal, state, private, public, other);

21. operation status;

22. list other company hazardous waste operations in Louisiana (permitted or non-permitted and current or abandoned);

23. list other states in which hazardous waste operations are or have been conducted, as required by LAC 33:I.1701;

24. zoning of site, if applicable;

25. for hazardous debris: a description of the debris category(ies) and contaminant category(ies) to be treated, stored, or disposed of at the facility;

26. other information required in LAC 33:I.1701; and

27. comments.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 21:266 (March 1995), amended by the Office of the Secretary, LR 25:661 (April 1999).

Subchapter D. Part II General Permit Information Requirements

§516. Information Requirements for Solid Waste Management Units

A. The following information is required for each solid waste management unit at a facility seeking a permit:

1. the location of the unit on the topographic map required under LAC 33:V.517.B;

2. designation of type of unit;

3. general dimensions and structural description (supply any available drawings);

4. when the unit was operated; and

5. specification of all waste codes for all hazardous wastes that have been managed at the unit;

6. details of all ancillary equipment including tanks storing hazardous waste in less than 90-day service and pipes carrying hazardous waste to the injection well(s) must meet the requirements of LAC 33:V.Chapter 19. A certification by an independent Louisiana registered professional engineer must be provided attesting to the adequacy of pipes, valves, and pumps to handle hazardous waste under pressure and to the adequacy of secondary containment provided to meet the requirements of LAC 33:V.Subpart 1.

B. The owner or operator of any facility containing one or more solid waste management units must submit all available information pertaining to any known release of hazardous wastes or hazardous constituents from such unit or units.

C. The owner/operator must conduct and provide the results of sampling and analysis of groundwater, land surface and/or subsurface strata, surface water, and/or air, which may include the installation of wells, if the administrative authority ascertains it is necessary to complete a RCRA Facility Assessment that will determine whether a more complete investigation is necessary. If the owner/operator has an EPA approved RCRA Facility Investigation, the results of this investigation may be provided to the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§517. Part II Information Requirements (the Formal Permit Application)

The formal permit application information requirements presented in this Section reflect the standards promulgated in LAC 33:V.Subpart 1. These information requirements are necessary in order to determine compliance with all standards. Responses and exhibits shall be numbered sequentially according to the technical standards. The permit application must describe how the facility will comply with each of the Sections of LAC 33:V.Chapters 15-37 and 41. Information required in the formal permit application shall be submitted to the administrative authority and signed in accordance with requirements in LAC 33:V.509. The description must include appropriate design information (calculations, drawings, specifications, data, etc.) and administrative details (plans, flow charts, decision trees, manpower projections, operating instructions, etc.) to permit the administrative authority to determine the adequacy of the hazardous waste permit application. Certain technical data, such as design drawings, specifications, and engineering studies, shall be certified by a Louisiana registered professional engineer. If a Section does not apply, the permit application must state it does not apply and why it does not apply. This information is to be submitted using the same numbering system and in the same order used in these regulations:

A. a general description of the facility including hours of operation/day and days/week;

B. a topographic map or maps showing a distance of 1,000 feet around the facility at a scale of 2.5 centimeters (1 inch) equal to not more than 61.0 meters (200 feet); contours must be shown on the map. The contour interval must be sufficient to clearly show the pattern of surface water flow in the vicinity of and from each operational unit of the facility. The map or maps shall clearly show the following:

1. map scale and date;
2. orientation of the map (north arrow);
3. 100-year floodplain area;

COMMENT: Owners and operators of all facilities shall provide an identification of whether the facility is located within a 100-year floodplain and a flood hazard map (Corps of Engineers or Department of Housing and Urban Development). This identification must indicate the source of data for such determination and include a copy of the relevant Federal Insurance Administration (FIA) flood map, if used. Where maps for the National Flood Insurance Program produced by FIA of the Federal Emergency Management Agency are available, they will normally be determinative of whether a facility is located within or outside of the 100-year floodplain. However, where the FIA map excludes an area (usually areas of the floodplain less than 200 feet in width), these areas must be considered and a determination made as to whether they are in the 100-year floodplain. Where FIA maps are not available for a proposed facility location, the owner or operator must use equivalent mapping techniques to determine if the facility is within the 100-year floodplain, and if so located, what the 100-year flood elevation would be.

4. surface waters including intermittent streams and surface flow through the site and a map of the potentiometric surface for aquifers within 100 feet of lowest elevation of disposal cells, or other facilities containing hazardous waste, from 1,000 feet upstream to 1,000 feet downstream, where practicable. Included should be a general area map and cross sections indicating the extent of freshwater sands, and the degree of isolation from waste sources by confining layers of clay;

5. surrounding land uses (residential, commercial, agricultural, recreational, public) such as schools, day care centers, hospitals, nursing homes, prisons, libraries, etc.;

COMMENT: A map or aerial photograph showing surrounding land use for the area within 2 miles of the site is required.

6. legal boundaries of the TSD facility site;
7. access control (fences, gates);
8. injection and withdrawal wells both on site and off site;

COMMENT: A map of all known wells, operating or abandoned, on the site and within 2 miles of the site perimeter as required in LAC 33:V.515.A.15, including the depth of wells, amount of pumpage, water level depth (annual maximum and minimum), and water analysis from the water well nearest the disposal site is also required.

9. the proposed location of groundwater monitoring wells as required under LAC 33:V.3315.A and B;

10. the proposed point of compliance as defined under LAC 33:V.3311;

11. buildings, treatment, storage, or disposal operations; or other structures (recreation areas, runoff control systems, access and internal roads, storm sanitary, and process sewerage systems, loading and unloading areas, fire control facilities, utilities, security facilities, etc.);

12. barriers for drainage or flood control;

13. location of operational units within the TSD facility site, where hazardous waste is (or will be) treated, stored, or disposed of (including equipment cleanup areas). (For large TSD facilities, the administrative authority may allow the use of other scales on a case-by-case basis); and

14. natural features affecting off-site drainage patterns, transportation, utilities, and location of effluent discharges;

C. site layout and facility design when phased construction is planned; the plans must indicate each phase and an accompanying schedule of construction;

D. chemical and physical analyses of the hazardous wastes and the hazardous debris to be handled at the facility. At a minimum, these analyses shall contain all the information that must be known to treat, store, or dispose of the wastes properly;

E. a copy of the waste analysis plan required by LAC 33:V.1519.B;

ENVIRONMENTAL QUALITY

F. a description of the security procedures (including entry control, hours manned, lighting, monitoring, and other procedures to prevent unauthorized entry) and equipment required by LAC 33:V.1507 or a justification demonstrating the reasons for requesting a waiver of this requirement;

G. a copy of the general inspection schedule required by LAC 33:V.1509.B. Include, where applicable, as part of the inspection schedule, specific requirements in LAC 33:V.1709, 1719, 1721, 1731, 1755-1759, 1763, 1907.I, 1911, 2109, 2309, 2507, 2703.A-G, 2907, 3119.B and C, and 3205;

H. a justification of any request for a waiver(s) of the preparedness and prevention requirements of LAC 33:V.1511;

I. a copy of the contingency plan required by LAC 33:V.1513;

[NOTE: Include, where applicable, as part of the contingency plan, specific requirements in LAC 33:V.2909];

J. a description of procedures, structures, or equipment used at the facility to:

1. prevent hazards in unloading operations (for example, ramps, special forklifts);
2. prevent runoff from hazardous waste handling areas to other areas of the facility or environment, or to prevent flooding (for example, berms, dikes, trenches);
3. monitoring leachate control;
4. prevent contamination of water supplies;
5. monitor water and air pollution affecting area outside site;
6. mitigate effects of equipment failure, power outages, inclement weather, or other abnormal conditions;
7. prevent undue exposure of personnel to hazardous waste (for example, protective clothing);
8. prevent accidental ignition or reaction of ignitable, reactive, or incompatible wastes as required to demonstrate compliance with LAC 33:V.1517; and
9. prevent nonpermitted releases to the atmosphere;

K. traffic pattern, estimated volume (number, types of vehicles) and control (for example, show turns across traffic lanes, and stacking lanes, if appropriate; describe access road surfacing and load bearing capacity; show traffic control signals);

L. an outline of both the introductory and continuing training programs by owners or operators to prepare persons to operate or maintain the TSD facility in a safe manner as required to demonstrate compliance with LAC 33:V.1515. A list of general qualifications of key operating positions and a brief description of how training will be designed to meet actual job tasks in accordance with these requirements;

M. a copy of the closure plan and, where applicable, the post-closure plan required by LAC 33:V.3511, 3523, and

1915. Include, where applicable, as part of the plans, specific requirements in LAC 33:V.1915, 2117, 2315, 2521, 2719, 2911, 3121, 3203 and 3207;

N. for hazardous waste disposal units that have been closed, documentation that notices required in LAC 33:V.3517 have been filed;

O. the most recent closure cost estimate for the facility prepared in accordance with LAC 33:V.3705 and a copy of the documentation required to demonstrate financial assurance under LAC 33:V.3707. For a new facility, a copy of the required documentation may be submitted 60 days prior to the initial receipt of hazardous wastes, if that is later than the submission of the Part II;

P. where applicable, the most recent post-closure cost estimate for the facility prepared in accordance with LAC 33:V.3709 plus a copy of the documentation required to demonstrate financial assurance under LAC 33:V.3711. For a new facility, a copy of the required documentation may be submitted 60 days prior to the initial receipt of hazardous wastes, if that is later than the submission of the Part II;

Q. where applicable, a copy of the insurance policy or other documentation which comprises compliance with the requirements of LAC 33:V.Chapter 37. For a new facility, documentation showing the amount of insurance meeting the specification of LAC 33:V.Chapter 37 that the owner or operator plans to have in effect before initial receipt of hazardous waste for treatment, storage, or disposal;

R. where appropriate, proof of coverage by a state financial mechanism in compliance with LAC 33:V.Chapter 37;

S. a wind rose (i.e., prevailing wind speed and direction) and the source of the information;

T. facility location information:

1. seismic standard. In order to determine the applicability of the seismic standard, LAC 33:V.1503.A.3, the owner or operator of the facility must identify the political jurisdiction (e.g., parish, township, or election district) in which the facility is proposed to be located:

a. the owner or operator shall demonstrate compliance with the seismic standard. This demonstration may be made using either published geologic data (including federal hazardous waste regulations) or data obtained from field investigations carried out by the applicant. The information provided must be of such quality to be acceptable to geologists experienced in identifying and evaluating seismic activity. The information submitted must show that either:

i. no faults which have had displacement in Holocene time are present, or no lineations which suggest the presence of a fault (which have displacement in Holocene time) within 3,000 feet of a facility are present, based on data from:

(a). published geologic studies, including cites from federal regulations which demonstrate that the requirements of this Section do not apply;

(b). aerial reconnaissance of the area within a 5-mile radius from the facility;

(c). an analysis of aerial photographs covering a 3,000-foot radius of the facility; and

(d). if needed to clarify the above data, a reconnaissance based on walking portions of the area within 3,000 feet of the facility; or

ii. no faults may pass within 200 feet of the portions of the facility where treatment, storage, or disposal of hazardous waste will be conducted based on data from a comprehensive geologic analysis of the site. Unless a site analysis is otherwise conclusive concerning the absence of faults within 200 feet of such portions of the facility, data shall be obtained from a subsurface exploration (trenching) of the area within a distance no less than 200 feet from portions of the facility where treatment, storage, or disposal of hazardous waste will be conducted. Such trenching shall be performed in a direction that is perpendicular to known faults (which have had displacement in Holocene time) passing within 3,000 feet of the portions of the facility where treatment, storage, or disposal of hazardous waste will be conducted. Such investigation shall document with supporting maps and other analyses, the location of any faults found, and shall be certified by an independent Louisiana registered professional engineer or geologist;

2. 100-year floodplain:

a. owners and operators of all facilities shall provide an identification of whether the facility is located within a 100-year floodplain;

b. owners and operators of facilities located in the 100-year floodplain must provide the following information:

i. the 100-year flood level and any other special flooding factors (e.g., wave action) which must be considered in designing, constructing, operating, or maintaining the facility to withstand washout from a 100-year flood;

ii. engineering analysis to indicate the various hydrodynamic and hydrostatic forces expected to result at the site as a consequence of a 100-year flood;

iii. structural or other engineering studies showing the design of operational units (e.g., tanks, incinerators) and flood protection devices (e.g., floodwalls, dikes) at the facility and how these will prevent washout;

iv. if applicable, and in lieu of the above two provisions, a detailed description of procedures to be followed to remove hazardous waste to safety before the facility is flooded, including:

v. timing of such movement relative to flood levels, including estimated time to move the waste, showing that such movement can be completed before floodwaters reach the facility;

vi. a description of the location(s) to which the waste will be moved and demonstration that those facilities will be eligible to receive hazardous waste in accordance with LAC 33:V.Subpart 1;

vii. the planned procedures, equipment, and personnel to be used and the means to ensure that such resources will be available in time for use; and

viii. the potential for accidental discharges of the waste during movement;

c. existing facilities not in compliance with LAC 33:V.1503.B.3 shall provide a plan showing how the facility will be brought into compliance and a schedule for compliance;

3. site geology, including:

a. certification by a geologist or independent Louisiana registered professional engineer specializing in geotechnical engineering that the ground and subsurface conditions at the site are acceptable for the planned purposes of the facility;

b. identification of the uppermost aquifer and aquifers hydraulically interconnected beneath the facility property, including groundwater flow direction and rate, and the basis for such identification (i.e., the information obtained from hydrogeologic investigations of the facility area);

c. soil types, textures, and conditions to depth of 30 feet below lowest elevation of planned disposal cells for impoundments, landfill and land treatment facility based on test holes at 200-foot intervals (or greater or less intervals if acceptable to the administrative authority);

d. logs of test holes and wells, including soil samples for each pertinent strata analyzed for soil type, texture, permeability, and other pertinent characteristics;

e. general area map and cross sections indicating the extent of freshwater sands, and the degree of isolation of these aquifers to a depth of 1,000 feet from waste sources by confining layers of clay;

f. on a topographic map, a delineation of the waste management area, the property boundary, the proposed *point of compliance* as defined under LAC 33:V.3311, the proposed location of groundwater monitoring wells as required under LAC 33:V.3315.A and B; and

g. detailed plans and an engineering report describing the proposed groundwater monitoring program to be implemented to meet the requirements of LAC 33:V.3315.A-H;

4. site hydrology, including:

a. travel times in feet/day for normal drainage of each natural surface drainage system within 1,000 feet of the property;

b. climate factors:

i. the 24-hour/25-year storm rainfall;

ENVIRONMENTAL QUALITY

ii. maximum, minimum, and average temperature/month for past 10 years;

iii. impact of previous hurricanes on area;

iv. comparison of rainfall and evapotranspiration rates; and

v. prevailing wind direction (provide wind rose);

c. a description of any plume of contamination that has entered the groundwater from a regulated unit at the time that the application is submitted that:

i. delineates the extent of the plume on the topographic map such as required under LAC 33:V.517.B; and

ii. identifies the concentration of each LAC 33:V.3325, Table 4 constituent throughout the plume or identifies the maximum concentrations of each such constituent in the plume;

d. if the presence of hazardous constituents have not been detected in the groundwater at the time of permit application, the owner or operator must submit sufficient information, supporting data, and analyses to establish a detection monitoring program which meets the requirements of LAC 33:V.3317. This submission must address the following items specified under LAC 33:V.3317:

i. a proposed list of indicator parameters, waste constituents, or reaction products that can provide a reliable indication of the presence of hazardous constituents in the groundwater;

ii. a proposed groundwater monitoring system;

iii. background values for each proposed monitoring parameter or constituent, or procedures to calculate such values; and

iv. a description of proposed sampling, analysis, and statistical comparison procedures to be utilized in evaluating groundwater monitoring data;

e. if the presence of hazardous constituents has been detected in the groundwater at the point of compliance at the time of permit application, the owner or operator must submit sufficient information, supporting data, and analyses to establish a compliance monitoring program which meets the requirements of LAC 33:V.3319. The owner or operator must also submit an engineering feasibility plan for a corrective action program necessary to meet the requirements of LAC 33:V.3321. To demonstrate compliance with LAC 33:V.3319, the owner or operator must address the following items:

i. a description of the wastes previously handled at the facility;

ii. a characterization of the contaminated groundwater, including concentrations of hazardous constituents;

iii. a list of hazardous constituents for which compliance monitoring will be undertaken in accordance with LAC 33:V.3315 and 3317;

iv. proposed concentration limits for each hazardous constituent, based on the criteria set forth in LAC 33:V.3309.A, including a justification for establishing any alternate concentration limits;

v. detailed plans and an engineering report describing the proposed groundwater monitoring system, in accordance with the requirements of LAC 33:V.3315; and

vi. a description of proposed sampling, analysis, and statistical comparison procedures to be utilized in evaluating groundwater monitoring data;

f. if hazardous constituents have been measured in the groundwater which exceed the concentration limits established under LAC 33:V.3309, Table 1, or if groundwater monitoring conducted at the time of permit application under LAC 33:V.3301-3309 at the waste boundary indicates the presence of hazardous constituents from the facility in groundwater over background concentrations, the owner or operator must submit sufficient information, supporting data, and analyses to establish a corrective action program which meets the requirements of LAC 33:V.3321. To demonstrate compliance with LAC 33:V.3321, the owner or operator must address, at a minimum, the following items:

i. a characterization of the contaminated groundwater, including concentrations of hazardous constituents;

ii. the concentration limit for each hazardous constituent found in the groundwater as set forth in LAC 33:V.3309;

iii. detailed plans and an engineering report describing the corrective action to be taken; and

iv. a description of how the groundwater monitoring program will demonstrate the adequacy of the corrective action;

5. environmental factors, including:

a. list all known historical sites, recreational areas, archaeological sites, wildlife areas, swamps and marshes, habitats for endangered species, and other sensitive ecological areas within 1000 feet of the site; and

b. indicate measures planned to protect such areas listed from detrimental impact from the operation of the proposed facility;

6. geographical factors. For an area within 2 miles of the proposed site, provide the following information:

a. map or aerial photograph showing all buildings identified as residential, commercial, industrial, or public (schools, day care centers, hospitals, nursing homes, prisons, libraries, etc.);

b. population;

- c. principal livelihood of residents for facilities located in rural areas;
 - d. land use; and
 - e. road network, with average daily traffic count and route of trucks which will transport waste to the facility;
7. operations plan, including:
- a. classification and estimated quantities of wastes to be handled;
 - b. methods and processes utilized:
 - i. facility capacity for each disposal method;
 - ii. detailed description of each process or method;
 - iii. storage and disposal procedures:
 - (a). plans for receipt, checking, processing, segregation of incompatible wastes, and odor control; and
 - (b). life of each facility based on projected use;
 - (c). describe recordkeeping procedures, types of records to be kept, and use of the records by management to control the operation; and
 - (d). monitoring and recording of incoming wastes;

U. Special Requirements. Administrative authority may require additional provisions for special procedures or processes, for specific information for a supplementary environmental analysis, or for such information as may be necessary to enable the administrative authority to carry out his duties under other state laws;

V. for land disposal facilities, if an approval has been granted under LAC 33:V.2239, a petition has been approved under LAC 33:V.2241 or 2271, or a determination made under LAC 33:V.2273, a copy of the notice of approval or a determination is required; and

W. a summary of the preapplication meeting, along with a list of attendees and their addresses, and copies of any written comments or materials submitted at the meeting, as required under LAC 33:V.708.A.3.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 13:433 (August 1987), LR 14:790 (November 1988), LR 15:181 (March 1989), LR 15:378 (May 1989), LR 16:220 (March 1990), LR 16:399 (May 1990), LR 16:614 (July 1990), LR 16:683 (August 1990), LR 17:658 (July 1991), LR 18:1256 (November 1992), LR 21:266 (March 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:657 (April 1998), LR 24:1691 (September 1998), LR 25:436 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1465 (August 1999), LR 25:1799 (October 1999), repromulgated LR 26:1608 (August 2000), repromulgated LR 26:2003 (September 2000), amended LR 27:287 (March 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 33:1625 (August

2007), amended by the Office of the Secretary, Legal Division, LR 43:1139 (June 2017).

Subchapter E. Specific Information Requirements

§519. Contents of Part II: General Requirements

A. Part II of the permit application consists of the general information requirements of this Section, and the specific information requirements in LAC 33:V:519, 520, 521, 523, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, and 706 applicable to the facility. The Part II information requirements presented in LAC 33:V:519, 520, 521, 523, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, and 706 reflect the standards promulgated in LAC 33:V: Chapters 15, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 35, and 37. These information requirements are necessary in order for the administrative authority to determine compliance with LAC 33:V: Chapters 15, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 35, and 37. If owners and operators of Hazardous Waste Management facilities can demonstrate that the information prescribed in Part II cannot be provided to the extent required, the administrative authority may make allowance for submission of such information on a case-by-case basis. Information required in Part II shall be submitted to the administrative authority and signed in accordance with requirements in Subchapter B of this Chapter. Certain technical data, such as design drawings and specifications and engineering studies, shall be certified by a Louisiana registered professional engineer. For post-closure permits, only the information specified in LAC 33:V.528 is required in Part II of the permit application.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:436 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1465 (August 1999), amended by the Office of the Secretary, Legal Affairs Division, LR 34:992 (June 2008), LR 34:1894 (September 2008).

§520. Specific Part II Information Requirements for Groundwater Protection

The following additional information regarding protection of groundwater is required from owners or operators of hazardous waste facilities containing a regulated unit except as provided in LAC 33:V.3301.B and C:

A. a summary of the groundwater monitoring data obtained during the interim status period under LAC 33:V.4367, 4369, 4371, 4373, and 4375, where applicable;

B. identification of the uppermost aquifer and aquifers hydraulically interconnected beneath the facility property, including groundwater flow direction and rate, and the basis for such identification (i.e., the information obtained from hydrogeologic investigations of the facility area);

ENVIRONMENTAL QUALITY

C. on the topographic map required under LAC 33:V.517.B, a delineation of the waste management area, the property boundary, the proposed *point of compliance* as defined under LAC 33:V.3311, the proposed location of groundwater monitoring wells as required under LAC 33:V.3315, and, to the extent possible, the information required in LAC 33:V.520.B;

D. a description of any known plume of contamination that has entered the groundwater from a regulated unit at the time that the application was submitted that:

1. delineates the extent of the plume on the topographic map required under LAC 33:V.517.B; and

2. identifies the concentration of each constituent listed in LAC 33:V.3325 throughout the plume or identifies the maximum concentrations of each LAC 33:V.3325 constituent in the plume;

E. detailed plans and an engineering report describing the proposed groundwater monitoring program to be implemented to meet the requirements of LAC 33:V.3315;

F. if the presence of hazardous constituents has not been detected in the groundwater at the time of permit application, the owner or operator must submit sufficient information, supporting data, and analyses to establish a detection monitoring program that meets the requirements of LAC 33:V.3317. This submission must address the following items specified under LAC 33:V.3317:

1. a proposed list of indicator parameters, waste constituents, or reaction products that can provide a reliable indication of the presence of hazardous constituents in the groundwater;

2. a proposed groundwater monitoring system;

3. background values for each proposed monitoring parameter or constituent, or procedures to calculate such values; and

4. a description of proposed sampling, analysis, and statistical comparison procedures to be utilized in evaluating groundwater monitoring data;

G. if the presence of hazardous constituents has been detected in the groundwater at the point of compliance at the time of the permit application, the owner or operator must submit to the Office of Environmental Services sufficient information, supporting data, and analyses to establish a compliance monitoring program that meets the requirements of LAC 33:V.3319. Except as provided in LAC 33:V.3317.H, the owner or operator must also submit to the Office of Environmental Services an engineering feasibility plan for a corrective action program necessary to meet the requirements of LAC 33:V.3321, unless the owner or operator obtains written authorization in advance from the administrative authority to submit a proposed permit schedule for submittal of such a plan. To demonstrate compliance with LAC 33:V.3319, the owner or operator must address the following items:

1. a description of the hazardous waste code specified in LAC 33:V.Chapter 49 for the wastes previously handled at the facility;

2. a characterization of the contaminated groundwater, including concentrations of hazardous constituents;

3. a list of hazardous constituents for which compliance monitoring will be undertaken in accordance with LAC 33:V.3315 and 3319;

4. proposed concentration limits for each hazardous constituent, based on the criteria set forth in LAC 33:V.3309.A, including a justification for establishing any alternate concentration limits;

5. detailed plans and an engineering report describing the proposed groundwater monitoring system, in accordance with the requirements of LAC 33:V.3315; and

6. a description of proposed sampling, analysis, and statistical comparison procedures to be utilized in evaluating groundwater monitoring data;

H. if hazardous constituents have been measured in the groundwater that exceed the concentration limits established under LAC 33:V.3309, Table 1, or if groundwater monitoring conducted at the time of permit application under LAC 33:V.4367, 4369, 4371, 4373, and 4375 at the waste boundary indicates the presence of hazardous constituents from the facility in groundwater over background concentrations, the owner or operator must submit sufficient information, supporting data, and analyses to establish a corrective action program that meets the requirements of LAC 33:V.3321. However, an owner or operator is not required to submit information to establish a corrective action program if he or she demonstrates to the administrative authority that alternate concentration limits will protect human health and the environment after considering the criteria listed in LAC 33:V.3309.B. An owner or operator who is not required to establish a corrective action program for this reason must instead submit sufficient information to establish a compliance monitoring program that meets the requirements of LAC 33:V.3319 and LAC 33:V.520.F. To demonstrate compliance with LAC 33:V.3321, the owner or operator must address, at a minimum, the items listed in LAC 33:V.520.H.1-4 below (the permit may contain a schedule for submittal of the information required in LAC 33:V.520.H.3 and 4 provided the owner or operator obtains written authorization from the administrative authority prior to submittal of the complete permit application):

1. a characterization of the contaminated groundwater, including concentrations of hazardous constituents;

2. the concentration limit for each hazardous constituent found in the groundwater as set forth in LAC 33:V.3309;

3. detailed plans and an engineering report describing the corrective action to be taken;

4. a description of how the groundwater monitoring program will demonstrate the adequacy of the corrective action; and

5. the permit may contain a schedule for submittal of the information required in LAC 33:V.520.H.3 and 4 provided the owner or operator obtains written authorization from the administrative authority prior to submittal of the complete permit application.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 18:1256 (November 1992), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2467 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2454 (October 2005), LR 33:2100 (October 2007).

§521. Specific Part II Information Requirements for Containers

Except as otherwise provided in LAC 33:V.2101 owners or operators of facilities that store containers of hazardous waste must provide the following additional information:

A. a description of the containment system to demonstrate compliance with LAC 33:V.2111, show at least the following:

1. basic design parameters, dimensions, and materials of construction;
2. how the design promotes drainage or how containers are kept from contact with standing liquids in the containment system;
3. capacity of the containment system relative to the number and volume of containers to be stored;
4. provisions for preventing or managing run-on;
5. how accumulated liquids can be analyzed and removed to prevent overflow;

B. for storage areas that store containers holding wastes that do not contain free liquids, a demonstration of compliance with LAC 33:V.2111.C including:

1. test procedures and results or other documentation or information to show that the wastes do not contain free liquids; and
2. a description of how the storage area is designed or operated to drain and remove liquids or how containers are kept from contact with standing liquids;

C. sketches, drawings, or data demonstrating compliance with LAC 33:V.2113 (location of buffer zone and containers holding ignitable or reactive wastes) and LAC 33:V.2115.C (location of incompatible wastes), where applicable;

D. where incompatible wastes are stored or otherwise managed in containers, a description of the procedures used to ensure compliance with LAC 33:V.2107.A-C, and 1517.B-D; and

E. information on air emission control equipment as required in LAC 33:V.526.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 18:1256 (November 1992), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1692 (September 1998).

§523. Specific Part II Information Requirements for Tanks

Except as otherwise provided in LAC 33:V.1901, owners and operators of facilities that use tanks to store or treat hazardous waste must provide the following additional information:

A. a written assessment that is reviewed and certified by an independent, qualified professional engineer as to the structural integrity and suitability for handling hazardous waste for each tank system, as required under LAC 33:V.1903 and 1905;

B. dimensions and capacity of each tank;

C. descriptions of feed systems, safety cutoff, bypass systems, and pressure controls (e.g., vents);

D. a diagram of piping, instrumentation, and process flow for each tank system;

E. a description of materials and equipment used to provide external corrosion protection, as required under LAC 33:V.1905.A.3.b;

F. for new tank systems, a detailed description of how the tank system(s) will be installed in compliance with LAC 33:V.1905.B, C, D, and E;

G. detailed plans and description of how the secondary containment system for each tank system is or will be designed, constructed, and operated to meet the requirements of LAC 33:V.1907.A, B, C, D and F;

H. for tank systems for which a variance from the requirements of LAC 33:V.1907 is sought (as provided by LAC 33:V.1907.G):

1. detailed plans and engineering and hydrogeologic reports, as appropriate, describing alternate design and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous waste or hazardous constituents into the groundwater or surface water during the life of the facility; or

2. a detailed assessment of the substantial present or potential hazards posed to human health or the environment should a release enter the environment;

I. descriptions of controls and practices to prevent spills and overflows, as required under LAC 33:V.1909.B;

J. for tank systems in which ignitable, reactive, or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility

design will achieve compliance with the requirements of LAC 33:V.1917 and 1919; and

K. information on air emission control equipment as required in LAC 33:V.526.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 13:433 (August 1987) LR 16:220 (March 1990), LR 16:614 (July 1990), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1692 (September 1998), amended by the Office of the Secretary, Legal Affairs Division, LR 34:992 (June 2008).

§525. Specific Part II Information Requirements for Surface Impoundments

Except as otherwise provided in LAC 33:V.1501, owners and operators of facilities that treat, store, or dispose of hazardous waste in surface impoundments must provide the following additional information:

A. a list of the hazardous wastes placed or to be placed in each surface impoundment;

B. detailed plans and an engineering report describing how the surface impoundment is designed and is or will be constructed, operated and maintained to meet the requirements of LAC 33:V.1504, 2903, 2904, and 2906. This submission must address the following items:

1. the liner system (except for an existing portion of a surface impoundment). If an exemption from the requirement for a liner is sought as provided by LAC 33:V.2903.B, submit detailed plans and engineering and hydrogeologic reports, as appropriate, describing alternate design and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the groundwater or surface water at any future time;

2. the double liner and leak (leachate) detection, collection and removal system, if the surface impoundment must meet the requirements of LAC 33:V.2903.J. If an exemption from the requirements for double liners and leak detection, collection and removal system or alternative design is sought as provided by LAC 33:V.2903.C, K, or L, submit appropriate information;

3. if the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation and the location of the saturated zone in relation to the leak detection system;

4. the construction quality assurance (CQA) plan, if required under LAC 33:V.1504;

5. proposed action leakage rate, with rationale, if required under LAC 33:V.2904 and response action plan, if required under LAC 33:V.2906;

6. prevention of overtopping; and

7. structural integrity of dikes;

C. a description of how each surface impoundment, including the double liner system, leak detection system, cover system, and appurtenances for control of overtopping, will be inspected in order to meet the requirements of LAC 33:V.2907.B, C, and E. This information must be included in the inspection plan submitted under LAC 33:V.517.G;

D. a description of how each surface impoundment, including the liner and cover systems and appurtenances for control of overtopping, will be inspected in order to meet the requirements of LAC 33:V.2907.B and C;

E. a certification by a qualified engineer which attests to the structure integrity of each dike, as required under LAC 33:V.2907.D. For new units, the owner or operator must submit a statement by a qualified engineer that he will provide such a certification upon completion of construction in accordance with the plans and specifications;

F. a description of the procedure to be used for removing a surface impoundment from service, as required under LAC 33:V.2909.B and C;

G. a description of how hazardous waste residues and contaminated materials will be removed from the unit at closure, as required under LAC 33:V.2911.A. For any wastes not to be removed from the unit upon closure, the owner or operator must submit detailed plans and an engineering report describing how LAC 33:V.2911.B and C will be complied with. This information should be included in the closure plan and, where applicable, the post-closure plan;

H. if ignitable or reactive wastes are to be placed in a surface impoundment an explanation of how LAC 33:V.2913 will be complied with;

I. if incompatible wastes, or incompatible wastes and materials will be placed in a surface impoundment, an explanation of how LAC 33:V.2915 will be complied with;

J. a waste management plan for EPA Hazardous Waste Numbers F020, F021, F022, F023, F026 and F027 describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of LAC 33:V.2917. This submission must address the following items:

1. the volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

2. the attenuative properties of underlying and surrounding soils or other materials;

3. the mobilizing properties of other materials codisposed with these wastes; and

4. the effectiveness of additional treatment, design, or monitoring techniques; and

K. information on air emission control equipment as required in LAC 33:V.526.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 16:220 (March 1990), LR 21:266 (March 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1106 (June 1998), LR 24:1692 (September 1998).

§526. Specific Part II Information Requirements for Air Emission Controls for Tanks, Surface Impoundments, and Containers

A. Except as otherwise provided in LAC 33:V.1501, owners and operators of tanks, surface impoundments, or containers that use air emission controls in accordance with the requirements of LAC 33:V.Chapter 17.Subchapter C shall provide the following additional information:

1. documentation for each floating roof cover installed on a tank subject to LAC 33:V.1755.D.1 or 2 that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design and certification by the owner or operator that the cover meets the applicable design specifications as listed in LAC 33:V.1755.E.1 or F.1;

2. identification of each container area subject to the requirements of LAC 33:V.Chapter 17.Subchapter C and certification by the owner or operator that the requirements of this Chapter are met;

3. documentation for each enclosure used to control air pollutant emissions from tanks or containers in accordance with the requirements of LAC 33:V.1755.D.5 or 1759.E.1.b that includes records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure under 40 CFR 52.741, Appendix B;

4. documentation for each floating membrane cover installed on a surface impoundment in accordance with the requirements of LAC 33:V.1757.C that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the specifications listed in LAC 33:V.1757.C.1;

5. documentation for each closed-vent system and control device installed in accordance with the requirements of LAC 33:V.1761 that includes design and performance information as specified in LAC 33:V.530.C and D;

6. an emission monitoring plan for both Method 21 in 40 CFR Part 60, Appendix A and control device monitoring methods. This plan shall include the following information: monitoring point(s), monitoring methods for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliance; and

7. when an owner or operator of a facility subject to LAC 33:V.Chapter 43.Subchapter V cannot comply with LAC 33:V.Chapter 17.Subchapter C by the date of permit issuance, the schedule of implementation required under LAC 33:V.1751.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1692 (September 1998).

§527. Specific Part II Information Requirements for Waste Piles

Except as otherwise provided in LAC 33:V.1501, owners and operators of facilities that treat or store hazardous waste in waste piles must provide the following additional information:

A. a list of hazardous wastes placed or to be placed in each waste pile;

B. if an exemption is sought to LAC 33:V.2303 and LAC 33:V.Chapter 33 as provided by LAC 33:V.2301.C, an explanation of how the standards of LAC 33:V.2301.C will be complied with;

C. detailed plans and an engineering report describing how the pile is or will be designed, constructed, operated and maintained to meet the requirements of LAC 33:V.2303. This submission must address the following items as specified in LAC 33:V.2303:

1. the liner system (except for an existing portion of a pile), if the waste pile must meet the requirements of LAC 33:V.2303.A. If an exemption from the requirement for a liner is sought, as provided by LAC 33:V.2303.B, the owner or operator must submit detailed plans and engineering and hydrogeologic reports, as applicable, describing alternate design and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituent into the groundwater or surface water at any future time:

a. the double liner and leak (leachate) detection, collection, and removal system, if the waste pile must meet the requirements of LAC 33:V.2303.C. If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by LAC 33:V.2303.D, E, or F, submit appropriate information;

b. if the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation and the location of the saturated zone in relation to the leak detection system;

c. the construction quality assurance (CQA) plan if required under LAC 33:V.1504;

d. proposed action leakage rate, with rationale, if required under LAC 33:V.2304 and response action plan, if required under LAC 33:V.2306;

ENVIRONMENTAL QUALITY

2. control of run-on;
3. control of run-off;
4. management of collection and holding units associated with run-on and run-off control systems; and
5. control of wind dispersal of particulate matter, where applicable;

D. if an exemption from LAC 33:V.Chapter 33 is sought as provided by LAC 33:V.2303 or 2307 submit detailed plans and an engineering report describing how the requirements of LAC 33:V.2303.B or 2307 will be complied with;

E. a description of how each waste pile, including the double liner system, leachate collection and removal system, leak detection system, cover system, and appurtenance for control of run-on and run-off, will be inspected in order to meet the requirements of LAC 33:V.2309.A, B, and C. This information must be included in the inspection plan submitted under LAC 33:V.517.G;

F. if treatment is carried out on or in the pile, details of the process and equipment used, and the nature and quality of the residuals;

G. if ignitable or reactive wastes are to be placed in a waste pile, an explanation of how the requirements of LAC 33:V.2311 will be complied with;

H. if incompatible wastes, or incompatible wastes and materials will be placed in a waste pile, an explanation of how LAC 33:V.2313 will be complied with;

I. a description of how hazardous waste residues and contaminated materials will be removed from the waste pile at closure, as required under LAC 33:V.2315.A. For any waste not to be removed from the waste pile upon closure, this owner or operator must submit detailed plans and an engineering report describing how LAC 33:V.2521.A and B will be complied with;

J. a waste management plan for EPA Hazardous Waste Numbers F020, F021, F022, F023, F026 and F027 describing how a waste pile that is not enclosed (as defined in LAC 33:V.2301.C) is or will be designed, constructed, operated, and maintained to meet the requirements of LAC 33:V.2317. This submission must address the following items:

1. the volume, physical, and chemical characteristics of the wastes to be disposed in the waste pile, including their potential to migrate through soil or to volatilize or escape into the atmosphere;
2. the attenuative properties of underlying and surrounding soils or other materials;
3. the mobilizing properties of other materials codisposed with these wastes; and
4. the effectiveness of additional treatment, design, or monitoring techniques.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 16:220 (March 1990), LR 21:266 (March 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1106 (June 1998).

§528. Part II Information Requirements for Post-Closure Permits

A. For post-closure permits, the owner or operator is required to submit only the information specified in LAC 33:V.516; 517.A, B, F, G, H, M, N, P, R, and T; and 520, unless the administrative authority determines that additional information from LAC 33:V.516, 517, 520, 523, 525, 527, 531, and 533 is necessary. The owner or operator is required to submit the same information when an alternative authority is used in lieu of a post-closure permit as provided in LAC 33:V.305.H.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 25:436 (March 1999).

§529. Specific Part II Information Requirements for Incinerators

Except as LAC 33:V.Chapter 31 and Subsection F of this Section provide otherwise, owners and operators of facilities that incinerate hazardous waste must fulfill the requirements of Subsection A, B, or C of this Section:

A. when seeking an exemption under LAC 33:V.3105.B or C (ignitable, corrosive, or reactive wastes only):

1. documentation that the waste is listed as a hazardous waste in LAC 33:V.Chapter 49, solely because it is ignitable (Hazard Code I) or corrosive (Hazard Code C) or both; or

2. documentation that the waste is listed as a hazardous waste in LAC 33:V.Chapter 49, solely because it is reactive (Hazard Code R) for characteristics other than those listed in LAC 33:V.4903.D.4 and 5, and will not be burned when other hazardous wastes are present in the combustion zone; or

3. documentation that the waste is a hazardous waste solely because it possesses the characteristics of ignitability, corrosivity, or both, as determined by the tests for characteristics of hazardous waste under LAC 33:V.4903; or

4. documentation that the waste is a hazardous waste solely because it possesses the reactivity characteristics listed in LAC 33:V.4903.D.1, 2, 3, 6, 7, or 8, and that it will not be burned when other hazardous wastes are present in the combustion zone; or

B. submit a trial burn plan or the results of a trial burn, including all required determinations, in accordance with LAC 33:V.3115; or

C. in lieu of a trial burn, the applicant may submit the following information:

1. an analysis of each waste or mixture of wastes to be burned including:

a. heat value of the waste in the form and composition in which it will be burned;

b. viscosity (if applicable), or description of physical form of the waste;

c. an identification of any hazardous organic constituents listed in LAC 33:V.3105, Table 1, that are present in the waste to be burned, except that the applicant need not analyze for constituents listed in LAC 33:V.3105, Table 1, which would reasonably not be expected to be found in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion stated. The waste analysis must rely on appropriate analytical techniques;

d. an approximate quantification of the hazardous constituents identified in the waste, within the precision produced by appropriate analytical methods;

e. a quantification of those hazardous constituents in the waste which may be designated as POHC's based on data submitted from other trial or operational burns which demonstrate compliance with the performance standards in LAC 33:V.3111;

2. a detailed engineering description of the incinerators, including:

a. manufacturer's name and model number of incinerator;

b. type of incinerator;

c. linear dimension of incinerator unit including cross sectional area of combustion chamber;

d. description of auxiliary fuel system (type/feed);

e. capacity of prime mover;

f. description of automatic waste feed cutoff system(s);

g. stack gas monitoring and pollution control monitoring system;

h. nozzle and burner design;

i. construction materials;

j. location and description of temperature, pressure, and flow indicating devices and control devices;

3. a description and analysis of the waste to be burned compared with the waste for which data from operational or trial burns are provided to support the contention that a trial burn is not needed; The data should include those items listed in Paragraph C.1 of this Section. This analysis should specify the POHC's which the applicant has identified in the waste for which a permit is sought, and any differences from the POHC's in the waste for which burn data are provided;

4. the design and operating conditions of the incinerator unit to be used, compared with that for which comparative burn data are available;

5. a description of the results submitted from any previously conducted trial burn(s) including:

a. sampling and analysis techniques used to calculate performance standards in LAC 33:V.3111;

b. methods and results of monitoring temperatures, waste feed rates, carbon monoxide, and an appropriate indicator of combustion gas velocity (including a statement concerning the precision and accuracy of this measurement);

6. the expected incinerator operation information to demonstrate compliance with LAC 33:V.3111 and 3117, including:

a. expected carbon monoxide (CO) level in the stack exhaust gas;

b. waste feed rate;

c. combustion zone temperature;

d. indication of combustion gas velocity;

e. expected stack gas volume, flow rate, and temperature;

f. computed residence time for waste in the combustion zone;

g. expected hydrochloric acid removal efficiency;

h. expected fugitive emissions and their control procedures;

i. proposed waste feed cut-off limits based on the identified significant operating parameters;

7. such supplemental information as the administrative authority finds necessary to achieve the purposes of this Subsection;

8. waste analysis data, including that submitted in Paragraph C.1 of this Section, sufficient to allow the administrative authority to specify as permit Principal Organic Hazardous Constituents (permit POHC's) those constituents for which destruction and removal efficiencies will be required;

D. the administrative authority shall approve a permit application without a trial burn if he finds that:

1. the wastes are sufficiently similar; and

2. the incinerator units are sufficiently similar, and the data from other trial burns are adequate to specify (under LAC 33:V.3117) operating conditions that will ensure that the performance standards in LAC 33:V.3111 will be met by the incinerator;

E. commercial hazardous waste incinerators. The administrative authority shall issue no new permit or substantial permit modification, as defined in LAC 33:I.1503, that authorizes the construction or operation

of any commercial hazardous waste incineration facility, of any type, until the permit applicant complies with:

1. all applicable hazardous waste regulations in LAC 33:V, particularly as they pertain to:
 - a. design as required in LAC 33:V.Chapters 5 and 31;
 - b. siting as required in LAC 33:V.Chapters 5, 7, and 15;
 - c. construction as required in LAC 33:V.Chapters 7 and 31;
 - d. operation as required in LAC 33:V.Chapters 3, 5, 7, and 31;
 - e. emission limitations as required in LAC 33:V.Chapters 5 and 31; and
 - f. disposal methods as required in LAC 33:V.Chapters 22, 31, and 35;
2. all applicable air quality regulations in LAC 33:III; and
3. all applicable water quality regulations in LAC 33:IX;

F. when an owner or operator of a hazardous waste incineration unit becomes subject to RCRA permit requirements after October 12, 2005, or when an owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the air emission standards and limitations in 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122 (i.e., by conducting a comprehensive performance test and submitting a notification of compliance in accordance with 40 CFR 63.1207(j) and 63.1210(d), documenting compliance with all applicable requirements of 40 CFR Part 63, Subpart EEE), the requirements of this Section do not apply, except those provisions the administrative authority determines are necessary to ensure compliance with LAC 33:V.3117.A and C if the owner or operator elects to comply with LAC 33:V.2001.A.1.a to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the administrative authority may apply the provisions of this Section, on a case-by-case basis, for purposes of information collection in accordance with LAC 33:V.303.Q-R and 311.E-F.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2011(D)(24)(a) and 2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 22:817 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:2199 (November 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 27:292 (March 2001), LR 29:319 (March 2003), amended by the Office of Environmental Assessment, LR 31:1571 (July 2005), amended by the Office of the Secretary, Legal Affairs Division, LR 34:620 (April 2008), LR 34:1011 (June 2008), LR 34:1894 (September 2008).

§530. Specific Part II Information Requirements for Process Vents

Except as otherwise provided in LAC 33:V.1501, owners and operators of facilities that have process vents to which LAC 33:V.Chapter 17.Subchapter A applies must provide the following additional information.

A. Facilities that cannot install a closed-vent system and control device to comply with the provisions of LAC 33:V.Chapter 17.Subchapter A, on the effective date that the facility becomes subject to the provisions of LAC 33:V.Chapter 17.Subchapter A, and Chapter 43.Subchapter Q, must provide an implementation schedule as specified in LAC 33:V.1709.A.2.

B. Documentation of compliance with the process vent standards in LAC 33:V.1707 must be provided, including:

1. information and data identifying all affected process vents, annual throughput, and operating hours of each affected unit, estimated emission rates for each affected vent and for the overall facility (i.e., the total emissions for all affected vents at the facility), and the approximate location within the facility of each affected unit (e.g., identify the hazardous waste management units on a facility plot plan);

2. information and data supporting estimates of vent emissions and emission reduction achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, estimates of vent emissions and emission reductions must be made using operating parameter values (e.g., temperatures, flow rates, or concentrations) that represent the conditions that exist when the waste management unit is operating at the highest load or capacity level reasonably expected to occur;

3. information and data used to determine whether or not a process vent is subject to the requirements of LAC 33:V.1707.

C. Owners or operators who apply for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with the requirements of LAC 33:V.1707, and choose to use test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device must provide a performance test plan as specified in LAC 33:V.1713.B.3.

D. Documentation of compliance with LAC 33:V.1709 must be provided, including:

1. a list of all information references and sources used in preparing the documentation;

2. records including the dates of each compliance test required by LAC 33:V.1709.K;

3. a design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions," as incorporated by reference at LAC

33:V.110, or other engineering texts acceptable to the administrative authority that present basic control device information. The design analysis shall address the vent stream characteristics and control device operation parameters as specified in LAC 33:V.1713.B.4.c;

4. a statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur;

5. a statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of 95 weight percent or greater unless the total organic emission limits of LAC 33:V.1707.A for affected process vents at the facility can be attained by a control device involving vapor recovery at an efficiency less than 95 weight percent.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 18:1256 (November 1992), LR 22:817 (September 1996), amended by the Office of the Secretary, Legal Affairs Division, LR 34:621 (April 2008).

§531. Specific Part II Information Requirements for Land Treatment Facilities

Except as otherwise provided in LAC 33:V.1501, owners and operators of facilities that use land treatment to dispose of hazardous waste must provide the following additional information:

A. a description of plans to conduct a treatment demonstration as required under LAC 33:V.2707. The description must include the following information:

1. the wastes for which the demonstration will be made and the potential hazardous constituents in the waste;

2. the data sources to be used to make the demonstration (e.g., literature, laboratory data, field data, or operating data);

3. any specific laboratory or field test that will be conducted, including:

a. the type of test (e.g., column leaching, degradation);

b. materials and methods, including analytical procedures;

c. expected time for completion;

d. characteristics of the unit that will be simulated in the demonstration, including treatment zone characteristics, climatic conditions, and operating practices;

B. a description of a land treatment program, as required under LAC 33:V.2705. This information must be submitted with the plans for the treatment demonstration, and updated

following the treatment demonstration. The land treatment program must address the following items:

1. the wastes to be land treated;

2. design measures and operating practices necessary to maximize treatment in accordance with LAC 33:V.2703.A including:

a. waste application method and rate;

b. measures to control soil pH;

c. enhancement of microbial or chemical reactions;

d. control of moisture content;

3. provisions for unsaturated zone monitoring, including:

a. sampling equipment, procedures, and frequency;

b. procedures for selecting sampling locations;

c. analytical procedures;

d. chain of custody control;

e. procedures for establishing background values;

f. statistical methods for interpreting results;

g. the justification for any hazardous constituents recommended for selection as principal hazardous constituents, in accordance with the criteria for such selection in LAC 33:V.2711.A;

4. a list of hazardous constituents reasonably expected to be in, or derived from, the wastes to be land treated based on waste analysis performed pursuant to LAC 33:V.1519;

5. the proposed dimensions of the treatment zone;

C. a description of how the unit is or will be designed, constructed, operated, and maintained in order to meet the requirements of LAC 33:V.2303. This submission must address the following items:

1. control of run-on;

2. collection and control of run-off;

3. minimization of run-off of hazardous constituents from the treatment zone;

4. management of collection and holding facilities associated with run-on and run-off control systems;

5. periodic inspection of this unit. (This information should be included in the inspection plan.);

6. control of wind dispersal of particulate matter, if applicable;

D. no food-chain crops are to be grown in or on the treatment zone of the land treatment unit;

E. a description of the vegetative cover to be applied to closed portions of the facility, and a plan for maintaining such cover during the post-closure care period, as required under LAC 33:V.2709.A.8 and C.2. This information should

ENVIRONMENTAL QUALITY

be included in the closure plan and, where applicable, the post-closure plan;

F. if ignitable or reactive wastes will be placed in or on the treatment zone, an explanation of how the requirements of LAC 33:V.2715 will be complied with;

G. if incompatible wastes, or incompatible wastes and materials, will be placed in or on the same treatment zone, an explanation of how LAC 33:V.2717 will be complied with;

H. a waste management plan for EPA Hazardous Waste Numbers F020, F021, F022, F023, F026 and F027 describing how a land treatment facility is or will be designed, constructed, operated, and maintained to meet the requirements of LAC 33:V.2723. This submission must address the following items:

1. the volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;
2. the attenuative properties of underlying and surrounding soils or other materials;
3. the mobilizing properties of other materials codisposed with these wastes; and
4. the effectiveness of additional treatment, design, or monitoring techniques.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 16:220 (March 1990), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1106 (June 1998).

§532. Special Part II Information Requirements for Drip Pads

A. Except as otherwise provided by LAC 33:V.Chapter 15, owners and operators of hazardous waste treatment, storage, or disposal facilities that collect, store, or treat hazardous waste on drip pads must provide the following additional information:

1. a list of hazardous wastes placed or to be placed on each drip pad;
2. if an exemption is sought to LAC 33:V.Chapter 33, as provided by LAC 33:V.3301, detailed plans and an engineering report describing how the requirements of LAC 33:V.3301 will be met;
3. detailed plans and an engineering report describing how the drip pad is or will be designed, constructed, operated and maintained to meet the requirements of LAC 33:V.2805, including the as-built drawings and specifications. This submission must address the following items as specified in LAC 33:V.2803:
 - a. the design characteristics of the drip pad;
 - b. the liner system;

- c. the leakage detection system, including how the system is designed to detect the failure of the drip pad or the presence of any releases of hazardous waste or accumulated liquid at the earliest practicable time;

- d. practices designed to maintain drip pads;

- e. the associated collection system;

- f. control of run-on to the drip pad;

- g. control of run-off from the drip pad;

- h. the interval at which drippage and other materials will be removed from the associated collection system and a statement demonstrating that the interval will be sufficient to prevent overflow onto the drip pad;

- i. procedures for cleaning the drip pad at least once every seven days to ensure the removal of any accumulated residues of waste or other materials, including but not limited to rinsing, washing with detergents or other appropriate solvents, or steam cleaning and provisions for documenting the date, time, and cleaning procedure used each time the pad is cleaned;

- j. operating practices and procedures that will be followed to ensure that tracking of hazardous waste or waste constituents off the drip pad due to activities by personnel or equipment is minimized;

- k. procedures for ensuring that, after removal from the treatment vessel, treated wood from pressure and nonpressure processes is held on the drip pad until drippage has ceased; including recordkeeping practices;

- l. provisions for ensuring that collection and holding units associated with the run-on and run-off control systems are emptied or otherwise managed as soon as possible after storms to maintain design capacity of the system;

- m. if treatment is carried out on the drip pad, details of the process equipment used and the nature and quality of the residuals;

- n. a description of how each drip pad, including appurtenances for control of run-on and run-off, will be inspected in order to meet the requirements of LAC 33:V.2805. This information should be included in the inspection plan submitted under LAC 33:V.517.G;

- o. a certification signed by an independent, qualified professional engineer stating that the drip pad design meets the requirements of LAC 33:V.2805.A-F;

- p. a description of how hazardous waste residues and contaminated materials will be removed from the drip pad at closure, as required under LAC 33:V.2809.A. For any waste not to be removed from the drip pad upon closure, the owner or operator must submit detailed plans and an engineering report describing how LAC 33:V.2521.A and B will be complied with. This information should be included in the closure plan and, where applicable, the post-closure plan submitted under LAC 33:V.517.M.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended by the Office of the Secretary, Legal Affairs Division, LR 34:993 (June 2008).

§533. Specific Part II Information Requirements for Landfills

Except as otherwise provided in LAC 33:V.1501, owners and operators of facilities that dispose of hazardous waste in landfills must provide the following additional information:

A. a list of the hazardous wastes placed in each landfill or landfill cell;

B. detailed plans and an engineering report describing how the landfill is designed and is or will be constructed, operated and maintained to comply with the requirements of LAC 33:V.1504, 2503, 2504, and 2507. This submission must address the following items:

1. the liner system (except for an existing portion of a landfill), if the landfill must meet the requirements of LAC 33:V.2503.A. If an exemption from the requirement for a liner is sought as provided by LAC 33:V.2503.L, submit detailed plans and engineering and hydrogeological reports, as appropriate, describing alternate designs and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the groundwater or surface water at any future time;

2. the double liner and leak (leachate) detection, collection, and removal system, if the landfill must meet the requirements of LAC 33:V.2503.K. If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by LAC 33:V.2503.L or M, submit appropriate information;

3. if the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation and the location of the saturated zone in relation to the leak detection system;

4. the construction quality assurance (CQA) plan if required under LAC 33:V.1504;

5. proposed action leakage rate, with rationale, if required under LAC 33:V.2504, and response action plan, if required under LAC 33:V.2508;

6. control of run-on;

7. control of run-off;

8. management of collection and holding facilities associated with run-on and run-off control systems; and

9. control of wind dispersal of particulate matter, where applicable;

C. there are no exemptions from the groundwater protection requirements of LAC 33:V.Chapter 33;

D. a description of how each landfill, including the liner and cover systems, will be inspected in order to meet the requirements of LAC 33:V.2507.B, C, and D. This information should be included in the inspection plan submitted under LAC 33:V.517.G;

E. detailed plans and an engineering report describing the final cover which will be applied to each landfill or landfill cell at closure in accordance with LAC 33:V.2521.A, and a description of how each landfill will be maintained and monitored after closure in accordance with LAC 33:V.2521.B. This information should be included in the closure and post-closure plans;

F. if ignitable or reactive wastes will be landfilled, an explanation of how the standards of LAC 33:V.2511 will be complied with;

G. if incompatible wastes, or incompatible wastes and materials will be landfilled, an explanation of how LAC 33:V.2513 will be complied with;

H. bulk or non-containerized liquid waste or wastes containing free liquids to be landfilled must comply with LAC 33:V.2515;

I. if containers of hazardous waste are to be landfilled, an explanation of how the requirements of LAC 33:V.2517 or LAC 33:V.2519, as applicable, will be complied with;

J. a waste management plan for EPA Hazardous Waste Numbers F020, F021, F022, F023, F026, and F027 describing how a landfill is or will be designed, constructed, operated, and maintained to meet the requirements of LAC 33:V.2523. This submission must address the following items:

1. the volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

2. the attenuative properties of underlying and surrounding soils or other materials;

3. the mobilizing properties of other materials codisposed with these wastes; and

4. the effectiveness of additional treatment, design, or monitoring techniques.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:280 (April 1984), LR 16:220 (March 1990), LR 21:266 (March 1995), LR 21:944 (September 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1106 (June 1998).

§534. Specific Part II Information Requirements for Miscellaneous Units

Except as otherwise provided in LAC 33:V.3201, owners and operators of facilities that treat, store, or dispose of hazardous waste in miscellaneous units must provide the following additional information:

ENVIRONMENTAL QUALITY

A. a detailed description of the unit being used or proposed for use, including the following:

1. physical characteristics, materials of construction, and dimensions of the unit;
2. detailed plans and engineering reports describing how the unit will be located, designed, constructed, operated, maintained, monitored, inspected, and closed to comply with the requirements of LAC 33:V.3203 and 3205; and
3. for disposal units, a detailed description of the plans to comply with the post-closure requirements of LAC 33:V.3207;

B. detailed hydrologic, geologic, and meteorologic assessments and land-use maps for the region surrounding the site that address and ensure compliance of the unit with each factor in the environmental performance standards of LAC 33:V.3203. If the applicant can demonstrate that he does not violate the environmental performance standards of LAC 33:V.3203 and the administrative authority agrees with such demonstration, preliminary hydrologic, geologic, and meteorologic assessments will suffice;

C. information on the potential pathways of exposure of humans or environmental receptors to hazardous waste or hazardous constituents and on the potential magnitude and nature of such exposures;

D. for any treatment unit, a report on a demonstration of the effectiveness of the treatment based on laboratory or field data;

E. any additional information determined by the administrative authority to be necessary for evaluation of compliance of the unit with the environmental performance standards of LAC 33:V.3203.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:399 (May 1990).

§535. Specific Part II Information Requirements for Boilers and Industrial Furnaces Burning Hazardous Waste for Energy or Material Recovery and Not for Destruction

A. Trial Burns

1. General. Except as provided below, owners or operators that are subject to the standards to control organic emissions provided by LAC 33:V.3009, standards to control particulate matter provided by LAC 33:V.3011, standards to control metals emissions provided by LAC 33:V.3013, or standards to control hydrogen chloride or chlorine gas emissions provided by LAC 33:V.3015 must conduct a trial burn to demonstrate conformance with those standards and must submit a trial burn plan or the results of a trial burn, including all required determinations, in accordance with LAC 33:V.537.

a. A trial burn to demonstrate conformance with a particular emission standard may be waived under provisions of LAC 33:V.3009-3015 and LAC 33:V.535.A.2-5.

b. The owner or operator may submit data in lieu of a trial burn, as prescribed in LAC 33:V.535.A.6.

2. Waiver of Trial Burn for DRE

a. Boilers Operated under Special Operating Requirements. When seeking to be permitted under LAC 33:V.3009.A.4 and 3021 that automatically waive the DRE trial burn, the owner or operator of a boiler must submit documentation that the boiler operates under the special operating requirements provided by LAC 33:V.3021.

b. Boilers and Industrial Furnaces Burning Low Risk Waste. When seeking to be permitted under the provisions for low risk waste provided by LAC 33:V.3009.A.5 and 3019.A that waive the DRE trial burn, the owner or operator must submit:

i. documentation that the device is operated in conformance with the requirements of LAC 33:V.3019.A.1;

ii. results of analyses of each waste to be burned, documenting the concentrations of nonmetal compounds listed in LAC 33:V.4901.G, Table 6, except for those constituents that would reasonably not be expected to be in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion explained. The analysis must rely on appropriate analytical techniques;

iii. documentation of hazardous waste firing rates and calculations of reasonable, worst-case emission rates of each constituent identified in LAC 33:V.535.A.2.b.ii using procedures provided by LAC 33:V.3019.A.2.b;

iv. results of emissions dispersion modeling for emissions identified in LAC 33:V.535.A.2.b.iii using modeling procedures prescribed by LAC 33:V.3013.H. The administrative authority will review the emission modeling conducted by the applicant to determine conformance with these procedures. The administrative authority will either approve the modeling or determine that alternate or supplementary modeling is appropriate; and

v. documentation that the maximum annual average ground level concentration of each constituent identified in Clause A.2.b.ii of this Section quantified in conformance with Clause A.2.b.iv of this Section does not exceed the allowable ambient level established in 40 CFR 266, Appendices IV or V, as adopted and amended at LAC 33:V.3099.Appendices D and E. The acceptable ambient concentration for emitted constituents for which a specific Reference Air Concentration has not been established in 40 CFR 266, Appendix IV, as adopted and amended at LAC 33:V.3099.Appendix D or Risk-Specific Dose has not been established in 40 CFR 266, Appendix V, as adopted at LAC 33:V.3099.Appendix E, is 0.1 micrograms per cubic meter, as noted in the footnote to 40 CFR 266, Appendix IV, as adopted and amended at LAC 33:V.3099.Appendix D.

3. Waiver of Trial Burn for Metals. When seeking to be permitted under the Tier I (or adjusted Tier I) metals feed rate screening limits provided by LAC 33:V.3013.B and E that control metals emissions without requiring a trial burn, the owner or operator must submit:

- a. documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feedstocks;
- b. documentation of the concentration of each metal controlled by LAC 33:V.3013.B or E in the hazardous waste, other fuels, and industrial furnace feedstocks, and calculations of the total feed rate of each metal;
- c. documentation of how the applicant will ensure that the Tier I feed rate screening limits provided by LAC 33:V.3013.B or E will not be exceeded during the averaging period provided by that Subsection;
- d. documentation to support the determination of the terrain-adjusted effective stack height, good engineering practice stack height, terrain type, and land use as provided by LAC 33:V.3013.B.3-5;
- e. documentation of compliance with the provisions of LAC 33:V.3013.B.6, if applicable, for facilities with multiple stacks;
- f. documentation that the facility does not fail the criteria provided by LAC 33:V.3013.B.7 for eligibility to comply with the screening limits; and
- g. proposed sampling and metals analysis plan for the hazardous waste, other fuels, and industrial furnace feedstocks.

4. Waiver of Trial Burn for Particulate Matter. When seeking to be permitted under the low risk waste provisions of LAC 33:V.3019.B which waives the particulate standard (and trial burn to demonstrate conformance with the particulate standard), applicants must submit documentation supporting conformance with LAC 33:V.535.A.2.b and A.3.

5. Waiver of Trial Burn for HCl and Cl₂. When seeking to be permitted under the Tier I (or adjusted Tier I) feed rate screening limits for total chloride and chlorine provided by LAC 33:V.3015.B.1 and E that control emissions of hydrogen chloride (HCl) and chlorine gas (Cl₂) without requiring a trial burn, the owner or operator must submit:

- a. documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feedstocks;
- b. documentation of the levels of total chloride and chlorine in the hazardous waste, other fuels, and industrial furnace feedstocks, and calculations of the total feed rate of total chloride and chlorine;
- c. documentation of how the applicant will ensure that the Tier I (or adjusted Tier I) feed rate screening limits provided by LAC 33:V.3015.B.1 or E will not be exceeded during the averaging period provided by that Subsection;
- d. documentation to support the determination of the terrain-adjusted effective stack height, good engineering

practice stack height, terrain type, and land use as provided by LAC 33:V.3015.B.3;

- e. documentation of compliance with the provisions of LAC 33:V.3015.B.4, if applicable, for facilities with multiple stacks;
- f. documentation that the facility does not fail the criteria provided by LAC 33:V.3015.B.3 for eligibility to comply with the screening limits; and
- g. proposed sampling and analysis plan for total chloride and chlorine for the hazardous waste, other fuels, and industrial furnace feedstocks.

6. Data in Lieu of Trial Burn. The owner or operator may seek an exemption from the trial burn requirements to demonstrate conformance with LAC 33:V.537 and 3009-3015 by providing the information required by LAC 33:V.537 from previous compliance testing of the device in conformance with LAC 33:V.3007, or from compliance testing or trial or operational burns of similar boilers or industrial furnaces burning similar hazardous wastes under similar conditions. If data from a similar device is used to support a trial burn waiver, the design and operating information required by LAC 33:V.535 must be provided for both the similar device and the device to which the data is to be applied, and a comparison of the design and operating information must be provided. The administrative authority shall approve a permit application without a trial burn if he finds that the hazardous wastes are sufficiently similar, the devices are sufficiently similar, the operating conditions are sufficiently similar, and the data from other compliance tests, trial burns, or operational burns are adequate to specify (under LAC 33:V.3005) operating conditions that will ensure conformance with LAC 33:V.3005.C. In addition, the following information shall be submitted:

- a. for a waiver from any trial burn:
 - i. a description and analysis of the hazardous waste to be burned compared with the hazardous waste for which data from compliance testing, or operational or trial burns are provided to support the contention that a trial burn is not needed;
 - ii. the design and operating conditions of the boiler or industrial furnace to be used, compared with that for which comparative burn data are available; and
 - iii. such supplemental information as the administrative authority finds necessary to achieve the purposes of this Paragraph;
- b. for a waiver of the DRE trial burn, the basis for selection of POHCs used in the other trial or operational burns which demonstrate compliance with the DRE performance standard in LAC 33:V.3009.A. This analysis should specify the constituents in LAC 33:V.4901.G, Table 6, that the applicant has identified in the hazardous waste for which a permit is sought, and any differences from the POHCs in the hazardous waste for which burn data are provided.

ENVIRONMENTAL QUALITY

B. Alternative HC Limit for Industrial Furnaces with Organic Matter in Raw Materials. Owners or operators of industrial furnaces requesting an alternative HC limit under LAC 33:V.3009.F shall submit the following information at a minimum:

1. documentation that the furnace is designed and operated to minimize HC emissions from fuels and raw materials;

2. documentation of the proposed baseline flue gas HC (and CO) concentration, including data on HC (and CO) levels during tests when the facility produced normal products under normal operating conditions from normal raw materials while burning normal fuels and when not burning hazardous waste;

3. test burn protocol to confirm the baseline HC (and CO) level including information on the type and flow rate of all feedstreams, point of introduction of all feedstreams, total organic carbon content (or other appropriate measure of organic content) of all nonfuel feedstreams, and operating conditions that affect combustion of fuel(s) and destruction of hydrocarbon emissions from nonfuel sources;

4. trial burn plan to:

a. demonstrate that flue gas HC (and CO) concentrations when burning hazardous waste do not exceed the baseline HC (and CO) level; and

b. identify the types and concentrations of organic compounds listed in LAC 33:V.4901.G, Table 6, that are emitted when burning hazardous waste in conformance with procedures prescribed by the administrative authority;

5. implementation plan to monitor over time changes in the operation of the facility that could reduce the baseline HC level and procedures to periodically confirm the baseline HC level; and

6. such other information as the administrative authority finds necessary to achieve the purposes of this Subsection.

C. Alternative Metals Implementation Approach. When seeking to be permitted under an alternative metals implementation approach under LAC 33:V.3013.F, the owner or operator must submit documentation specifying how the approach ensures compliance with the metals emissions standards of LAC 33:V.3013.C or D and how the approach can be effectively implemented and monitored. Further, the owner or operator shall provide such other information that the administrative authority finds necessary to achieve the purposes of this Subsection.

D. Automatic Waste Feed Cutoff System. Owners or operators shall submit information describing the automatic waste feed cutoff system, including any pre-alarm systems that may be used.

E. Direct Transfer. Owners or operators that use direct transfer operations to feed hazardous waste from transport vehicles (containers, as defined in LAC 33:V.3023) directly to the boiler or industrial furnace shall submit information

supporting conformance with the standards for direct transfer provided by LAC 33:V.3023.

F. Residues. Owners or operators that claim that their residues are excluded from regulation under the provisions of LAC 33:V.3025 must submit information adequate to demonstrate conformance with those provisions.

G. When an owner or operator of a cement or lightweight aggregate kiln, solid fuel or liquid fuel boiler, or hydrochloric acid production furnace becomes subject to RCRA permit requirements after October 12, 2005, or when an owner or operator of an existing cement or lightweight aggregate kiln, solid fuel or liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations in 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122 (i.e., by conducting a comprehensive performance test and submitting a notification of compliance in accordance with 40 CFR 63.1207(j) and 63.1210(d), documenting compliance with all applicable requirements of 40 CFR Part 63, Subpart EEE), the requirements of this Section do not apply. However, the requirements of this Section do apply if:

1. the administrative authority determines that certain provisions of this Section are necessary to ensure compliance with LAC 33:V.3005.E.1 and 2.c if the owner or operator elects to comply with LAC 33:V.2001.A.1.a to minimize emissions of toxic compounds from startup, shutdown, and malfunction events;

2. the facility is an area source as defined in LAC 33:III.5103 and the owner or operator elects to comply with the standards and associated requirements in LAC 33:V.3011, 3013, and 3015 for particulate matter, non-mercury metals, and hydrogen chloride and chlorine gas; or

3. the administrative authority determines that certain provisions of this Section apply, on a case-by-case basis, for purposes of information collection in accordance with LAC 33:V.303.Q-R and 311.E-F.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:737 (September 1989), amended LR 18:1375 (December 1992), LR 21:266 (March 1995), LR 22:817 (September 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 27:292 (March 2001), LR 29:319 (March 2003), amended by the Office of the Secretary, Legal Affairs Division, LR 34:621 (April 2008), LR 34:1011 (June 2008).

§536. Specific Part II Information Requirements for Equipment

Except as otherwise provided in LAC 33:V.1501, owners and operators of facilities that have equipment to which LAC 33:V.Chapter 17.Subchapter B applies must provide the following additional information.

A. For each piece of equipment to which LAC 33:V.Chapter 17.Subchapter B, applies, the following information must be provided:

1. equipment identification number and hazardous waste management unit identification;
2. approximate locations within the facility (e.g., identify the hazardous waste management unit on a facility plot plan);
3. type of equipment (e.g., a pump or pipeline valve);
4. percent by weight total organics in the hazardous waste stream at the equipment;
5. hazardous waste state at the equipment (e.g., gas/vapor or liquid); and
6. method of compliance with the standard (e.g., “monthly leak detection and repair” or “equipped with dual mechanical seals”).

B. Facilities that cannot install a closed-vent system and control device to comply with the provisions of LAC 33:V.Chapter 17.Subchapter B, on the effective date that the facility becomes subject to the provisions of LAC 33:V.Chapter 17.Subchapter B, or Chapter 43.Subchapter R, must provide an implementation schedule as specified in LAC 33:V.1709.A.2.

C. Owners or operators who apply for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system and choose to use test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device must provide a performance test plan as specified in LAC 33:V.1713.B.3.

D. Documentation that demonstrates compliance with the equipment standards in LAC 33:V.1719-1733 must be provided. This documentation shall contain the records required under LAC 33:V.1743. The administrative authority may request further documentation before deciding if compliance has been demonstrated.

E. Documentation to demonstrate compliance with LAC 33:V.1735 shall be provided and include the following information:

1. a list of all information references and sources used in preparing the documentation;
2. records, including the dates, of each compliance test required by LAC 33:V.1709.J;
3. a design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of “APTI Course 415: Control of Gaseous Emissions,” as incorporated by reference at LAC 33:V.110, or other engineering texts acceptable to the administrative authority that present basic control device information. The design analysis shall address the vent stream characteristics and control device operation parameters as specified in LAC 33:V.1713.B.4.c;
4. a statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist

when the hazardous waste management unit is operating at the highest load or capacity level reasonably expected to occur;

5. a statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of 95 weight percent or greater.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 18:1256 (November 1992), LR 22:817 (September 1996), amended by the Office of the Secretary, Legal Affairs Division, LR 34:621 (April 2008).

Subchapter F. Special Forms of Permits

§537. Permits for Boiler and Industrial Furnaces Burning Hazardous Waste for Recycling Purposes Only (Boilers and industrial furnaces burning hazardous waste for destruction are subject to permit requirements for incinerators.)

A. General. New boilers and industrial furnaces (those not operating under interim status) that will be permitted based on a trial burn under LAC 33:V.3005.D.3 are subject to Subsection B of this Section. Boilers and industrial furnaces operating under the interim status standards of LAC 33:V.3007 are subject to Subsection C of this Section.

B. New Boilers and Industrial Furnaces Permitted with a Trial Burn. A permit for a new boiler or industrial furnace shall specify appropriate conditions for the following operating periods.

1. Pre-Trial Burn Period. For the period beginning with initial introduction of hazardous waste and ending with initiation of the trial burn, and only for the minimum time required to bring the boiler or industrial furnace to a point of operational readiness to conduct a trial burn, not to exceed 720 hours operating time when burning hazardous waste, the administrative authority shall establish pre-trial burn permit conditions, including but not limited to allowable hazardous waste feed rates and operating conditions. The administrative authority may extend this operational period once for up to 720 additional hours at the applicant’s request when good cause is shown. The permit may be modified to reflect the extension according to LAC 33:V.323 (minor modifications of permits).

- a. Applicants must submit a statement with Part II of the permit application that suggests the conditions necessary to operate in compliance with the standards of LAC 33:V.3009-3015 during this period. This statement should include, at a minimum, restrictions on the applicable operating parameters identified in LAC 33:V.3005.E.

- b. The administrative authority will review this statement and any other relevant information submitted with Part II of the permit application and specify requirements for

ENVIRONMENTAL QUALITY

this period sufficient to meet the performance standards of LAC 33:V.3009-3015 based on engineering judgment.

2. Trial Burn Period. For the duration of the trial burn, the administrative authority must establish conditions in the trial burn permit for the purposes of determining feasibility of compliance with the performance standards of LAC 33:V.3009-3015 and of determining adequate operating conditions under LAC 33:V.3005.E.

a. Applicants must propose a trial burn plan, prepared under Subparagraph B.2.b of this Section, to be submitted with Part II of the permit application.

b. The trial burn plan must include the following information.

i. An analysis of each feedstream, including hazardous waste, other fuels, and industrial furnace feedstocks as fired, containing the following information is required:

(a). heating value, levels of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, thallium, total chlorine/chloride, and ash; and composition of the hazardous waste must be specified;

(b). viscosity or a description of the physical form of the feedstream.

ii. An analysis of each hazardous waste stream as fired is required, including:

(a). an identification of any hazardous organic constituents listed in LAC 33:V.3105, Table 1, that are present in the feed stream, except that the applicant need not analyze for constituents listed in LAC 33:V.3105, Table 1, that would reasonably not be expected to be found in the hazardous waste. The constituents excluded from analysis must be identified and the basis for this exclusion explained. The waste analysis must be conducted in accordance with appropriate analytical techniques;

(b). an approximate quantification of the hazardous constituents identified in the hazardous waste, within the precision produced by appropriate analytical methods;

(c). if applicable, the blending procedures used before firing the hazardous waste must be described, and a detailed analysis of the hazardous waste before blending provided, along with an analysis of the material with which the hazardous waste is blended and the blending ratios.

iii. A detailed engineering description of the boiler or industrial furnace is required, including:

(a). manufacturer's name and model number of the boiler or industrial furnace;

(b). type of boiler or industrial furnace;

(c). maximum design capacity in appropriate units;

(d). description of the feed system for the hazardous waste, and, as appropriate, other fuels and industrial furnace feedstocks;

(e). capacity of the hazardous waste feed system;

(f). description of automatic hazardous waste feed cutoff system(s);

(g). description of any emission control system(s); and

(h). description of stack gas monitoring and any pollution-control monitoring systems.

iv. A detailed description of sampling and monitoring procedures including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis must be provided.

v. A detailed test schedule for each hazardous waste for which the trial burn is planned, including date(s), duration, quantity of hazardous waste to be burned, and other factors relevant to the administrative authority's decision under LAC 33:V.537.B.2.e must be included.

vi. A detailed test protocol, including, for each hazardous waste identified, the ranges of hazardous waste feed rate and, as appropriate, the feed rates of other fuels and industrial furnace feedstocks, and any other relevant parameters that will vary and that may affect the ability of the boiler or industrial furnace to meet the performance standards in LAC 33:V.3009-3015 must be provided.

vii. Any emission control equipment that will be used must be described along with the planned operating conditions.

viii. Procedures for rapidly stopping the hazardous waste feed and controlling emissions in the event of an equipment malfunction must be described.

ix. The administrative authority may request additional information that he reasonably finds necessary to determine whether to approve the trial burn plan in light of the purposes of this Paragraph and the criteria in LAC 33:V.537.B.2.e.

c. The administrative authority, in reviewing the trial burn plan, shall evaluate the sufficiency of the information provided and may require the applicant to supplement this information to achieve the purposes of this Paragraph.

d. The administrative authority will use the hazardous waste analysis data in the trial burn plan to specify as trial Principal Organic Hazardous Constituents (POHCs) those constituents for which destruction and removal efficiencies must be calculated during the trial burn. The administrative authority will specify these trial POHCs on the basis of his estimate of the difficulty of destroying:

i. the constituents identified in the hazardous waste feed;

ii. their concentrations or mass in the hazardous waste feed; and

iii. for hazardous wastes listed in LAC 33:V.4901, the hazardous waste organic constituent(s) identified in LAC 33:V.4901.G, Table 6.

e. The administrative authority shall approve a trial burn plan if he finds that:

i. the trial burn is likely to determine whether the boiler or industrial furnace can meet the performance standards in LAC 33:V.3009-3015;

ii. the trial burn itself will not present an imminent hazard to human health and the environment;

iii. the trial burn will help him determine operating requirements to be specified under LAC 33:V.3005.E; and

iv. the information sought in LAC 33:V.537.B.2.e.i-iii cannot reasonably be obtained through other means.

f. Reserved.

g. The administrative authority must send a notice to all persons on the facility mailing list, as set forth in LAC 33:V.717.A.1.e, and to the appropriate units of state and local government, as set forth in LAC 33:V.717.A.1.b, announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the administrative authority has issued such notice.

i. This notice must be mailed within a reasonable time period before the trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the permitting agency.

ii. This notice must contain:

(a). the name and telephone number of the applicant's contact person;

(b). the name and telephone number of the permitting agency's contact office;

(c). the location where the approved trial burn plan and any supporting documents can be reviewed and copied; and

(d). an expected time period for commencement and completion of the trial burn.

h. During each approved trial burn (or as soon after the burn as is practicable), the applicant must make the following determinations and analyses:

i. a quantitative analysis of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, thallium, silver, and chlorine/chloride in the feedstreams (hazardous waste, other fuels, and industrial furnace feedstocks) to the boiler or industrial furnace is required;

ii. a quantitative analysis of the stack gas for the concentration and mass emissions of the trial POHCs is required;

iii. if dioxin and furan testing is required under LAC 33:V.3009.E, a quantitative analysis of the stack gas for the concentration and mass emission rate of the 2,3,7,8-chlorinated tetra-octa congeners of chlorinated dibenzo-p-dioxins and furans, and a computation showing conformance with the emission standard are required;

iv. a quantitative analysis of the stack gas for the concentration and mass emission of particulate matter, metal(s) or hydrogen chloride (HCl) and chlorine gas (Cl₂) and a computation showing conformance with the metals or HCl emission performance standard in LAC 33:V.3011 and 3015 are required;

v. a quantitative analysis of the scrubber water (if any), ash residues, and other residues is required for the purpose of estimating the fate of the trial POHCs, the fate of any metal, and the fate of chlorine/chloride subject to emissions testing under LAC 33:V.537.B.2.g.iii.(b);

vi. destruction and removal efficiency (DRE) must be computed in accordance with the DRE formula specified in LAC 33:V.3009.A;

vii. sources of fugitive emissions and their means of control must be identified;

viii. carbon monoxide, total hydrocarbons, and oxygen in the stack gas must be continuously measured. The administrative authority may approve an alternative scheme for monitoring total hydrocarbons;

ix. a quantitative analysis of the exhaust gas for the concentration and mass emission of particulate matter, and a computation showing conformance with the particulate matter standard in LAC 33:V.3011 is required; and

x. any other information will be required that the administrative authority specifies as necessary to ensure that the trial burn will reveal whether the facility complies with the performance standards required by LAC 33:V.3009-3015.

i. The applicant must submit to the Office of Environmental Services a certification that the trial burn has been conducted in accordance with the approved trial burn plan and must submit the results of all the analyses and determinations required in Subparagraph B.2.h of this Section. This submission shall be made within 90 days of completion of the trial burn, or later if approved by the administrative authority.

j. All data collected during any trial burn must be submitted to the administrative authority after completion of the trial burn.

k. All submissions required by this Paragraph must be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report under LAC 33:V.507 and 509.

3. Post-Trial Burn Period. For a minimum period immediately after the trial burn sufficient for the applicant to analyze samples, compute data, and submit the trial burn results, and for the administrative authority to review the

trial burn results and modify the facility permit to reflect those results, the administrative authority will specify the operating requirements most likely to ensure compliance with the performance standards of LAC 33:V.3009-3015 based on engineering judgment. The administrative authority shall extend and modify the trial burn permit to develop the post-trial burn permit. The permit modification shall proceed as a minor modification according to LAC 33:V.323.

a. Applicants must submit a statement with Part II of this permit application that identifies the conditions necessary for operation in compliance with the performance standards of LAC 33:V.3009-3015 during this period. This statement should include, at a minimum, restrictions on the operating parameters identified in LAC 33:V.3005.E.

b. The administrative authority will review this statement and any other relevant information submitted with Part I of the permit application and specify requirements for this period sufficient to meet the performance standards of LAC 33:V.3009-3015 based on engineering judgment.

4. Final Permit. For the final period of operation, the administrative authority will develop operating requirements in conformance with LAC 33:V.3005.E that reflect conditions in the trial burn plan and are likely to ensure compliance with the performance standards of LAC 33:V.3009-3015. Based on the trial burn results, the administrative authority will modify the permit as necessary to ensure compliance with the performance standards of LAC 33:V.3009-3015. The permit modification shall proceed according to LAC 33:V.321.

C. Interim Status Boilers and Industrial Furnaces

1. For the purpose of determining feasibility of compliance with the performance standards of LAC 33:V.3009-3015 of this Chapter and of determining adequate operating conditions under LAC 33:V.3007, applicants owning or operating existing boilers or industrial furnaces operated under the interim status standards of LAC 33:V.3007 must either prepare and submit a trial burn plan and perform a trial burn in accordance with the requirements of this Section or submit other information as specified in LAC 33:V.535.A.6. The administrative authority must announce his or her intention to approve of the trial burn plan in accordance with the timing and distribution requirements of Subparagraph B.2.g of this Section. The contents of the notice must include:

- a. the name and telephone number of a contact person at the facility;
- b. the name and telephone number of a contact office at the permitting agency;
- c. the location where the trial burn plan and any supporting documents can be reviewed and copied; and
- d. a schedule of the activities that are required prior to permit issuance, including the anticipated time schedule for agency approval of the plan and the time periods during which the trial burn would be conducted.

2. Applicants who submit a trial burn plan and receive approval before submission of Part II of the permit application must complete the trial burn and submit the results specified in LAC 33:V.537.B.2.h with Part II of the permit application. If completion of this process conflicts with the date set for submission of Part II, the applicant must contact the administrative authority to establish a later date for submission of Part II or the trial burn results. If the applicant submits a trial burn plan with Part II of the permit application, the trial burn must be conducted and the results submitted within a time period prior to permit issuance to be specified by the administrative authority.

D. When an owner or operator of a cement or lightweight aggregate kiln, solid fuel or liquid fuel boiler, or hydrochloric acid production furnace becomes subject to RCRA permit requirements after October 12, 2005, or when an owner or operator of an existing cement or lightweight aggregate kiln, solid fuel or liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations in 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122 (i.e., by conducting a comprehensive performance test and submitting a notification of compliance in accordance with 40 CFR 63.1207(j) and 63.1210(d), documenting compliance with all applicable requirements of 40 CFR Part 63, Subpart EEE), the requirements of this Section do not apply. However, the requirements of this Section do apply if:

1. the administrative authority determines that certain provisions of this Section are necessary to ensure compliance with LAC 33:V.3005.E.1 and 2.c if the owner or operator elects to comply with LAC 33:V.2001.A.1.a to minimize emissions of toxic compounds from startup, shutdown, and malfunction events;

2. the facility is an area source as defined in LAC 33:III.5103 and the owner or operator elects to comply with the standards and associated requirements in LAC 33:V.3011, 3013, and 3015 for particulate matter, non-mercury metals, and hydrogen chloride and chlorine gas; or

3. the administrative authority determines that certain provisions of this Section apply, on a case-by-case basis, for purposes of information collection in accordance with LAC 33:V.303.Q-R and 311.E-F.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:737 (September 1989), amended LR 18:1375 (December 1992), LR 21:266 (March 1995), LR 22:818, 832 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:657 (April 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2468 (November 2000), LR 27:292 (March 2001), LR 29:320 (March 2003), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2455 (October 2005), LR 33:2101 (October 2007), LR 34:622 (April 2008), LR 34:1012 (June 2008), amended by the Office of the Secretary, Legal Division, LR 43:1139 (June 2017).

§540. Remedial Action Plans (RAPs)

A. Remedial action plans (RAPs) are special forms of permits that are regulated under LAC 33:V.Chapter 5.Subchapter G.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:271 (February 2000).

Subchapter G. Remedial Action Plans (RAPs)—General Information**§545. Why is this Subchapter written in a special format?**

A. This Subchapter is written in a special format to make it easier to understand the regulatory requirements. Like other department regulations, this establishes enforceable legal requirements. For this Subchapter, *I* and *you* refer to the owner/operator.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:271 (February 2000).

§550. What is a RAP?

A. A RAP is a special form of a RCRA permit that you, as an owner or operator, may obtain, instead of a permit issued under LAC 33:V.303-329 and 501-537, to authorize you to treat, store, or dispose of hazardous remediation waste (as defined in LAC 33:V.109) at a remediation waste management site. A RAP may only be issued for the area of contamination where the remediation wastes to be managed under the RAP originated, or areas in close proximity to the contaminated area, except as allowed in limited circumstances under LAC 33:V.699.

B. The requirements in LAC 33:V.303-329 and 501-537 do not apply to RAPs unless those requirements for traditional RCRA permits are specifically required under this Subchapter. The definitions in LAC 33:V.109 apply to RAPs.

C. Notwithstanding any other provision of LAC 33:V.Subpart 1, any document that meets the requirements in this Section constitutes a RCRA permit under RCRA Section 3005(c).

D. A RAP may be:

1. a stand-alone document that includes only the information and conditions required by this Subchapter; or

2. part (or parts) of another document that includes information and/or conditions for other activities at the remediation waste management site, in addition to the information and conditions required by this Subchapter.

E. If you are treating, storing, or disposing of hazardous remediation wastes as part of a cleanup compelled by federal

or state cleanup authorities, your RAP does not affect your obligations under those authorities in any way.

F. If you receive a RAP at a facility operating under interim status, the RAP does not terminate your interim status.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:271 (February 2000).

§555. When do I need a RAP?

A. Whenever you treat, store, or dispose of hazardous remediation wastes in a manner that requires a RCRA permit under LAC 33:V.Chapter 3, you must either obtain:

1. a RCRA permit according to LAC 33:V.303-329 and 501-537; or

2. a RAP according to this Subchapter.

B. Treatment units that use combustion of hazardous remediation wastes at a remediation waste management site are not eligible for RAPs under this Subchapter.

C. You may obtain a RAP for managing hazardous remediation waste at an already permitted RCRA facility. You must have these RAPs approved as a modification to your existing permit according to the requirements of LAC 33:V.321-323 instead of the requirements in this Subchapter. When you submit an application for such a modification, however, the information requirements in LAC 33:V.321.C.1.a.i, 2.a.iv, and 3.a.iv do not apply; instead, you must submit the information required under LAC 33:V.580. When your permit is modified the RAP becomes part of the RCRA permit. Therefore, when your permit (including the RAP portion) is modified, revoked and reissued, terminated, or when it expires, it will be modified according to the applicable requirements in LAC 33:V.321-323, revoked and reissued according to the applicable requirements in LAC 33:V.323, terminated according to the applicable requirements in LAC 33:V.323, and expire according to the applicable requirements in LAC 33:V.315.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:271 (February 2000).

§560. Does my RAP grant me any rights or relieve me of any obligations?

A. The provisions of LAC 33:V.307 apply to RAPs.

(NOTE: The provisions of LAC 33:V.307.A provide you assurance that, as long as you comply with your RAP, the department will consider you in compliance with Subtitle C of RCRA and will not take enforcement actions against you. However, you should be aware of four exceptions to this provision that are listed in LAC 33:V.307.)

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

ENVIRONMENTAL QUALITY

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:272 (February 2000).

§565. How do I apply for a RAP?

A. To apply for a RAP, you must complete an application, sign it, and submit it to the Office of Environmental Services according to the requirements in this Subchapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:272 (February 2000), amended LR 26:2468 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2455 (October 2005), LR 33:2101 (October 2007).

§570. Who must obtain a RAP?

A. When a facility or remediation waste management site is owned by one person, but the treatment, storage, or disposal activities are operated by another person, it is the operator's duty to obtain a RAP, except that the owner must also sign the RAP application.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:272 (February 2000).

§575. Who must sign the application and any required reports for a RAP?

A. Both the owner and the operator must sign the RAP application and any required reports according to LAC 33:V.507, 509, and 511. In the application, both the owner and the operator must also make the certification required in LAC 33:V.513.A. However, the owner may choose the alternative certification under LAC 33:V.513.B if the operator certifies under LAC 33:V.513.A.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:272 (February 2000).

§580. What must I include in my application for a RAP?

A. You must include the following information in your application for a RAP:

1. the name, address, and EPA identification number of the remediation waste management site;
2. the name, address, and telephone number of the owner and operator;
3. the latitude and longitude of the site;
4. the United States Geological Survey (USGS) or county map showing the location of the remediation waste management site;

5. a scaled drawing of the remediation waste management site showing:

- a. the remediation waste management site boundaries;
- b. any significant physical structures; and
- c. the boundary of all areas on-site where remediation waste is to be treated, stored, or disposed;

6. a specification of the hazardous remediation waste to be treated, stored, or disposed of at the facility or remediation waste management site. This must include information on:

- a. constituent concentrations and other properties of the hazardous remediation wastes that may affect how such materials should be treated and/or otherwise managed;
- b. an estimate of the quantity of these wastes; and
- c. a description of the processes you will use to treat, store, or dispose of this waste including technologies, handling systems, design, and operating parameters you will use to treat hazardous remediation wastes before disposing of them according to the LDR standards of LAC 33:V.Chapter 22, as applicable;

7. enough information to demonstrate that operations that follow the provisions in your RAP application will ensure compliance with applicable requirements of LAC 33:V.Chapters 15-37, 41, and 43;

8. such information as may be necessary to enable the administrative authority to carry out his duties under other state laws as is required for traditional RCRA permits under LAC 33:V.517.U; and

9. any other information the administrative authority decides is necessary for demonstrating compliance with this Subsection or for determining any additional RAP conditions that are necessary to protect human health and the environment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:272 (February 2000).

§585. What if I want to keep this information confidential?

A. Provisions for confidential information may be found in LAC 33:I.Chapter 5.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:272 (February 2000).

§590. To whom must I submit my RAP application?

A. You must submit your application for a RAP to the Office of Environmental Services for approval.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:273 (February 2000), amended LR 26:2468 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2455 (October 2005), LR 33:2101 (October 2007).

§595. If I submit my RAP application as part of another document, what must I do?

A. If you submit your application for a RAP as a part of another document, you must clearly identify the components of that document that constitute your RAP application.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:273 (February 2000).

§600. What is the process for approving or denying my application for a RAP?

A. If the administrative authority tentatively finds that your RAP application includes all of the information required by LAC 33:V.580 and that your proposed remediation waste management activities meet the regulatory standards, the administrative authority may make a tentative decision to approve your RAP application. The administrative authority will then prepare a draft RAP and provide an opportunity for public comment before making a final decision on your RAP application, according to this Subchapter.

B. If the administrative authority tentatively finds that your RAP application does not include all of the information required by LAC 33:V.580 or that your proposed remediation waste management activities do not meet the regulatory standards, the administrative authority may request additional information from you or ask you to correct deficiencies in your application. If you fail or refuse to provide any additional information the administrative authority requests, or to correct any deficiencies in your RAP application, the administrative authority may make a tentative decision to deny your RAP application. After making this tentative decision, the administrative authority will prepare a notice of intent to deny your RAP application (*notice of intent to deny*) and provide an opportunity for public comment before making a final decision on your RAP application, according to the requirements in this Subchapter. The administrative authority may deny the RAP application either in its entirety or in part.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:273 (February 2000).

§605. What must the administrative authority include in a draft RAP?

A. If the administrative authority prepares a draft RAP, it must include:

1. the information required under LAC 33:V.580.A. 1-9;

2. the following terms and conditions:

a. terms and conditions necessary to ensure that the operating requirements specified in your RAP comply with applicable requirements of LAC 33:V.Chapters 15-37, 41, and 43 (including any recordkeeping and reporting requirements). In satisfying this provision, the administrative authority may incorporate, expressly or by reference, applicable requirements of LAC 33:V.Chapters 15-37, 41, and 43 into the RAP or establish site-specific conditions as required or allowed by LAC 33:V.Chapters 15-37, 41, and 43;

b. terms and conditions in LAC 33:V.309;

c. terms and conditions for modifying, revoking and reissuing, and terminating your RAP, as provided in LAC 33:V.640; and

d. any additional terms or conditions that the administrative authority determines are necessary to protect human health and the environment, including any terms and conditions necessary to respond to spills and leaks during use of any units permitted under the RAP; and

3. if the draft RAP is part of another document, as described in LAC 33:V.550, the administrative authority must clearly identify the components of that document that constitute the draft RAP.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:273 (February 2000).

§610. What else must the administrative authority prepare in addition to the draft RAP or Notice of Intent to Deny?

A. Once the administrative authority has prepared the draft RAP or notice of intent to deny, he must then:

1. prepare a statement of basis that briefly describes the derivation of the conditions of the draft RAP and the reasons for them, or the rationale for the notice of intent to deny;

2. compile an administrative record, including:

a. the RAP application and any supporting data furnished by the applicant;

b. the draft RAP or notice of intent to deny;

c. the statement of basis and all documents cited therein (material readily available at the department or published material that is generally available need not be physically included with the rest of the record, as long as it is specifically referred to in the statement of basis); and

d. any other documents that support the decision to approve or deny the RAP; and

3. make information contained in the administrative record available for review by the public upon request.

ENVIRONMENTAL QUALITY

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:273 (February 2000).

§615. What are the procedures for public comment on the draft RAP or Notice of Intent to Deny?

A. The administrative authority must:

1. send notice to you of his intention to approve or deny your RAP application, and send you a copy of the statement of basis;

2. publish a notice of his intention to approve or deny your RAP application in a major local newspaper of general circulation;

3. broadcast his intention to approve or deny your RAP application over a local radio station; and

4. send a notice of his intention to approve or deny your RAP application to each unit of local government having jurisdiction over the area in which your site is located and to each state agency having any authority under state law with respect to any construction or operations at the site.

B. The notice required by Subsection A of this Section must provide an opportunity for the public to submit written comments on the draft RAP or notice of intent to deny within at least 45 days.

C. The notice required by Subsection A of this Section must include:

1. the name and address of the office processing the RAP application;

2. the name and address of the RAP applicant, and if different, the remediation waste management site or activity the RAP will regulate;

3. a brief description of the activity the RAP will regulate;

4. the name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft RAP or notice of intent to deny, statement of basis, and the RAP application;

5. a brief description of the comment procedures in this Section, and any other procedures by which the public may participate in the RAP decision;

6. if a hearing is scheduled, the date, time, location, and purpose of the hearing;

7. if a hearing is not scheduled, a statement of procedures to request a hearing;

8. the location of the administrative record, and times when it will be open for public inspection; and

9. any additional information the administrative authority considers necessary or proper.

D. If, within the comment period, the administrative authority receives written notice of opposition to his

intention to approve or deny your RAP application and a request for a hearing, the administrative authority must hold an informal public hearing to discuss issues relating to the approval or denial of your RAP application. The administrative authority may also determine on his own initiative that an informal hearing is appropriate. The hearing must include an opportunity for any person to present written or oral comments. Whenever possible, the administrative authority must schedule this hearing at a location convenient to the nearest population center to the remediation waste management site and give notice according to the requirements in Subsection A of this Section. This notice must, at a minimum, include the information required by Subsection C of this Section and:

1. reference to the date of any previous public notices relating to the RAP application;

2. the date, time, and location of the hearing; and

3. a brief description of the nature and purpose of the hearing, including the applicable rules and procedures.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:273 (February 2000).

§620. How will the administrative authority make a final decision on my RAP application?

A. The administrative authority must consider and respond to any significant comments raised during the public comment period, or during any hearing on the draft RAP or notice of intent to deny, and revise your draft RAP based on those comments, as appropriate.

B. If the administrative authority determines that your RAP includes the information and terms and conditions required in LAC 33:V.605, then he may issue a final decision approving your RAP and, in writing, notify you and all commenters on your draft RAP that your RAP application has been approved.

C. If the administrative authority determines that your RAP does not include the information required in LAC 33:V.605, then he will issue a final decision denying your RAP and, in writing, notify you and all commenters on your draft RAP that your RAP application has been denied.

D. If the administrative authority's final decision is that the tentative decision to deny the RAP application was incorrect, he will withdraw the notice of intent to deny and proceed to prepare a draft RAP, according to the requirements in this Subchapter.

E. When the administrative authority issues his final RAP decision, he must refer to the procedures for appealing the decision under R.S. 30:2024.

F. Before issuing the final RAP decision, the administrative authority must compile an administrative record. Material readily available at the department or published materials which are generally available and which are included in the administrative record need not be

physically included with the rest of the record as long as it is specifically referred to in the statement of basis or the response to comments. The administrative record for the final RAP must include information in the administrative record for the draft RAP (see LAC 33:V.610.B) and:

1. all comments received during the public comment period;
2. tapes or transcripts of any hearings;
3. any written materials submitted at these hearings;
4. the responses to comments;
5. any new material placed in the record since the draft RAP was issued;
6. any other documents supporting the RAP; and
7. a copy of the final RAP.

G. The administrative authority must make information contained in the administrative record available for review by the public upon request.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:274 (February 2000).

§625. May the decision to approve or deny my RAP application be administratively appealed?

A. You may request an administrative hearing on a decision by the administrative authority to grant or deny your RAP application, under R.S. 30:2024. If the secretary does not grant your hearing request within 30 days of filing, you are entitled to file an application for de novo review of the secretary's action in the Nineteenth Judicial District Court.

B. An aggrieved person [as defined in R.S. 30:2004 (17)] may appeal a final decision on your RAP to the Nineteenth Judicial District Court, under R.S. 30:2050.21. Such an appeal would not suspend the effectiveness of the RAP, if one is issued. However, the secretary may grant, or the court may order, a stay of the RAP decision.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:1441 (July 2000).

§630. When does my RAP become effective?

A. Your RAP becomes effective 30 days after the administrative authority notifies you and all commenters that your RAP is approved unless:

1. the administrative authority specifies a later effective date in the decision;
2. review is requested under R.S. 30:2024; or
3. no commenters requested a change in the draft RAP, in which case the RAP becomes effective immediately when it is issued.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:1441 (July 2000).

§635. When may I begin physical construction of new units permitted under the RAP?

A. You must not begin physical construction of new units permitted under the RAP for treating, storing, or disposing of hazardous remediation waste before receiving a RAP which is effective under the terms of LAC 33:V.630.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:1441 (July 2000).

§640. After my RAP is issued, how may it be modified, revoked and reissued, or terminated?

A. In your RAP, the administrative authority must specify, either directly or by reference, procedures for future modifications, revocations and reissuance, or terminations of your RAP. These procedures must provide adequate opportunities for public review and comment on any modification, revocation and reissuance, or termination that would significantly change your management of your remediation waste, or that otherwise merits public review and comment. If your RAP has been incorporated into a traditional RCRA permit, as allowed under LAC 33:V.555.C, then the RAP will be modified according to the applicable requirements in LAC 33:V.321-323.B.2, revoked and reissued according to the applicable requirements in LAC 33:V.321 and 323.B.3, or terminated according to the applicable requirements of LAC 33:V.323.B.3.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:274 (February 2000).

§645. For what reasons may the administrative authority choose to modify my final RAP?

A. The administrative authority may modify your final RAP on his own initiative only if one or more of the following reasons listed in this Section exist(s). If one or more of these reasons do not exist, then the administrative authority will not modify your final RAP, except at your request. Reasons for modification are:

1. you made material and substantial alterations or additions to the activity that justify applying different conditions;
2. the administrative authority finds new information that was not available at the time of RAP issuance and would have justified applying different RAP conditions at the time of issuance;
3. the standards or regulations on which the RAP was based have changed because of new or amended statutes,

ENVIRONMENTAL QUALITY

standards, or regulations, or by judicial decision after the RAP was issued;

4. if your RAP includes any schedules of compliance, the administrative authority may find reasons to modify your compliance schedule, such as an act of God, strike, flood, or materials shortage or other events over which you as the owner/operator have little or no control and for which there is no reasonably available remedy;

5. you are not in compliance with conditions of your RAP;

6. you failed in the application or during the RAP issuance process to disclose fully all relevant facts, or you misrepresented any relevant facts at the time;

7. the administrative authority has determined that the activity authorized by your RAP endangers human health or the environment and can only be remedied by modifying; or

8. you have notified the administrative authority (as required in the RAP under LAC 33:V.321.B) of a proposed transfer of a RAP.

B. Notwithstanding any other provision in this Section, when the administrative authority reviews a RAP for a land disposal facility under LAC 33:V.665, he may modify the permit as necessary to assure that the facility continues to comply with the currently applicable requirements in LAC 33:V.Subpart 1.

C. The administrative authority will not reevaluate the suitability of the facility location at the time of RAP modification unless new information or standards indicate that a threat to human health or the environment exists that was unknown when the RAP was issued.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:275 (February 2000).

§650. For what reasons may the administrative authority choose to revoke and reissue my final RAP?

A. The administrative authority may revoke and reissue your final RAP on his own initiative only if one or more reasons for revocation and reissuance exist(s). If one or more reasons do not exist, then the administrative authority will not modify or revoke and reissue your final RAP, except at your request. Reasons for modification or revocation and reissuance are the same as the reasons listed for RAP modifications in LAC 33:V.645.A.5-8 if the administrative authority determines that revocation and reissuance of your RAP is appropriate.

B. The administrative authority will not reevaluate the suitability of the facility location at the time of RAP revocation and reissuance unless new information or standards indicate that a threat to human health or the environment exists that was unknown when the RAP was issued.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:275 (February 2000).

§655. For what reasons may the administrative authority choose to terminate my final RAP, or deny my renewal application?

A. The administrative authority may terminate your final RAP on his own initiative, or deny your renewal application, for the same reasons as those listed for RAP modifications in LAC 33:V.645.A.5-7 if the administrative authority determines that termination of your RAP or denial of your RAP renewal application is appropriate.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:275 (February 2000).

§660. May the decision to approve or deny a modification, revocation and reissuance, or termination of my RAP be administratively appealed?

A. You may request an administrative hearing on a decision by the administrative authority to grant or deny a modification, revocation and reissuance, or termination of your RAP under R.S. 30:2024. If the secretary does not grant your hearing request within 30 days of filing, you are entitled to file an application for de novo review of the secretary's action in the Nineteenth Judicial District Court.

B. An aggrieved person [as defined in R.S. 30:2004 (17)] may appeal a final decision on your RAP to the Nineteenth Judicial District Court, under R.S. 30:2050.21. Such an appeal would not suspend the effectiveness of the RAP, if one is issued. However, the secretary may grant, or the court may order, a stay of the RAP decision.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:1441 (July 2000).

§665. When will my RAP expire?

A. RAPs must be issued for a fixed term, not to exceed 10 years, although they may be renewed upon approval by the administrative authority in fixed increments of no more than 10 years. In addition, the administrative authority must review any RAP for hazardous waste land disposal five years after the date of issuance or reissuance, and you or the administrative authority must follow the requirements for modifying your RAP as necessary to assure that you continue to comply with currently applicable requirements in RCRA Sections 3004 and 3005.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:275 (February 2000).

§670. How may I renew my RAP if it is expiring?

A. If you wish to renew your expiring RAP, you must follow the process for application for and issuance of RAPs in this Subchapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:276 (February 2000).

§675. What happens if I have applied correctly for a RAP renewal but have not received approval by the time my old RAP expires?

A. If you have submitted a timely and complete application for a RAP renewal, but the administrative authority, through no fault of yours, has not issued a new RAP with an effective date on or before the expiration date of your previous RAP, your previous RAP conditions continue in force until the effective date of your new RAP or RAP denial.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:276 (February 2000).

§680. What records must I maintain concerning my RAP?

A. You are required to keep records of:

1. all data used to complete RAP applications and any supplemental information that you submit for a period of at least three years from the date the application is signed; and

2. any operating and/or other records the administrative authority requires you to maintain as a condition of your RAP.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:276 (February 2000).

§685. How are time periods in the requirements in this Subchapter and my RAP computed?

A. Any time period scheduled to begin on the occurrence of an act or event must begin on the day after the act or event. (For example, if your RAP specifies that you must close a staging pile within 180 days after the operating term for that staging pile expires, and the operating term expires on June 1, then June 2 counts as day one of your 180 days, and you would have to complete closure by November 28.)

B. Any time period scheduled to begin before the occurrence of an act or event must be computed so that the period ends on the day before the act or event. (For example, if you are transferring ownership or operational control of your site, and wish to transfer your RAP, the new owner or operator must submit a revised RAP application no later than 90 days before the scheduled change. Therefore, if you plan to change ownership on January 1, the new owner/operator

must submit the revised RAP application no later than October 3, so that the 90th day would be December 31.)

C. If the final day of any time period falls on a weekend or legal holiday, the time period must be extended to the next working day. (For example, if you wish to request an administrative hearing on the administrative authority's decision to modify your RAP, then you must file your request with the secretary within 30 days after notice of the decision is served upon you. If the thirtieth day falls on Sunday, then you may submit your appeal by the Monday after. If the thirtieth day falls on July 4, then you may submit your appeal by July 5.)

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:276 (February 2000).

§690. How may I transfer my RAP to a new owner or operator?

A. If you wish to transfer your RAP to a new owner or operator, you must follow the requirements specified in your RAP for RAP modification to identify the new owner or operator, and incorporate any other necessary requirements. These modifications do not constitute significant modifications for purposes of LAC 33:V.640. The new owner/operator must submit a revised RAP application no later than 90 days before the scheduled change along with a written agreement containing a specific date for transfer of RAP responsibility between you and the new permittees.

B. When a transfer of ownership or operational control occurs, you as the old owner or operator must comply with the applicable requirements in LAC 33:V.Chapter 37 (financial requirements), until the new owner or operator has demonstrated that he is complying with the requirements in that chapter. The new owner or operator must demonstrate compliance with LAC 33:V.Chapter 37 within six months of the date of the change in ownership or operational control of the facility or remediation waste management site. When the new owner/operator demonstrates compliance with LAC 33:V.Chapter 37 to the administrative authority, the administrative authority will notify you that you no longer need to comply with LAC 33:V.Chapter 37, as of the date of demonstration.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:276 (February 2000).

§695. What must the state or EPA region report about noncompliance with RAPs?

A. The department or EPA region must report noncompliance with RAPs according to the provisions of 40 CFR 270.5.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:276 (February 2000).

§699. May I perform remediation waste management activities under a RAP at a location removed from the area where the remediation wastes originated?

A. You may request a RAP for remediation waste management activities at a location removed from the area where the remediation wastes originated if you believe such a location would be more protective than the contaminated area or areas in close proximity.

B. If the administrative authority determines that an alternative location, removed from the area where the remediation waste originated, is more protective than managing remediation waste at the area of contamination or areas in close proximity, then the administrative authority may approve a RAP for this alternative location.

C. You must request the RAP, and the administrative authority will approve or deny the RAP, according to the procedures and requirements in this Subchapter.

D. A RAP for an alternative location must also meet the following requirements, which the administrative authority must include in the RAP for such locations:

1. the RAP for the alternative location must be issued to the person responsible for the cleanup from which the remediation wastes originated;
2. the RAP is subject to the expanded public participation requirements in LAC 33:V.708;
3. the RAP is subject to the public notice requirements in LAC 33:V.717; and
4. the site permitted in the RAP may not be located within 61 meters or 200 feet of a fault which has had displacement in the Holocene time (you must demonstrate compliance with this standard through the requirements in LAC 33:V.517.T). (See definitions of terms in LAC 33:V.109.)

[NOTE to Paragraph D.4 of this Section: Sites located in a political jurisdiction other than those listed in Appendix VI of 40 CFR 264 are assumed to be in compliance with this requirement.]

E. These alternative locations are remediation waste management sites and retain the following benefits of remediation waste management sites:

1. exclusion from facility-wide corrective action under LAC 33:V.3322; and
2. application of LAC 33:V.1501.H in lieu of LAC 33:V.Chapter 15.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:276 (February 2000).

Chapter 7. Administrative Procedures for Treatment, Storage, and Disposal Facility Permits

Subchapter A. Permits

§701. Emergency Permits

A. Notwithstanding any other provision, in the event the administrative authority finds an imminent and substantial endangerment to human health or the environment, he may issue a temporary emergency permit (1) to a nonpermitted facility to allow treatment, storage, or disposal of hazardous waste or (2) to a permitted facility to allow treatment, storage, or disposal of a hazardous waste not covered by an effective permit. This emergency permit:

1. may be oral or written; if oral, it shall be followed in five days by a written emergency permit;
2. shall not exceed 90 days in duration;
3. shall clearly specify the hazardous wastes to be received, and the manner and location of their treatment, storage, or disposal;
4. may be terminated by the administrative authority at any time without process if he determines that termination is appropriate to protect human health and the environment;
5. shall be accompanied by a public notice published under LAC 33:V.715 including:
 - a. name and address of the office granting the emergency authorization;
 - b. name and location of the permitted TSD facility;
 - c. a brief description of the wastes involved;
 - d. a brief description of the action authorized and reasons for authorizing it; and
 - e. duration of the emergency permit;
6. shall incorporate, to the extent possible and not inconsistent with the emergency situation, all applicable and appropriate requirements of LAC 33:V.Subpart 1.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 18:1256 (November 1992), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:658 (April 1998).

§703. Permit Evaluation

A. Application Distribution. Upon acceptance of an application for review, the administrative authority will distribute copies of the application (Part I) for review and comment to: the public (filed with local libraries or other public facility), notification of which is to be published in a bulletin (see LAC 33:V.717), and as an ad in a local newspaper; Department of Health and Hospitals, Office of

Health Services and Environmental Quality; Department of Wildlife and Fisheries; Office of Public Works of the Department of Transportation and Development; or the successors to any of the above; and to local governing authorities of any municipality and parish within whose territorial jurisdiction the facility or activity is located.

B. Review Considerations

1. In conducting its review of the application, the administrative authority will consider the purpose and use of facilities, operations and monitoring plan, capacity, closure, site suitability, financial responsibility, legal considerations, special considerations deemed necessary by the administrative authority on a site specific basis, and local zoning ordinances.

2. Comment from the public and involved local, parish, state, and federal agencies will be reviewed. The administrative authority may consider that the agencies that do not comment within 45 days from the date the ad is published in the newspaper have no objection to the proposed operation.

3. The administrative authority will assist the operator in the modification of the permit application or facility design or operation by:

a. conducting staff discussions with operator, designing engineer, and other principals to discuss reasons for denial;

b. referencing to “state-of-the-art” procedures and methods which, if incorporated in the operation design, would allow permit reapplication; and

c. conducting staff evaluations of objectionable features of application.

4. Initial compliance inspections shall be made as follows:

a. for existing facilities as a part of permit application evaluation; or

b. for new facilities ready to begin operation, after a “Request to Perform Initial Inspection” is submitted by the operator to the administrative authority. This inspection determines that new construction was built in conformity with conditions of the permit by a certification from the operator and supervising engineer, and actual department inspection and evaluation.

5. Order to proceed, or to continue with operation shall be given as follows:

a. the administrative authority will issue to existing facilities a notice to continue operations, issue an interim permit for a specified length of time to continue, and cite measures which must be taken to satisfy the terms of the permit. Specific target dates will be listed in the permit and a report of compliance will be submitted as required to the administrative authority but in no case less than quarterly; or

b. to new facilities the administrative authority will issue a notice permitting operation under a standard permit

or issue a list of modifications required, before an order to begin operation will be issued.

6. **Mandatory Provisions.** Operation of existing facilities during department action on the permit application is permitted, in accordance with provisions of the Act, except that when the continued operation of an existing facility is determined by the department to be causing or about to cause irreparable damage to the environment, or a serious threat to life or safety based on recognized criteria or standards, or both, the administrative authority shall institute immediate enforcement actions pursuant to LAC 33:V.107 of these regulations and the Act. During the time period effective as of November 19 1980, and to extend no longer than the date of issuance of an interim or standard permit, existing treatment, storage and disposal facilities are required to meet interim status standards, in addition to the requirements of prior permits issued before August 1, 1979. Failure to comply with applicable provisions of the interim status standards as set forth in LAC 33:V.Chapter 43 shall be a violation of these regulations.

7. If an applicant fails or refuses to correct deficiencies in the application, the permit may be denied and appropriate enforcement actions may be taken under the applicable statutory provisions.

8. The effective date of an application is the date on which the administrative authority notifies the applicant that the application is complete as provided in LAC 33:V.303.M.

9. For each application from a major TSD facility, the administrative authority shall, no later than the effective date of the application, prepare and mail a project decision schedule to the applicant. The schedule shall specify target dates by which the administrative authority intends to:

a. prepare a draft permit;

b. give public notice;

c. complete the public comment period, including any public hearing; and

d. issue a final permit.

C. Draft Permits

1. Once an application is complete, the administrative authority shall tentatively decide whether to prepare a draft permit or to deny the permit.

2. If the administrative authority tentatively decides to deny the permit, a notice of intent to deny shall be issued. A notice of intent to deny the permit is a type of draft permit which follows the same procedures as any draft permit prepared under LAC 33:V.703.C.4. If the administrative authority’s final decision is that the tentative decision to deny the permit was incorrect, the notice of intent to deny shall be withdrawn and a draft permit under LAC 33:V.703.C.3 shall be prepared.

3. If the administrative authority decides to prepare a draft permit, he shall prepare a draft permit that contains the following information:

- a. all conditions under LAC 33:V.309 and 311;
- b. all compliance schedules under LAC 33:V.325;
- c. all monitoring requirements under LAC 33:V.309.J; and
- d. all standards for treatment, storage, and/or disposal facilities and surface facilities for injection wells.

4. All draft permits prepared under this Section shall be accompanied by a fact sheet (LAC 33:V.703.D), and shall be based on the administrative record, publicly noticed (LAC 33:V.715) and made available for public comment (LAC 33:V.707). The administrative authority shall give notice of opportunity for a public hearing (LAC 33:V.711), and respond to comments (LAC 33:V.707).

D. Fact Sheet

1. A fact sheet shall be prepared for every draft permit. The fact sheet shall briefly set forth principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit. The administrative authority shall send this fact sheet to the applicant and, on request, to any other person.

2. The fact sheet shall include, when applicable:

- a. a brief description of the type of facility or activity which is the subject of the draft permit;
- b. the type and quantity of wastes, fluids, or pollutants which are proposed to be or are being treated, stored, disposed of, injected, emitted, or discharged;
- c. a brief summary of the basis for the draft permit conditions including references to applicable statutory or regulatory provisions and appropriate supporting references to the administrative record;
- d. reasons why any requested variances or alternatives to required standards do or do not appear justified;
- e. a description of the procedures for reaching a final decision on the draft permit including:
 - i. the beginning and ending dates of the comment period and the address where comments will be received;
 - ii. procedures for requesting a hearing and the nature of that hearing;
 - iii. any other procedures by which the public may participate in the final decision; and
- f. name and telephone number of a person to contact for additional information.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 21:564 (June 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2468 (November 2000).

§705. Issuance and Effective Date of Permit

A. After the close of the public comment period under LAC 33:V.707 on a draft permit, the administrative authority shall issue a final permit decision (or a decision to deny a permit for the active life of a hazardous waste management facility or TSD unit under LAC 33:V.706). The administrative authority shall notify the applicant and each person who has submitted written comments or requested notice of the final permit decision. This notice shall include reference to the procedures for appealing a decision. For the purpose of this Section, a final permit decision means a final decision to issue, deny, modify or revoke and reissue, or terminate a permit.

B. A final permit decision (or a decision to deny a permit for the active life of a hazardous waste management facility or TSD unit under LAC 33:V.706) shall become effective upon issuance, unless:

- 1. a later effective date is specified in the decision;
- 2. review is requested under R.S. 30:2024, in which case effectiveness of permit conditions shall be governed by LAC 33:I.Chapter 4;
- 3. no comments requested a change in the draft permit, in which case the permit shall become effective immediately upon issuance.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 14:790 (November 1988), LR 15:181 (March 1989), LR 16:614 (July 1990), amended by the Office of the Secretary, Legal Division, LR 38:2769 (November 2012), LR 43:1140 (June 2017).

§706. Permit Denial

A. The administrative authority may, pursuant to the procedures in LAC 33:V.Chapter 7, deny the permit application either in its entirety or as to the active life of a hazardous waste management facility or TSD unit only.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:614 (July 1990), amended LR 21:944 (September 1995).

Subchapter B. Hearings

§707. Public Comments and Requests for Public Hearings

A. During the public comment period provided under LAC 33:V.715, any interested person may submit written comments on the draft permit or the permit application and may request a public hearing, if no hearing has already been scheduled. A request for a public hearing shall be in writing and shall state the nature of the issues proposed to be raised in the hearing. All comments shall be considered in making the final decision and shall be answered as provided in LAC 33:V.707.B.

B. Response to Comments. At the time that any final permit decision is issued, the administrative authority shall issue a response to comments.

1. This response shall specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change, and briefly describe and respond to all significant comments on the draft permit or the permit application raised during the public comment period, or during any hearing.

2. The response to comments shall be available to the public.

C. Within 30 days after a final permit decision (or a decision under LAC 33:V.706 to deny a permit for the active life of a hazardous waste management facility or TSD unit) has been issued under LAC 33:V.705, any person who filed comments on that draft permit or participated in the public hearing may petition the administrative authority to review any condition of the permit decision.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:614 (July 1990).

§708. Preapplication Public Meeting and Notice, Public Notice Requirements at the Application Stage, and Information Repository

A. Preapplication Public Meeting and Notice

1. Applicability. The requirements of this Section shall apply to all RCRA Part II applications seeking initial permits for hazardous waste management units over which the department has permit issuance authority. The requirements of this Section shall also apply to RCRA Part II applications seeking renewal of permits for such units where the renewal application is proposing a significant change in facility operations. For the purposes of this Section a significant change is any change that would qualify as a Class 3 Permit Modification under LAC 33:V.321.C. The requirements of this Section do not apply to permit modifications under LAC 33:V.321.C or to applications that are submitted for the sole purpose of conducting post-closure activities or post-closure activities and corrective action at a facility.

2. Prior to the submission of a Part II RCRA permit application for a facility, the applicant must hold at least one meeting with the public in order to solicit questions from the community and inform the community of proposed hazardous waste management activities. The applicant shall post a sign-in sheet or otherwise provide a voluntary opportunity for attendees to provide their names and addresses.

3. The applicant shall submit a summary of the meeting, along with the list of attendees and their addresses developed under Paragraph A.2 of this Section, and copies of any written comments or materials submitted at the meeting

to the permitting agency as a part of the Part II application, in accordance with LAC 33:V.517.

4. The applicant must provide public notice of the preapplication meeting at least 30 days prior to the meeting. The applicant must maintain, and provide to the permitting agency upon request, documentation of the notice.

a. The applicant shall provide public notice in all of the following forms:

i. a newspaper advertisement. The applicant shall publish a notice, fulfilling the requirements in Subparagraph A.4.b of this Section, in a newspaper of general circulation in the parish or equivalent jurisdiction that hosts the proposed location of the facility. In addition, the administrative authority shall instruct the applicant to publish the notice in newspapers of general circulation in adjacent parishes or equivalent jurisdictions where the administrative authority determines that such publication is necessary to inform the affected public. The notice must be published as a display advertisement;

ii. a visible and accessible sign. The applicant shall post a notice on a clearly marked sign at or near the facility, fulfilling the requirements in Subparagraph A.4.b of this Section. If the applicant places the sign on the facility property, then the sign must be large enough to be readable from the nearest point where the public would pass by the site;

iii. a broadcast media announcement. The applicant shall broadcast a notice, fulfilling the requirements in Subparagraph A.4.b of this Section, at least once, on at least one local radio station or television station. The applicant may employ another medium with prior approval of the administrative authority;

iv. a notice to the department. The applicant shall send a copy of the newspaper notice to the Office of Environmental Services and to the appropriate units of state and local government, in accordance with LAC 33:V.717.A.1.b.

b. The notices required under Subparagraph A.4.a of this Section must include:

i. the date, time, and location of the meeting;

ii. a brief description of the purpose of the meeting;

iii. a brief description of the facility and proposed operations, including the address or a map (e.g., a sketched or copied street map) of the facility location;

iv. a statement encouraging people to contact the facility at least 72 hours before the meeting if they need special access to participate in the meeting; and

v. the name, address, and telephone number of a contact person for the applicant.

B. Public Notice Requirements at the Application Stage

1. Applicability. The requirements of this Section shall apply to all RCRA Part II applications seeking initial

permits for hazardous waste management units over which the department has permit issuance authority. The requirements of this Section shall also apply to RCRA Part II applications seeking renewal of permits for such units under LAC 33:V.315.A. The requirements of this Section do not apply to permit modifications under LAC 33:V.321.C or permit applications submitted for the sole purpose of conducting post-closure activities or post-closure activities and corrective action at a facility.

2. Notification at Application Submittal

a. The administrative authority shall provide public notice, as set forth in LAC 33:V.717.A.1.e, and notice to appropriate units of state and local government, as set forth in LAC 33:V.717.A.1.b, that a Part II permit application has been submitted to the department and is available for review.

b. The notice shall be published within a reasonable period of time after the application is received by the administrative authority. The notice must include:

- i. the name and telephone number of the applicant's contact person;
- ii. the name and telephone number of the permitting agency's contact office and a mailing address to which information, opinions, and inquiries may be directed throughout the permit review process;
- iii. an address to which people can write in order to be put on the facility mailing list;
- iv. the location where copies of the permit application and any supporting documents can be viewed and copied;
- v. a brief description of the facility and proposed operations, including the address or a map (e.g., a sketched or copied street map) of the facility location on the front page of the notice; and
- vi. the date that the application was submitted.

3. Concurrent with the notice required under Paragraph B.2 of this Section, the administrative authority must place the permit application and any supporting documents in a location accessible to the public in the vicinity of the facility or at the permitting agency's office.

C. Information Repository

1. Applicability. The requirements of this Section apply to all applications seeking RCRA permits for hazardous waste management units over which the department has permit issuance authority.

2. The administrative authority may assess the need, on a case-by-case basis, for an information repository. When assessing the need for an information repository, the administrative authority shall consider a variety of factors including the level of public interest, the type of facility, the presence of an existing repository, and the proximity to the nearest copy of the administrative record. If the administrative authority determines, at any time after submittal of a permit application, that there is a need for a

repository, then the administrative authority shall notify the facility that it must establish and maintain an information repository. (See LAC 33:V.309.M for similar provisions relating to the information repository during the life of a permit.)

3. The information repository shall contain all documents, reports, data, and information deemed necessary by the administrative authority to fulfill the purposes for which the repository is established. The administrative authority shall have the discretion to limit the contents of the repository.

4. The information repository shall be located and maintained at a site chosen by the facility. If the administrative authority finds the site unsuitable for the purposes and persons for which it was established, due to problems with the location, hours of availability, access, or other relevant considerations, then the administrative authority shall specify a more appropriate site.

5. The administrative authority shall specify requirements for informing the public about the information repository. At a minimum, the administrative authority shall require the facility to provide a written notice about the information repository to all individuals on the facility mailing list.

6. The facility owner/operator shall be responsible for maintaining and updating the repository with appropriate information throughout a time period specified by the administrative authority. The administrative authority may close the repository at his or her discretion, based on the factors in Paragraph C.2 of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:659 (April 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2468 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2455 (October 2005), LR 33:2101 (October 2007).

§709. Evidentiary Hearings on Operating Permit Applications for Commercial Hazardous Waste Treatment, Storage, Disposal, or Recycling Facilities

A. The purpose of an evidentiary hearing is to develop a record of facts, documents, testimony, and pleadings for submission to the administrative authority for consideration in making a permit decision.

B. Applicability

1. An evidentiary hearing shall be held after the technical review of an initial permit application for the operation of a proposed, nonexistent commercial hazardous waste treatment, storage, disposal, or recycling facility.

2. An evidentiary hearing may be held after the technical review of a permit application, other than an initial application for a proposed, nonexistent facility, for the operation of a commercial hazardous waste treatment,

storage, disposal, or recycling facility upon a determination by the administrative authority that the hearing would be beneficial in making a permit decision. Considerations by the administrative authority in making this determination include, but are not limited to, fact-finding or clarification of issues.

3. Permit applications for which evidentiary hearings may be held pursuant to Paragraph B.2 of this Section include, but are not limited to:

- a. initial permit applications for interim status facilities;
- b. renewal permit applications for existing facilities; and
- c. major modification (Class 2 or 3) applications for existing facilities (including requests for conversion of noncommercial status to commercial status).

C. The administrative authority shall give public notice of the hearing at least 30 days prior to the date scheduled for commencement of the hearing.

D. Public notice shall be given for all evidentiary hearings.

1. The administrative authority shall mail a copy of a notice to the following persons (any person otherwise entitled to receive notice under this Subsection may waive his or her rights to receive notice for any classes and categories of permits):

- a. the applicant;
- b. the parish governing authority;
- c. those who request notice in writing and those who are on the area mailing list developed by the department.

2. The permit applicant shall publish a notice, provided by the administrative authority, in a daily or weekly major local newspaper of general circulation within the area affected by the facility or activity and in the official journal of the state.

3. The permit applicant shall provide for broadcasting the notice over a local radio station designated by the administrative authority.

4. The administrative authority shall require the applicant to provide and pay for the notifications in LAC 33:V.709.D.2 and 3 and submit proof thereof.

E. All public notices issued under LAC 33:V.709.D.1 and 2 shall contain the following minimum information:

1. name and address of the office processing the permit action for which notice is being given;
2. name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit;
3. a brief description of the business conducted at the facility or activity described in the permit application;

4. name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the permit application;

5. statement that intervention is required to participate at the hearing and a brief description of the procedures to qualify as an intervener;

6. date, time, and place of the hearing;

7. a brief description of the nature and purpose of the hearing; and

8. any additional information considered by the administrative authority to be necessary or proper.

F. Administrative procedures for adjudications contained in LAC 33:I.Chapter 3 shall apply to evidentiary hearings except as provided in LAC 33:V.709.G and H or where they are incompatible with the purpose of the evidentiary hearing as stated in LAC 33:V.709.A.

G. The presiding officer shall not make findings of fact, conclusions of law, or recommendations or render decisions on the merits of the permit application. The presiding officer's authority terminates once the record is complete and has been submitted to the administrative authority.

H. Administrative procedures for adjudications pertaining to intervention contained in LAC 33:I.323 shall apply to evidentiary hearings.

I. Upon completion of the evidentiary hearing, the administrative authority may require the applicant to submit additional relevant information to supplement the record.

J. No draft permit decision shall be issued until after the administrative authority has received and reviewed the record of the evidentiary hearing.

K. Unless otherwise directed by the secretary in writing, hearing officers hired pursuant to R.S. 30:2018 are hereby delegated authority to perform the functions of the presiding officer in evidentiary hearings.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:683 (August 1990), LR 17:362 (April 1991), LR 21:565 (June 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2469 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 34:69 (January 2008).

§711. Public Hearings

A. Applicability

1. The administrative authority shall hold a public hearing whenever written notice of opposition to a draft permit and a request for a hearing are received within 45 days of the public hearing notice. Whenever practicable, the administrative authority shall schedule a hearing under this Section at a location convenient to the nearest population center to the proposed facility.

2. The administrative authority may also hold a public hearing at his or her discretion whenever, for instance, such a hearing might clarify one or more issues involved in the permit decision.

3. Public notice of the hearing shall be given as specified in LAC 33:V.713.A.

B. For any public hearing, the administrative authority shall designate a presiding officer who shall be responsible for its scheduling and orderly conduct.

C. Any person may submit oral or written statements and data concerning the draft permit. Reasonable limits may be set upon the time allowed for oral statements, and written submissions may be required. The public comment period under LAC 33:V.715 shall automatically be extended to the close of any public hearing under this Section. The hearing officer may also extend the comment period by so stating at the hearing.

D. A tape recording or written transcript of the hearing shall be made available to the public.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 17:478 (May 1991).

Subchapter C. Public Notice of Permit Actions and Public Comment Period

§713. Scope

A. The administrative authority shall give public notice that the following actions have occurred:

1. a permit application has been tentatively denied under LAC 33:V.703.C.2;

2. a draft permit has been prepared under LAC 33:V.703.C.3;

3. a hearing has been scheduled under LAC 33:V.711.A; or

4. an appeal has been granted under LAC 33:V.323.A.3.

B. No public notice is required when a request for permit modification, revocation and reissuance, or termination is denied under LAC 33:V.323. Written notice of that denial shall be given to the requester and to the permittee.

C. Public notices may describe more than one permit or permit action.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§715. Timing

A. Public notice of the preparation of a draft permit (including a notice of intent to deny a permit application) required under LAC 33:V.703.C.2 and 703.C.4 shall allow at least 45 days for public comment.

B. Public notice of a public hearing shall be given at least 45 days before the hearing. (Public notice of the hearing may be given at the same time as public notice of the draft permit and the two notices may be combined.)

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§717. Methods

A. Public notice of activities described in LAC 33:V.713.A shall be given by the following methods:

1. by mailing a copy of a notice to the following persons (any person otherwise entitled to receive notice under this Subsection may waive his or her rights to receive notice for any classes and categories of permits):

a. the applicant;

b. any unit of local government having jurisdiction over the area where the facility is proposed to be located, and each state agency having any authority under state law with respect to the construction or operation of such facility;

c. any other agency which the administrative authority knows has issued or is required to issue a permit for the same facility or activity;

d. federal and state agencies with jurisdiction over fish, shellfish, and wildlife resources and over coastal zone management plans, the Advisory Council on Historic Preservation, state historic preservation officers, and any affected states (Indian tribes) (For purposes of this Section, and in the context of the underground injection control program only, the term "state" includes Indian tribes treated as states.);

e. persons on a mailing list, including:

i. those who request in writing to be on the list;

ii. those solicited for "area lists" on the basis of their participation in past permit proceedings in that area; and

iii. those on the list as a result of notification to the public of the opportunity to be put on the mailing list through periodic publication in the public press and in such publications as regional and state funded newsletters, environmental bulletins, or state law journals. The administrative authority may update the mailing list from time to time by requesting written indication of continued interest from those listed and the administrative authority may delete from the list the name of any person who fails to respond to such a request;

2. for standard permits or major modifications, publication of a notice in a daily or weekly major local newspaper of general circulation within the area affected by the facility or activity and broadcast over local radio stations. The administrative authority may require the applicant to provide for and pay for the notifications and submit proof thereof;

3. any other method reasonably calculated to give actual notice of the action in question to the persons potentially affected by it, including press releases or any other forum or medium to elicit public participation.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 17:478 (May 1991), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:1442 (July 2000).

§719. Contents

A. All public notices issued under this Part shall contain the following minimum information:

1. name and address of the office processing the permit action for which notice is being given;
2. name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit;
3. a brief description of the business conducted at the facility or activity described in the permit application or the draft permit;
4. name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft permit or draft general permit, as the case may be, statement of basis or fact sheet, and the application;
5. a brief description of the comment procedures required by LAC 33:V.707 and the time and place of any hearing that will be held, including a statement of procedures to request a hearing (unless a hearing has already been scheduled) and other procedures by which the public may participate in the final permit decision; and
6. any additional information considered necessary or proper.

B. Public Notices for Hearings. In addition to the general public notice described in LAC 33:V.719, the public notice of a hearing under LAC 33:V.709 shall contain the following information:

1. reference to the date of previous public notices relating to the permit;
2. date, time, and place of the hearing; and
3. a brief description of the nature and purpose of the hearing, including the applicable rules and procedures.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 14:790 (November 1988).

§721. Additional Information

A. In addition to any other notice requirements of this Chapter, a copy of the fact sheet, Part I of the permit application, and the draft decision shall be mailed to the applicant, the United States Environmental Protection Agency, the governing authority for the parish in which the facility or activity is located or proposed, and the library repository specifically designated to receive information concerning the facility.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 21:565 (June 1995).

(EDITOR'S NOTE: Chapter 9 is hereby repealed as of May 20, 2006. §901 moved to §1516.A; §905 moved to §1516.B; §907 moved to §1516.C; §909 moved to §1516.D; §911 requirements exist in Chapter 11; §921 requirements exist in Chapter 11; and §923 moved to §1107.E.)

Chapter 10. Generators of Hazardous Waste

Editor's Note: Chapter 10 consolidates and reorganizes the requirements for generators formerly contained in LAC:V.108 and Chapter 11.

Subchapter A. General

§1001. Definitions Used in Chapter

A. The following definitions apply to this Chapter.

Condition for Exemption—any requirement in LAC 33:V.1003.C, 1009, 1011, 1013, 1015, or Subchapter C of this Chapter that states an event, action, or standard that shall occur or be met in order to obtain an exemption from any applicable requirement in LAC 33:V.Subpart 1.

Independent Requirement—a requirement of Chapter 10 that states an event, action, or standard that shall occur or be met; and that applies without relation to, or irrespective of, the purpose of obtaining a conditional exemption from storage facility permit, interim status and operating requirements under LAC 33:V.1009, 1011, 1013, 1015, or Subchapter C of this Chapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:901 (July 2020).

§1003. Purpose, Scope and Applicability

A. The regulations of this Chapter establish standards for a generator of hazardous waste as defined in LAC 33:V.109.

ENVIRONMENTAL QUALITY

1. A person who generates a hazardous waste as defined in LAC 33:V.109 is subject to all the applicable independent requirements in the regulations below.

a. Independent requirements of a very small quantity generator include:

i. LAC 33:V.1005.A-E (Hazardous Waste Determination and Recordkeeping);

ii. LAC 33:V.1007 (Generator Category Determination);

iii. LAC 33:V.1017 (EPA Identification Numbers and Notification of Hazardous Waste Activities for Generators); and

iv. LAC 33:V.5121.C.2 (Annual Fees).

b. Independent requirements for a small quantity generator include:

i. LAC 33:V.1005 (Hazardous Waste Determination and Recordkeeping);

ii. LAC 33:V.1007 (Generator Category Determination);

iii. LAC 33:V.1017 (EPA Identification Numbers and Notification of Hazardous Waste Activities for Generators);

iv. LAC 33:V.1019 (Recordkeeping);

v. LAC 33:V.1027 (Recordkeeping and Reporting for Small Quantity Generators);

vi. LAC 33:V.1107 (The Manifest System);

vii. LAC 33:V.Chapter 10.Subchapter E (Pre-transport Requirements);

viii. LAC 33:V.Chapter 11.Subchapter B (Transboundary Shipments of Hazardous Waste); and

ix. LAC 33:V.5121.C.1 (Annual Fees).

c. Independent requirements of a large quantity generator include:

i. LAC 33:V.1005 (Hazardous Waste Determination and Recordkeeping);

ii. LAC 33:V.1007 (Generator Category Determination);

iii. LAC 33:V.1017 (EPA Identification Numbers and Notification of Hazardous Waste Activities for Generators);

iv. LAC 33:V.Chapter 10.Subchapter B (Recordkeeping and Reporting for Small Quantity Generators and Large Quantity Generators), except LAC 33:V.1027;

v. LAC 33:V.1107 (Manifest Requirements);

vi. LAC 33:V.Chapter 10.Subchapter E (Pretransport Requirements);

vii. LAC 33:V.Chapter 11.Subchapter B (Transboundary Shipments of Hazardous Waste); and

viii. LAC 33:V.5121.C.1 (Annual Fees).

2. A generator that accumulates hazardous waste on-site is a person that stores hazardous waste and is subject to the applicable requirements of LAC 33:V.Subpart 1, unless it is one of the following:

a. a very small quantity generator that meets the conditions for exemption in LAC 33:V.1009;

b. a small quantity generator that meets the conditions for exemption in LAC 33:V.1011 and 1013; or

c. a large quantity generator that meets the conditions for exemption in LAC 33:V.1011 and 1015.

3. If a generator is a small quantity generator or a large quantity generator, it shall not transport, offer its hazardous waste for transport, or otherwise cause its hazardous waste to be sent to a facility that is not a designated facility, as defined in LAC 33:V.109, or not otherwise authorized to receive the generator's hazardous waste. A very small quantity generator shall comply with the requirements of Section 1009 of this Chapter regarding management of hazardous waste.

B. Determining Generator Category. A generator shall use LAC 33:V.1007 to determine which provisions of this Chapter are applicable to the generator based on the quantity of hazardous waste generated per calendar month.

C. A farmer disposing of waste pesticides from his own use which are hazardous wastes is not required to comply with the standards of this Chapter or other standards in LAC 33:V.Chapters 3, 5, 7, 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, 37, and 43 for those wastes, provided he triple rinses each emptied pesticide container in accordance with the provisions of LAC 33:V.109.Empty Container.2.c and disposes of the pesticide residues in a manner consistent with the disposal instructions on the pesticide label.

D. Failure to Comply

1. A person who generates a hazardous waste as defined in LAC 33:V.109 and further specified in LAC 33:V.Chapter 49 is subject to the requirements of this Chapter and penalties prescribed in the Louisiana Environmental Act, R.S. 30:2001, et seq., for noncompliance.

2. A generator's noncompliance with a condition for exemption in this Chapter is not subject to penalty or injunctive relief under the Louisiana Environmental Quality Act, R.S. 30:2001 et seq., as a violation of a condition for exemption in this Chapter. Noncompliance by a generator with an applicable condition for exemption for storage permit and operations requirements means that a facility is a storage facility operating without an exemption from the permit, interim status, and operations requirements in LAC 33:V.Subpart 1. Without an exemption, any violations of such storage requirements are subject to penalty and

injunctive relief under the Louisiana Environmental Quality Act, La. R.S. 30:2001, et seq.

E. An owner or operator who initiates a shipment of hazardous waste from a treatment, storage, or disposal facility shall comply with the generator standards established in this Chapter. The provisions of this Chapter are applicable to the on-site accumulation of hazardous waste by generators. Therefore, the provisions of this Chapter only apply to owners or operators who are shipping hazardous waste, which they generated at that facility. A generator who treats, stores, or disposes of hazardous waste on-site shall comply with the applicable standards and requirements set forth in LAC 33:V.Subpart 1.

F. Persons responding to an explosives or munitions emergency in accordance with LAC 33:V.1501.C.7.a.iv or d or 4307, and 305.C.12 or 13 are not required to comply with the standards of this Chapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:901 (July 2020).

§1005. Hazardous Waste Determination and Recordkeeping

A. A person who generates a solid waste, as defined in LAC 33:V.109, shall determine if that waste is a hazardous waste in order to ensure the wastes are properly managed according to applicable RCRA regulations. A hazardous waste determination is made using the steps in Subsections B-G of this Section.

B. The hazardous waste determination for each solid waste shall be made at the point of waste generation, before any dilution, mixing, or other alteration of the waste occurs, and at any time in the course of its management that it has, or may have, changed its properties as a result of exposure to the environment or other factors that may change the properties of the waste such that the RCRA classification of the waste may change.

C. The generator shall determine if the waste is exempted or excluded from regulation under LAC 33:V.105.D.

D. If the waste is not exempted or excluded under LAC 33:V.105.D, the person shall then use knowledge of the waste to determine whether the waste meets any of the listing descriptions under LAC 33:V.Chapter 49. Acceptable knowledge that may be used in making an accurate determination as to whether the waste is listed may include waste origin, composition, process producing the waste, feedstock, and other reliable and relevant information. If the waste is listed, the person may file a delisting petition under LAC 33:V.105.M to demonstrate to the Office of Environmental Services that the waste from this particular site or operation is not a hazardous waste.

E. The person then shall also determine whether the waste exhibits one or more hazardous characteristics as

identified in LAC 33:V.4903 by following the procedures in Paragraph E.1 or 2 of this Section, or a combination of both.

1. The person shall apply knowledge of the hazard characteristic of the waste in light of the materials or the processes used to generate the waste. Acceptable knowledge may include process knowledge (e.g., information about the chemical feedstocks and other inputs to the production process); knowledge of products, byproducts, and intermediates produced by the manufacturing process; chemical or physical characterization of wastes; information on the chemical and physical properties of the chemicals used or produced by the process or otherwise contained in the waste; testing that illustrates the properties of the waste; or other reliable and relevant information about the properties of the waste or its constituents. A test other than a test method set forth in LAC 33:V.4903, or an equivalent test method approved by the administrative authority under LAC 33:V.105.I, may be used as part of a person's knowledge to determine whether a solid waste exhibits a characteristic of hazardous waste. However, such tests do not, by themselves, provide definitive results. Persons testing their waste shall obtain a representative sample of the waste for testing, as defined at LAC 33:V.109.

2. When available knowledge is inadequate to make an accurate determination, the person shall test the waste according to the methods set forth in LAC 33:V.4903, or according to an equivalent method approved by the administrative authority under LAC 33:V.105.I and in accordance with Subparagraphs a and b below.

a. Persons testing their waste shall obtain a representative sample of the waste for testing as defined at LAC 33:V.109.

b. Where a test method is specified in LAC 33:V.4903, the results of the regulatory test, when properly performed, shall be definitive for determining the regulatory status of the waste.

F. If the waste is determined to be hazardous, the generator shall refer to LAC 33:V. Subpart 1 for other possible exclusions or restrictions pertaining to management of the specific waste.

G. Recordkeeping for Small Quantity Generators and Large Quantity Generators. A small or large quantity generator shall maintain records supporting its hazardous waste determinations, including records that identify whether a *solid waste* is a *hazardous waste*, as defined by LAC 33:V.109. Records shall be maintained for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. These records shall comprise the generator's knowledge of the waste and support the generator's determination, as described in Subsections D and E of this Section. The records shall include, but are not limited to the following types of information: the results of any tests, sampling, waste analyses, or other determinations made in accordance with this section; records documenting the tests, sampling, and analytical methods used to demonstrate the validity and relevance of such tests; records consulted in order to

ENVIRONMENTAL QUALITY

determine the process by which the waste was generated, the composition of the waste, and the properties of the waste; and records which explain the knowledge basis for the generator’s determination, as described in Paragraph E.1 of this Section. The periods of record retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the administrative authority.

H. Identifying Hazardous Waste Numbers for Small Quantity Generators and Large Quantity Generators. If the waste is determined to be hazardous, small quantity generators and large quantity generators shall identify all applicable EPA hazardous waste numbers (EPA hazardous waste codes) in LAC 33:V.4901 and 4903. Prior to shipping the waste off-site, the generator shall mark its containers with all applicable EPA hazardous waste numbers (EPA hazardous waste codes) according to LAC 33:V.1063.C.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:902 (July 2020).

§1007. Generator Category Determination

A. A Generator Shall Determine its Generator Category. A generator’s category is based on the amount of hazardous waste generated each month and may change from month to month. This Section sets forth procedures to determine whether a generator is a very small quantity generator, small quantity generator, or large quantity generator for a particular month, as defined in LAC 33:V.109.

B. Generators of Either Acute Hazardous Waste or Nonacute Hazardous Waste. A generator who generates either acute hazardous waste or nonacute hazardous waste in a calendar month shall determine its generator category for that month by doing the following:

1. counting the total amount of hazardous waste generated in a calendar month;
2. subtracting the total of any amounts of waste exempt from counting as described in Subsections D and E of this Section; and
3. determining the resulting generator category for the hazardous waste generated using Table 1 of this Section.

C. Generators of Both Acute Hazardous Waste and Nonacute Hazardous Waste. A generator who generates both acute hazardous waste and nonacute hazardous waste in the same calendar month shall determine its generator category for that month by doing the following:

1. counting separately the total amount of acute hazardous waste and the total amount of nonacute hazardous waste generated in a calendar month;
2. subtracting from each total any amounts of waste exempt from counting as described in Subsections D and E of this Section;

3. determining separately the resulting categories for the quantities of acute and nonacute hazardous waste generated using Table 1 of this Section; and

4. comparing the resulting generator categories from Paragraph C.3 of this Section and applying the more stringent generator category to the accumulation and management of both nonacute and acute hazardous waste generated for that month.

Table 1. Generator Categories Based on Quantity of Hazardous Waste Generated in a Calendar Month			
Quantity of Acute Hazardous Waste Generated in a Calendar Month	Quantity of Nonacute Hazardous Waste Generated in a Calendar Month	Quantity of Residues from a Clean-up of Acute Hazardous Waste in a Calendar Month	Generator Category
Greater than 1 kg (2.2 lbs) (> 1 kg)	Any Amount	Any Amount	Large Quantity Generator
Any Amount	Greater than or equal to 1,000 kg (2,000 lbs) (≥ 1,000 kg)	Any Amount	Large Quantity Generator
Any Amount	Any Amount	Greater than 1,000 kg (220 lbs) (>100 kg)	Large Quantity Generator
Less than or equal to 1 kg (2.2 lbs) (≤ 1 kg)	Greater than 100 kg (220 lbs.) and less than 1,000 kg (2,200 lbs) (>100 kg and <1,000 kg)	Less than or equal to 100 kg (220 lbs) (≤ 100 kg)	Small Quantity Generator
Less than or equal to 1 kg (2.2 lbs) (≤ 1 kg)	Less than or equal to 100 kg (220 lbs) (≤ 1 kg)	Less than or equal to 100 kg (220 lbs) (≤ 100 kg)	Very Small Quantity Generator

D. When making the monthly quantity-based determination required by this Chapter, the generator shall include all hazardous waste that it generates, except hazardous waste that is:

1. exempt from regulation under LAC 33:V.105.D.3-6 and 8, 109.Empty Container.1.a, and 4105.A.1;
2. managed immediately upon generation only in on-site elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities as defined in LAC 33:V.109;
3. recycled, without prior storage or accumulation, only in an on-site process subject to regulation under LAC 33:V.4105.D;
4. used oil managed under the requirements of LAC 33:V.4105.A.3 and Chapter 40;
5. spent lead-acid batteries managed under the requirements of LAC 33:V.4145;
6. universal waste managed under LAC 33:V.105.D.7 and Chapter 38; or
7. managed as part of an episodic event in compliance with LAC 33:V.Chapter 10.Subchapter C.

E. In determining the quantity of hazardous waste generated in a calendar month, a generator need not include:

1. hazardous waste when it is removed from on-site accumulation, as long as the hazardous waste has been previously counted once;

2. hazardous waste generated by on-site treatment (including reclamation) of the generator's hazardous waste, so long as the hazardous waste that is treated was previously counted once; or

3. hazardous waste spent materials that are generated, reclaimed, and subsequently reused on-site, so long as such spent materials have been previously counted once.

F. Based on the generator category as determined under this Section, the generator shall meet the applicable independent requirements listed in LAC 33:V.1003. A generator's category also determines which of the provisions of LAC 33:V.1009, 1011, 1013, or 1015 shall be met to obtain an exemption from the storage facility permit, interim status, and operating requirements when accumulating hazardous waste.

G. Mixing Hazardous Waste with Solid Waste

1. Very Small Quantity Generator Waste

a. Hazardous waste generated by a very small quantity generator may be mixed with solid waste. Very small quantity generators may mix a portion or all of its hazardous waste with solid waste and remain subject to LAC 33:V.1009 even though the resultant mixture exceeds the quantity limits identified in the definition of *very small quantity generator* at LAC 33:V.109, unless the mixture exhibits one or more of the characteristics of hazardous waste identified in LAC 33:V.4903.

b. If the resulting mixture exhibits a characteristic of hazardous waste, this resultant mixture is a newly generated hazardous waste. The very small quantity generator shall count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the calendar month quantity limits for the very small quantity generator identified in the definition of generator categories found in LAC 33:V.109. If so, to remain exempt from permitting, interim status, and operating standards, the very small quantity generator shall meet the conditions for exemption applicable to either a small quantity generator or a large quantity generator. The very small quantity generator shall also comply with the applicable independent requirements for either a small quantity generator or a large quantity generator.

c. If a very small quantity generator's waste is mixed with used oil, the mixture is subject to LAC 33:V.Chapter 40. Any material produced from such a mixture by processing, blending, or other treatment is also regulated under LAC 33:V.Chapter 40.

2. Small Quantity Generator and Large Quantity Generator Hazardous Waste

a. Hazardous waste generated by a small quantity generator or a large quantity generator may be mixed with a solid waste. These mixtures are subject to the following: the mixture rule in LAC 33:V.109.Hazardous Waste.2.c, 3.b, 3.c, and 4.e; the prohibition of dilution rule at LAC 33:V.2207.A; the land disposal restriction requirements of LAC 33:V.2223 if a characteristic hazardous waste is mixed with a solid waste so that it no longer exhibits the hazardous characteristic; and the hazardous waste determination requirement at LAC 33:V.1005.

b. If the resulting mixture is found to be a hazardous waste, this resultant mixture is a newly generated hazardous waste. A small quantity generator shall count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the small quantity generator calendar monthly quantity limits identified in the definition of generator categories found in LAC 33:V.109. If so, to remain exempt from the permitting, interim status, and operating standards, the small quantity generator shall meet the conditions for exemption applicable to the large quantity generator. The small quantity generator shall also comply with the independent requirements for a large quantity generator.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:903 (July 2020).

§1009. Conditions for Exemption for Very Small Quantity Generators

A. Provided that the very small quantity generator meets all the conditions for exemption listed in this Section, hazardous waste generated by the very small quantity generator is not subject to the requirements of LAC 33:V.Subpart 1 (except LAC 33:V.1003-1009) and the very small quantity generator may accumulate hazardous waste on-site without complying with such requirements. The conditions for exemption are included in Paragraphs 1-7 below.

1. In a calendar month, the very small quantity generator shall generate less than or equal to the amounts specified in the definition of very small quantity generator in LAC 33:V.109.

2. The very small quantity generator shall comply with LAC 33:V.1005.A-E.

3. If the very small quantity generator accumulated at any time greater than 1 kilogram (2.2 lbs.) of acute hazardous waste or 100 kilograms (220 lbs.) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into or on any land or water of any acute hazardous waste listed in LAC 33:V.4901.B or E, all quantities of that acute hazardous waste are subject to the following additional conditions for exemption:

ENVIRONMENTAL QUALITY

a. such waste is held on-site for no more than 90 days beginning on the date when the accumulated wastes exceed the amounts provided above; and

b. the conditions for exemption in LAC 33:V.1015.

4. If the very small quantity generator accumulates at any time 1,000 kilograms (2,200 lbs.) or greater of nonacute hazardous waste, all quantities of that hazardous waste are subject to the following additional conditions for exemption:

a. such waste is held on-site for no more than 180 days, or 270 days, if applicable, beginning on the date when the accumulated waste exceed the amounts provided above;

b. the quantity of waste accumulated on-site never exceeds 6,000 kilograms (13,200 lbs.); and

c. the conditions for exemption in LAC 33:V.1013.C.2-G.

5. A very small quantity generator that accumulates hazardous waste in amounts less than or equal to the limits in Paragraphs A.3 and 4 of this Section shall either treat or dispose of its hazardous waste in an on-site facility or ensure delivery to an off-site treatment, storage, or disposal facility, either of which, if located in the U.S., is:

a. permitted under 40 CFR 270, LAC 33:V.Subpart 1, or a RCRA approved hazardous waste program of any other state;

b. in interim status under 40 CFR 265 and 270, LAC 33:V.Subpart 1, or a RCRA approved hazardous waste program of any other state;

c. authorized to manage hazardous waste by a state with a hazardous waste management program approved under 40 CFR 271;

d. permitted, licensed, or registered by a state to manage municipal solid waste and, if managed in a municipal solid waste landfill is subject to 40 CFR 258, LAC 33:VII.Subpart 1;

e. permitted, licensed, or registered by a state to manage non-municipal non-hazardous waste and, if managed in a non-municipal non-hazardous waste disposal unit, is subject to the requirements in 40 CFR 257.5-30, LAC 33:VII.Subpart 1; or

f. a facility which:

i. beneficially uses or reuses, or legitimately recycles or reclaims its waste; or

ii. treats its waste prior to beneficial use or reuse, or legitimate recycling or reclamation;

g. for universal waste managed under LAC 33:V.Chapter 38, a universal waste handler or destination facility subject to the requirements of 40 CFR 273 or LAC 33:V.Chapter 38;

h. a large quantity generator under the control of the same person as the very small quantity generator, provided the following conditions are met:

i. the very small quantity generator and the large quantity generator are under the control of the same *person* as defined in LAC 33:V.109. Control for the purpose of this Section, means the power to direct the policies of the generator, whether by the ownership of stock, voting rights, or otherwise, except that contractors who operate generator facilities on behalf of a different person as defined in LAC 33:V.109 shall not be deemed to control such generators;

ii. the very small quantity generator marks its container(s) of hazardous waste with:

(a). the words "Hazardous Waste"; and

(b). an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704).

6. A container holding hazardous waste shall be closed at all times during accumulation, except when:

a. adding, removing, or consolidating the hazardous waste; or

b. temporary venting of a container is necessary:

i. for the proper operation of equipment; or

ii. to prevent a dangerous situation, such as build-up of extreme pressure.

7. A very small quantity generator shall label or mark each container accumulating hazardous waste with the words "Hazardous Waste" or with other words that identify the contents of the container.

B. The placement of bulk or non-containerized liquid hazardous waste or hazardous waste containing free liquids (whether or not sorbents have been added) in any landfill is prohibited.

C. A very small quantity generator experiencing an episodic event may generate and accumulate hazardous waste in accordance with LAC 33:V.Chapter 10.Subchapter C in lieu of LAC 33:V.1011, 1013, and 1015.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:904 (July 2020).

§1011. Satellite Accumulation Area Regulations for Small Quantity Generators and Large Quantity Generators

A. A generator may accumulate as much as 55 gallons of nonacute hazardous waste and/or either one quart of liquid acute hazardous waste listed in LAC 33:V.4901.B or E, or 1

kg (2.2 lbs.) of solid acute hazardous waste listed in LAC 33:V.4901.B or E in containers at or near any point of generation where waste initially accumulate which is under the control of the operator of the process generating the waste, without a permit or interim status and without complying with the requirements of LAC 33:V.Subpart 1, provided that all of the conditions for exemption in this Section are met. A generator may comply with the conditions for exemption in this Section instead of complying with the conditions for exemption in LAC 33:V.1013.C. or 1015.B, except as required in Paragraphs A.7 and 8 of this Section. The conditions for exemption for satellite accumulation are included in Paragraphs 1-8 below.

1. If a container holding hazardous waste is not in good condition, or if it begins to leak, the generator shall immediately transfer the hazardous waste from this container to a container that is in good condition and does not leak, or immediately transfer and manage the waste in a central accumulation area operated in compliance with LAC 33:V.1013.C or 1015.B.

2. The generator shall use a container made of or lined with materials that will not react with, and are otherwise compatible with, the hazardous waste to be accumulated, so that the ability of the container to contain the waste is not impaired.

3. Special Standards for Incompatible Wastes

a. Incompatible wastes, or incompatible wastes and materials (see LAC 33:V.199.Appendix B for examples), shall not be placed in the same container, unless the generator complies with LAC 33:V.1517.B.

b. Hazardous waste shall not be placed in an unwashed container that previously held an incompatible waste or material, unless the generator complies with LAC 33:V.1517.B.

c. A container holding a hazardous waste that is incompatible with any waste or other material accumulated nearby in other containers shall be separated from the other materials or protected from them by any practical means.

4. A container holding hazardous waste shall be closed at all times during accumulation, except:

a. when adding, removing, or consolidating waste; or

b. when temporary venting of a container is necessary:

- i. for the proper operation of equipment; or
- ii. to prevent dangerous situations, such as build-up of extreme pressure.

5. A generator shall mark or label its container with:

- a. the words “Hazardous Waste”; and
- b. an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the

U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704).

6. A generator who accumulates either acute hazardous waste listed in LAC 33:V.4901.B or E or nonacute hazardous waste in excess of the amounts listed in Subsection A of this Section at or near any point of generation shall do the following:

a. comply within three consecutive calendar days with the applicable central accumulation area regulations in LAC 33:V.1013.C or 1015.B, or

b. remove the excess from the satellite accumulation area within three consecutive calendar days to either:

i. a central accumulation area operated in accordance with the applicable regulations in LAC 33:V.1013.C or 1015.B;

ii. an on-site interim status or permitted treatment, storage, or disposal facility, or

iii. an off-site designated facility; and

c. during the three consecutive calendar day period the generator shall continue to comply with Paragraphs A.1-5 of this Section. (The generator shall mark or label the container(s) holding the excess accumulation of hazardous waste with the date the excess amount began accumulating.)

7. All satellite accumulation areas operated by a small quantity generator shall meet the preparedness and prevention regulations of LAC 33:V.1013.C.8 and emergency procedures regulations of LAC 33:V.1013.C.9.

8. All satellite accumulation areas operated by a large quantity generator shall meet the preparedness, prevention and emergency procedures in LAC 33:V.Chapter 10.Subchapter D.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:906 (July 2020).

§1013. Conditions for Exemption for Small Quantity Generators

A. A small quantity generator may accumulate hazardous waste on-site without a permit or interim status, and without complying with the requirements of LAC 33:V.Subpart 1, provided that all the conditions for exemption listed in this Section are met.

B. Generation. The generator generates in a calendar month no more than the amounts specified in the definition of small quantity generator in LAC 33:V.109.

ENVIRONMENTAL QUALITY

C. Accumulation. The generator accumulates hazardous waste on-site for no more than 180 days, unless in compliance with the conditions for exemption for longer accumulation in Subsections E and F of this Section. The following accumulation conditions also apply:

1. Accumulation Limit. The quantity of hazardous waste accumulated on-site never exceeds 6,000 kilograms (13,200 lbs.).

2. Accumulation of Hazardous Waste in Containers

a. Condition of Containers. If a container holding hazardous waste is not in good condition, or if it begins to leak, the small quantity generator shall immediately transfer the hazardous waste from this container to a container that is in good condition, or immediately manage the waste in some other way that complies with the conditions for exemption of this Section.

b. Compatibility of Waste with Container. The small quantity generator shall use a container made of or lined with materials that will not react with, and are otherwise compatible with, the hazardous waste to be accumulated, so that the ability of the container to contain the waste is not impaired.

c. Management of Containers

i. A container holding hazardous waste shall always be closed during accumulation, except when it is necessary to add or remove waste.

ii. A container holding hazardous waste shall not be opened, handled, or accumulated in a manner that may rupture the container or cause it to leak.

d. Inspections. At least weekly, the small quantity generator shall inspect central accumulation areas. The small quantity generator shall look for leaking containers and for deterioration of containers caused by corrosion or other factors. See Subparagraph C.2.a of this Section for remedial action required if deterioration or leaks are detected.

e. Special Conditions for Accumulation of Incompatible Wastes

i. Incompatible wastes, or incompatible wastes and materials (see LAC 33:V.199.Appendix B for examples), shall not be placed in the same container, unless the generator complies with LAC 33:V.1517.B.

ii. Hazardous waste shall not be placed in an unwashed container that previously held an incompatible waste or material (see LAC 33:V.199.Appendix B for examples), unless the generator complies with LAC 33:V.1517.B.

iii. A container accumulating hazardous waste that is incompatible with any waste or other materials accumulated or stored nearby in other containers, piles, open tanks, or surface impoundments shall be separated from the other materials or protected from them by means of a dike, berm, wall, or other device.

3. Accumulation of Hazardous Waste in Tanks

a. A small quantity generator of hazardous waste shall comply with the following operating conditions.

i. Treatment or accumulation of hazardous waste in tanks shall comply with LAC 33:V.1517.B.

ii. Hazardous waste or treatment reagents shall not be placed in a tank if they could cause the tank or its inner liner to rupture, leak, corrode, or otherwise fail before the end of its intended life.

iii. Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., dike or trench), a drainage control system, or a diversion structure (e.g., standby tank) with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank.

iv. Where hazardous waste is continuously fed into a tank, the tank shall be equipped with a means to stop this inflow (e.g., waste feed cutoff system or by-pass system to a standby tank).

b. Except as noted in Subparagraph C.3.c of this Section, a small quantity generator that accumulates hazardous waste in tanks shall inspect, where present:

i. discharge control equipment (e.g., waste feed cutoff systems, bypass systems, and drainage systems) at least once each operating day, to ensure that it is in good working order;

ii. data gathered from the monitoring equipment (e.g., pressure and temperature gauges) at least once each operating day to ensure that the tank is being operated according to its design;

iii. the level of waste in the tank at least once each operating day to ensure compliance with Clause C.3.a.iii of this Section;

iv. the construction materials of the tank at least weekly to detect corrosion or leaking of fixtures or seams; and

v. the construction materials of, and the area immediately surrounding, discharge confinement (e.g., dikes) at least weekly to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation). The generator shall remedy any deterioration or malfunction of equipment or structures, which the inspection reveals on a schedule, which ensures that the problem does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, remedial action shall be taken immediately.

c. A small quantity generator accumulating hazardous waste in tanks or tank systems that have full secondary containment and that either use leak detection equipment to alert personnel to leaks, or implement established workplace practices to ensure leaks are properly identified, shall inspect at least weekly, where applicable, the areas identified in Clauses C.3.b.i-v of this Section. Use of the alternate inspection schedule shall be documented in the generator's operating record. This documentation shall

include a description of the established workplace practices at the generator.

d. A small quantity generator accumulating hazardous waste in tanks shall, upon closure of the facility, remove all hazardous waste from tanks, discharge control equipment, and discharge confinement structures. At closure, as throughout the operating period, unless the small quantity generator can demonstrate, in accordance with LAC 33:V.109.Hazardous Waste.4 or 5, that any solid waste removed from its tank is not a hazardous waste, then it shall manage such waste in accordance with all applicable provisions of LAC 33:V.Chapters 10, 11, 13, 22, and 43.

e. A small quantity generator shall comply with the following special conditions for accumulation of ignitable or reactive waste.

i. Ignitable or reactive waste shall not be placed in a tank, unless:

(a). the waste is treated, rendered, or mixed before or immediately after placement in a tank so that the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under LAC 33:V.4903.B or D and LAC 33:V.1517.B is complied with;

(b). the waste is accumulated or treated in such a way that it is protected from any material or conditions that may cause the waste to ignite or react; or

(c). the tank is used solely for emergencies.

ii. A small quantity generator which treats or accumulates ignitable or reactive waste in covered tanks shall comply with the buffer zone requirements for tanks contained in Tables 2-1 through 2-6 of the 1977 or 1981 National Fire Protection Association's "Flammable and Combustible Liquids Code" (incorporated by reference in LAC 33:V.110).

iii. A small quantity generator shall comply with the following special conditions for incompatible wastes.

(a). Incompatible wastes, or incompatible wastes and materials (see LAC 33:V.199.Appendix B for examples), shall not be placed in the same tank, unless the generator complies with LAC 33:V.1517.B.

(b). Hazardous waste shall not be placed in an unwashed tank that previously held an incompatible waste or material, unless the generator complies with LAC 33:V.1517.B.

f. A small quantity generator accumulating hazardous waste in tanks shall use inventory logs, monitoring equipment or other records in accordance with LAC 33:V.1909.D or E to demonstrate that hazardous waste has been emptied within 180 days of first entering the tank if using a batch process, or in the case of a tank with a continuous flow process, demonstrate that estimated volumes of hazardous waste entering the tank daily exit the tank within 180 days of first entering.

g. A small quantity generator accumulating hazardous waste in tanks shall keep inventory logs or records documenting the generator's compliance with LAC 33:V.1909.D or E on-site and readily available for inspection.

4. Accumulation of Hazardous Waste on Drip Pads. If the waste is placed on drip pads, the small quantity generator shall:

a. comply with LAC 33:V.2801, 2803, 2804, 2805, 2807, and 2809;

b. remove all wastes from the drip pad at least once every 90 days (Any hazardous wastes that are removed from the drip pad at least once every 90 days are then subject to the 180-day accumulation limit in Subsection C of this Section and LAC 33:V.1011 if hazardous waste is being managed in satellite accumulation areas prior to being moved to the central accumulation area.); and

c. maintain on-site at the facility the following records readily available for inspection:

i. a written description of procedures that are followed to ensure that all wastes are removed from the drip pad and associated collection system at least every 90 days; and

ii. documentation of each waste removal, including the quantity of waste removed from the drip pad and the sump or collection system, and the date and time of the removal.

5. Accumulation of Hazardous Waste in Containment Buildings. If the wastes is placed in containment buildings, the small quantity generator shall:

a. comply with LAC 33:V.Chapter 43.Subchapter T;

b. label its containment building with the words "Hazardous Waste" in a conspicuous place easily visible to employees, visitors, emergency responders, waste handlers, or other persons on-site;

c. provide an indication of the hazards of the contents in a conspicuous place (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazardous communication consistent with the U.S. Department of Transportation requirements in 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard in 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704);

d. maintain the following records on-site and made readily available for inspection:

i. the professional engineer certification that the building complies with the design standards specified in LAC 33:V.4703 (This certification shall be in the generator's files prior to operation of the unit.); and

ENVIRONMENTAL QUALITY

ii. inventory logs or other records (i.e., monitoring equipment or any other effective means) with the following information:

(a). a written description of procedures to ensure that each waste volume remains in the unit for no more than 90 days, a written description of the waste generation and management practices for the facility showing that the generator is consistent with maintaining the 90-day limit, and documentation that the procedures are complied with; or

(b). documentation that the unit is emptied at least once every 90 days.

6. Labeling and Marking of Containers and Tanks

a. A small quantity generator shall mark or label its containers and tanks accumulating hazardous waste with:

i. the words "Hazardous Waste"; and

ii. an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements in 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Communication Standard in 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704).

b. In addition to Clauses 6.a.i and ii above, each container shall be marked or labelled with the date upon which each period of accumulation begins. The date shall be clearly visible for inspection on each container.

7. Land Disposal Restrictions. A small quantity generator shall comply with all the applicable requirements in LAC 33:V.Chapter 22.

8. Preparedness and Prevention

a. Maintenance and Operation of Facility. A small quantity generator shall maintain and operate its facility to minimize the possibility of a fire, explosion, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water, which could threaten human health or the environment.

b. Required Equipment. All areas where hazardous waste is either generated or accumulated shall be equipped with the items in Clauses 1013.C.b.i-iv of this Section, unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below or the actual waste generation or accumulation area does not lend itself for safety reasons to have a particular kind of equipment specified below. A small quantity generator may determine the most appropriate locations to locate equipment necessary to prepare for and respond to emergencies. The required equipment consists of:

i. an internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

ii. a device (i.e., a telephone) immediately available at the scene of operations, or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams;

iii. portable fire extinguishers, fire control equipment, including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals, spill control equipment, and decontamination equipment; and

iv. water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

c. Testing and Maintenance of Equipment. All communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, shall be tested and maintained as necessary to ensure its proper operation in time of emergency.

d. Access to Communications or Alarm System

i. Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation shall have immediate access (e.g., direct or unimpeded access) to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required under Subparagraph C.8.b of this Section.

ii. In the event there is just one employee on the premises while the facility is operating, the employee shall have immediate access (e.g., direct or unimpeded access) to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required under Subparagraph C.8.b of this Section.

e. Required Aisle Space. The small quantity generator shall maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

f. Arrangements with Local Authorities

i. The small quantity generator shall attempt to make arrangements with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers and local hospitals, taking into account the types and quantities of hazardous waste handled at the facility. Arrangements may be made with the local emergency planning committee, if it is determined to be the appropriate organization with which to make arrangements.

(a). A small quantity generator attempting to make arrangements with its local fire department shall determine the potential need for the services of the local police department, other emergency response teams,

emergency response contractors, equipment suppliers and local hospitals.

(b). As part of this coordination, the small quantity generator shall attempt to make arrangements, as necessary, to familiarize the above organizations with the layout of the facility, the properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes as well as the types of injuries or illnesses that could result from fires, explosions, or releases at the facility.

(c). Where more than one police or fire department might respond to an emergency, the small quantity generator shall attempt to make arrangements designating primary emergency authority to a specific fire or police department, and arrangements with any others to provide support to the primary emergency authority.

ii. A small quantity generator shall maintain records documenting the arrangements with the local fire department as well as any other organization necessary to respond to an emergency. This documentation shall include documentation in the operating record that either confirms such arrangements actively exist or in cases where no arrangements exist, confirms that attempts to make such arrangements were made.

iii. A facility possessing 24-hour response capabilities may seek a waiver from the authority having jurisdiction (AHJ) over the fire code at the facility's location (i.e., state fire marshal or district fire chief) as far as needing to make arrangements with the local fire department as well as any other organization necessary to respond to an emergency, provided the waiver is documented in the operating record.

9. Emergency Procedures. The small quantity generator shall comply with the following conditions for those areas of the generator facility where hazardous waste is generated and accumulated.

a. At all times there shall be at least one employee either on the premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures specified in Subparagraph C.9.d of this Section. This employee is the emergency coordinator.

b. The small quantity generator shall post the following information next to telephones or in areas directly involved in the generation and accumulation of hazardous waste:

i. the name and emergency telephone number of the emergency coordinator;

ii. location of fire extinguishers and spill control material, and if present, fire alarm; and

iii. the telephone number of the fire department, unless the facility has a direct alarm.

c. The small quantity generator shall ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

d. The emergency coordinator or his designee shall respond to any emergencies that arise. The applicable responses are as follows.

i. In the event of a fire, the small quantity generator shall call the fire department or attempt to extinguish it using a fire extinguisher.

ii. In the event of a spill, the small quantity generator is responsible for containing the flow of hazardous waste to the extent possible, and as soon as is practicable, cleaning up the hazardous waste and any contaminated materials or soil. Such containment and cleanup can be conducted either by the small quantity generator or by a contractor on behalf of the small quantity generator.

iii. Immediate Emergency Notification

(a). Notification to the Louisiana State Police, Department of Public Safety

(i). In the event of a fire, explosion, or other release that could threaten human health outside the facility or when the small quantity generator has knowledge that a spill has reached surface water, the small quantity generator shall immediately, but in no case later than one hour, notify the 24-hour Louisiana Emergency Hazardous Materials Hotline by calling 1-877-922-6595 or 225-925-6595. This notification to the Louisiana State Police, Department of Public Safety shall be in accordance with LAC 33:I.Chapter 39 and shall include the following information:

[a].the name and telephone number, and employer of the contact person;

[b].the company or responsible party's name;

[c].where the incident occurred (mailing address and physical location);

[d].date and time the incident began and ended;

[e].the identity of the hazardous material released or involved (this would include proper chemical name if available, an indication of whether it is an extremely hazardous substance and whether it is a solid, liquid or gas);

[f].the actual amount or an estimate of the amount released; or in the absence of quantity data for the hazardous materials released, one of the following incident classifications: unusual event, site emergency, or general emergency;

[g].whether the material released escaped or could reasonably be expected to escape, beyond the site of the facility;

[h].if available, the substance's hazard class and any other identifier (e.g., U.N. number, CHRIS code, etc.);

ENVIRONMENTAL QUALITY

[i]. medium into which the hazardous materials was released (e.g., air, water, land);

[j]. whether the release resulted in a fire or explosion;

[k]. injury to personnel, or a fatality resulting from the release or incident;

[l]. details regarding wind direction, wind speed, temperature, and precipitation;

[m]. any need or a recommendation for, an offsite protective action (road closure, shelter-in-place, evacuation, or none);

[n]. details of the release or incident; and

[o]. whether other responsible state and local agencies such as the local emergency planning committee have been notified.

(ii). **Updates During the Incident.** The hotline must be immediately notified of any adverse change in the nature or rate of the discharge. Additional notifications must be made for discharges of multiple constituents when they originate from different causes or sources or they are substantially different in nature from the discharges in the initial notification.

(iii). **Written Follow-Up Reports.** Written follow-up reports for any unauthorized discharge that requires notification shall be submitted by the small quantity generator to SPOC in accordance with LAC 33:I.3925 and the Louisiana State Police, Department of Public Safety in accordance with LAC 33.V.Subpart 2.10111.

(b). **Emergency Notifications to Other Regulatory Agencies.** The small quantity generator should be aware that other federal, state and local agencies may require immediate and/or follow-up notification of an emergency situation under other regulatory authorities, including, but not limited to, the following:

(i). the National Response Center by calling their 24-hour toll free number 1-800-424-8802, to the extent that immediate notification is required under 40 CFR 302.6 (exceedance of reportable quantities) or 40 CFR 110.6 (oil spills); and/or

(ii). the appropriate local emergency planning committee having jurisdiction over the facility to the extent that immediate notification is required under 40 CFR part 355, Subpart C or LAC 33.V.Subpart 2.Chapter 101. (Contact information for each local emergency planning committee is available on the Louisiana State Police, Department of Public Safety's website.)

D. **Transporting Over 200 Miles.** A small quantity generator who transports its waste, or offers its waste for transportation, over a distance of 200 miles or more for off-site treatment, storage or disposal may accumulate hazardous waste on-site for 270 days or less without a permit or without having interim status provided that the generator complies with the conditions of Subsection C of this Section.

E. **Accumulation Time Limit Extension.** A small quantity generator who accumulates hazardous waste for more than 180 days (or for more than 270 days if it transports its waste, or offers its waste for transportation, over a distance of 200 miles or more) is subject to the requirements of LAC 33.V.Subpart 1 unless it has been granted an extension to the 180-day (or 270-day if applicable) period. Such extension may be granted by the Office of Environmental Services if hazardous waste shall remain on-site for longer than 180-days, or 270 days if applicable, due to temporary, unforeseen, and uncontrollable circumstances. An extension of up to 30 days may be granted at the discretion of the Office of Environmental Services on a case-by-case basis.

F. **Rejected Load.** A small quantity generator who sends a shipment of hazardous waste to a designated facility with the understanding that the designated facility can accept and manage the waste and later receives that shipment back as a rejected load or residue in accordance with the manifest discrepancy provisions of LAC 33.V.1516.C may accumulate the returned waste on-site in accordance with Subsections B-E of this Section. Upon receipt of the returned shipment, the generator shall:

1. sign Item 18c of the manifest, if the transporter returned the shipment using the original manifest; or

2. sign Item 20 of the manifest, if the transporter returned the shipment using a new manifest.

G. A small quantity generator experiencing an episodic event may accumulate hazardous waste in accordance with Subchapter C of this Chapter in lieu of Section 1015 of this Chapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:906 (July 2020).

§1015. Conditions for Exemption for Large Quantity Generators

A. A large quantity generator may accumulate hazardous waste on-site without a permit or interim status, and without complying with the requirements of LAC 33.V.Subpart 1, provided that all of the following conditions for exemption are met.

B. **Accumulation.** A large quantity generator accumulates hazardous waste on-site for no more than 90 days, unless in compliance with the accumulation time limit extension or F006 waste accumulation conditions for exemption in Subsections C-F of this Section. The following accumulation conditions also apply.

1. **Accumulation of Hazardous Waste in Containers.** If the hazardous waste is placed in containers, the large quantity generator shall comply with the following:

a. **Air Emission Standards.** The applicable requirements of LAC 33.V.Chapter 43.Q, R, and V;

b. **Condition of Containers.** If a container holding hazardous waste is not in good condition, or if it begins to

leak, the large quantity generator shall immediately transfer the hazardous waste from this container to a container that is in good condition, or immediately manage the waste in some other way that complies with the conditions for exemption of this Section;

c. **Compatibility of Waste with Container.** The large quantity generator shall use a container made of or lined with materials that will not react with, and are otherwise compatible with, the hazardous waste to be stored, so that the ability of the container to contain the waste is not impaired.

d. **Management of Containers**

i. A container holding hazardous waste shall always be closed during accumulation, except when it is necessary to add or remove waste.

ii. A container holding hazardous waste shall not be opened, handled, or stored in a manner that may rupture the container or cause it to leak.

e. **Inspections.** At least weekly, the large quantity generator shall inspect central accumulation areas. The large quantity generator shall look for leaking containers and deterioration of containers caused by corrosion and other factors. See Subparagraph B.1.b of this Section for remedial action required if deterioration or leaks are detected.

f. **Special Conditions for Accumulation of Ignitable and Reactive Wastes**

i. A container holding ignitable or reactive waste shall be located at least 15 meters (50 feet) from the facility's property line unless a written approval is obtained from the authority having jurisdiction (AHJ) over the fire code at the facility's location (i.e., state fire marshal or district fire chief) allowing hazardous waste accumulation to occur within this restricted area. A record of the written approval shall be maintained as long as ignitable or reactive hazardous waste is accumulated in this area.

ii. The large quantity generator shall take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. This waste shall be separated and protected from sources of ignition or reaction including but not limited to the following: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical, or mechanical), spontaneous ignition (e.g., from heat-producing chemical reactions), and radiant heat. While ignitable or reactive waste is being handled, the large quantity generator shall confine smoking and open flame to specially designated locations. Signs stating "No Smoking" shall be conspicuously placed wherever there is a hazard from ignitable or reactive waste.

g. **Special Conditions for Accumulation of Incompatible Wastes**

i. Incompatible wastes, or incompatible wastes and materials (see LAC 33:V.199.Appendix B for examples), shall not be placed in the same container, unless the generator complies with LAC 33:V.4321.B.

ii. Hazardous waste shall not be placed in an unwashed container that previously held an incompatible waste or material (see LAC 33:V.199.Appendix B for examples), unless the generator complies with LAC 33:V.4321.B.

iii. A container holding a hazardous waste that is incompatible with any waste or other materials accumulated or stored nearby in other containers, piles, open tanks, or surface impoundments shall be separated from the other materials or protected from them by means of a dike, berm, wall, or other device.

2. **Accumulation of Hazardous Waste in Tanks**

a. If waste is placed in tanks, the large quantity generator shall comply with the applicable requirements of LAC 33:V.1903.A, 1905.B-H, 1907, 1909, 1911, 1913, 1915 (except 1915.C), 1917, 1919, and 1921.

b. A large quantity generator accumulating hazardous waste in tanks shall use inventory logs, monitoring equipment or other records in accordance with LAC 33:V.1909.D or E to demonstrate that hazardous waste has been emptied within 90 days of first entering the tank if using a batch process, or in the case of a tank with a continuous flow process, demonstrate that estimated volumes of hazardous waste entering the tank daily exit the tank within 90 days of first entering.

c. A large quantity generator accumulating hazardous waste in tanks shall keep inventory logs or records documenting the generator's compliance with LAC 33:V.1909.D or E on-site and readily available for inspection.

3. **Accumulation of Hazardous Waste on Drip Pads.** If the hazardous waste is placed on drip pads, the large quantity generator shall comply with the following.

a. The large quantity generator shall comply with LAC 33:V.2801, 2803, 2804, 2805, 2807, and 2809.

b. The large quantity generator shall remove all wastes from the drip pad at least once every 90 days. Any hazardous wastes that are removed from the drip pad are then subject to the 90-day accumulation limit in Subsection B of this Section and LAC 33:V.1011, if the hazardous wastes are being managed in satellite accumulation areas prior to being moved to a central accumulation area.

c. The large quantity generator shall maintain on-site at the facility the following records readily available for inspection:

i. a written description of procedures that are followed to ensure that all wastes are removed from the drip pad and associated collection system at least once every 90 days; and

ii. documentation of each waste removal, including the quantity of waste removed from the drip pad and the sump or collection system and the date and time of removal.

ENVIRONMENTAL QUALITY

4. Accumulation of Hazardous Waste in Containment Buildings. If the waste is placed in containment buildings, the large quantity generator shall:

- a. comply with LAC 33:V.Chapter 43.Subchapter T;
 - b. label its containment building with the words "Hazardous Waste" in a conspicuous place easily visible to employees, visitors, emergency responders, waste handlers, or other persons on-site;
 - c. provide an indication of the hazards of the contents in a conspicuous place (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements in 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard in 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704);
 - d. maintain the following records on-site and made readily available for inspection:
 - i. the professional engineer certification that the building complies with the design standards specified in LAC 33:V.4703 (This certification shall be in the generator's files prior to operation of the unit.); and
 - ii. inventory logs or other records (i.e., monitoring equipment or any other effective means) with the following information:
 - (a). a written description of procedures to ensure that each waste volume remains in the unit for no more than 90 days, a written description of the waste generation and management practices for the facility showing that the generator is consistent with respecting the 90-day limit, and documentation that the procedures are complied with; or
 - (b). documentation that the unit is emptied at least once every 90-days.
5. Labeling and Marking of Containers and Tanks
- a. A large quantity generator shall mark or label its containers and tanks accumulating hazardous waste with:
 - i. the words "Hazardous Waste"; and
 - ii. an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704).
 - b. In addition to Clauses 5.a.i and ii above, each container shall be marked or labelled with the date upon

which each period of accumulation begins. The date shall be clearly visible for inspection on each container.

6. Emergency Procedures. The large quantity generator complies with the standards in Subchapter D of this Chapter, Preparedness, Prevention, and Emergency Procedures for Large Quantity Generators.

7. Personnel Training

a. The Required Training Elements

i. Facility personnel shall successfully complete a program of classroom instruction, online training (e.g., computer-based or electronic), or on-the-job training that teaches them to perform their duties in a way that ensures compliance with this Chapter. The large quantity generator shall ensure that this program includes all the elements described in the document required under Clause B.7.d of this Section.

ii. This program shall be directed by a person trained in hazardous waste management procedures, and shall include instruction which teaches facility personnel hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed.

iii. At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable:

- (a). procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment;
- (b). key parameters for automatic waste feed cut-off systems;
- (c). communications or alarm systems;
- (d). responses to fires or explosions;
- (e). responses to groundwater contamination incidents; and
- (f). shutdown of operations.

iv. For facility employees that receive emergency response training in accordance with U.S. Occupational Safety and Health Administration regulations 29 CFR 1910.120(p)(8) and 120(q), the large quantity generator is not required to provide separate emergency response training in accordance with this Section, provided that the overall facility training meets all the conditions of exemption in this Section.

b. Facility personnel shall successfully complete the program required in Subparagraph B.7.a of this Section within six months after the date of their employment or assignment to the facility, or to a new position at the facility, whichever is later. Employees shall not work in unsupervised positions until they have completed the training standards of Subparagraph B.7.a of this Section.

c. Facility personnel shall take part in an annual review of the initial training required in Subparagraph B.7.a of this Section.

d. The large quantity generator shall maintain documents and records at the facility including:

i. the job title of each position at the facility related to hazardous waste management, and the name of the employee filling each job;

ii. a written job description of each position listed under Clause B.7.d.i of this Section (This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but shall include the requisite skill, education, or other qualifications, and duties of facility personnel assigned to each position);

iii. a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed under Clause B.7.d.i of this Section; and

iv. records that document that the training or job experience, required under Subparagraphs B.7.a-c of this Section, has been given to, and completed by, facility personnel.

e. Training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

8. Closure. These regulations regarding closure are applicable to large quantity generators accumulating hazardous waste in a central accumulation area (i.e., container storage [e.g., drums, roll-off boxes, etc.], tank systems, drip pads, or containment buildings) at a facility. The closure requirements of this Paragraph do not apply to satellite accumulation areas. Except as allowed for by Subparagraph B.8.k of this Paragraph (i.e., Notification requirements for closures initiated prior to July 20, 2020, prior to closing a central accumulation area, or prior to closing the facility, the large quantity generator shall meet the following conditions.

a. Notification of Closure of a Central Accumulation Area. A large quantity generator shall perform one of the following when closing a central accumulation area.

i. The large quantity generator shall notify the Office of Environmental Services following the procedures in Subparagraph B.8.b of this Paragraph in order to meet the closure performance standards of Clause B.8.c.i of this Paragraph for container storage, tank systems, and containment buildings or Clause B.8.c.ii for drip pads. If the central accumulation area is subsequently reopened, the large quantity generator shall update the notice in the operating record.

ii. The large quantity generator shall place a notice in the operating record to document the closure of the central accumulation area within 30 days after closure of the unit. If the central accumulation area is subsequently reopened, the large quantity generator shall update the notice in the operating record. Information required as part of the notice in the operating record shall include:

(a). reason for closure;

(b). name and/or other unit designation;

(c). description of the type of waste accumulation (e.g., single roll-off box accumulating solids, tank system with secondary containment, etc.);

(d). basic design and construction information for any unit that is a tank system, containment building, or drip pad;

(e). basic design and construction information for secondary containment (e.g., long-term [i.e., fixed, immovable] or temporary, materials of construction, coating, etc.) (The information shall include whether there are any sumps or engineered swales serving as a receptacle for drainage in the secondary containment.);

(f). location within the facility (at a minimum, a general location relative to a fixed building or unit along with cardinal direction and distance; a map may be included; geographic coordinates are required for long-term [i.e., fixed, immovable] units);

(g). period of time of use;

(h). description of the hazardous waste and waste codes (waste profiles may be included);

(i). documentation showing how the last stored hazardous waste was managed (e.g., copies of final manifests or written/signed notation if sent off-site for treatment or disposal; written/signed notation if transferred elsewhere on-site for treatment, storage, or disposal as may be authorized by LAC 33:V.Subpart 1);

(j). for a central accumulation area consisting of container storage, the following information to support a presumptive demonstration of closure in accordance with Clause B.8.d.i of this Paragraph:

(i). weekly inspection logs, summary, or other information (e.g., photographs, written documentation of spill clean ups, etc.) to demonstrate during the entirety of the accumulation period that:

[a].there were no spills, leaks, or releases of hazardous waste or hazardous constituents onto the secondary containment or soil immediately surrounding and beneath the unit, or they were properly cleaned up and managed in order to meet the closure performance standards; and

[b].for container storage with long-term (i.e., fixed, immovable) secondary containment, there were no visible signs of significant cracks, gaps, or deterioration of the secondary containment, or they were properly repaired in

ENVIRONMENTAL QUALITY

a timely manner. Any sumps or engineered swales serving as a receptacle for drainage in the secondary containment should be clearly mentioned;

(ii). for container storage with long-term (i.e., fixed, immovable) secondary containment, after removal of all waste a final inspection log/report and other information (e.g., photographs, etc.) to demonstrate that:

[a].there was no significant staining or other signs of contamination from hazardous waste on the secondary containment, including sumps or engineered swales serving as a receptacle for drainage in the secondary containment; and

[b].there were no visible signs of significant cracks, gaps, or deterioration for sumps or engineered swales serving as a receptacle for drainage;

(k). any information that might be needed in support of a sufficiency demonstration (see Subparagraph B.8.e of this Paragraph); and

(l). any other information that might be deemed relevant by the large quantity generator (e.g., documentation regarding additional activities necessary to meet the closure performance standards, photographs, manifests, etc.).

b. Notification of Closure of a Facility, or Optional Notification of Closure of a Central Accumulation Area. A large quantity generator shall provide the following notification for closure of the facility:

i. notify the Office of Environmental Services using the department's Notification of Hazardous Waste Activity Form (HW-1) no later than 30 days prior to closing the facility, and include the following supplemental information in a cover letter:

(a). contact information for person responsible for closure;

(b). reason for closure;

(c). list of units being closed including names and/or other unit designations;

(d). for each unit, description of the type of waste accumulation (e.g., single roll-off box accumulating solids, tank system with secondary containment, etc.);

(e). basic design and construction information for any unit that is a tank system, containment building, or drip pad;

(f). for each unit, basic design and construction information for secondary containment (e.g., long-term [i.e., fixed, immovable] or temporary, materials of construction, coating, etc.) (The information shall include whether there are any sumps or engineered swales serving as a receptacle for drainage in the secondary containment.);

(g). for each unit, location within the facility (at a minimum, a general location relative to a fixed building or unit along with cardinal direction and distance; a map may be included; geographic coordinates are required for long-term [i.e., fixed, immovable] units);

(h). period of time of use for each unit;

(i). for each unit, description of the hazardous waste and waste codes (waste profiles may be included);

(j). for any unit being closed that is container storage, provide either:

(i). a statement that the unit will be closed in accordance with Clause B.8.d.i of this Paragraph (presumptive demonstration of closure); or

(ii). supplemental information required by Subclause B.8.b.i.(k) of this Paragraph below; and

(k). for any units being closed that are tank systems, containment buildings, drip pads, or container storage requiring additional demonstration efforts of closure under Clause B.8.d.ii of this Paragraph, provide the following:

(i). decontamination method(s) of aboveground components;

(ii). protocol/methods and list of constituents for confirmatory sampling and analysis of rinsate;

(iii). protocol/methods, list of constituents, and locations and depths for confirmatory sampling and analysis of soil (and groundwater, if deemed necessary) immediately surrounding and beneath the unit considering the following:

[a].soil sampling shall consider random locations and specific locations under the containment including sumps, or engineered swales serving as a receptacle for drainage, and areas where there may have been visible signs of significant staining, cracks, gaps or other deterioration;

[b].if there is confirmed soil contamination resulting from a release of hazardous waste or hazardous constituents from the central accumulation area, or if there is reason to believe that the groundwater may have been impacted by a release of hazardous waste or hazardous constituents from the central accumulation area, the large quantity generator shall conduct confirmatory groundwater sampling and analysis. The extent of any confirmatory groundwater sampling and analysis shall be based upon site-specific conditions, including but not limited to: depth to the water table; information regarding any suspected or known contamination in the environmental media; potential mobility of the constituents; site-specific conditions that may encourage constituent mobility; and the extent and effectiveness of any previous response actions; and

[c].in lieu of confirmatory sampling and analysis of soil (and groundwater, if deemed necessary), the large quantity generator may state its intent to demonstrate that the closure performance standards for soil and groundwater have been met through the Risk Evaluation/Corrective Action Program (RECAP) and remedial activities (See Clause B.8.f.ii of this Paragraph for container storage, tank systems, and containment buildings and LAC 33:V.2809.B.2 for drip pads); and

ii. notify the Office of Environmental Services using the department's Notification of Hazardous Waste Activity Form (HW-1) within 90 days after closing the facility that it has complied with the closure performance standards of Subparagraph B.8.c of this Paragraph. If the facility cannot meet the closure performance standards of Subparagraph B.8.c of this Paragraph, the facility shall notify the Office of Environmental Services using the department's Notification of Hazardous Waste Activity Form (HW-1) that it will close as a landfill (i.e., close with waste in place) under 4501.B and D in the case of container storage, tank system or containment building unit(s). A facility with drip pads shall notify using the department's Notification of Hazardous Waste Activity Form (HW-1) that it will close under the standards of LAC 33:V.2809.B. The following supplemental information shall be included in a cover letter with any notification submitted under this Clause:

(a). information included in the prior notification of closure as delineated in Subclauses B.8.b.i.(a)-(i) of this Paragraph;

(b). for any container storage being closed in accordance with Clause B.8.d.i of this Paragraph (presumptive demonstration of closure):

(i). a signed statement from the responsible official stating that the closure performance standards have been met through the presumptive demonstration of closure requirements of Clause B.8.d.i of this Paragraph; and

(ii). documentation for any sufficiency demonstrations approved under Subparagraph B.8.e of this Paragraph; and

(c). for any units being closed that are tank systems, containment buildings, or drip pads (or container storage requiring additional demonstration efforts of closure under Subclause B.8.d.ii of this Paragraph), a closure report submitted for approval including:

(i). brief overview of closure activities;

(ii). details of the closure activities including:

[a].removal of final waste, contaminated debris, and contaminated soil;

[b].decontamination procedures;

[c].analytical results of the rinsate compared to potable water standards (i.e., the numerical closure performance standards, available on the department's website); and

[d].analytical results of the soil (and groundwater, if deemed necessary) compared to the numerical closure performance standards available in guidance on the department's website as delineated below:

[i].the numerical closure performance standards are the applicable limiting screening option standards as defined by the Risk Evaluation/Corrective Action Program (RECAP) in LAC 33:I.Chapter 13;

[ii].for soil, the residential screening standard and industrial screening standard with conveyance notice may be used; and

[iii].in lieu of conducting confirmatory soil sampling (and groundwater sampling, if deemed necessary) during closure, the large quantity generator may state that the closure performance standards for soil and groundwater will be met through RECAP and remedial activities (See Clause B.8.f.ii of this Paragraph for container storage, tank systems, and containment buildings and LAC 33:V.2809.B.2 for drip pads.);

(iii).supporting documentation including:

[a].sampling and analysis protocol/methods, locations and depths, and borehole logs, as applicable;

[b].analytical lab data reports; and

[c].supporting documentation deemed relevant by the large quantity generator (e.g., photographs, manifests, description of any other actions relevant to the closure not otherwise mentioned, etc.);

(iv).documentation for any sufficiency demonstrations approved under Subparagraph B.8.e of this Paragraph; and

(v). a written statement signed by the responsible official stating that the closure performance standards have been met. (The Office of Environmental Services shall review and approve the closure report and notification to ensure that the closure performance standards have been met.)

iii. A large quantity generator may request additional time to close and meet the closure performance standards. The large quantity generator shall notify the Office of Environmental Services using the department's Notification of Hazardous Waste Activity Form (HW-1) within 75 days after the date provided in Clause B.8.b.i of this Paragraph to request an extension and provide an explanation as to why the additional time is required.

c. Closure Performance Standards

i. Closure Performance Standards for Central Accumulation Areas that are Container Storage, Tank Systems, or Containment Buildings

(a). At closure, the large quantity generator shall close the central accumulation area or facility in a manner that:

(i). minimizes the need for further maintenance by controlling, minimizing, or eliminating, to the extent necessary to protect human health and the environment, the post-closure escape of hazardous waste, hazardous constituents, leachate, contaminated run-off, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere; and

(ii). removes or decontaminates all contaminated equipment, structures and soil and any remaining hazardous waste residues from the central

ENVIRONMENTAL QUALITY

accumulation area including containment system components (e.g., pads, liners, etc.), contaminated soils and subsoils, bases, and structures and equipment contaminated with waste, unless LAC 33:V.109.Hazardous Waste.5 applies.

(b). Any hazardous waste generated in the process of closing either the large quantity generator's facility or unit(s) accumulating hazardous waste shall be managed in accordance with all applicable standards of LAC 33:V.Subpart 1, including removing any hazardous wastes contained in these units within 90 days of generating it and managing these wastes in a RCRA subtitle C hazardous waste permitted treatment, storage, and disposal facility, or interim status facility.

(c). If the large quantity generator demonstrates that either any contaminated soils and wastes cannot be practicably removed or decontaminated as required in Division B.8.c.i.(a).(ii) of this Paragraph, or that the remaining contaminant levels are not protective of human health and the environment as demonstrated by the confirmatory sampling and analytical results specified in Subdivision B.8.b.ii.(c).(ii).[d] of this Paragraph, or through the use of RECAP and remedial activities under Subparagraph B.8.f of this Paragraph or LAC 33:V.2809.B.2, then the central accumulation area is considered to be a landfill. The large quantity generator shall then close the central accumulation area and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills (LAC 33:V.4501.B and D). In addition, for the purposes of closure, post-closure, and financial responsibility, such a central accumulation area is then considered to be a landfill, and the large quantity generator shall meet all of the requirements for landfills specified in LAC 33:V.Chapter 43.Subchapters F and G.

ii. Closure Performance Standards for Central Accumulation Areas that are Drip Pads. At closure, the large quantity generator shall comply with the closure requirements of Subparagraph B.8.b, Division B.8.c.i.(a).(i), and Subclause B.8.c.i.(b) of this Paragraph, and LAC 33:V.2809.A and B.

d. Special Provisions for Closing a Central Accumulation Area Consisting of Container Storage. This Subparagraph is applicable to closure for a central accumulation area consisting of container storage. The container storage may have temporary or long-term (i.e., fixed, immovable) secondary containment.

i. Presumptive Demonstration of Closure. A large quantity generator shall be considered to have performed due diligence in closing container storage (i.e., no additional closure efforts or verification shall be required) and met the closure performance standards of Clause B.8.c.i of this Paragraph provided the following conditions are met.

(a). All information has been placed in the operating record as required by Clause B.8.a.ii of this Paragraph.

(b). All containers were removed from the central accumulation area and were either sent off-site for treatment or disposal or were transferred elsewhere on-site for treatment, storage, or disposal authorized by LAC 33:V.Subpart 1.

(c). Weekly inspection logs, summary, or other information (e.g., photographs, written documentation of spill clean ups, etc.) in the operating record demonstrate during the entirety of the accumulation period that:

(i). there were no spills, leaks, or releases of hazardous waste or hazardous constituents onto the secondary containment or soil immediately surrounding and beneath the unit, or they were properly cleaned up and managed in order to meet the closure performance standards; and

(ii). for container storage with long-term (i.e., fixed, immovable) secondary containment, there were no visible signs of significant cracks, gaps, or deterioration of the secondary containment, or they were properly repaired in a timely manner. (Any sumps or engineered swales serving as a receptacle for drainage in the secondary containment should be clearly mentioned.)

(d). For container storage with long-term (i.e., fixed, immovable) secondary containment, after removal of all waste a final inspection log/report and other information (i.e., photographs, etc.) in the operating record demonstrate that:

(i). there was no significant staining or other signs of contamination from hazardous waste on the secondary containment, including sumps or engineered swales serving as a receptacle for drainage in the secondary containment; and

(ii). there were no visible signs of significant cracks, gaps or deterioration for sumps or engineered swales serving as a receptacle for drainage;

(e). additional demonstration efforts of closure as specified in Clause B.8.d.ii of this Paragraph below are not necessary; and

(f). a signed statement from the responsible official is submitted with the subsequent notification as required by Division B.8.b.ii.(b).(i) of this Paragraph stating the closure performance standards have been met through the presumptive demonstration of closure requirements of this Clause.

ii. Additional Demonstration Efforts of Closure for Container Storage

(a). It is the responsibility of the large quantity generator to be aware of the closure performance standards and to make a good faith effort to demonstrate that the closure performance standards have been met. Additional decontamination procedures and confirmatory sampling of the final rinsate and/or soil (and groundwater, if deemed necessary) shall be required if either:

(i). any of the conditions of Clause B.8.d.i of this Paragraph are not met; or

(ii). the potential future use of the area requires additional efforts to demonstrate that sufficient decontamination has been achieved (e.g., if a secondary containment area has a potential future use for storing food grade products, then decontamination procedures and confirmatory sampling of the final rinsate may be required to verify that it has been adequately decontaminated);

(b). Container storage requiring additional closure efforts shall meet the notification requirements of Subclause B.8.b.i.(k) of this Paragraph (i.e., prior notification) and Subclause B.8.b.ii.(c) of this Paragraph (i.e., closure report for subsequent notification), unless a sufficiency demonstration is approved by the Office of Environmental Services in accordance with Subparagraph B.8.e of this Paragraph. The Office of Environmental Services shall review and approve the closure report and notification to ensure that the closure performance standards have been met.

e. Sufficiency Demonstration of Closure

i. Prior to, or during closure, the large quantity generator may petition the Office of Environmental Services to meet the closure performance standards through alternate, reduced, or eliminated requirements for closure notifications in Subparagraphs B.8.a and b of this Paragraph. These requirements may include, but are not limited to, documentation, submittal information, decontamination procedures, confirmatory sampling and analysis on the rinsate, and confirmatory sampling and analysis on the soil (and groundwater, if deemed necessary) immediately surrounding and beneath the unit.

ii. A sufficiency demonstration shall not alleviate the large quantity generator's requirement to meet the closure performance standards in Subparagraph B.8.c of this Paragraph, but rather the demonstration of how the closure performance standards have been met.

iii. A sufficiency demonstration will only be approved by the Office of Environmental Services if merited by the supporting information and site-specific conditions.

(a). The following is a partial list of factors the Office of Environmental Services may consider in approving the sufficiency demonstration: accumulation time period; quantity and nature of the hazardous waste; containment design and condition; proper operations and maintenance; any additional protections (e.g., leak detection, etc.); soil and groundwater classification; overall compliance history; existing or future corrective action measures include the central accumulation area and/or the facility (e.g., site-wide corrective action being implemented through an enforceable agreement with the large quantity generator, or an order of the department specifically includes the central accumulation area and/or the facility); and any other relevant information requested by the Office of Environmental Services.

(b). A few example scenarios for a sufficiency demonstration include, but are not limited to: decontamination might not be necessary for a tank system that accumulated diluted wastewater; confirmatory rinsate sampling might not be necessary for a tank system that will receive a hazardous waste permit to manage the same waste; and confirmatory soil (and groundwater, if deemed necessary) sampling might not be required for a tank system that was used for a one-time event.

iv. The Office of Environmental Services' approval of a sufficiency demonstration may require additional or alternate closure efforts or verification from the large quantity generator depending on site-specific conditions.

v. Upon approval by the Office of Environmental Services, the petitioner shall incorporate the relevant information of the sufficiency demonstration into the closure notification requirements of Subparagraphs B.8.a and b of this Paragraph, as applicable. The large quantity generator shall maintain all documentation in support of the sufficiency demonstration.

f. The use of Risk Evaluation/Corrective Action Program (RECAP) and remedial activities for the closure of container storage, tank systems, and containment buildings.

i. If there is suspected or confirmed contamination in the environmental media (i.e., soil or groundwater) immediately surrounding and beneath the unit as demonstrated by the confirmatory sampling and analytical results specified in Subdivision B.8.b.ii.(c).(ii).[d] of this Paragraph or by other evidence, risk evaluation and/or remedial activities may be conducted by the large quantity generator in order to demonstrate that the closure performance standards have been met.

ii. The risk evaluation and/or remedial activities may be conducted, either in addition to, or instead of, the confirmatory sampling and analysis required by Subdivision B.8.b.ii.(c).(ii).[d] of this Paragraph.

iii. The risk evaluation and/or remedial activities shall be:

(a). in accordance with RECAP as referenced in LAC 33:I.Chapter 13 (Risk Evaluation/Corrective Action Program);

(b). under the direction of the Office of Environmental Assessment; and

(c). subject to all cost recovery provisions of the department.

iv. A site investigation work plan shall be submitted to the Office of Environmental Assessment in accordance with Appendix B of RECAP.

v. The risk evaluation must demonstrate that the closure is protective of human health and the environment and that post-closure care is not necessary in order for Subclause B.8.c.i.(c) of this Paragraph (i.e., closure as a landfill) not to apply.

ENVIRONMENTAL QUALITY

g. Contamination from Other Sources. The Office of Environmental Services may conditionally approve the closure of a central accumulation area whereby the large quantity generator agrees to address contamination remaining in the environmental media (i.e., soil or groundwater) through additional remedial activities under the direction of the Office of Environmental Assessment. The large quantity generator must successfully demonstrate that either:

i. the contamination is from a source other than hazardous waste managed in the unit; or

ii. the contamination caused by the hazardous waste managed in the unit is comingled with contamination caused by another source.

h. Notification of Newly-Identified Release. Any newly identified release of hazardous waste to the environment must be reported either to the Louisiana State Police, Department of Public Safety in accordance with LAC 33:V.105.J.1 (Emergency Conditions) or SPOC in accordance with LAC 33:V.105.J.2 (Nonemergency Conditions).

i. Closure Inspections. The department may inspect the central accumulation area before, during, or after the closure activities have been completed.

j. Closure Guidance. The large quantity generator should review all guidance that may be issued by the department and posted on its website including, but not limited to, guidance on confirmatory sampling for aboveground structures and environmental media. The purpose of such guidance is to ensure best management practices, promote consistency, and produce technically defensible closures. Any such guidance issued by the department is not regulation and shall not substitute for the requirements of Subparagraph B.8 of this Paragraph. Thus, any guidance does not impose any new requirements. The department shall retain discretion to use approaches on a case-by-case basis that differ from such guidance where appropriate. The department will base decisions regarding closure activities required by Subparagraph B.8 of this Paragraph in accordance with the Act and regulations as applied to the specific facts of the closure. Whether or not the recommendations in any guidance are appropriate in a given situation will depend on site-specific circumstances.

k. Notification Requirements for Closures Initiated Prior to July 20, 2020.

i. For purposes of this Subparagraph, initiation of closure shall consist of removing the final volume of hazardous waste from the central accumulation area(s) with the intent of no longer using the unit(s) for accumulation of hazardous waste.

ii. A large quantity generator shall meet the closure performance standards of Subparagraph B.8.c of this Paragraph regardless of when closure was initiated.

iii. A large quantity generator that initiated closure prior to July 20, 2020 shall either:

(a). comply with the notification requirements of Subparagraphs B.8.a and b of this Paragraph; or

(b). perform the following:

(i). complete all closure activities and meet the closure performance standards within 180 days of July 20, 2020, unless such deadline is extended in writing by the Office of Environmental Services upon proper showing by the large quantity generator that such extension is warranted; and

(ii). submit a Certification of No Hazardous Waste Activity form, available on the department's website, to the Office of Environmental Services no later than 30 days after completion of all closure activities. (The department may conduct an inspection of the central accumulation area(s) in order to verify that the closure performance standards were met.)

9. Land Disposal Restrictions. The large quantity generator complies with all applicable requirements under LAC 33:V.Chapter 22.

C. Accumulation Time Limit Extension. A large quantity generator who accumulates hazardous waste for more than 90 days is subject to the applicable requirements of LAC 33:V.Subpart 1, unless granted an extension to the 90-day period. Such extension may be granted by the Office of Environmental Services if hazardous wastes must remain on-site for longer than 90 days due to unforeseen, temporary, and uncontrollable circumstances. An extension of up to 30 days may be granted at the discretion of the Office of Environmental Services on a case-by-case basis.

D. Accumulation of F006 Waste. A large quantity generator who also generates wastewater treatment sludges from electroplating operations that meet the listing description for the EPA hazardous waste number F006, may accumulate F006 waste on-site for more than 90 days, but not more than 180 days without being subject to LAC 33:V.Subpart 1, provided that it complies with all of the following additional conditions for exemption.

1. The large quantity generator shall implement pollution prevention practices that reduce the amount of any hazardous substances, pollutants, or contaminants entering F006 waste or otherwise released to the environment prior to its recycling.

2. The F006 waste shall be legitimately recycled through metals recovery.

3. No more than 20,000 kilograms of F006 waste shall be accumulated on-site at any one time.

4. The F006 waste shall be managed in accordance with the following.

a. F006 waste shall accumulate in containers, tanks or containment buildings.

i. If the F006 waste is placed in containers, the large quantity generator shall comply with the applicable conditions for exemption in Paragraph B.1 of this Section.

ii. If the F006 waste is placed in tanks, the large quantity generator shall comply with the applicable conditions for exemption of Paragraph B.2 of this Section.

iii. If the F006 waste is placed in containment buildings, the large quantity generator shall comply with LAC 33:V.Chapter 43.Subchapter T. Additionally, the large quantity generator shall place its professional engineer certification that the building complies with the design standards specified in LAC 33:V.4703 in the facility's files prior to operation of the unit. The large quantity generator shall maintain:

(a). a written description of procedures to ensure that the F006 waste remains in the unit for no more than 180 days, a written description of the waste generation and management practices for the facility showing that they are consistent with the 180-day limit, and documentation that the large quantity generator is complying with the procedures; or

(b). documentation that the unit is emptied at least once every 180 days.

b. The large quantity generator is exempt from all the requirements in LAC 33:V.Chapter 43.Subchapters F (Closure and Post-Closure) and G (Financial Requirements), except for those referenced in Paragraph B.8 of this Section.

c. The date upon which each period of accumulation begins shall be clearly marked and shall be clearly visible for inspection on each container.

d. While being accumulated on-site, each container and tank shall be labeled or clearly marked with:

i. the words "Hazardous Waste"; and

ii. an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704).

e. The large quantity generator shall comply with the requirements in Paragraphs B.6 and 7 of this Section.

E. F006 Waste Transported Over 200 Miles. A large quantity generator who also generates wastewater treatment sludges from electroplating operations that meet the listing description for the EPA hazardous waste number F006, and who transports this waste, or offers this waste for transportation, over a distance of 200 miles or more for off-site metals recovery, may accumulate F006 waste on-site for more than 90 days, but not more than 270 days without being subject to LAC 33:V.Subpart 1 if the large quantity generator complies with all of the conditions for exemption in Paragraphs D.1-4 of this Section.

F. F006 Waste Accumulation Time Extension. A large quantity generator who accumulates F006 waste on-site for more than 180 days, or for more than 270 days if the generator transports the waste, or offers this waste for transportation, over a distance of 200 miles or more, or who accumulates more than 20,000 kilograms of F006 waste on-site, is an operator of a storage facility and is subject to the requirements of LAC 33:V.Subpart 1 unless the generator has been granted an extension to the 180-day, or 270-day if applicable, period or an exception to the 20,000 kilogram accumulation limit. Such extensions and exceptions may be granted by the Office Environmental Services if F006 waste must remain on-site for longer than 180 days, or 270 days if applicable, or if more than the 20,000 kilograms of F006 waste must remain on-site due to unforeseen, temporary, and uncontrollable circumstances. An extension of up to 30 days or an exception to the accumulation limit may be granted at the discretion of the Office of Environmental Services on a case-by-case basis.

G. Consolidation of Hazardous Waste Received from Very Small Quantity Generators. Consolidation of hazardous waste received from very small quantity generators shall be in accordance with this Subsection. Large quantity generators may accumulate on-site hazardous waste received from very small quantity generators under control of the same person (as defined in LAC 33:V.109), without a storage permit or interim status and without complying with the requirements of LAC 33:V.Subpart 1 provided that they comply with the following conditions. Control, for the purposes of this Section, means the power to direct the policies of the generator, whether by the ownership of stock, voting rights, or otherwise, except that contractors who operate generator facilities on behalf of a different person shall not be deemed to control such generators.

1. The large quantity generator shall notify the Office of Environmental Services at least 30 days prior to receiving the first shipment from a very small quantity generator(s) using the department's Notification of Hazardous Waste Activity Form (HW-1) that:

a. identifies on the form the name(s) and site address(es) for the very small quantity generator(s) as well as the name and business telephone number for a contact person for the very small quantity generator(s); and

b. submits an update of the department's Notification of Hazardous Waste Activity Form (HW-1) within 30 days after a change in the name or site address for the very small quantity generator.

2. The large quantity generator shall maintain records of shipments for three years from the date the hazardous waste was received from the very small quantity generator. These records shall identify the name, site address, and contact information for the very small quantity generator and include a description of the hazardous waste received, including the quantity and the date the waste was received.

3. The large quantity generator shall comply with the independent requirements identified in Subparagraph 1003.A.1.c and the conditions for exemption in this Section

for all hazardous waste received from a very small quantity generator. For the purposes of the labeling and marking regulations in Paragraph B.5 of this Section, the large quantity generator shall label the container or unit with the date accumulation started (i.e., the date the hazardous waste was received from the very small quantity generator). If the large quantity generator is consolidating incoming hazardous waste from a very small quantity generator with either its own hazardous waste or with hazardous waste from other very small quantity generators, the large quantity generator shall label each container or unit with the earliest date any hazardous waste in the container was accumulated on-site.

H. Rejected Load. A large quantity generator who sends a shipment of hazardous waste to a designated facility with the understanding that the designated facility can accept and manage the waste and later receives that waste back as a rejected load or residue in accordance with the manifest discrepancy provisions of LAC 33:V.1516.C or LAC 33:V.4355 may accumulate the returned waste on-site in accordance with Subsections B and C of this Section. Upon receipt of the returned shipment, the generator shall sign:

1. Item 18c of the manifest, if the transporter returned the shipment using the original manifest; or
2. Item 20 of the manifest, if the transporter returned the shipment using a new manifest.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:911 (July 2020).

§1017. EPA Identification Numbers and Notification of Hazardous Waste Activities for Generators

A. All generators (i.e., very small quantity generators, small quantity generators and large quantity generators) shall obtain an active EPA identification number by notifying the Office of Environmental Services using the Notification of Hazardous Waste Activity Form (HW-1) within 14 days after first generating any hazardous waste at the location specified in the notification. The assignment of an active EPA identification number shall serve as proof of this notification to the department by the generator. However, as EPA identification numbers are site-specific, if a generator moves to another location, the generator shall obtain a new EPA identification number for the facility. A generator shall notify the Office of Environmental Services within seven days if any information submitted in the notification of hazardous waste activity changes. As stated in LAC 33:V.105.A.9, failure to submit a timely and complete Notification of Hazardous Waste Activity Form (HW-1), obtain an active EPA identification number or notify the department of changes to the notification shall constitute a violation of these regulations and subject the applicant to enforcement action up to and including the assessment of civil penalties.

B. A generator shall not treat, store, dispose of, transport, or offer for transportation hazardous waste without having received an active EPA identification number.

C. A generator shall not offer its hazardous waste to transporters or to treatment, storage, or disposal facilities that have not received an active EPA identification number and the required authorization necessary to receive and manage the generator’s waste.

D. Renotification by Small Quantity Generators and Large Quantity Generators

1. A small quantity generator shall renotify the Office of Environmental Services starting in the year 2021 and every four years thereafter using the department’s Notification of Hazardous Waste Activity Form (HW-1). Small quantity generators with EPA identification numbers ending in:

- a. an even number shall submit notification by April 15, 2021, and every four years thereafter; or
- b. an odd number shall submit notification by September 1, 2021, and every four years thereafter.

2. A large quantity generator shall renotify the Office of Environmental Services by March 1 of each even-numbered year thereafter using the department’s Notification of Hazardous Waste Activity Form (HW-1). A large quantity generator may submit this renotification as part of its annual report required under LAC 33:V.1021.

E. Other significant hazardous waste activities described in this Chapter (i.e., closures for large quantity generators in accordance with Subparagraph 1015.B.8.b, episodic events in accordance with Subchapter C, and large quantity generators consolidating hazardous waste from very small quantity generators in accordance with Paragraph 1015.G.1) shall also require submittal of a Notification of Hazardous Waste Activity to the Office of Environmental Services.

F. Generators shall comply with the general requirements in LAC 33:V.105.A regarding the Notification of Hazardous Waste Activity and for obtaining an EPA identification number.

G. Generators who cease hazardous waste activities or move to another location shall notify the Office of Environmental Services within 30 days using the department’s Notification of Hazardous Waste Activity Form (HW-1) or other forms approved by the department in accordance with LAC 33:V.105.A.5.b.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:919 (July 2020).

Subchapter B. Recordkeeping and Reporting for Small Quantity Generators and Large Quantity Generators

§1019. Recordkeeping

A. A generator shall keep a copy of each manifest signed in accordance with LAC 33:V.1107.D.1 for three years or

until he receives a signed copy from the designated facility which received the waste. The signed copy shall be retained as a record for at least three years from the date the waste was accepted by the initial transporter.

B. A generator shall keep a copy of each annual report and exception report for a period of at least three years from the due date of the report.

C. See LAC 33:V.1005.G for recordkeeping requirements for documenting hazardous waste determinations.

D. The periods of retention referred to in this Subchapter are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:920 (July 2020).

§1021. Annual Report for Large Quantity Generators

A. A generator who is a large quantity generator for at least one month of the calendar year (reporting year) who ships any hazardous waste off-site to a treatment, storage, or disposal facility within the United States shall complete and submit an annual report to the Office of Environmental Services by March 1 of the following year. The annual report shall be submitted on the form provided by the Office of Environmental Services and it shall cover generator activities during the reporting year. This requirement also applies to large quantity generators that receive hazardous waste from very small quantity generators according to LAC 33:V.1015.G.

B. Any generator who is a large quantity generator for at least one month of the calendar year (reporting year) who disposes, treats, or stores hazardous waste on-site shall complete and submit an annual report to the Office of Environmental Services by March 1 of the following year. Reporting shall be in accordance with the provisions of LAC 33:V.Chapters 3, 5, 7, 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 30, 31, 32, 33, 35, 37, and 43, and shall include total quantity by type of waste handled, and how that waste was disposed, treated, or stored. The annual report shall be on the form provided by the Office of Environmental Services. Generators shall maintain on-site a copy of each report submitted to the department for a period of at least three years from the date of the report. This requirement also applies to large quantity generators that receive hazardous waste from very small quantity generators according to LAC 33:V.1015.G.

C. Exports of hazardous waste to foreign countries are not required to be reported on the annual report. A separate annual report requirement is set forth in LAC 33:V.1113.G for hazardous waste exporters.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:920 (July 2020).

§1023. Exception Reporting

A. A large quantity generator who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 35 days of the date the waste was accepted by the initial transporter shall contact the transporter and/or the owner/operator of the designated facility to determine the status of the hazardous waste.

B. A large quantity generator shall submit an exception report to the Office of Environmental Services if he has not received a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 45 days of the date the waste was accepted by the initial transporter. The exception report shall include:

1. a legible copy of the manifest for which the generator does not have confirmation of delivery; and
2. a cover letter signed by the generator or his authorized representative explaining the efforts taken to locate the hazardous waste and the results of those efforts.

C. A small quantity generator who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 60 days of the date the waste was accepted by the initial transporter shall submit a legible copy of the manifest, with some indication that the generator has not received confirmation of delivery, to the Office of Environmental Services. The submission to the Office of Environmental Services need only be a handwritten or typed note on the manifest itself, or on an attached sheet of paper, stating that the returned manifest was not received.

D. For rejected shipments of hazardous waste or container residues contained in nonempty containers that are forwarded to an alternate facility by a designated facility using a new manifest, following the procedures of LAC 33:V.1516.C.5.a.i-vi, the generator shall comply with the requirements of Subsections A or C of this Section, as applicable, for the shipment forwarding the material from the designated facility to the alternate facility instead of for the shipment from the generator to the designated facility. For purposes of Subsections A-C of this Section for a shipment forwarding such waste to an alternate facility by a designated facility, the following conditions shall apply.

1. The copy of the manifest received by the generator shall have the handwritten signature of the owner or operator of the alternate facility in place of the signature of the owner or operator of the designated facility.
2. The 35/45/60-day time frames shall begin the date the waste was accepted by the initial transporter forwarding the hazardous waste from the designated facility to the alternate facility.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:919 (July 2020).

§1025. Additional Reporting

A. The administrative authority, as it deems necessary under the Act, may require generators to furnish additional reports concerning the quantities and disposition of waste identified or listed in LAC 33:V.Chapter 49.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:921 (July 2020).

§1027. Recordkeeping and Reporting for Small Quantity Generators

A. A small quantity generator is subject only to the following independent requirements in this Subchapter, which include:

1. recordkeeping in §1019.A, 1019.C, and 1019.D of this Part;
2. exception reporting in §1023.C of this Subchapter; and
3. additional reporting in §1025.A of this Subchapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:921 (July 2020).

Subchapter C. Alternative Standards for Episodic Generation

§1029. Applicability

A. This Subchapter is applicable to very small quantity generators and small quantity generators as defined in LAC 33:V.109.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:921 (July 2020).

§1031. Definitions for this Subchapter

A. The following definitions apply to this Subchapter:

Episodic Event—an activity or activities, either planned or unplanned, that does not normally occur during generator operations, resulting in an increase in the generation of hazardous wastes that exceeds the calendar month quantity limits for the generator’s usual category.

Planned Episodic Event—an episodic event that the generator planned and prepared for, including: regular maintenance, tank cleanouts, short-term projects, and removal of excess chemical inventory.

Unplanned Episodic Event—an episodic event that the generator did not plan or reasonably did not expect to occur,

including production process upsets, product recalls, accidental spills, or acts of nature such as tornado, hurricane, or flood.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:921 (July 2020).

§1033. Conditions for Generators Managing Hazardous Waste from an Episodic Event

A. Very Small Quantity Generator. A very small quantity generator may maintain its existing generator category for hazardous waste generated during an episodic event provided that the generator complies with the following conditions.

1. The very small quantity generator is limited to one episodic event per calendar year, unless a petition is granted under Section 1035 of this Subchapter. Before submittal of a HW-1 notification to the Office of Environmental Services for a second episodic event in a calendar year, the very small quantity generator shall obtain approval of the petition for a second episodic event as required by Section 1035 of this Subchapter.

2. Notification. The very small quantity generator shall notify the Office of Environmental Services no later than 30 calendar days prior to initiating a planned episodic event using the department’s Notification of Hazardous Waste Activity Form (HW-1). In the event of an unplanned episodic event, the generator shall notify the Office of Environmental Services within 72 hours of the unplanned event via phone, email, or fax and subsequently submit the department’s Notification of Hazardous Waste Activity Form (HW-1). The generator shall include the start date and end date of the episodic event, the reason(s) for the event, types and estimated quantities of hazardous waste expected to be generated as a result of the episodic event, and shall identify a facility contact and emergency coordinator with 24-hour telephone access to discuss the notification submittal or respond to an emergency in compliance with LAC 33:V.1013.C.9.a.

3. EPA ID Number. The very small quantity generator shall have an EPA identification number or obtain an EPA identification number using the department’s Notification of Hazardous Waste Activity Form (HW-1).

4. Accumulation. A very small quantity generator is prohibited from accumulating hazardous waste generated from an episodic event on drip pads and in containment buildings. When accumulating hazardous waste in containers and tanks the following conditions apply.

a. Containers. A very small quantity generator accumulating in containers shall mark or label its containers with the following:

- i. the words “Episodic Hazardous Waste”;
- ii. an indication of the hazards of the contents (examples include, but are not limited to, the applicable

hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704); and

iii. the date upon which the episodic event began; clearly visible for inspection on each container.

b. Tanks. A very small quantity generator accumulating episodic hazardous waste in tanks shall do the following:

i. mark or label the tank with the words “Episodic Hazardous Waste”;

ii. mark or label the tank with an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704);

iii. use inventory logs, monitoring equipment or other records to identify the date upon which each episodic event begins; and

iv. keep inventory logs or records with the above information on-site and readily available for inspection.

c. Hazardous waste shall be managed in a manner that minimizes the possibility of a fire, explosion, or release of hazardous waste or hazardous waste constituents to the air, soil, or water.

i. Containers shall be in good condition and compatible with the hazardous waste being accumulated therein. Containers shall be kept closed except to add or remove waste.

ii. Tanks shall be in good condition and compatible with the hazardous waste accumulated therein. Tanks shall have procedures in place to prevent the overflow (e.g., be equipped with means to stop inflow with systems such as waste feed cutoff systems or bypass systems to a standby tank when hazardous waste is continuously fed into the tank). Tanks shall be inspected at least once each operating day to ensure all applicable discharge control equipment, such as waste feed cutoff systems, bypass systems, and drainage systems are in good working order and to ensure the tank is operated according to its design by reviewing the data gathered from monitoring equipment such as pressure and temperature gauges from the inspection.

5. The very small quantity generator shall comply with the hazardous waste manifest provisions of LAC 33:V.1107 when it sends its episodic event hazardous waste off-site to a *designated facility*, as defined in LAC 33:V.109.

6. The very small quantity generator has up to 60 calendar days from the start of the episodic event to manifest and send its hazardous waste generated from the episodic event to a *designated facility*, as defined in LAC 33:V.109.

7. Very small quantity generators shall maintain the following records for three years from the end date of the episodic event:

a. beginning and ending dates of the episodic event;

b. a description of the episodic event;

c. a description of the types and quantities of hazardous wastes generated during the event;

d. a description of how the hazardous waste was managed as well as the name of the RCRA-designated facility that received the hazardous waste;

e. name(s) of hazardous waste transporters; and

f. an approval letter from the administrative authority if the generator petitioned to conduct one additional episodic event per calendar year.

B. Small Quantity Generator. A small quantity generator may maintain its existing generator category during an episodic event provided that the generator complies with the following conditions.

1. The small quantity generator is limited to one episodic event per calendar year unless a petition is granted under Section 1035 of this Subchapter. Before submittal of a HW-1 notification to the Office of Environmental Services for a second episodic event in a calendar year, the small quantity generator shall obtain approval of the petition for a second episodic event as required by Section 1035 of this Subchapter.

2. Notification. The small quantity generator shall notify the Office of Environmental Services no later than 30 calendar days prior to initiating a planned episodic event using the department’s Notification of Hazardous Waste Activity Form (HW-1). In the event of an unplanned episodic event, the small quantity generator shall notify the Office of Environmental Services within 72 hours of the unplanned event via phone, email, or fax, and subsequently submit the department’s Notification of Hazardous Waste Activity Form (HW-1). The small quantity generator shall include the start date and end date of the episodic event and the reason(s) for the event, types and estimated quantities of hazardous waste expected to be generated as a result of the episodic event, and identify a facility contact and emergency coordinator with 24-hour telephone access to discuss the notification submittal or respond to emergency.

3. EPA ID Number. The small quantity generator shall have an EPA identification number or obtain an EPA identification number using the department’s Notification of Hazardous Waste Activity Form (HW-1).

ENVIRONMENTAL QUALITY

4. Accumulation by Small Quantity Generators. A small quantity generator is prohibited from accumulating hazardous waste generated from an episodic event on drip pads and in containment buildings. When accumulating hazardous waste generated from an episodic event in containers and tanks, the following conditions shall apply.

a. Containers. A small quantity generator accumulating episodic hazardous waste in containers shall meet the standards of LAC 33:V.1013.C.2 and shall mark or label its containers with the following:

- i. the words “Episodic Hazardous Waste”;
- ii. an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704); and
- iii. the date upon which the episodic event began, clearly visible for inspection on each container.

b. Tanks. A small quantity generator accumulating episodic hazardous waste in tanks shall meet the standards of LAC 33:V.1013.C.3 and shall:

- i. mark or label the tank with the words “Episodic Hazardous Waste”;
- ii. mark or label the tank with an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association Code 704);
- iii. use inventory logs, monitoring equipment or other records to identify the date upon which each period of accumulation begins and ends; and
- iv. keep inventory logs or records with the above information on-site and available for inspection.

5. The small quantity generator shall treat hazardous waste generated from an episodic event on-site or manifest and ship such hazardous waste off-site to a designated facility, as defined by LAC 33:V.109, within 60 calendar days from the start of the episodic event.

6. The small quantity generator shall maintain the following records for three years from the end date of the episodic event including:

- a. the beginning and end dates of the episodic event;
- b. a description of the episodic event;
- c. a description of the types and quantities of hazardous waste generated during the event;
- d. a description of how the hazardous waste was managed as well as the name of the designated facility (as defined by LAC 33:V.109) that received the hazardous waste;
- e. name(s) of hazardous waste transporters; and
- f. an approval letter from the administrative authority if the generator petitioned to conduct one additional episodic event per calendar year.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:921 (July 2020).

§1035. Petition to Manage One Additional Episodic Event per Calendar Year

A. A generator may petition the administrative authority for a second episodic event in a calendar year without impacting its generator category under the following conditions. If a very small quantity generator or small quantity generator has already held:

1. a planned episodic event in calendar year, the generator may petition the administrative authority for an additional unplanned episodic event in that calendar year within 72 hours of the unplanned event; or
2. an unplanned episodic event in a calendar year, the generator may petition the administrative authority for an additional planned episodic event in that calendar year.

B. The petition shall include the following:

1. the reason(s) why an additional episodic event is needed and the nature of the episodic event;
2. the estimated amount of hazardous waste to be managed from the event;
3. how the hazardous waste is to be managed;
4. the estimated length of time needed to complete the management of the hazardous waste generated from the episodic event—not to exceed 60 days; and
5. information regarding the previous episodic event managed by the generator, including the nature of the event, whether it was a planned or unplanned event, and how the generator complied with the conditions.

C. The petition shall be made to the administrative authority in writing, either on paper or electronically.

D. If the petition is approved by the administrative authority, the generator shall comply with Section 1033 of this Subchapter when managing the hazardous waste from the second approved episodic event including notifying the

Office of Environmental Services using the department's Notification of Hazardous Waste Activity Form (HW-1). A copy of the written approval of the petition shall accompany the HW-1 notification.

E. The generator shall retain written approval in its records for three years from the date the episodic event ended.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:923 (July 2020).

Subchapter D. Preparedness, Prevention and Emergency Procedures for Large Quantity Generators

§1037. Applicability

A. The regulations of this Subchapter apply to those areas of a large quantity generator where hazardous waste is generated or accumulated on-site.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:923 (July 2020).

§1039. Maintenance and Operation of Facility

A. A large quantity generator shall maintain and operate its facility to minimize the possibility of a fire, explosion, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:923 (July 2020).

§1041. Required Equipment

A. All areas deemed applicable by Section 1037 of this Subchapter shall be equipped with the items in Paragraphs A.1-4 of this Section, unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below or the actual hazardous waste generation or accumulation area does not lend itself for safety reasons to have a particular kind of equipment specified below. A large quantity generator may determine the most appropriate locations within its facility to locate the following equipment necessary to prepare for and respond to emergencies including:

1. an internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

2. a device, such as a telephone, immediately available at the scene of operations, or a hand-held two-way

radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams;

3. portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and

4. water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:923 (July 2020).

§1043. Testing and Maintenance of Equipment

A. All communication or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, shall be tested and maintained as necessary to ensure its proper operation in time of emergency.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:924 (July 2020).

§1045. Access to Communication or Alarm Systems

A. Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation shall have immediate access (e.g., direct or unimpeded access) to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless a device is not required under Section 1041 of this Subchapter.

B. In the event there is just one employee on the premises while the facility is operating, the employee shall have immediate access (e.g., direct or unimpeded access) to a device, such as a telephone, immediately available at the scene of operation, or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required under Section 1041 of this Subchapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:924 (July 2020).

§1047. Required Aisle Space

A. The large quantity generator shall maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of the facility operation in an emergency, unless aisle space is not needed for any of these purposes.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:924 (July 2020).

§1049. Arrangements with Local Authorities

A. The large quantity generator shall attempt to make arrangements with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals, taking into account the types and quantities of hazardous wastes handled at the facility. Arrangements may be made with the local emergency planning committee, if it is determined to be the appropriate organization with which to make arrangements.

1. A large quantity generator attempting to make arrangements with its local fire department shall determine the potential need for the services of the local police department, other emergency response teams, emergency response contractors, equipment suppliers and local hospitals.

2. As part of this coordination, the large quantity generator shall attempt to make arrangements, as necessary, to familiarize the above organizations with the layout of the facility, the properties of the hazardous waste handled at the facility and associated hazards, places where personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes as well as the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.

3. Where more than one police or fire department might respond to an emergency, the large quantity generator shall attempt to make arrangements designating primary emergency authority to a specific fire or police department, and arrangements with any others to provide support to the primary emergency authority.

B. The large quantity generator shall maintain records documenting the arrangements with the local fire department as well as any other organization necessary to respond to an emergency. This documentation shall include documentation in the operating record that either confirms such arrangements actively exist or in cases where no arrangements exist, confirms that attempts to make such arrangements were made.

C. A facility possessing 24-hour response capabilities may seek a waiver from the authority having jurisdiction (AHJ) over the fire code at the facility's location (i.e., state fire marshal or district fire chief) as far as needing to make arrangements with the local fire department as well as any other organization necessary to respond to an emergency, provided that the waiver is documented in the operating record.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:924 (July 2020).

§1051. Purpose and Implementation of Contingency Plan

A. A large quantity generator shall have a contingency plan for the facility. The contingency plan shall be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.

B. The provisions of the plan shall be carried out immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:924 (July 2020).

§1053. Content of Contingency Plan

A. The contingency plan shall describe the actions facility personnel shall take to comply with Sections 1051 and 1061 of this Subchapter in response to fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.

B. If the generator has already prepared a spill, prevention, control, and countermeasures (SPCC) plan in accordance with 40 CFR part 112, or some other emergency or contingency plan, it need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the standards of this Chapter. The generator may develop one contingency plan that meets all regulatory standards. EPA recommends that the plan be based on the National Response Team's Integrated Contingency Plan Guidance (i.e., one plan).

C. The plan shall describe arrangements agreed to with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, local hospitals or, if applicable, the local emergency planning committee, in accordance with Section 1049 of this Subchapter.

D. The plan shall list names and telephone numbers of all persons qualified to act as emergency coordinator (see Section 1059 of this Subchapter), and this list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they assume responsibility as alternates. In situations where the generator facility has an emergency coordinator continuously on duty because it operates 24 hours per day, every day of the year, the plan may list the staff position (e.g., operations manager, shift coordinator, shift operations supervisor) as well as an emergency telephone number that can be guaranteed to be answered at all times.

E. The plan shall include a list of all emergency equipment at the facility (e.g., fire extinguishing systems, spill control equipment, communications and alarm systems

(internal and external), and decontamination equipment), where this equipment is required. This list shall be kept up to date. In addition, the plan shall include the location and physical description of each item on the list, and a brief outline of its capabilities.

F. The plan shall include an evacuation plan for generator personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:925 (July 2020).

§1055. Copies of Contingency Plan

A. A copy of the contingency plan and all revisions to the plan shall be maintained at the large quantity generator's facility.

B. The large quantity generator shall submit a copy of the contingency plan and all revisions to all local emergency responders (i.e., police departments, fire departments, hospitals, and state and local emergency response teams that may be called upon to provide emergency services). This document may also be submitted to the local emergency planning committee, as appropriate.

C. A large quantity generator that first becomes subject to these provisions after July 20, 2020, or a large quantity generator that is otherwise amending its contingency plan shall at that time submit a quick reference guide of the contingency plan to the local emergency responders identified at Subsection B of this Section or, as appropriate, the local emergency planning committee. The quick reference guide shall include:

1. the types/names of hazardous wastes in layman's terms and the hazard associated with each hazardous waste present at any one time (e.g., toxic paint waste, spent ignitable solvent, corrosive acid);

2. the estimated maximum amount of each hazardous waste that may be present at any one time;

3. the identification of any hazardous waste where exposure would require unique or special treatment by medical or hospital staff;

4. a map of the facility showing areas where hazardous wastes are generated, accumulated and treated and routes for accessing these wastes;

- a. in the case of satellite accumulation areas that are designed for managing small quantities of waste at multiple locations throughout a facility, identification of the general waste-generation locations is acceptable;

- b. short-term (i.e., temporary) central accumulation units used for no more than 90 days (unless in compliance

with the accumulation time limit extension or F006 waste accumulation conditions for exemption in Subsections C through F of LAC 33:V.1015) that are primarily event related (e.g., maintenance events, spill cleanups, etc.) need not be identified in the quick reference guide or contingency plan;

5. a street map of the facility in relation to surrounding businesses, schools, and residential areas to understand how best to get to the facility and also evacuate citizens and workers;

6. the locations of water supply (e.g., fire hydrant and its flow rate);

7. the identification of on-site notification systems (e.g., fire alarm that rings off-site, smoke alarms); and

8. the name of the emergency coordinator(s) and 7/24-hour emergency telephone number(s) or, in the case of a facility where an emergency coordinator is continuously on duty, the emergency telephone number for the emergency coordinator.

D. Generators shall update, if necessary, their quick reference guides, whenever the contingency plan is amended and submit these documents to the local emergency responders identified in Subsection B of this Section or, as appropriate the local emergency planning committee.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:925 (July 2020).

§1057. Amendment of Contingency Plan

A. The contingency plan shall be reviewed, and immediately amended, if necessary whenever:

1. applicable regulations are revised;

2. the plan fails in an emergency;

3. the generator facility changes—in its design, construction, operation, maintenance, or other circumstances—in a way that materially increases the potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents, or changes the response necessary in an emergency;

4. the list of emergency coordinators changes; or

5. the list of emergency equipment changes.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:926 (July 2020).

§1059. Emergency Coordinator

A. At all times, there shall be at least one employee either on the generator's premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures and implementing the

ENVIRONMENTAL QUALITY

necessary emergency procedures outlined in LAC 33:V.1061. Although responsibilities may vary depending on factors such as type and variety of hazardous waste(s) handled by the facility, as well as type and complexity of the facility, this emergency coordinator shall be thoroughly familiar with all aspects of the generator's contingency plan, all operations and activities at the facility, the location and characteristics of hazardous waste handled, the location of all records within the facility, and the facility's layout. In addition, this person shall have the authority to commit the resources needed to carry out the contingency plan.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:926 (July 2020).

§1061. Emergency Procedures

A. Whenever there is an imminent or actual emergency situation, the emergency coordinator or his designee shall immediately:

1. activate internal facility alarm or communication systems, where applicable, to notify all facility personnel; and
2. notify appropriate state or local agencies with designated response roles if their help is needed.

B. Whenever there is a release, fire, or explosion, the emergency coordinator shall immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of the facility records or manifests and, if necessary, by chemical analysis.

C. Concurrently, the emergency coordinator shall assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment shall consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-offs from water or chemical agents used to control fire and heat-induced explosions).

D. If the emergency coordinator determines that the facility has had a release, fire, or explosion, which could threaten human health or the environment, outside the facility, the emergency coordinator shall report the findings as follows.

1. If the assessment indicates that evacuation of local areas may be advisable, the emergency coordinator shall immediately notify appropriate local authorities. The emergency coordinator shall be available to help appropriate officials decide whether local areas should be evacuated.

2. Immediate Emergency Notifications

- a. Notification to the Louisiana State Police, Department of Public Safety.

- i. The emergency coordinator shall immediately, but in no case later than one hour, notify the 24-hour Louisiana Emergency Hazardous Materials Hotline by calling 1-877-922-6595 or 225-925-6595. This notification to the Louisiana State Police, Department of Public Safety shall be in accordance with LAC 33:I.Chapter 39 and shall include the following information:

- (a). the name and telephone number, and employer of the contact person;

- (b). the company or responsible party's name;

- (c). where the incident occurred (mailing address and physical location);

- (d). date and time the incident began and ended;

- (e). the identity of the hazardous material released or involved (this would include proper chemical name if available, an indication of whether it is an extremely hazardous substance, and whether it is a solid, liquid, or gas);

- (f). the actual amount or an estimate of the amount released; or in the absence of quantity data for the hazardous materials released, one of the following incident classifications: unusual event, site emergency, or general emergency;

- (g). whether the material released escaped or could reasonably be expected to escape, beyond the site of the facility;

- (h). if available, the substance's hazard class and any other identifier (e.g., U.N. number, CHRIS code, etc.);

- (i). medium into which the hazardous materials was released (e.g. air, water, land);

- (j). whether the release resulted in a fire or explosion;

- (k). injury to personnel, or a fatality resulting from the release or incident;

- (l). details regarding wind direction, wind speed, temperature, and precipitation;

- (m). any need or a recommendation for, an off-site protective action (e.g., road closure, shelter-in-place, evacuation, or none);

- (n). details of the release or incident; and

- (o). whether other responsible state and local agencies such as the local emergency planning committee have been notified.

- ii. Updates During the Incident. The hotline must be immediately notified of any adverse change in the nature or rate of the discharge. Additional notifications must be made for discharges of multiple constituents when they originate from different causes or sources or they are substantially different in nature from the discharges in the initial notification.

b. Emergency Notifications to Other Regulatory Agencies. The large quantity generator should be aware that other federal, state and local agencies may require immediate and/or follow-up notification of an emergency situation under other regulatory authorities, including, but not limited to the:

i. National Response Center by calling their 24-hour toll free number 1-800-424-8802, to the extent that immediate notification is required under 40 CFR 302.6 (exceedance of reportable quantities) or 40 CFR 110.6 (oil spills); and/or

ii. appropriate local emergency planning committee having jurisdiction over the facility to the extent that immediate notification is required under 40 CFR part 355, subpart C or LAC 33:V.Subpart 2.Chapter 101. Contact information for each local emergency planning committee is available on the Louisiana State Police, Department of Public Safety's website.

E. During an emergency, the emergency coordinator shall take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur or spread to other hazardous waste at the generator's facility. These measures shall include, where applicable, stopping processes and operations, collecting and containing released hazardous waste, and removing or isolating containers.

F. If the generator stops operations in response to a fire, explosion or release, the emergency coordinator shall monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

G. Immediately after an emergency, the emergency coordinator shall provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. Unless the generator can demonstrate, in accordance with LAC 33:V.109.Hazardous Waste.4 or 5, that the recovered material is not a hazardous waste, then it is a newly generated hazardous waste that shall be managed in accordance with all applicable requirements and conditions for exemption in LAC 33:V.Chapters 10, 11, 13, and 43.

H. The emergency coordinator shall ensure the following in the affected area(s) of the facility.

1. No hazardous waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed.

2. All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

I. The generator shall note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Written follow-up reports for any unauthorized discharge that requires notification shall be submitted by the large quantity generator to SPOC within seven calendar days of the initial

notification in accordance with LAC 33:I.3925 and the Louisiana State Police, Department of Public Safety within five business days of the incident in accordance with LAC 33:V.Subpart 2.10111.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:926 (July 2020).

Subchapter E. Pre-transportation Requirements for Small Quantity Generators and Large Quantity Generators

§1063. Packaging, Labeling, Marking, and Placarding

A. Packaging. Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator shall package the waste in accordance with the applicable Department of Public Safety regulations and packaging under LAC 33:V.Subpart 2. Chapter 103.

B. Labeling. Before transporting or offering hazardous waste for transportation off-site, a generator shall label each package in accordance with the applicable transportation regulations on hazardous materials of the Louisiana Department of Public Safety or its successor agency under LAC 33:V.Subpart 2.Chapter 105.

C. Marking

1. Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator shall mark each container of 119 gallons or less used in such transportation with the following words and information in accordance with the Department of Public Safety regulations (see Department of Public Safety regulation LAC 33:V.Subpart 2.Chapter 105).

Hazardous Waste: Federal and state law prohibits improper disposal. If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.

Generator's Name and Address _____

Generator's EPA ID Number _____

Manifest Tracking Number _____

EPA Hazardous Waste Number(s) _____

2. A generator may use a nationally recognized electronic system, such as bar coding, to identify the EPA Hazardous Waste Number(s), as required by Paragraph 1 or 3 of this Subsection.

3. Lab packs that will be incinerated in compliance with LAC 33:V.2227.C are not required to be marked with EPA Hazardous Waste Number(s), except D004, D005, D006, D007, D008, D010, and D011, where applicable.

D. Placarding. Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator shall placard, or offer the initial transporter the appropriate placards for, the shipment according to Department of Public Safety regulations for hazardous materials under LAC 33:V.Subpart 2.Chapter 105.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:927 (July 2020).

§1065. Liquids in Landfills Prohibition

A. The placement of bulk or noncontainerized liquid hazardous waste or hazardous waste containing free liquids, whether or not sorbents have been added, in any landfill is prohibited. Prior to disposal in a hazardous waste landfill, liquids shall meet additional requirements as specified in LAC 33:V.2515.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:928 (July 2020).

§1067. Spills

A. Any spilled material or material trapped in sumps that is a hazardous waste or that will be disposed of as a hazardous waste shall be cleaned up in a timely manner.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:928 (July 2020).

Chapter 11. Manifest, Import and Export Requirements

Editor's Note: The generator requirements in Chapter 10 et al. were consolidated and reorganized in LAC 33:V.Chapter 10.

Subchapter A. General

§1101. Applicability

Editor's Note: Parts of 1101 were either revised or moved to LAC 33:V.1003 as part of the consolidation and reorganization of the generator requirements in LAC 33:V.Chapter 10.

A. Generators, transporters and treatment, storage, and disposal facilities are subject to the applicable manifesting requirements of Sections 1107 and 1108 of this Chapter when transporting hazardous waste off-site.

B. Any person who exports or imports hazardous waste subject to the manifesting requirements of this Chapter, the export requirements for spent lead-acid battery management standards in LAC 33:V.4145, or subject to the universal waste management standards of LAC 33:V.Chapter 38, to or from the OECD member countries listed in LAC 33:V.1113.I.1.a for recovery shall comply with the applicable requirements of Sections 1113, 1125, and 1127 of this Chapter.

C. Any person who imports hazardous waste from a foreign country into the state of Louisiana must comply with the standards applicable to generators established in LAC 33:V.Chapter 10.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:398 (May 1990), LR 18:1256 (November 1992), LR 20:1000 (September 1994), LR 22:20 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:660 (April 1998), LR 24:1106 (June 1998), LR 24:1693 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 27:709 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 32:822 (May 2006), LR 38:782 (March 2012), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 44:40 (January 2018), LR 46:928 (July 2020).

§1107. Manifest Requirements

A. General Requirements. The revised manifest form and procedures in 40 CFR Part 262 and the Appendix to Part 262 shall be effective as of September 5, 2006. As of September 5, 2006, Uniform Hazardous Waste Manifest forms must be obtained only from EPA-registered and approved sources as identified by the Manifest Registry. Contact the Office of Environmental Services, or access the U.S. Environmental Protection Agency's website to obtain information on EPA-registered and approved sources.

1. A generator who transports, or offers for transportation, hazardous waste for off-site treatment, storage, or disposal, or a treatment, storage, and disposal facility that offers for transport a rejected hazardous waste load, shall prepare a Manifest (OMB Control number 2050-0039) on EPA Form 8700-22 and, if necessary, EPA Form 8700-22A, according to the instructions included in the Appendix to 40 CFR Part 262.

2. A generator shall designate on the manifest one facility that is permitted to handle the waste described on the manifest. A generator may also designate on the manifest one alternate facility that is permitted to handle the waste in the event an emergency prevents delivery of the waste to the primary designated facility.

3. If the transporter is unable to deliver the hazardous waste to the designated facility or the alternate facility, the generator shall either designate another facility or instruct the transporter to return the waste.

4. The requirements of this Section do not apply to hazardous waste produced by generators of greater than 100 kg, but less than 1000 kg, in a calendar month where:

a. the waste is reclaimed under a contractual agreement pursuant to which:

i. the type of waste and frequency of shipments are specified in the agreement;

ii. the vehicle used to transport the waste to the recycling facility and to deliver regenerated material back to the generator is owned and operated by the reclaimer of the waste; and

b. the generator maintains a copy of the reclamation agreement in his files for a period of at least three years after termination or expiration of the agreement.

5. In naming a hazardous waste, a generator shall use the proper shipping name prescribed by the Louisiana Department of Public Safety and Corrections or its successor agency and provide specific identification pursuant to LAC 33:V.Chapter 49.

6. If the hazardous waste is to be transported out-of-state, the generator will be responsible for receiving the completed, signed manifest from the out-of-state hazardous waste facility.

7. Generators must get written confirmation of acceptability of the hazardous waste from the operator of the hazardous waste facility before shipping the hazardous waste. The confirmation must be maintained as part of the facility manifest records (see LAC 33:V.1019).

8. The requirements of this Chapter and LAC 33:V.1063.C do not apply to the transport of hazardous wastes on a public or private right-of-way within or along the border of contiguous property under the control of the same person, even if such contiguous property is divided by a public or private right-of-way. Notwithstanding LAC 33:V.1301.A, the generator or transporter must comply with the requirements for transporters set forth in LAC 33:V.1315 and 1317 in the event of a discharge of hazardous waste on a public or private right-of-way.

9. Electronic Manifest. In lieu of using the manifest form specified in Paragraph A.1 of this Section, a person required to prepare a manifest under Paragraph A.1 of this Section may prepare and use an electronic manifest, provided that the person:

a. complies with the requirements in LAC 33:V.1107.F for use of electronic manifests; and

b. complies with the requirements of 40 CFR 3.10 for the reporting of electronic documents to EPA.

B. Required Information

1. The manifest must contain all of the following information before being issued:

a. the name, physical address, telephone number, and active EPA identification number of the generator;

b. the name and active EPA identification number of each transporter;

c. the name, physical address, telephone number, and active EPA identification number of the designated facility;

d. the description of the waste(s) (e.g., proper shipping name, EPA hazardous waste number, etc.) required by Hazardous Materials regulations of the Louisiana Department of Public Safety in LAC 33:V.Subpart 2.Chapter 101; and

e. the total quantity of each hazardous waste in tons, cubic yards, pounds, or gallons (liquids only), and the type, including but not limited to, metal drums, barrels, kegs, fiberboard or plastic drums, cargo tanks, tank trucks, dump trucks, metal boxes, cartons, cases, burlap bags, paper bags,

plastic bags, wooden drums, portable tanks, tank cars, cylinders, wooden boxes, and fiber or plastic boxes, and number of containers as loaded into or onto the transport vehicle. If the weight is unknown, the volume and estimated weight shall be provided.

2. The certification that appears on the manifest must be read, signed, and dated by the generator as follows.

“I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packaged, marked, and labeled/placarded, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations. If this is an export shipment and I am the primary exporter, I certify that the contents of this consignment conform to the terms of the attached EPA Acknowledgment of Consent.”

C. Number of Copies. The manifest consists of at least the number of copies which will provide the generator, each transporter, and the owner or operator of the designated facility with one copy each for their records and another copy to be returned to the generator.

D. Use of the Manifest

1. The generator must:

a. sign and date the manifest certification by hand when the initial transporter accepts the shipment;

b. obtain the handwritten signature of the initial transporter and date of acceptance on the manifest; and

c. retain one copy, in accordance with LAC 33:V.1019.A.

2. The generator must give the transporter the remaining copies of the manifest.

3. For shipments of hazardous waste within the United States solely by water (bulk shipments only), the generator must send three copies of the manifest dated and signed in accordance with this Section to the owner or operator of the designated facility or the last water (bulk shipment) transporter to handle the waste in the United States if exported by water. Copies of the manifest are not required for each transporter.

4. For rail shipments of hazardous waste within the United States which originate at the site of generation, the generator must complete the transporter section of the manifest less signature, retain one copy of the completed manifest, and send at least three copies of the manifest dated and signed in accordance with this Section to:

a. the next non-rail transporter, if any; or

b. the designated facility if transported solely by rail; or

c. the last rail transporter to handle the waste in the United States if exported by rail.

[NOTE: See LAC 33:V.1307.E and 1307.F for special provisions for rail or water (bulk shipment) transporters.]

5. Reserved.

ENVIRONMENTAL QUALITY

6. For shipments of hazardous waste to a designated facility in an authorized state that has not yet obtained authorization to regulate that particular waste as hazardous, the generator must assure that the designated facility agrees to sign and return the manifest to the generator, and that any out-of-state transporter signs and forwards the manifest to the designated facility.

7. For rejected shipments of hazardous waste or container residues contained in non-empty containers that are returned to the generator by the designated facility, following the procedures of LAC 33:V.1516.C.6, the generator shall:

- a. sign either:
 - i. Item 20 of the new manifest, if a new manifest is used for the returned shipment; or
 - ii. Item 18c of the original manifest, if the original manifest is used for the returned shipment;
- b. provide the transporter a copy of the manifest;
- c. within 30 days of delivery of the rejected shipment or container residues contained in non-empty containers, send a copy of the manifest to the designated facility that returned the shipment to the generator; and
- d. retain at the generator's site a copy of each manifest for at least three years from the date of delivery.

E. Special Manifest Provisions

1. Scope. These provisions will apply to material in containers meeting the provisions of lab packs except that the outer container, excluding overpacking, shall not exceed 5 gallons (20 liters) in total liquid capacity prior to addition of the absorbent. The container and overpacking shall comply with applicable requirements of the Louisiana Department of Public Safety or its successor agency. Except as otherwise provided herein, the requirements of LAC 33:V.2519 shall be met.

2. Reporting and Recordkeeping. Both the generator and disposer shall maintain copies of the manifests and other records as required elsewhere in LAC 33:V.Subpart 1. The generator and disposer shall include all such wastes in the annual report as provided in LAC 33:V.1021.

F. Use of the Electronic Manifest

1. Legal Equivalence to Paper Manifests. Electronic manifests that are obtained, completed, and transmitted in accordance with LAC 33:V.1107.A.9, and used in accordance with this Section in lieu of EPA Forms 8700-22 and 8700-22A are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these regulations to obtain, complete, sign, provide, use, or retain a manifest.

a. Any requirement in these regulations to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of LAC 33:V.1107.G.

b. Any requirement in these regulations to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when an electronic manifest is transmitted to the other person by submission to the system.

c. Any requirement in these regulations for a generator to keep or retain a copy of each manifest is satisfied by retention of a signed electronic manifest in the generator's account on the national e-manifest system, provided that such copies are readily available for viewing and production if requested by any EPA or authorized state inspector.

d. No generator may be held liable for the inability to produce an electronic manifest for inspection under this Section if the generator can demonstrate that the inability to produce the electronic manifest is due exclusively to a technical difficulty with the electronic manifest system for which the generator bears no responsibility.

2. A generator may participate in the electronic manifest system either by accessing the electronic manifest system from its own electronic equipment, or by accessing the electronic manifest system from portable equipment brought to the generator's site by the transporter who accepts the hazardous waste shipment from the generator for off-site transportation.

3. Restriction on Use of Electronic Manifests. A generator may prepare an electronic manifest for the tracking of hazardous waste shipments involving any RCRA hazardous waste only if it is known at the time the manifest is originated that all waste handlers named on the manifest participate in the electronic manifest system.

4. Requirement for One Printed Copy. To the extent the Hazardous Materials regulation on shipping papers for carriage by public highway requires shippers of hazardous materials to supply a paper document for compliance with 49 CFR 177.817, a generator originating an electronic manifest must also provide the initial transporter with one printed copy of the electronic manifest.

5. Special Procedures when Electronic Manifest is Unavailable. If a generator has prepared an electronic manifest for a hazardous waste shipment, but the electronic manifest system becomes unavailable for any reason prior to the time that the initial transporter has signed electronically to acknowledge the receipt of the hazardous waste from the generator, then the generator must obtain and complete a paper manifest and if necessary, a continuation sheet (EPA Forms 8700-22 and 8700-22A) in accordance with the manifest instructions in the appendix to 40 CFR part 262, and use these paper forms from this point forward in accordance with the requirements of LAC 33:V.1107.D.

6. Special Procedures for Electronic Signature Methods Undergoing Tests. If a generator has prepared an electronic manifest for a hazardous waste shipment, and signs this manifest electronically using an electronic signature method which is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the generator

shall also sign with an ink signature the generator/offeree certification on the printed copy of the manifest provided under LAC 33:V.1107.F.4.

7. Imposition of User Fee. A generator who is a user of the electronic manifest may be assessed a user fee by EPA for the origination of each electronic manifest. EPA shall maintain and update from time-to-time the current schedule of electronic manifest user fees, which shall be determined based on current and projected system costs and level of use of the electronic manifest system. The current schedule of electronic manifest user fees shall be published as an appendix to 40 CFR part 262.

G. Electronic Manifest Signatures

1. Electronic signature methods for the e-Manifest system shall be a:

a. legally valid and enforceable signature under applicable EPA and other federal requirements pertaining to electronic signatures; and

b. method that is designed and implemented in a manner that EPA considers to be as cost effective and practical as possible for the users of the manifest.

H. Waste Minimization Certification. A generator who initiates a shipment of hazardous waste must certify to one of the following statements in Item 15 of the Uniform Hazardous Waste Manifest.

1. "I am a large quantity generator. I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and I have selected the practicable method of treatment, storage, or disposal currently available to me that minimizes the present and future threat to human health and the environment."

2. "I am a small quantity generator. I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford."

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 12:319 (May 1986), LR 16:220 (March 1990), LR 17:362 (April 1991), LR 17:478 (May 1991), LR 18:1256 (November 1992), LR 20:1109 (October 1994), LR 21:266, 267 (March 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1693 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2470 (November 2000), LR 27:42 (January 2001), LR 27:709 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 32:823 (May 2006), LR 33:89 (January 2007), repromulgated LR 33:281 (February 2007), amended LR 33:2101 (October 2007), LR 34:622 (April 2008), LR 38:775 (March 2012), amended by the Office of the Secretary, Legal Division, LR 42:566 (April 2016), LR 43:1140 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:928 (July 2020).

§1108. Manifest Tracking Numbers, Manifest Printing, and Obtaining Manifests

A. 40 CFR 262.21 and the associated appendix, July 1, 2009, are hereby incorporated by reference. 40 CFR 262.21 establishes standards and procedures for registrants who apply early to, and obtain approval from, the Director, Office of Solid Waste, US EPA, to print and distribute hazardous waste manifest forms.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 18:1256 (November 1992), amended by the Office of the Secretary, Legal Affairs Division, LR 32:823 (May 2006), LR 36:2274 (October 2010).

§1113. Exports of Hazardous Waste

A. Applicability. Any person who exports hazardous waste to a foreign country, from a point of departure in the state of Louisiana, shall comply with the requirements of this Chapter and with the special requirements of this Section. This Section establishes requirements applicable to exports of hazardous waste. Except to the extent LAC 33:V.1113.I provides otherwise, a primary exporter of hazardous waste shall comply with the special requirements of this Section, and a transporter who transports hazardous waste for export shall comply with applicable requirements of LAC 33:V.Chapter 13.

B. Reserved.

C. General Requirements. Exports of hazardous wastes are prohibited except in compliance with the applicable requirements of this Section and LAC 33:V.Chapter 13. Exports of hazardous waste are prohibited unless:

1. notification in accordance with Subsection D of this Section has been provided;

2. the appropriate authority in the receiving country has consented to accept the hazardous waste;

3. a copy of the EPA Acknowledgment of Consent for the shipment accompanies the hazardous waste shipment and, unless exported by rail, is attached to the manifest (or shipping paper for exports by water [bulk shipment]);

4. the hazardous waste shipment conforms to the terms of the receiving country's written consent as reflected in the EPA Acknowledgement of Consent.

D. Notification of Intent to Export

1. A primary exporter of hazardous waste must notify the United States Environmental Protection Agency of an intended export before such waste is scheduled to leave the United States. A complete notification should be submitted 60 days before the initial shipment is intended to be shipped off-site. This notification may cover export activities extending over a 12-month or lesser period. The notification must be in writing, signed by the primary exporter, and include the following information:

ENVIRONMENTAL QUALITY

a. name, mailing address, telephone number, and EPA ID number of the primary exporter;

b. by consignee, for each hazardous waste type:

i. a description of the hazardous waste and the EPA hazardous waste number (LAC 33:V.4901 and 4903), U.S. Department of Transportation proper shipping name, hazard class, and ID number for each hazardous waste as identified in 49 CFR Part 171-177;

ii. the estimated frequency or rate at which such waste is to be exported and the period of time over which such waste is to be exported;

iii. the estimated total quantity of the hazardous waste in units as specified in the instructions to the Uniform Hazardous Waste Manifest Form (8700-22);

iv. all points of entry to and departure from each foreign country through which the hazardous waste will pass;

v. a description of the means by which each shipment of the hazardous waste will be transported (e.g., mode of transportation vehicle [air, highway, rail, water, etc.], type[s] of container [drums, boxes, tanks, etc.]);

vi. a description of the manner in which the hazardous waste will be treated, stored, or disposed of in the receiving country (e.g., land or ocean incineration, other land disposal, ocean dumping, recycling);

vii. the name and site address of the consignee and any alternate consignee; and

viii. the name of any transit countries through which the hazardous waste will be sent and a description of the approximate length of time the hazardous waste will remain in such country and the nature of its handling while there.

2. Notification shall be sent to the Office of Environmental Services, with "Attention: Notification to Export" prominently displayed on the front of the envelope.

NOTE: This does not relieve the regulated community from the requirement of submitting notification to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, as required by 40 CFR 262.53(b) and Paragraph D.1 of this Section.

3. Except for changes to the telephone number required by Subparagraph D.1.a of this Section, changes to the information required by Clause D.1.b.v of this Section, and decreases in the quantity indicated pursuant to Clause D.1.b.iii of this Section, when the conditions specified on the original notification change (including any exceedance of the estimate of the quantity of hazardous waste specified in the original notification), the primary exporter must provide the United States Environmental Protection Agency with a written renotification of the change. The shipment cannot take place until consent of the receiving country to the changes (except for changes to Clause D.1.b.viii of this Section and in the ports of entry to and departure from

transit countries pursuant to Clause D.1.b.iv of this Section) has been obtained and the primary exporter received an EPA Acknowledgment of Consent reflecting the receiving country's consent to the changes.

4. Upon request by the United States Environmental Protection Agency, a primary exporter shall furnish to the United States Environmental Protection Agency any additional information which a receiving country requests in order to respond to a notification.

5. In conjunction with the United States Department of State, the United States Environmental Protection Agency (EPA) shall provide a complete notification to the receiving country and any transit countries. A notification is complete when the EPA receives a notification which the EPA determines satisfies the requirements of Paragraph D.1 of this Section. Where a claim of confidentiality is asserted with respect to any notification information required by Paragraph D.1 of this Section, the EPA may find the notification not complete until any such claim is resolved in accordance with 40 CFR 260.2.

6. Where the receiving country consents to the receipt of the hazardous waste, the EPA shall forward an EPA acknowledgement of consent to the primary exporter for purposes of Paragraph E.8 of this Section. Where the receiving country objects to receipt of the hazardous waste or withdraws a prior consent, the EPA shall notify the primary exporter in writing. The EPA will also notify the primary exporter of any responses from transit countries.

E. Special Manifest Requirements. A primary exporter must comply with manifest requirements of LAC 33:V.1107, except for the following.

1. In lieu of the name, site address, and EPA ID number of the designated permitted facility, the primary exporter must enter the name and site address of the consignee.

2. In lieu of the name, site address, and EPA ID number of a permitted alternate facility, the primary exporter may enter the name and site address of any alternate consignee.

3. In the International Shipments block, the primary exporter shall check the export box and enter the point of exit (city and state) from the United States.

4. The following statement must be added to the end of the first sentence of the certification set forth in Item 16 of the Uniform Hazardous Waste Manifest Form: "and conforms to the terms of the attached EPA Acknowledgment of Consent".

5. The primary exporter shall obtain the manifest form from any source that is registered with the US EPA as a supplier of manifests.

6. The primary exporter must require the consignee to confirm in writing the delivery of the hazardous waste to that facility and to describe any significant discrepancies (as defined in LAC 33:V.1516.C.1) between the manifest and

the shipment. A copy of the manifest signed by such facility may be used to confirm delivery of the hazardous waste.

7. In lieu of the requirements of LAC 33:V.1107.A.3, where a shipment cannot be delivered for any reason to the designated or alternate consignee, the primary exporter shall:

a. renotify the United States Environmental Protection Agency of a change in the conditions of the original notification to allow shipment to a new consignee in accordance with Paragraph D.3 of this Section and obtain an EPA acknowledgment of consent prior to delivery; or

b. instruct the transporter to return the waste to the primary exporter in the United States or designate another facility within the United States; and

c. instruct the transporter to revise the manifest in accordance with the primary exporter's instructions.

8. The primary exporter must attach a copy of the EPA Acknowledgment of Consent to the shipment to the manifest which must accompany the hazardous waste shipment. For exports by rail or water (bulk shipment), the primary exporter must provide the transporter with an EPA Acknowledgment of Consent which must accompany the hazardous waste but which need not be attached to the manifest except that for exports by water (bulk shipment) the primary exporter must attach the copy of the EPA Acknowledgment of Consent to the shipping paper.

9. The primary exporter shall provide the transporter with an additional copy of the manifest for delivery to the U.S. Customs official at the point the hazardous waste leaves the United States in accordance with LAC 33:V.1307.G4.

F. Exception Reports. In lieu of the requirements of LAC 33:V.1023, a primary exporter must file an exception report with the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue, N.W., Washington, DC 20460, if any of the following occurs:

1. he has not received a copy of the manifest signed by the transporter stating the date and place of departure from the United States within 45 days from the date it was accepted by the initial transporter;

2. within 90 days from the date the waste was accepted by the initial transporter, the primary exporter has not received written confirmation from the consignee that the hazardous waste was received; or

3. the waste is returned to the United States.

G. Annual Reports

1. Primary exporters of hazardous waste shall file with the United States Environmental Protection Agency no later than March 1 of each year, a report summarizing the types, quantities, frequency, and ultimate destination of all hazardous waste exported during the previous calendar year. Such reports shall include the following:

a. the EPA identification number, name, and mailing and site address of the exporter;

b. the calendar year covered by the report;

c. the name and site address of each consignee;

d. by consignee, for each hazardous waste exported, a description of the hazardous waste, the EPA hazardous waste number (from LAC 33:V.4901 or 4903), U.S. Department of Transportation hazard class, the name and US EPA ID number (where applicable) for each transporter used, the total amount of waste shipped and number of shipments pursuant to each notification;

e. except for hazardous waste produced by exporters of greater than 100 kg, but less than 1000 kg, in a calendar month, unless provided in accordance with LAC 33:V.1021 in even numbered years:

i. a description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated; and

ii. a description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984;

f. a certification signed by the primary exporter which states:

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment."

2. Reports shall be sent to the administrative authority of the Louisiana Department of Environmental Quality.

NOTE: This does not relieve the regulated community from the requirement of submitting annual reports in accordance with 40 CFR 262.56 to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460. Hand-delivered reports should be sent to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division, Environmental Protection Agency, Ariel Rios Bldg., Room 6144, 12th St. and Pennsylvania Ave., NW, Washington, DC 20004.

H. Recordkeeping

1. For all exports a primary exporter must:

a. keep a copy of each notification of intent to export for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;

b. keep a copy of each EPA Acknowledgment of Consent for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;

c. keep a copy of each confirmation of delivery of the hazardous waste from the consignee for at least three

years from the date the hazardous waste was accepted by the initial transporter; and

d. keep a copy of each annual report for a period of at least three years from the due date of the report.

2. The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the United States Environmental Protection Agency.

I. International Agreements

1. Any person who exports or imports waste considered hazardous under U.S. national procedures, (i.e., meets the definition of hazardous waste in LAC 33:V.109, and is subject to either the manifest requirements of this Chapter, the universal waste management standards of LAC 33:V.Chapter 38, or the requirements for spent lead-acid batteries in LAC 33:V.4145) to or from designated member countries of the OECD, as defined in Subparagraph I.1.a, of this Section for purposes of recovery is subject to Subchapter B of this Section. The requirements of this Section and LAC 33:V.1123 do not apply to such exports and imports.

a. For the purposes of this Subchapter, the designated OECD member countries consist of Australia, Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Republic of Korea, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

b. For the purposes of this Subchapter, Canada and Mexico are considered OECD member countries only for the purpose of transit.

2. Any person who exports hazardous waste to or imports hazardous waste from a designated OECD member country for purposes other than recovery (e.g., incineration, disposal), Mexico (for any purpose), or Canada (for any purpose) remains subject to the requirements of this Section and LAC 33:V.1123; however, they are not subject to the requirements of LAC 33:V.1127.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:220 (March 1990), LR 18:1256 (November 1992), LR 20:1000 (September 1994), LR 20:1109 (October 1994), LR 21:944 (September 1995), LR 22:20 (January 1996), amended by the Office of the Secretary, LR 22:344 (May 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:661 (April 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2471 (November 2000), LR 27:710 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 32:824 (May 2006), LR 33:2102 (October 2007), LR 34:72 (January 2008), LR 34:622 (April 2008), LR 38:782 (March 2012), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 44:40 (January 2018), LR 46:929 (July 2020).

§1123. Imports of Foreign Hazardous Waste

A. Any person who imports hazardous waste from a foreign country into the state of Louisiana must comply with this Chapter and the special requirements of LAC 33:V.1123.

B. When importing hazardous waste from a foreign country into the state of Louisiana, a person must meet all the requirements of LAC 33:V.1107 for the manifest except that:

1. the name and address of the foreign generator and the importer's name, address, and EPA identification number must replace the generator's name, address, and EPA identification number;

2. the U.S. importer or his agent must sign and date the certification and obtain the signature of the initial transporter to replace the generator's signature on the certification statement;

3. in the comment section (Section J) of the manifest form, the importer must indicate the name of any transit countries with the corresponding ports and dates of entry and departure through which each waste type passed and the nature of its handling while there, the point of entry and the date on which the waste entered the United States and the date on which the Importation of Hazardous Waste Notification Form (HW-2) was mailed to the administrative authority; and

4. a copy of the Importation of Hazardous Waste Notification Form must accompany the manifest form.

C. A person who imports hazardous waste shall obtain a manifest form from any source that is registered with the US EPA as a supplier of manifests.

1. In the International Shipments block, the importer shall check the import box and enter the point of entry (city and state) into the United States.

2. The importer shall provide the transporter with an additional copy of the manifest to be submitted by the receiving facility to the US EPA.

D. Any person who imports hazardous waste from a foreign country into the state of Louisiana must prepare an Importation of Hazardous Waste Notification Form (HW-2) notifying the administrative authority of an intended import at least 30 days but not prior to one year before such waste is scheduled to enter the state of Louisiana. This notification form must be obtained from the administrative authority. The notification form must be signed by the importer and include the following information:

1. name, mailing address, telephone number, and EPA identification number of the importer;

2. for each hazardous waste type:

a. a description of the hazardous waste and the EPA hazardous waste number (LAC 33:V.4901 and 4903), the United States Department of Transportation shipping name, the hazard class, and the ID number for each hazardous waste imported;

b. the estimated total quantity of the hazardous waste in units as specified in the instructions to the Uniform Hazardous Waste Manifest form (8700-22); and

c. a description of the manner in which each hazardous waste type will be treated, stored, or disposed of in the state of Louisiana, e.g., incineration, land disposal, recycling;

3. a description of the means by which the shipment of the hazardous waste will be transported, e.g., mode of transportation (air, highway, rail, water, etc.) and types of containers (drums, boxes, tanks, etc.); and

4. the name of the U.S. port of entry with the corresponding date of entry and the nature of the handling of the waste from its point of entry into the U.S. until its final destination.

E. Notification shall be sent to the Office of Environmental Services, with "Attention: Notification to Import Foreign Hazardous Waste" prominently displayed on the front of the envelope. Such notices shall be sent by certified mail.

F. Except for changes to the telephone number required by LAC 33:V.1123.D.1, decreases in the quantity indicated pursuant to LAC 33:V.1123.D.2.c, and changes to the information required by LAC 33:V.1123.D.2.e, when conditions specified on the original notification change (including changes in the estimate of the quantity of hazardous waste specified in the original notification), the importer must provide the administrative authority with written notice of the change. Notice of such change must be submitted to the administrative authority prior to import into the state of Louisiana of the waste that is the subject of the change.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:20 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2471 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 32:824 (May 2006), LR 33:2103 (October 2007).

§1125. Unmanifested Foreign Hazardous Waste

A. Any person who imports foreign generated material that has not been classified as hazardous waste prior to entry into the state of Louisiana, but subsequently is determined to be hazardous waste, must immediately notify the Office of Environmental Services by telephone.

B. Any person who imports foreign generated material that has not been classified as hazardous waste prior to entry into the state of Louisiana, but subsequently is determined to be hazardous must, within seven business days:

1. file, in writing, an unmanifested waste report with the Office of Environmental Services, which shall include:

- a. the facility name and location;
- b. the port of entry of the hazardous waste;

c. the date of entry of the hazardous waste;

d. clarification of existence or nonexistence of an Importation of Hazardous Waste Notification Form (HW-2);

e. the name of the transporter from port of entry to the destination facility;

f. the vehicle numbers of the transporters; and

g. the date of transportation; and

2. prepare a manifest and file a copy of the completed manifest for the unmanifested waste with the administrative authority. (The transporter's signature may be omitted from the manifest; however, the comment section [Section J] of the manifest must explain why the signature was omitted and must detail the unmanifested waste circumstance.)

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:21 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2471 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2103 (October 2007).

Subchapter B. Transboundary Shipments of Hazardous Waste

§1127. Transboundary Shipments of Hazardous Waste for Recovery within the OECD

A. Applicability

1. The requirements of this Subchapter apply to imports and exports of wastes that are considered hazardous under United States national procedures and are destined for recovery operations in the countries listed in LAC 33:V.1113.I.1.a. A waste is considered hazardous under United States national procedures if the waste:

a. meets the definition of *hazardous waste* as defined in 40 CFR 261.3; and

b. is subject to either the manifesting requirements of LAC 33:V.1107, the universal waste management standards of LAC 33:V.Chapter 38, or the export requirements in the spent lead-acid battery management standards of LAC 33:V.4145.

2. Any person (exporter, importer, or recovery facility operator) who mixes two or more wastes (including hazardous and nonhazardous wastes) or otherwise subjects two or more wastes (including hazardous and nonhazardous wastes) to physical or chemical transformation operations, and thereby creates a new hazardous waste, becomes a generator and assumes all subsequent generator duties under RCRA and any exporter duties, if applicable, under this Subchapter.

B. General Conditions

1. Scope. The level of control for exports and imports of waste is indicated by assignment of the waste to either a list of wastes subject to the green control procedures or a list

ENVIRONMENTAL QUALITY

of wastes subject to the amber control procedures and by United States national procedures as defined in Paragraph A.1 of this Section. The OECD green and amber lists are incorporated by reference in Paragraph I.4 of this Section.

a. Listed Waste Subject to the Green Control Procedures

i. Green wastes that are not considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section are subject to existing controls normally applied to commercial transactions.

ii. Green wastes that are considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section are subject to the amber control procedures set forth in this Subchapter.

iii. Green wastes that are sufficiently contaminated or mixed with other wastes subject to amber list controls such that the waste or waste mixture is considered hazardous under United States national procedures must be handled in accordance with the amber list controls.

b. Listed Wastes Subject to the Amber Control Procedures

i. Amber wastes that are considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section, are subject to the amber control procedures set forth in this Subchapter.

ii. Amber wastes that are considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section, are subject to the amber control procedures in the United States, even if it is imported to, or exported from, a designated OECD member country listed in LAC 33:V.1113.I.1.a that does not consider the waste to be hazardous. In such an event, the responsibilities of the amber control procedures are as follows:

(a). U.S. Exports. The United States shall issue an acknowledgement of receipt and assume other responsibilities of the competent authority of the country of import.

(b). U.S. Imports. The U.S. recovery facility/importer and the United States shall assume the obligations associated with the amber control procedures that normally apply to the exporter and country of export, respectively.

iii. Amber wastes that are not considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section but are considered hazardous by an OECD member country are subject to the amber control procedures in the OECD member country that considers the waste hazardous. All responsibilities of the U.S. importer/exporter shift to the importer/exporter of the OECD member country that considers the waste hazardous unless the parties make other arrangements through contracts.

NOTE: Some wastes subject to the amber control procedures are not listed or otherwise identified as hazardous under RCRA. Therefore, they are not subject to the amber control

procedures of this Subchapter. Regardless of the status of the waste under RCRA, however, other federal environmental statutes (e.g., the Toxic Substances Control Act) restrict certain waste imports or exports. Such restrictions continue to apply with regard to this Subchapter.

c. Procedures for Mixtures of Wastes

i. A green waste that is mixed with one or more other green wastes such that the resulting mixture is not considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section, shall be subject to the green control procedures, provided the composition of this mixture does not impair its environmentally sound recovery.

NOTE: The regulated community should note that some OECD member countries may require, by domestic law, that mixtures of different green wastes be subject to the amber control procedures.

ii. A green waste that is mixed with one or more amber wastes, in any amount, *de minimis* or otherwise, or a mixture of two or more amber wastes, such that the resulting waste mixture is considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section, are subject to the amber control procedures, provided the composition of this mixture does not impair its environmentally sound recovery.

NOTE: The regulated community should note that some OECD member countries may require, by domestic law, that a mixture of a green waste and more than a *de minimis* amount of an amber waste or a mixture of two or more amber wastes be subject to the amber control procedures.

d. Wastes not yet assigned to an OECD waste list are eligible for transboundary movements, as follows:

i. if such wastes are considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section, these wastes are subject to the amber control procedures; or

ii. if such wastes are not considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section, such wastes are subject to the green control procedures.

2. General Conditions Applicable to Transboundary Movements of Hazardous Waste

a. The waste shall be destined for recovery operations at a facility that, under applicable domestic law, is operating or is authorized to operate in the importing country.

b. The transboundary movement shall be in compliance with applicable international transport agreements.

NOTE: These international agreements include, but are not limited to, the Chicago Convention (1944), ADR (1957), ADN (1970), MARPOL Convention (1973/1978), SOLAS Convention (1974), IMDG Code (1985), COTIF (1985), and RID (1985).

c. Any transit of waste through a non-OECD member country must be conducted in compliance with all applicable international and national laws and regulations.

3. Provisions Relating to Re-Export for Recovery to a Third Country

a. Re-export of wastes subject to the amber control procedures from the United States, as the importing country, to a third country listed in LAC 33:V.1113.I.1.a may occur only after an exporter in the United States provides notification to and obtains consent of the competent authorities in the third country, the original exporting country, and new transit countries. The notification shall comply with the notice and consent procedures in Subsection C of this Section for all concerned countries, and the original exporting country. The competent authorities of the original exporting country as well as the competent authorities of all other concerned countries have 30 days to object to the proposed movement.

i. The 30-day period begins once the competent authorities of both the initial exporting country and new importing country issue Acknowledgements of Receipt of the notification.

ii. The transboundary movement may commence if no objection has been lodged after the 30-day period has passed or immediately after written consent is received from all relevant OECD importing and transit countries.

b. Re-export of wastes subject to the amber control procedures from the original importing country to a third country listed in LAC 33:V.1113.I.1.a may occur only following notification of the competent authorities of the third country, the original exporting country, and new transit countries by an exporter in the original importing country in accordance with Subsection C of this Section. The transboundary movement may not proceed until receipt by the original importing country of written consent from the competent authorities of the third country, the original exporting country, and new transit countries.

c. In the case of re-export of amber wastes to a country other than those listed in LAC 33:V.1113.I.1.a, notification to and consent of the competent authorities of the original OECD member country of export and any OECD member countries of transit is required as specified in Subparagraphs B.3.a and b of this Section in addition to compliance with all international agreements and arrangements to which the first importing OECD member country is a party and all applicable regulatory requirements for exports from the first importing country.

4. Duty to Return or Re-Export Wastes Subject to the Amber Control Procedures. When a transboundary movement of wastes subject to the amber control procedures cannot be completed in accordance with the terms of the contract or the consent(s) and alternative arrangements cannot be made to recover the waste in an environmentally sound manner in the country of import, the waste shall be returned to the country of export or re-exported to a third country. The requirements of Paragraph B.3 of this Section apply to any shipments to be re-exported to a third country. The following provisions apply to shipments to be returned to the country of export as appropriate.

a. Return from the United States to the Country of Export. The U.S. importer shall inform EPA at the specified address in Clause C.2.a.i of this Section of the need to return the shipment. EPA will then inform the competent authorities of the countries of export and transit, citing the reason(s) for returning the waste. The U.S. importer shall complete the return within 90 days from the time EPA informs the country of export of the need to return the waste, unless informed in writing by EPA of another timeframe agreed to by the concerned member countries. If the return shipment will cross any transit country, the return shipment may only occur after EPA provides notification to and obtains consent from the competent authority of the country of transit, and provides a copy of that consent to the U.S. importer.

b. Return From the Country of Import to the United States. The U.S. exporter shall provide for the return of the hazardous waste shipment within 90 days from the time the country of import informs EPA of the need to return the waste or such other period of time as the concerned member countries agree. The U.S. exporter shall submit an exception report to EPA in accordance with Paragraph G.2 of this Section.

5. Duty to Return Wastes Subject to the Amber Control Procedures from the Country of Transit. When a transboundary movement of wastes subject to the amber control procedures does not comply with the requirements of the notification and movement documents or otherwise constitutes illegal shipment, and if alternative arrangements cannot be made to recover these wastes in an environmentally sound manner, the waste shall be returned to the country of export. The following provisions apply as appropriate:

a. Return from the United States (as Country of Transit) to the Country of Export. The U.S. transporter shall inform EPA at the specified address in Clause C.2.a.i of this Section of the need to return the shipment. EPA will then inform the competent authority of the country of export, citing the reason(s) for returning the waste. The U.S. transporter shall complete the return within 90 days from the time EPA informs the country of export of the need to return the waste, unless informed in writing by EPA of another time frame agreed to by the concerned member countries.

b. Return from the Country of Transit to the United States (as Country of Export). The U.S. exporter shall provide for the return of the hazardous waste shipment within 90 days from the time the competent authority of the country of transit informs EPA of the need to return the waste or such other period of time as the concerned member countries agree. The U.S. exporter shall submit an exception report to EPA in accordance with Paragraph G.2 of this Section.

6. Requirements for Wastes Destined for and Received by R12 and R13 Facilities. The transboundary movement of wastes destined for R12 and R13 operations shall comply with all amber control procedures for notification and consent as set forth in Subsection C of this

ENVIRONMENTAL QUALITY

Section and for the movement document as set forth in Subsection D of this Section. Additional responsibilities of R12/R13 facilities include:

a. indicating in the notification document the foreseen recovery facility or facilities where the subsequent R1-R11 recovery operation takes place or may take place;

b. within three days of receipt of the wastes by the R12/R13 recovery facility or facilities, the facility(ies) shall return a signed copy of the movement document to the exporter and to the competent authorities of the countries of export and import. The facility(ies) shall retain the original of the movement document for three years;

c. as soon as possible, but no later than 30 days after the completion of the R12/R13 recovery operation and no later than one calendar year following the receipt of the waste, the R12 or R13 facility(ies) shall send a certificate of recovery to the foreign exporter and to the competent authority of the country of export and to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue, N. W. Washington, D.C. 20460, by mail, e-mail without digital signature followed by mail, or fax followed by mail;

d. when a R12/R13 recovery facility delivers wastes for recovery to a R1-R11 recovery facility located in the country of import, it shall obtain as soon as possible, but not later than one calendar year following delivery of the waste, a certification from the R1-R11 facility that recovery of the wastes at that facility has been completed. The R12/R13 facility shall promptly transmit the applicable certification to the competent authorities of the countries of import and export, identifying the transboundary movements to which the certification pertain;

e. when a R12/R13 recovery facility delivers wastes for recovery to an R1-R11 recovery facility located in the initial country of export, amber control procedures apply, including a new notification. If located in a third country other than the initial country of export, amber control procedures apply, with the additional provision that the competent authority of the initial country of export shall also be notified of the transboundary movement.

7. Laboratory Analysis Exemption. The transboundary movement of an amber waste is exempt from the amber control procedures if it is in certain quantities and destined for laboratory analysis to assess its physical or chemical characteristics, or to determine its suitability for recovery operations. The quantity of such waste shall be determined by the minimum quantity reasonably needed to perform the analysis in each particular case adequately, but in no case exceed 25 kgs. Waste destined for laboratory analysis must still be appropriately packaged and labeled.

C. Notification and Consent

1. Applicability. Consent shall be obtained from the competent authorities of the relevant OECD importing and transit countries prior to exporting hazardous waste destined

for recovery operations subject to this Subchapter. Hazardous wastes subject to amber control procedures are subject to the requirements of Paragraph C.2 of this Section and wastes not identified on any list are subject to the requirements of Paragraph C.3 of this Section.

2. Amber Wastes. The export from the United States of hazardous waste as described in Paragraph A.1 of this Section subject to the amber control procedures are prohibited unless the notification and consent requirements of this Subsection are met.

a. Transactions Requiring Specific Consent

i. Notification. At least 45 days prior to the commencement of each transboundary movement, the exporter must provide written notification, in English, of the proposed transboundary movement to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, with the words "Attention: OECD Export Notification" prominently displayed on the envelope. This notification shall include all of the information identified in Paragraph C.4 of this Section. In cases where wastes having similar physical and chemical characteristics, the same United Nations classification, and the same RCRA waste codes are to be sent periodically to the same recovery facility by the same exporter, the exporter may submit one general notification of intent to export these wastes in multiple shipments during a period of up to one year. When a general notification is used for multiple shipments, each shipment shall be accompanied by a movement document pursuant to Subsection D of this Section.

ii. Tacit Consent. If no objection has been lodged by any concerned country (i.e., exporting, importing, or transit countries) to a notification provided pursuant to Clause C.2.a.i of this Section within 30 days after the date of issuance of the acknowledgment of receipt of notification by the competent authority of the importing country, the transboundary movement may commence. Tacit consent expires one calendar year after the close of the 30-day period; renotification and renewal of all consents are required for exports after that date.

iii. Written Consent. If the competent authorities of all the relevant OECD importing and transit countries provide written consent in a period less than 30 days, the transboundary movement may commence immediately after all necessary consents are received. Written consent expires for each relevant OECD importing and transit country one calendar year after the date of that country's consent unless otherwise specified; renotification and renewal of each expired consent is required for exports after that date.

b. Transboundary Movements to Facilities Preapproved by the Competent Authorities of the Importing Countries to Accept Specific Wastes for Recovery

i. Notification. The exporter shall provide EPA the information identified in Paragraph C.4 of this Section,

in English, at least 10 days in advance of commencing shipment to a preapproved facility. The notification shall indicate that the recovery facility is preapproved, and the notification may apply to a single specific shipment or to multiple shipments as described in Clause C.2.a.i of this Section. This information shall be sent to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, with the words "OECD Export Notification-Preapproved Facility" prominently displayed on the envelope. General notifications that cover multiple shipments as described in Clause C.2.a.i of this Section may cover a period of up to three years. When a general notification is used for multiple shipments, each shipment shall be accompanied by a movement document pursuant to Subsection D of this Section.

ii. Exports to preapproved facilities may take place after seven working days from the issuance of an acknowledgement of receipt of the notification by the competent authority of the country of import, unless the exporter has received information indicating that the competent authority of any countries concerned objects to the shipment.

3. Wastes not Covered in the OECD Green and Amber Lists. Wastes destined for recovery operations that have not been assigned to the OECD green and amber lists, incorporated by reference in Paragraph I.4 of this Section but which are considered hazardous under United States national procedures as defined in Paragraph A.1 of this Section, shall be subject to the notification and consent requirements established for the amber control procedures in accordance with Paragraph C.2 of this Section. Wastes destined for recovery operations, that have not been assigned to the OECD green and amber lists incorporated by reference in Paragraph I.4 of this Section, and are not considered hazardous under U.S. national procedures as defined by Paragraph A.1 of this Section shall be subject to the green control procedures.

4. Notification Information. Notifications submitted under this Section shall include:

- a. serial number or other accepted identifier of the notification document;
- b. exporter name and EPA identification number (if applicable), address, telephone number, fax number, and email address;
- c. importing recovery facility name, address, telephone number, fax number, email address, and technologies employed;
- d. importer name (if not the owner or operator of the recovery facility), address, telephone number, fax number, and email address; whether the importer will engage in waste exchange recovery operation R12 or waste accumulation recovery operation R13 prior to delivering the waste to the final recovery facility and identification of

recovery operations to be employed at the final recovery facility;

- e. intended transporters and/or their agents; address, telephone number, fax number, and email address;
- f. country of export and relevant competent authority and point of departure;
- g. countries of transit and relevant competent authorities and points of entry and departure;
- h. country of import and relevant competent authority and point of entry;
- i. statement of whether the notification is a single notification or a general notification. If general, include the period of validity requested;
- j. date foreseen for commencement of transboundary movement;
- k. designation of waste type(s) from the appropriate OECD list incorporated by reference in Paragraph I.4 of this Section, descriptions of each waste type, estimated total quantity of each, RCRA waste code, and United Nations number for each waste type;
- l. means of transport envisaged;
- m. specification of the *recovery operation(s)* as defined in LAC 33:V.109; and
- n. certification/declaration signed by the exporter that states:

"I certify that the above information is complete and correct to the best of my knowledge, legally enforceable written contractual obligations have been entered into, and any applicable insurance or other financial guarantees shall cover the transboundary movement."

Name: _____

Signature: _____

Date: _____

NOTE: The United States does not currently require financial assurance for these waste shipments. However, United States exporters may be asked by other governments to provide and certify to such assurance as a condition of obtaining consent to a proposed movement.

5. Certificate of Recovery. As soon as possible, but no later than 30 days after the completion of recovery and no later than one calendar year following receipt of the waste, the U.S. recovery facility shall send a certificate of recovery to the exporter and to the competent authorities of the countries of export and import by mail, email (without a digital signature) or fax followed by mail. The certificate of recovery shall include a signed, written, and dated statement that affirms that the waste materials were recovered in the manner agreed to by the parties to the contract required under Subsection E of this Section.

D. Tracking Document

1. All United States parties subject to the contract provisions of Subsection E of this Section shall ensure that a movement document meeting the conditions of Paragraph

ENVIRONMENTAL QUALITY

D.2 of this Section accompanies each transboundary movement of wastes subject to the amber control procedures from the initiation of the shipment until it reaches the final recovery facility, including cases in which the waste is stored and/or sorted by the importer prior to shipment to the final recovery facility, except as provided in Subparagraphs D.1.a and b of this Section.

a. For shipments of hazardous waste within the United States solely by water (bulk shipments only) the generator shall forward the movement document with the manifest to the last water (bulk shipment) transporter to handle the waste in the United States if exported by water (in accordance with the manifest routing procedures in LAC 33:V.1107.D.3).

b. For rail shipments of hazardous waste within the United States which originate at the site of generation, the generator shall forward the movement document with the manifest (in accordance with the routing procedures for the manifest in LAC 33:V.1107.D.4) to the next nonrail transporter, if any, or the last rail transporter to handle the waste in the United States if exported by rail.

2. The movement document shall include all information required under Subsection C of this Section for notification and the following:

- a. date movement commenced;
- b. name (if not exporter), address, telephone number, fax number, and email of primary exporter;
- c. company name and EPA ID number of all transporters;
- d. identification (license, registered name, or registration number) of means of transport, including types of packaging envisaged;
- e. any special precautions to be taken by transporters;
- f. certification/declaration signed by the exporter that no objection to the shipment has been lodged as follows:

"I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally enforceable written contractual obligations have been entered into, that any applicable insurance or other financial guarantees are or shall be in force covering the transboundary movement, and that:

1. all necessary consents have been received; or
2. the shipment is directed at a recovery facility within the OECD area and no objection has been received from any of the concerned countries within the 30 day tacit consent period; or
3. the shipment is directed to a recovery facility preauthorized for that type of waste within the OECD area; such an authorization has not been revoked, and no objection has been received from any of the concerned countries."

[Delete sentences that are not applicable]

Name:

Signature:

Date:

and

g. appropriate signatures for each custody transfer (e.g., transporter, importer, and owner or operator of the recovery facility).

3. Exporters also shall comply with the special manifest requirements of LAC 33:V.1113.E.1, 2, 3, 5, and 9; and importers must comply with the import requirements of LAC 33:V.1123.

4. Each United States person that has physical custody of the waste from the time the movement commences until it arrives at the recovery facility shall sign the movement document (e.g., transporter, importer, and owner or operator of the recovery facility).

5. Within three working days of the receipt of imports subject to this Subchapter, the owner or operator of the United States recovery facility shall send signed copies of the movement document to the exporter, to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, and to the competent authorities of the exporting and transit countries. If the concerned U.S. recovery facility is a R12 and R13 recovery facility as defined under LAC 33:V.109.Recovery Operations, Table 1, the facility shall retain the original of the movement document for three years.

E. Contracts

1. Transboundary movements of hazardous wastes subject to the amber control procedures are prohibited unless they occur under the terms of a valid written contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). Such contracts or equivalent arrangements must be executed by the exporter and the owner or operator of the recovery facility and must specify responsibilities for each. Contracts or equivalent arrangements are valid for the purposes of this Section only if persons assuming obligations under the contracts or equivalent arrangements have appropriate legal status to conduct the operations specified in the contract or equivalent arrangement.

2. Contracts or equivalent arrangements must specify the name and EPA ID number, where available, of:

- a. the generator of each type of waste;
- b. each person who will have physical custody of the wastes;
- c. each person who will have legal control of the wastes; and
- d. the recovery facility.

3. Contracts or equivalent arrangements must specify which party to the contract will assume responsibility for alternate management of the wastes if its disposition cannot be carried out as described in the notification of intent to export. In such cases, contracts must specify that:

a. the person having actual possession or physical control over the wastes will immediately inform the exporter and the competent authorities of the exporting and importing countries and, if the wastes are located in a country of transit, the competent authorities of that country; and

b. the person specified in the contract will assume responsibility for the adequate management of the wastes in compliance with applicable laws and regulations including, if necessary, arranging the return of waste, and shall provide the notification for re-export.

4. Contracts must specify that the importer will provide the notification required in Paragraph B.3 of this Section prior to re-export of controlled wastes to a third country.

5. Contracts or equivalent arrangements must include provisions for financial guarantees, if required by the competent authorities of any concerned country, in accordance with applicable national or international law requirements.

NOTE: Financial guarantees so required are intended to provide for alternate recycling, disposal, or other means of sound management of the wastes in cases where arrangements for the shipment and the recovery operations cannot be carried out as foreseen. The United States does not require such financial guarantees at this time; however, some OECD member countries do. It is the responsibility of the exporter to ascertain and comply with such requirements; in some cases, transporters or importers may refuse to enter into the necessary contracts absent specific references or certifications to financial guarantees.

6. Contracts or equivalent arrangements must contain provisions requiring each contracting party to comply with all applicable requirements of this Subchapter.

7. Upon request by EPA, United States exporters, importers, or recovery facilities shall submit to EPA copies of contracts, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). Information contained in the contracts or equivalent arrangements for which a claim of confidentiality is asserted in accordance with 40 CFR 2.203(b) will be treated as confidential and will be disclosed by EPA only as provided in 40 CFR 260.2.

NOTE: Although the United States does not require routine submission of contracts at this time, OECD Decision C(92)39/FINAL allows member countries to impose such requirements. When other OECD member countries require submission of partial or complete copies of the contract as a condition to granting consent to proposed movements, EPA will request the required information; absent submission of such information, some OECD member countries may deny consent for the proposed movement.

F. Provisions Relating to Recognized Traders

1. A recognized trader who takes physical custody of a waste and conducts recovery operations (including storage prior to recovery) is acting as the owner or operator of a recovery facility and must be so authorized in accordance with all applicable federal laws.

2. A recognized trader acting as an exporter or importer for transboundary shipments of waste must comply

with all the requirements of this Subchapter associated with being an exporter or importer.

3. A recognized trader shall not arrange for import or export of hazardous waste without having received an EPA identification number.

G. Reporting and Recordkeeping

1. Annual Reports. For all waste movements subject to this Subchapter, persons (e.g., exporters, recognized traders) who meet the definition of primary exporter in LAC 33:V.109 or who initiate the movement document under Subsection D of this Section shall file an annual report with the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, no later than March 1 of each year, summarizing the types, quantities, frequency, and ultimate destination of all such hazardous waste exported during the previous calendar year. (If the primary exporter or the person who initiates the movement document under Subsection D of this Section is required to file an annual report for waste exports that are not covered under this Subchapter, he may include all export information in one report, provided the information required in Subparagraph 1.a of this Subsection on exports of waste destined for recovery within the designated OECD member countries is contained in a separate section.) Such reports shall include the following:

a. the EPA identification number, name, and mailing and site address of the exporter filing the report;

b. the calendar year covered by the report;

c. the name and site address of each final recovery facility;

d. by final recovery facility, for each hazardous waste exported, a description of the hazardous waste, the EPA hazardous waste number (from LAC 33:V.Chapter 49), designation of waste type(s) from OECD waste lists and applicable waste code from the OECD lists incorporated by reference in Paragraph I.4 of this Section, the DOT hazard class, the name and U.S. EPA identification number (where applicable) for each transporter used, the total amount of hazardous waste shipped pursuant to this Subchapter, and the number of shipments pursuant to each notification;

e. in even numbered years, for each hazardous waste exported, except for hazardous waste produced by exporters of greater than 100 kg but less than 1,000 kg in a calendar month and except for hazardous waste for which information was already provided pursuant to LAC 33:V.1021:

i. a description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated; and

ii. a description of the changes in volume and toxicity of the waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984; and

ENVIRONMENTAL QUALITY

f. a certification signed by the person acting as primary exporter or initiator of the movement document under Subsection D of this Section that states:

“I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.”

2. Exception Reports. Any person who meets the definition of primary exporter in LAC 33:V.109 or who initiates the movement document under Subsection D of this Section must file an exception report, in lieu of the requirements of LAC 33:V.1023 (if applicable), with the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue, N.W., Washington, DC 20560, if any of the following occurs:

a. he has not received a copy of the RCRA hazardous waste manifest (if applicable) signed by the transporter identifying the point of departure of the waste from the United States within 45 days from the date it was accepted by the initial transporter;

b. within 90 days from the date the waste was accepted by the initial transporter, the exporter has not received written confirmation from the recovery facility that the hazardous waste was received; or

c. the waste is returned to the United States.

3. Recordkeeping

a. Persons who meet the definition of *primary exporter* in LAC 33:V.109 or who initiate the movement document under this Section shall keep the following records:

i. a copy of each notification of intent to export and all written consents obtained from the competent authorities of concerned countries for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;

ii. a copy of each annual report for a period of at least three years from the due date of the report; and

iii. a copy of any exception reports and a copy of each confirmation of delivery (i.e., movement documentation) sent by the recovery facility to the exporter for at least three years from the date the hazardous waste was accepted by the initial transporter or received by the recovery facility, whichever is applicable.

iv. a copy of each certificate of recovery sent by the recovery facility to the exporter for at least three years from the date that the recovery facility completed processing the waste shipment.

b. The periods of retention referred to in this Section are extended automatically during the course of any

unresolved enforcement action regarding the regulated activity or as requested by the administrative authority.

H. Preapproval for United States Recovery Facilities—Reserved.

I. OECD Waste Lists

1. General. For the purposes of this Subchapter, a waste is considered hazardous under United States national procedures, and hence subject to this Subchapter, if the waste:

a. meets the definition of hazardous waste in LAC 33:V.109; and

b. is subject to either the Federal RCRA manifesting requirements of this Chapter, the universal waste management standards of LAC 33:V.Chapter 38, or the export requirements in the spent lead-acid battery management standards of LAC 33:V.4145.

2. If a waste is hazardous under Paragraph I.1 of this Section, it is subject to the amber control procedures, regardless of whether it appears in Appendix 4 of the OECD Decision, as defined in Subsection B of this Section.

3. The appropriate control procedures for hazardous wastes and hazardous waste mixtures are addressed in Subsection B of this Section.

4. The OECD waste lists, as set forth in Annex B (“Green List”) and Annex C (“Amber List”) (collectively “OECD waste lists”) of the 2009 “Guidance Manual for the Implementation of Council Decision C (2001)107/FINAL, as Amended, on the Control of Transboundary Movements of Wastes Destined for Recovery Operations,” are incorporated by reference. This incorporation by reference was approved by the director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. This material is incorporated as it exists on the date of the approval and a notice of any change in these materials will be published in the Federal Register. The materials are available for inspection at: the U.S. Environmental Protection Agency, Docket Center Public Reading Room, EPA West, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004 (Docket # EPA-HQ-RCRA-2005-0018) or at the National Archives and Records Administration (NARA), and may be obtained from the Organization for Economic Cooperation and Development, Environment Directorate, 2 rue André Pascal, F-75775 Paris Cedex 16, France. For information on the availability of this material at NARA, call (202) 741-6030, or go to: <http://www.archives.gov/federal-register/cfr/ibr-locations.html>. To contact the EPA Docket Center Public Reading Room, call (202) 566-1744. To contact the OECD, call +33 (0) 1 45 24 81 67.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:661 (April 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2471 (November 2000), LR 27:293 (March 2001), amended by

the Office of the Secretary, Legal Affairs Division, LR 33:2103 (October 2007), LR 34:72 (January 2008), LR 34:1012 (June 2008), LR 38:783 (March 2012), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:930 (July 2020).

Chapter 13. Transporters

§1301. Applicability

A. The revised manifest form and procedures in 40 CFR 260.10, 261.7, 263.20, and 263.21, had an effective date of September 5, 2006. The manifest form and procedures in 40 CFR 260.10, 261.7, 263.20, and 263.21, contained in 40 CFR parts 260 to 265, edition revised as of July 1, 2004, were applicable until September 5, 2006. This Chapter establishes standards that apply to persons transporting hazardous waste within the state of Louisiana if the transportation requires a manifest under LAC 33:V.1516.

B. The regulations set forth in LAC 33:V.Chapters 10, 11 and 13 establish the responsibilities of generators and transporters in the handling, transportation and management of hazardous waste. In these regulations, Louisiana has expressly adopted certain regulations of the Department of Public Safety (DPS). These regulations concern, among other things, labeling, marking, placarding, using proper containers and reporting discharges. The department has adopted these regulations in order to satisfy its statutory obligation to promulgate regulations which are necessary to protect human health and the environment in the transportation of hazardous waste. The department adoption of these DPS regulations ensures consistency with the requirements of DPS and thus avoids the establishment of duplicative or conflicting requirements with respect to these matters.

C. Transporters of hazardous waste are cautioned that DPS's regulations are fully applicable to their activities and enforceable by DPS. The department and DPS worked together to develop standards for transporters of hazardous waste in order to avoid conflicting requirements. Regardless of DPS's action, the department retains its authority to enforce these regulations.

D. This Chapter does not apply to:

1. on-site transportation of hazardous waste by generators or by owners or operators of permitted hazardous waste management facilities; and

2. any person who offers for transportation or who transports household refuse or household septic tank pumping from the site where it was generated, if those materials are not transported with any other hazardous waste.

E. A transporter of hazardous waste must also comply with LAC 33:V.Chapters 10 and 11 if he transports hazardous waste into Louisiana from abroad or mixes hazardous wastes of different United States Department of Transportation shipping descriptions by placing them into a single container.

F. A transporter of hazardous waste subject to the federal manifesting requirements of LAC 33:V.Chapter 11 or subject to the waste management standards of LAC 33:V.Chapter 38 that is being imported from or exported to any of the countries listed in LAC 33:V.1113.I.1.a for purposes of recovery is subject to this Chapter and to all other relevant requirements of LAC 33:V.Chapter 11.Subchapter B including, but not limited to, LAC 33:V.1127.D for movement documents.

G. The regulations in this Chapter do not apply to transportation during an explosives or munitions emergency response conducted in accordance with LAC 33:V.1501.C.7.a.iv or d or 4307 and 305.C.12 or 13.

H. LAC 33:V.5305 identifies how the requirements of this Chapter apply to military munitions classified as solid waste under LAC 33:V.5303.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:666 (April 1998), LR 24:1694 (September 1998), amended by the Office of the Secretary, Legal Affairs Division, LR 32:824 (May 2006), LR 38:789 (March 2012), amended by the Office of the Secretary, Legal Division, LR 42:567 (April 2016), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:930 (July 2020).

§1303. EPA Identification Number

A. A transporter must not transport hazardous wastes without having received an EPA identification number.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984).

§1305. Transfer Facility Requirements

A. A transporter who stores manifested shipments of hazardous waste at a transfer facility for more than 10 days is considered a storage facility and is required to obtain a permit in compliance with the conditions of these regulations.

B. If hazardous wastes from different generators or separate wastes from the same generator become mixed after being accepted by the transporter, the transporter shall also comply with applicable federal or state generator standards unless the transporter shows that the information on the manifests still identifies the hazardous waste.

C. A transporter who stores manifested shipments of hazardous waste in containers meeting the independent requirements applicable to the DPS regulations on packaging under LAC 33:V.Subpart 2.Chapter 101 at a transfer facility for a period of 10 days or less is not subject to regulation under LAC 33:V.Chapters 1-7, 15-29, 31-38, and 43 with respect to the storage of those wastes. The transporter shall notify the Office of Environmental Services using the

ENVIRONMENTAL QUALITY

department's Notification of Hazardous Waste Activity Form (HW-1) and obtain written approval by the administrative authority prior to storing waste under Subparagraph C of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), repromulgated LR 18:1256 (November 1992), amended by the Office of Waste Services, Hazardous Waste Division, LR 23:1511 (November 1997), LR 24:1694 (September 1998), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:930 (July 2020).

§1307. The Manifest System

A. A transporter may not accept hazardous waste from a generator or another transporter unless it is accompanied by a manifest form (EPA Form 8700-22, and if necessary, EPA Form 8700-22A), signed by the generator in accordance with the provisions of LAC 33:V.1107, or is provided with an electronic manifest that is obtained, completed, and transmitted in accordance with LAC 33:V.1107.A.9, and signed with a valid and enforceable electronic signature as described in LAC 33:V.1107.G. The transportation of any hazardous wastes without a manifest shall be deemed a violation of these regulations and the Act. In the case of exports other than those subject to LAC 33:V.1125, a transporter may not accept such waste from a primary exporter or other person:

1. if he knows the shipment does not conform to the EPA Acknowledgment of Consent; and

2. unless, in addition to a manifest signed by the generator, such waste is also accompanied by an EPA acknowledgment of consent which, except for shipments by rail, is attached to the manifest, or shipping paper for exports by water (bulk shipment). For exports of hazardous waste subject to the requirements of LAC 33:V.1125, a transporter may not accept hazardous waste without a tracking document that includes all information required by LAC 33:V.1127.D.

B. Before transporting the hazardous waste, the transporter must sign and date the manifest acknowledging acceptance of the hazardous waste from the generator or other transporter. The transporter must return a signed copy to the generator or other transporter before leaving the generator's property or other transporter's facility.

C. The transporter must ensure that the manifest accompanies the hazardous waste, except as provided for bulk water or rail transport in LAC 33:V.1307.E and F. In the case of exports, the transporter must ensure that a copy of the EPA Acknowledgment of Consent also accompanies the hazardous waste.

D. A transporter who delivers a hazardous waste to another transporter or to the designated facility must:

1. obtain the date of delivery and the handwritten signature of that transporter or of the owner or operator of the designated facility on the manifest;

2. retain one copy of the manifest in accordance with LAC 33:V.1311; and

3. give the remaining copies of the manifest to the accepting transporter or designated facility.

E. The requirements of LAC 33:V.1307.C, D and F do not apply to water (bulk shipment) transporters if:

1. the hazardous waste is delivered by water (bulk shipment) to the designated facility;

2. a shipping paper containing all the information required on the manifest (excluding the EPA identification number, generator certification and signature) and, for exports, an EPA Acknowledgment of Consent accompanies the hazardous waste;

3. the delivering transporter obtains the date of delivery and handwritten signature of the owner and operator of the designated facility on either the manifest or the shipping paper;

4. the person delivering the hazardous waste to the initial water (bulk shipment) transporter obtains the date of delivery and signature of the water (bulk shipment) transporter on the manifest and forwards it to the designated facility; and

5. a copy of the shipping paper or manifest is retained by each water (bulk shipment) transporter in accordance with LAC 33:V.1311.B.

F. For shipments involving rail transportation, the requirements of LAC 33:V.1307.C, D and E do not apply and the following requirements do apply.

1. When accepting hazardous waste from a non-rail transporter, the initial rail transporter must:

a. sign and date the manifest acknowledging acceptance of the hazardous waste;

b. return a signed copy of the manifest to the non-rail transporter;

c. forward at least three copies of the manifest to:

i. the next non-rail transporter, if any;

ii. the designated facility, if the shipment is delivered to that facility by rail; or

iii. the last rail transporter designated to handle the waste in the United States;

d. retain one copy of the manifest and rail shipping paper in accordance with LAC 33:V.1311;

2. rail transporters must ensure that a shipping paper containing all the information required on the manifest (excluding the EPA identification numbers, generator certification, and signatures) and, for exports, an EPA Acknowledgment of Consent accompanies the hazardous waste at all times;

[NOTE: Intermediate rail transporters are not required to sign either the manifest or shipping paper.]

3. when delivering hazardous waste to the designated facility, a rail transporter must:

a. obtain the date of delivery and handwritten signature of the owner or operator of the designated facility on the manifest or the shipping paper (if the manifest has not been received by the facility); and

b. retain a copy of the manifest or signed shipping paper in accordance with LAC 33:V.1311;

4. when delivering hazardous waste to a non-rail transporter, a rail transporter must:

a. obtain the date of delivery and the handwritten signature of the next non-rail transporter on the manifest; and

b. retain a copy of the manifest in accordance with LAC 33:V.1311; and

5. before accepting hazardous waste from a rail transporter, a non-rail transporter must sign and date the manifest or the shipping paper and provide a copy to the rail transporter.

G. Transporters who transport hazardous waste out of the United States must:

1. sign and date the manifest in the International Shipments block to indicate the date that the shipment left the United States;

2. retain one copy in accordance with LAC 33:V.1311.D;

3. return a signed copy of the manifest to the generator; and

4. give a copy of the manifest to a United States Customs official at the point of departure from the United States.

H. A transporter transporting hazardous waste from a generator who generates greater than 100 kg, but less than 1000 kg, of hazardous waste in a calendar month need not comply with the requirements of this Section or those of LAC 33:V.1311 provided that:

1. the waste is being transported in accordance with a reclamation agreement as provided for in LAC 33:V.1107.A.4;

2. the transporter records, on a log or shipping paper, the following information for each shipment:

a. the name, address, and EPA identification number of the generator of the waste;

b. the quantity of waste accepted;

c. all DOT-required shipping information; and

d. the date the waste is accepted;

3. the transporter carries this record when transporting waste to the reclamation facility; and

4. the transporter retains these records for a period of at least three years after termination or expiration of the agreement.

I. Use of Electronic Manifest—Legal Equivalence to Paper Forms for Participating Transporters. Electronic manifests that are obtained, completed, and transmitted in accordance with LAC 33:V.1107.A.9, and used in accordance with this Section in lieu of EPA Forms 8700-22 and 8700-22A, are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these regulations to obtain, complete, sign, carry, provide, give, use, or retain a manifest.

1. Any requirement in these regulations to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with, or obtaining a valid and enforceable electronic signature within the meaning of LAC 33:V.1107.G.

2. Any requirement in these regulations to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when a copy of an electronic manifest is transmitted to the other person by submission to the system.

3. Any requirement in these regulations for a manifest to accompany a hazardous waste shipment is satisfied when a copy of an electronic manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the waste shipment, except that to the extent that the hazardous materials regulation on shipping papers for carriage by public highway requires transporters of hazardous materials to carry a paper document to comply with 49 CFR 177.817, a hazardous waste transporter must carry one printed copy of the electronic manifest on the transport vehicle.

4. Any requirement in these regulations for a transporter to keep or retain a copy of a manifest is satisfied by the retention of an electronic manifest in the transporter's account on the e-manifest system, provided that such copies are readily available for viewing and production if requested by any EPA or authorized state inspector.

5. No transporter may be held liable for the inability to produce an electronic manifest for inspection under this Section, if that transporter can demonstrate that the inability to produce the electronic manifest is exclusively due to a technical difficulty with the EPA system for which the transporter bears no responsibility.

J. A transporter may participate in the electronic manifest system either by accessing the electronic manifest system from the transporter's own electronic equipment, or by accessing the electronic manifest system from the equipment provided by a participating generator, by another transporter, or by a designated facility.

K. Special Procedures when Electronic Manifest is not Available. If after a manifest has been originated electronically and signed electronically by the initial transporter, and the electronic manifest system should

become unavailable for any reason, then the following requirements shall be met:

1. the transporter in possession of the hazardous waste when the electronic manifest becomes unavailable shall reproduce sufficient copies of the printed manifest that is carried on the transport vehicle pursuant to LAC 33:V.1307.I.1.c, or obtain and complete another paper manifest for this purpose. The transporter shall reproduce sufficient copies to provide the transporter and all subsequent waste handlers with a copy for their files, plus two additional copies that will be delivered to the designated facility with the hazardous waste;

2. on each printed copy, the transporter shall include a notation in the special handling and additional description space (item 14) that the paper manifest is a replacement manifest for a manifest originated in the electronic manifest system, shall include (if not pre-printed on the replacement manifest) the manifest tracking number of the electronic manifest that is replaced by the paper manifest, and shall also include a brief explanation why the electronic manifest was not available for completing the tracking of the shipment electronically;

3. a transporter signing a replacement manifest to acknowledge receipt of the hazardous waste must ensure that each paper copy is individually signed and that a legible handwritten signature appears on each copy; and

4. from the point at which the electronic manifest is no longer available for tracking the waste shipment, the paper replacement manifest copies shall be carried, signed, retained as records, and given to a subsequent transporter or to the designated facility, following the instructions, procedures, and requirements that apply to the use of all other paper manifests.

L. Special Procedures for Electronic Signature Methods Undergoing Tests. If a transporter using an electronic manifest signs this manifest electronically using an electronic signature method, which is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the transporter shall sign the electronic manifest electronically, and also sign with an ink signature the transporter acknowledgement of receipt of materials on the printed copy of the manifest that is carried on the vehicle in accordance with LAC 33:V.1307.I.1.c. This printed copy bearing the generator's and transporter's ink signatures shall also be presented by the transporter to the designated facility to sign in ink to indicate the receipt of the waste materials or to indicate discrepancies. After the owner/operator of the designated facility has signed this printed manifest copy with its ink signature, the printed manifest copy shall be delivered to the designated facility with the waste materials.

M. Imposition of User Fee for Electronic Manifest Use. A transporter who is a user of the electronic manifest may be assessed a user fee by EPA for the origination or processing of each electronic manifest. EPA shall maintain and update from time-to-time the current schedule of electronic manifest user fees, which shall be determined based on current and

projected system costs and level of use of the electronic manifest system. The current schedule of electronic manifest user fees shall be published as an appendix to 40 CFR part 262.

N. Electronic Manifest Signatures. Electronic manifest signatures shall meet the criteria described in LAC 33:V.1107.G.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:220 (March 1990), LR 18:1256 (November 1992), LR 20:1109 (October 1994), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:666 (April 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 27:710 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 32:824 (May 2006), amended by the Office of the Secretary, Legal Division, LR 42:567 (April 2016).

§1309. Compliance with the Manifest

A. The transporter must deliver the entire quantity of hazardous waste which he has accepted from a generator or a transporter to:

1. the designated facility listed on the manifest;
2. the alternate designated facility, if the hazardous waste cannot be delivered to the designated facility because an emergency prevents delivery, and such action is approved by the administrative authority;
3. the next designated transporter; or
4. the place outside the United States designated by the generator.

NOTE: No person may deliver a hazardous waste to a place other than the permitted facility shown on the manifest.

B. If the hazardous waste cannot be delivered in accordance with Subsection A of this Section, the transporter shall contact the generator for further directions and shall revise the manifest according to the generator's instructions. If the hazardous waste is rejected by the designated facility while the transporter is on the facility's premises, then the transporter must obtain the following:

1. for a partial load rejection or for regulated quantities of container residues, a copy of the original manifest that includes the date and the facility's signature, the manifest tracking number of the new manifest that will accompany the shipment, and a description of the partial rejection or container residue in the Discrepancy block of the original manifest. The transporter shall retain a copy of this manifest and give remaining copies of the original to the rejecting facility. If the transporter is forwarding the rejected part of the shipment or a regulated container residue to an alternate facility or returning it to the generator, the transporter shall obtain a new manifest to accompany the shipment, and the new manifest must include all of the required information;

2. for a full load rejection that will be taken back by the transporter, a copy of the original manifest which includes the date and the rejecting facility's signature and that attests to the rejection, the description of the rejection in the Discrepancy block, and the name, address, phone number, and ID number for the alternate facility to which the shipment must be delivered. The transporter shall retain a copy of the manifest and give a copy to the rejecting facility. If the original manifest is not used, the transporter must obtain a new manifest for shipment.

C. A transporter shall not transport a shipment of hazardous waste in containers unless each hazardous waste container is marked and labeled as required in LAC 33:V.1063.B and C. If the label is lost or detached, the transporter shall replace it based on the information taken from the manifest for the shipment.

D. A transporter shall not transport a container that is leaking or appears to be damaged, except to the nearest place where the transport vehicle can be safely positioned without unnecessarily endangering other transport vehicles or the environment. The transporter will then make the repairs necessary to remedy the unsafe condition.

E. A transporter shall not accept hazardous wastes consisting of a material or mixtures of materials prohibited under DPS regulations.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2472 (November 2000), LR 27:44 (January 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 32:825 (May 2006), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:930 (July 2020).

§1311. Recordkeeping

A. A transporter of hazardous waste must keep a copy of the manifest signed by the generator, himself, and the next designated transporter or the owner or operator of the designated facility for a period of three years from the date the hazardous waste was accepted by the initial transporter.

B. For shipments delivered to the designated facility by water (bulk shipment), each water (bulk shipment) transporter must retain a copy of the shipping paper containing all the information required in LAC 33:V.1307.E.2 for a period of three years from the date the hazardous waste was accepted by the initial transporter.

C. For shipments of hazardous waste by rail:

1. the initial rail transporter must keep a copy of the manifest and shipping paper with all the information required in LAC 33:V.1307.F.2 for a period of three years from the date the hazardous waste was accepted by the initial transporter; and

2. the final rail transporter must keep a copy of the signed manifest (or the shipping paper if signed by the

designated facility in lieu of the manifest) for a period of three years from the date the hazardous waste was accepted by the initial transporter.

[NOTE: Intermediate rail transporters are not required to keep records pursuant to these regulations.]

D. A transporter who transports hazardous waste out of the United States must keep a copy of the manifest, indicating that the hazardous waste left the United States, for a period of three years from the date the hazardous waste was accepted by the initial transporter.

E. The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984).

§1313. Financial Responsibility

A. Each transporter of hazardous wastes shall acquire continuous coverage for all of its transport vehicles regulated by these rules and regulations at a minimum coverage of \$300,000 per vehicle public liability and \$200,000 per vehicle damage.

B. The financial responsibility required by this Section may be established by any one or a combination of the following:

1. evidence of liability insurance;
2. self-insurance with a level not more than 20 percent of equity; or
3. other evidence of financial responsibility acceptable to the secretary of public safety.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§1315. Spills

A. Contingency Plan. Each transporter shall prepare a spill contingency plan. The spill contingency plan must include the information specified in LAC 33:V.1513.B (except §1513.B.1), C, E, and F. The contingency plan shall include a section describing emergency response procedures as specified in LAC 33:V.1513.F.

B. Personnel Training. All transporters shall institute a personnel training program as specified in LAC 33:V.1515. This program shall apply to all personnel who would reasonably be expected to handle hazardous waste containers or tanks or deal with spills (e.g., drivers and dispatchers).

C. In the event of a discharge of hazardous waste during transportation, the transporter must take appropriate immediate action to protect human health and the

environment (e.g., notify local authorities and dike the discharge area).

D. If a discharge of hazardous waste occurs during transportation and an official acting within the scope of his official responsibilities determines that immediate removal of the waste is necessary to protect human health or the environment, that official may authorize the removal of the waste by transporters who do not have EPA identification numbers.

E. An air, rail, highway, or water transporter who has discharged hazardous waste must:

1. give notice, if required by 49 CFR 171.15, to the National Response Center by telephone at (800) 424-8802 or (202) 267-2675; and

2. report in writing, as required by 49 CFR 171.16, to the Information Systems Manager, PHH-63, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, Washington, DC 20590-0001, or send an electronic Hazardous Materials Incident Report to the Information System Manager, DHM-63, Research and Special Programs Administration, Department of Transportation, Washington, DC 20590-0001. An electronic Hazardous Materials Incident Report form can be obtained at <http://hazmat.dot.gov>.

F. As required by 33 CFR 153.203 for oil and hazardous substance, a water (bulk shipment) transporter who has discharged hazardous waste must immediately notify the National Response Center (NRC), U.S. Coast Guard, 2100 Second Street, SW, Washington, DC 20593 by telephone at (800) 424-8802 or (202) 267-2675.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), amended by the Office of the Secretary, Legal Affairs Division, LR 34:72 (January 2008).

§1317. Discharge Cleanup

A. A transporter must clean up any hazardous waste discharge that occurs during transportation and take such action as may be required by the administrative authority so that the hazardous waste discharge no longer presents a hazard to human health or the environment. The transporter becomes the generator of the waste for the purpose of cleanup, unless such responsibility is transferred to the owner of the material, or other responsible parties.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§1319. Use of Containers

A. A container may be used for the shipment of hazardous waste only to the extent permitted under the regulations of the Department of Public Safety. A permitted

container may be reused only as provided in LAC 33:V.1319.B.

B. A package marked “NRC” or “STC” according to the specification requirements in the regulations of the Department of Public Safety may be reused only one time for the shipment of hazardous wastes, under the following conditions:

1. the material is packaged, marked, and labeled in accordance with the regulations of the Department of Public Safety;

2. transportation is by highway only;

3. the package is transported only after being sealed for at least 24 hours, is inspected for leakage immediately before being transported; or

4. the package is loaded by the shipper and unloaded by the consignee, unless the motor carrier is a private or contract carrier.

C. When consolidating the contents of two or more containers with the same hazardous waste into a new container, or when combining and consolidating two different hazardous wastes that are compatible with each other, the transporter shall mark its containers of 119 gallons or less with the:

1. words “Hazardous Waste”; and

2. applicable EPA hazardous waste number(s) (EPA hazardous waste codes) in LAC 33:V.4901 and 4903, or in compliance with LAC 33:V.1063.C.2.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of the Secretary, Legal Affairs Division, LR 34:73 (January 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:931 (July 2020).

§1321. Hazardous Waste That Is Also a Hazardous Material

A. If a hazardous waste, as defined in these rules and regulations, also meets the definition of hazardous material, the regulations of the Department of Public Safety also apply.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§1323. Vehicle Markings and Placards

A. Markings. No person may transport a hazardous waste unless the transport vehicle is marked to display:

1. the name or trademark of the carrier operating the vehicle;

2. the city or place in which the carrier has its principal office or in which the vehicle is customarily based; and

3. the name of the person operating the vehicle. The name of a person other than the operating carrier may appear on the vehicle as long as the words “operated by” immediately precedes the information required by LAC 33:V.1323.A.1 and A.2. (Other identifying information may be displayed on the vehicle if it is not inconsistent with the information required by this Paragraph.)

B. The marking required by LAC 33:V.1323.A must:

1. appear on both sides of the vehicle;
2. be in letters that contrast sharply in color with the background;
3. be readily legible during daylight hours from a distance of at least 50 feet while the vehicle is stationary; and
4. be maintained in a manner that retains the legibility required by LAC 33:V.1323.B. (The marking may be a removable device.)

C. Placarding. A transporter may not move a transport vehicle containing a hazardous waste which is also a hazardous material unless the vehicle is placarded with placards in accordance with the regulations of the Department of Public Safety or such other regulations as may be prescribed by the secretary of public safety for placarding vehicles carrying a hazardous material.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

Chapter 15. Treatment, Storage, and Disposal Facilities

§1501. Applicability

A. The regulations in this Chapter apply to owners and operators of all hazardous waste facilities, except as provided in LAC 33:V.1501.C. LAC 33:V.1503.B.3 applies only to facilities subject to regulations under LAC 33:V. Chapters 19, 21, 23, 25, 27, 29, 31, or 32.

B. Except as specifically authorized by the terms and conditions of a permit issued under these rules and regulations, the construction and operation of a facility to treat, store, or dispose of hazardous wastes in violation of the standards established by this Section shall be a violation of the Act enforceable pursuant to LAC 33:V.107 of these regulations and R.S. 30:1073.

C. The requirements of this Chapter do not apply to:

1. the owner or operator of a facility permitted, licensed, or registered to manage municipal or industrial solid waste, if the only hazardous waste the facility treats, stores, or disposes of is excluded from regulation by LAC 33:V.1009;

2. the owner or operator of a facility managing recycled material described in LAC 33:V.4105.A (except to the extent they are referred to in LAC 33:V.Chapter 30 or 40 or LAC 33:V.4139, 4141, 4143, or 4145);

3. Reserved;

4. a farmer disposing of waste pesticides from his own use as provided in LAC 33:V.1003.C;

5. the owner or operator of a totally enclosed treatment facility (see LAC 33:V.109);

6. the owner or operator of an elementary neutralization unit or wastewater treatment unit (see LAC 33:V.109) provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 High TOC Subcategory defined in LAC 33:V.2299.Appendix, Table 2, Treatment Standards for Hazardous Wastes) or reactive (D003) waste to remove the characteristic before land disposal, the owner/operator must comply with the requirements set out in LAC 33:V.1517.B;

7.a. except as provided in Subparagraph C.7.b of this Section, a person engaged in treatment or containment activities during immediate response to any of the following situations:

- i. a discharge of a hazardous waste;
- ii. an imminent and substantial threat of a discharge of hazardous waste;
- iii. a discharge of a material that, when discharged, becomes a hazardous waste; or
- iv. an immediate threat to human health, public safety, property, or the environment, from the known or suspected presence of military munitions, other explosive material, or an explosive device, as determined by an explosive or munitions emergency response specialist as defined in LAC 33:V.109;

- b. an owner or operator of a facility otherwise regulated by this Chapter must comply with all applicable requirements of LAC 33:V.1511 and 1513;

- c. any person who is covered by Subparagraph C.7.a of this Section and who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of this Chapter and 40 CFR 122-124 for those activities; and

- d. in the case of an explosives or munitions emergency response, if a federal, state, tribal, or local official acting within the scope of his or her official responsibilities or an explosives or munitions emergency response specialist determines that immediate removal of the material or waste is necessary to protect human health or the environment, that official or specialist may authorize the removal of the material or waste by transporters who do not have EPA identification numbers and without the preparation of a manifest. In the case of emergencies involving military munitions, the responding military emergency response specialist's organizational unit must retain records for three

ENVIRONMENTAL QUALITY

years identifying the dates of the response, the responsible persons responding, the type and description of material addressed, and its disposition;

8. a transporter storing manifested shipments of hazardous waste in containers meeting the requirements applicable to the regulations of the Department of Public Safety on packaging, at a transfer facility for a period of 10 days or less, if so approved by the administrative authority;

9. the addition of absorbent material to waste in a container (see LAC 33:V.109), or the addition of waste to absorbent material in a container, provided that these actions occur at the time waste is first placed in the container and LAC 33:V.1517.B, 2103, and 2105 are complied with;

10. a generator accumulating waste on-site in compliance with LAC 33:V.Chapter 10;

11. universal waste handlers and universal waste transporters (as defined in LAC 33:V.3813) handling the wastes listed below. These handlers are subject to regulation under LAC 33:V.Chapter 38, when handling the below listed universal wastes:

- a. batteries as described in LAC 33:V.3803;
- b. pesticides as described in LAC 33:V.3805;
- c. mercury-containing equipment as described in LAC 33:V.3807;
- d. lamps as described in LAC 33:V.3809;
- e. electronics as described in LAC 33:V.3810; and
- f. antifreeze as described in LAC 33:V.3811; or

12. LAC 33:V.5309 identifies when the requirements of this Chapter apply to the storage of military munitions classified as solid waste under LAC 33:V.5303. The treatment and disposal of hazardous waste military munitions are subject to the applicable permitting, procedural, and technical standards in LAC 33:V.Subpart 1.

D. The requirements of this Chapter apply to owners or operators of all facilities which treat, store, or dispose of hazardous wastes referred to in LAC 33:V.Chapter 22.

E. The requirements of this Chapter apply to a person disposing of hazardous waste by means of ocean disposal subject to a permit issued under the Marine Protection, Research, and Sanctuaries Act only to the extent they are included in a RCRA permit by rule granted to such a person under LAC 33:V.305.D.

F. The requirements of this Chapter apply to a person disposing of hazardous waste by means of underground injection subject to a permit issued under an Underground Injection Control (UIC) program approved or promulgated under the Safe Drinking Water Act only to the extent they are required by 40 CFR 144.14.

G. The requirements of this Chapter apply to the owner or operator of a POTW which treats, stores, or disposes of hazardous waste only to the extent they are included in a

RCRA permit by rule granted to such a person under LAC 33:V.305.D.

H. The requirements of LAC 33:V.1017, 1503, 1504, 1507, 1509, 1511, 1513, 1515, 1517, 1519, and 3322 do not apply to remediation waste management sites. (However, some remediation waste management sites may be a part of a facility that is subject to a traditional RCRA permit because the facility is also treating, storing, or disposing of hazardous wastes that are not remediation wastes. In these cases, LAC 33:V.1509, 1511, 1513, and 3322 do apply to the facility subject to the traditional RCRA permit.) Instead of the requirements of LAC 33:V.1509, 1511, and 1513, owners or operators of remediation waste management sites must:

1. obtain an EPA identification number by applying to the administrative authority using the department's Form HW-1;

2. obtain a detailed chemical and physical analysis of a representative sample of the hazardous remediation wastes to be managed at the site. At a minimum, the analysis must contain all of the information which must be known to treat, store, or dispose of the waste according to LAC 33:V.Chapters 10, 11, 15-29, and 31-37, and must be kept accurate and up to date;

3. prevent people who are unaware of the danger from entering, and minimize the possibility for unauthorized people or livestock to enter onto the active portion of the remediation waste management site, unless the owner or operator can demonstrate to the administrative authority that:

a. physical contact with the waste, structures, or equipment within the active portion of the remediation waste management site will not injure people or livestock who may enter the active portion of the remediation waste management site; and

b. disturbance of the waste or equipment by people or livestock who enter onto the active portion of the remediation waste management site will not cause a violation of the requirements of this Section;

4. inspect the remediation waste management site for malfunctions, deterioration, operator errors, and discharges that may be causing, or may lead to, a release of hazardous waste constituents to the environment, or a threat to human health. The owner or operator must conduct these inspections often enough to identify problems in time to correct them before they harm human health or the environment, and must remedy the problem before it leads to a human health or environmental hazard. Where a hazard is imminent or has already occurred, the owner/operator must take remedial action immediately;

5. provide personnel with classroom or on-the-job training on how to perform their duties in a way that ensures the remediation waste management site complies with the requirements of LAC 33:V.Chapters 10, 11, 15-29, and 31-37, and on how to respond effectively to emergencies;

6. take precautions to prevent accidental ignition or reaction of ignitable or reactive waste, and prevent threats to

human health and the environment from ignitable, reactive, and incompatible waste;

7. for remediation waste management sites subject to regulation under LAC 33:V.Chapters 19, 21, 23, 25, 27, 29, 31, and 32, the owner/operator must design, construct, operate, and maintain a unit within a 100-year floodplain to prevent washout of any hazardous waste by a 100-year flood, unless the owner/operator can meet the demonstration of LAC 33:V.1503.B;

8. not place any non-containerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground mine, or cave;

9. develop and maintain a construction quality assurance program for all surface impoundments, waste piles, and landfill units that are required to comply with LAC 33:V.2303.C and D, 2503.L and M, and 2903.J and K at the remediation waste management site, according to the requirements of LAC 33:V.1504;

10. develop and maintain procedures to prevent accidents and a contingency and emergency plan to control accidents that occur. These procedures must address proper design, construction, maintenance, and operation of remediation waste management units at the site. The goal of the plan must be to minimize the possibility of, and the hazards from, a fire, explosion, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment. The plan must explain specifically how to treat, store, and dispose of the hazardous remediation waste in question, and must be implemented immediately whenever a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment occurs;

11. designate at least one employee, either on the facility premises or on call (that is, available to respond to an emergency by reaching the facility quickly), to coordinate all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan;

12. develop, maintain, and implement a plan to meet the requirements in Paragraphs H.2-6 and 9-10 of this Section; and

13. maintain records documenting compliance with Paragraphs H.1-12 of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992), LR 21:266 (March 1995), LR 21:944 (September 1995), LR 23:565, 568 (May 1997), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1106

(June 1998), LR 24:1694, 1759 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:277 (February 2000), LR 27:711 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 31:3117 (December 2005), LR 32:606 (April 2006), LR 34:623 (April 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:931 (July 2020).

§1503. Site Requirements

A. Geology

1. **Topographic Relief.** The site should not have any abrupt topographic changes or means should be provided to guard against slides, slumping, or erosion.

2. **Soils.** The area should be covered with natural stable soils of low permeability or a means should be provided, acceptable to administrative authority, which provide a barrier to penetration of surface spills or accumulations of hazardous wastes into a subsurface strata which would have a potential effect on a fresh-water aquifer.

3. **Seismic Conditions.** Portions of new facilities where treatment, storage, or disposal of hazardous waste will be conducted must not be located within 61 meters (200 feet) of a fault which has had displacement in Holocene time.

B. Hydrology

1. **General Requirement.** Sites utilized shall be isolated by means of natural or created boundaries from adjoining land and from subsurface and surface waters.

2. **Drainage.** The site must have the capability to control and/or contain run-off from the maximum rainfall in 24 hours from a 25-year storm (when maximum rainfall records are not available, the design standard shall be 12 inches below 31 degrees North latitude and 9 inches above 31 degrees North latitude) and must have the capability to divert run-on from adjoining land (outside limits of hazardous waste site or if part of an industrial complex, outside limits of company property) from such a storm from the site (surface and subsurface).

3. Floodplains

a. A facility located in a 100-year floodplain must be designed, constructed, operated, and maintained to prevent washout of any hazardous waste by a 100-year flood unless the owner or operator can demonstrate to the administrative authority that:

i. procedures are in effect which will cause the waste to be removed safely, before flood waters can reach the facility, to a location where the wastes will not be vulnerable to floodwaters; or

ii. for existing surface impoundments, waste piles, land treatment units, landfills, and miscellaneous units, no adverse effects on human health or the environment will result if washout occurs, considering:

(a) the volume and physical and chemical characteristics of the waste in the facility;

ENVIRONMENTAL QUALITY

(b). the concentrations of hazardous constituents that would potentially affect surface waters as a result of washout;

(c). the impact of such concentrations on the current or potential uses of and water quality standards established for the affected surface waters; and

(d). the impact of hazardous constituents on the sediments of affected surface waters or the soils of the 100-year floodplain that could result from washout.

4. Hurricane-Prone Areas. Sites located in an area which is historically subject to hurricanes shall be protected from the entry of water by natural or created barriers certified by a professional engineer.

5. Conformity with Existing Restrictions and Permits. Sites located in floodways or wetlands under control of the U.S. Army Corps of Engineers and/or the Coastal Zone Management Office must apply for applicable permits. However, to avoid unnecessarily long licensing periods, the department may accept and process the application with its final approval dependent upon a similar approval. Final department action on such a state permit will be taken after final action on wetlands and coastal zone permits.

6. Areas of Critical Environmental Concern. Sites located in, or adjacent to, swamps, marshes, floodplains, estuaries, designated wildlife hatchery areas, habitats of endangered species, and similar critical environmental areas shall be isolated from such areas by effective barriers which eliminate possible adverse impacts on such areas due to operation of the facility.

7. Salt Dome Formations, Salt Bed Formations, Underground Mines, and Caves. The placement of any noncontainerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground mine or cave is prohibited.

C. Facilities

1. Transportation. Access to sites by surface and water transportation modes shall be by roads and waterways with the capacity to accept the demands created by the facility and designed to avoid, to the extent practical, congestion, sharp turns, obstructions, or other hazards which are conducive to accidents.

2. Services. Sites shall have convenient access to required services, including: utilities, medical care, police, fire protection, and similar services, or provide these services internally in a manner acceptable to the administrative authority.

3. Buffer Zone

a. General Requirement. Sites shall be shielded from adjoining noncompatible land uses by space, natural separation, or other means acceptable to the administrative authority.

b. Minimum Requirements. In no event shall the buffer be less than that stated for the following sites:

i. sites zoned industrially—sufficient space for security and drainage control facilities; or

ii. all other locations—200 feet between any facility (treatment pond, incinerator, tank, etc.) and property line unless a proper buffer is installed which is acceptable to the administrative authority (see LAC 33:V.2113 for container requirements).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:220 (March 1990), LR 16:399 (May 1990), LR 18:1256 (November 1992).

§1504. Construction Quality Assurance Program

A. CQA Program

1. A construction quality assurance (CQA) program is required for all surface impoundment, waste pile, and landfill units that are required to comply with LAC 33:V.2903.J and K, 2303.C and D, and 2503.L and M. The program must ensure that the constructed units meet or exceed all design criteria and specifications in the permit. The program must be developed and implemented under the direction of a CQA officer who is a registered professional engineer.

2. The CQA program must address the following physical components, where applicable:

- a. foundations;
- b. dikes;
- c. low-permeability soil liners;
- d. geomembranes (flexible membrane liners);
- e. leachate collection and removal systems and leak detection systems; and
- f. final cover systems.

B. Written CQA Plan. The owner or operator of units subject to the CQA program under LAC 33:V.1504.A must develop and implement a written CQA plan. The plan must identify steps that will be used to monitor and document the quality of materials and the condition and manner of their installation. The CQA plan must include:

1. identification of applicable units and a description of how they will be constructed;

2. identification of key personnel in the development and implementation of the CQA plan and CQA officer qualifications;

3. a description of inspection and sampling activities for all unit components identified in LAC 33:V.1504.A.2, including observations and tests that will be used before, during, and after construction to ensure that the construction materials and the installed unit components meet the design specifications. The description must cover:

- a. sampling size and locations;

- b. frequency of testing;
- c. data evaluation procedures;
- d. acceptance and rejection criteria for construction materials;
- e. plans for implementing corrective measures; and
- f. data or other information to be recorded and retained in the operating record under LAC 33:V.1529.

C. Contents of Program

1. The CQA program must include observations, inspections, tests, and measurements sufficient to ensure:

- a. structural stability and integrity of all components of the unit identified in LAC 33:V.1504.A.2;
- b. proper construction of all components of the liners, leachate collection and removal system, leak detection system, and final cover system, according to permit specifications and good engineering practices, and proper installation of all components (e.g., pipes) according to design specifications; and
- c. conformity of all materials used with design and other material specifications under LAC 33:V.2303, 2503, and 2903.

2. The CQA program shall include test fills for compacted soil liners, using the same compaction methods as in the full-scale unit, to ensure that the liners are constructed to meet the hydraulic conductivity requirements of LAC 33:V.2303.C.1.b, 2503.L.1.b, and 2903.J.1.b in the field. Compliance with the hydraulic conductivity requirements must be verified by using in situ testing on the constructed test fill. The administrative authority may accept an alternative demonstration, in lieu of a test fill, where data are sufficient to show that a constructed soil liner will meet the hydraulic conductivity requirements of LAC 33:V.2303.C.1.b, 2503.L.1.b, and 2903.J.1.b in the field.

D. Certification. Waste shall not be received in a unit subject to this Section until the owner or operator has submitted to the Office of Environmental Services, by certified mail or hand delivery, a certification signed by the CQA officer that the approved CQA plan has been successfully carried out, that the unit meets the requirements of LAC 33:V.2903.J or K, 2303.C or D, or 2503.L or M, and the procedure in LAC 33:V.309.L.3.b has been completed. Documentation supporting the CQA officer's certification must be furnished to the administrative authority upon request.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2472 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2455 (October 2005), LR 33:2103 (October 2007).

§1505. Discharges from the Site

A. General Requirements. All point-source discharges must be controlled and reported as follows:

- 1. water discharges, if any, must be in conformity with effluent limitations established by the Clean Water Act operating under an NPDES permit and reported as required by that permit. The NPDES Permit must be applied for prior to the issuance of a hazardous waste permit; or
- 2. air emissions, if any, must be in conformity with air limitations of the Clean Air Act administered by the Office of Environmental Services, operating under an Air Quality Permit as required, and reported as required by that permit. The air permit must be applied for prior to the issuance of a hazardous waste permit.

B. Surface. Offsite shipments of any hazardous waste material, containers, packaging, or similar material must be reported on a manifest and must be delivered to a permitted facility.

C. Spills

1. Any spill of hazardous waste which could possibly endanger health or adversely affect the environment off-site shall be reported to the department immediately as provided in the "Notification Regulations and Procedures for Unauthorized Discharges and Spills." (See LAC 33:I.Chapter 39.)

2. If a spill occurs on the site of a generator or TSD facility, and if that spill could endanger the public health or affect the environment off-site, the department and the Department of Public Safety have the authority to enter the site and investigate the spill. It is the responsibility of the operator to report spills of this nature to the department and the Department of Public Safety as soon as possible, as provided in LAC 33:V.1505.C.1.

3. Any spilled material or material trapped in sumps that is a hazardous waste or that will be disposed of as a hazardous waste must be cleaned up in a timely manner.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2472 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2456 (October 2005), LR 33:2103 (October 2007).

§1507. Security

A. General Requirements. The security system shall insure that site ingress and egress by the public is controlled and that employees are protected from hazards to health resulting from contact with extremely hazardous operations.

B. Perimeter Control. The natural or created barrier to site ingress or egress around the entire perimeter of the hazardous waste area shall be continuously patrolled or

ENVIRONMENTAL QUALITY

monitored. Equipment will be installed, as necessary, to keep birds and wildlife off the site.

C. Entry. Each entry through the perimeter barrier shall be manned at all hours. The entry should be opened by security personnel or by an electronic system (card, code, handprint, etc. or television monitor) acceptable to the administrative authority.

D. Alternate Means of Meeting Security Requirements. Any operator may petition the administrative authority for acceptance of equivalent alternative means of meeting the requirements of LAC 33:V.1507 in whole or in part. This shall be done through submission of proof that necessary procedures for the protection of health and property are provided by other means and that representatives of local fire and police departments, if any, are adequately informed of such means.

E. Perimeter Barrier. A constructed barrier shall enclose the entire hazardous waste site and shall have the capability to deny unauthorized or unknowing ingress or egress and to prevent entry by domestic livestock.

F. Perimeter Clear Zone. A clear, lighted path shall be constructed and maintained inside the perimeter barrier to permit patrol by vehicle or foot.

G. Required entry facilities include the following:

1. gate at each entry point equipped with secure locking device;
2. gate house for guard, or electromechanical equipment permitting controlled access; and
3. floodlighting at each entry to insure a well-lighted, safe, and secure area at night.

H. Emergency Response Facilities

1. Communications. An alarm system with controls accessible to each area of potential spill, explosion, or fire; telephone contact to each facility location; two-way radios for key personnel; and

2. Fire Control. Portable fire extinguishers, decontamination facilities, fire control equipment at incinerators, mixing and treatment vats; and other fire-hazard facilities and fire hydrants (with capacity as required by state fire code) located not more than 200 feet from each fire-hazard facility.

I. Safety Control Devices

1. Moving Equipment Barriers. Steel or concrete posts or barriers capable of stopping trucks or other equipment used on the site (at maximum expected speed) shall be installed to protect all hazardous waste above-ground pipelines, valves, or other containers located adjacent to roadways.

2. Personnel Barriers. Barriers shall be installed at all locations where employees or visitors normally come in contact with ponds, lagoons, incinerators, treatment facilities, and other high-hazard locations.

J. Exterior Lighting

1. All personnel barriers shall be lighted; all vehicle barriers shall have reflectors.

2. Entry gates shall be lighted (see LAC 33:V.1507.G.3).

3. Perimeter barriers shall be lighted (see LAC 33:V.1507.B).

K. Signs. A sign with the legend "Danger—Unauthorized Personnel Keep Out" must be posted at each entrance to the active portion of a facility, and at other locations, in sufficient numbers to be seen from any approach to this active portion but in no case shall the spacing be greater than 200-foot intervals. The legend must be written in English and in any other language predominant in the area surrounding the facility, and must be legible from a distance of at least 25 feet. Existing signs with a legend other than "Danger—Unauthorized Personnel Keep Out" may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the active portion, and that entry onto the active portion can be dangerous.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992).

§1509. General Inspection Requirements

A.1. The owner or operator must inspect his facility for malfunctions and deterioration, operator errors, and discharges which may be causing or may lead to:

- a. a release of hazardous waste; or
- b. a threat to human health.

2. The owner or operator must conduct these inspections often enough to identify problems in time to correct them before they harm human health or the environment.

B. Inspection Schedule

1. The owner or operator must develop and follow a written schedule for inspecting monitoring equipment, safety and emergency equipment, security devices, and operating and structural equipment (such as dikes and sump pumps) that are important to preventing, detecting, or responding to environmental or human health hazards.

2. He must keep this schedule at the facility.

3. The schedule must identify the types of problems (e.g., malfunctions or deterioration) which are to be looked for during the inspection (e.g., inoperative sump pump, leaking fitting, eroding dike, etc.).

4. The frequency of inspection may vary for the items on the schedule. However, the frequency should be based on the rate of possible deterioration of the equipment and the probability of an environmental or human health incident if the deterioration, a malfunction, or operator error goes

undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the items and frequencies called for in LAC 33:V.1709, 1719, 1721, 1731, 1753, 1755, 1757, 1759, 1761, 1763, 1765, 1907, 1911, 2109, 2309, 2507, 2711, 2907, 3119, and 3205, where applicable. LAC 33:V.517.G requires the inspection schedule to be submitted with Part II of the permit application. The department will evaluate the schedule along with the rest of the application to ensure that it adequately protects human health and the environment. As part of this review, the department may modify or amend the schedule as may be necessary.

C. The owner or operator must remedy any deterioration or malfunction of equipment or structures which the inspection reveals; a schedule must be set up to ensure that the problem does not lead to an environmental or human health hazard. When a hazard is imminent or has already occurred, remedial action must be taken immediately.

D. The owner or operator must record inspections in an inspection log or summary. He must keep these records for at least three years from the date of inspection. At a minimum, these records must include the date and time of the inspection, the name of the inspector, a notation of the observations made, and the date and nature of any repairs or other remedial actions.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 17:658 (July 1991), LR 18:1256 (November 1992), LR 21:266 (March 1995), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1695 (September 1998), LR 25:437 (March 1999), amended by the Office of the Secretary, Legal Affairs Division, LR 34:993 (June 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:931 (July 2020).

§1511. Preparedness and Prevention

A. Applicability. The regulations in this Section apply to owners and operators of all hazardous waste facilities.

B. Design and Operation of a Facility. Facilities must be designed, constructed, maintained, and operated to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

C. Required Equipment. All facilities must be equipped with the following, unless it can be demonstrated to the administrative authority that none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below:

1. an internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

2. a device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way

radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams;

3. portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and

4. water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

D. Testing and Maintenance of Equipment. All facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, must be tested and maintained as necessary to assure its proper operation in time of emergency.

E. Access to Communications or Alarm System

1. Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless it can be demonstrated to the administrative authority that such a device is not required.

2. Anytime there is at least one employee on the premises while the facility is operating, he must have immediate access to a device such as a telephone, immediately available at the scene of operation, or a hand-held two-way radio, capable of summoning external emergency assistance, unless it can be demonstrated to the administrative authority that such a device is not required.

F. Required Aisle Space. The owner or operator must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the administrative authority that aisle space is not needed for any of these purposes.

G. Arrangements with Local Authorities

1. The owner or operator must attempt to make the following arrangements, as appropriate for the type of waste handled at his facility and the potential need for the services of these organizations:

- a. arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to and roads inside the facility, and possible evacuation routes;

- b. where more than one police and fire department might respond to an emergency, agreements designating primary emergency authority to a specific police and a specific fire department, and agreements with any others to provide support to the primary emergency authority;

c. agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and

d. arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.

2. Where state or local authorities decline to enter into such arrangements, the owner or operator must document the refusal in the operating record.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§1513. Contingency Plan and Emergency Procedures

A. Purpose and Implementation of Contingency Plan

1. Each owner or operator must have a contingency plan for his facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.

2. A contingency plan to be implemented in the event of an emergency shall be filed with the Office of Environmental Services and, after approval, with the local fire and police departments (if any operate in the area), hospitals and emergency response teams operating in the area that are subject to call by the operator or the department.

3. The provisions of the plan must be carried out immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

4. The plan shall be revised each time the facility operations are changed due to expansion, change in type or quantity of waste handled, or other changes which affect the degree or type of possible emergency situation.

B. Content of Contingency Plan

1. The contingency plan must describe the actions facility personnel must take to comply with Subsections A and F of this Section in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.

2. If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan in accordance with 40 CFR Part 112, or some other emergency or contingency plan, he need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with these requirements. The owner or operator may develop one contingency plan that meets all regulatory requirements. EPA recommends that the plan be based on the National Response Team's Integrated

Contingency Plan Guidance ("One Plan"). When modifications are made to non-RCRA provisions in an integrated contingency plan, the changes do not trigger the need for a RCRA permit modification.

3. The plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services.

4. The plan must list names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator, and this list must be kept up to date. When more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates. For new facilities, this information must be supplied to the administrative authority at the time of certification, rather than at the time of permit application.

5. The plan must include a list of all emergency equipment (where required) at the facility, such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment. This list must be kept up to date. In addition, the plan must include the location and a physical description of each item on the list and a brief outline of its capabilities.

6. The plan must include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. The plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes.

C. Copies of Contingency Plan

1. The contingency plan must be submitted to the Office of Environmental Services with the permit application and, after modification or approval, will become a condition of any permit issued.

2. A copy of the contingency plan and all revisions to the plan must be maintained at the facility and additional copies must be submitted to all local police departments, fire departments, hospitals, and state and local emergency response teams that may be called upon to provide emergency services.

D. Amendment of Contingency Plan. The contingency plan must be reviewed, and immediately amended, if necessary, whenever:

1. the facility permit is revised;
2. the plan fails in an emergency;
3. applicable regulations are revised;
4. the facility changes its design, construction, operation, maintenance, or other circumstances in a way that materially increases the potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents, or changes the response necessary in an emergency;
5. the list of emergency coordinators changes; or

6. the list of emergency equipment changes.

E. Emergency Coordinator. At all times, there must be at least one employee either on the facility premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures (see LAC 33:V.1513.F). This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan.

F. Emergency Procedures

1. Whenever there is an imminent or actual emergency situation, the emergency coordinator (or his designee when the emergency coordinator is on call) must immediately:

a. activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

b. notify appropriate state or local agencies with designated response roles if their help is needed.

2. Whenever there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. He may do this by observation or review of facility records or manifest, and, if necessary, by chemical analysis.

3. Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-off from water or chemical agents used to control fire and heat-induced explosions).

4. If the emergency coordinator determines that the facility has had a release, fire, or explosion which could threaten human health or the environment outside the facility, he must report his findings as follows:

a. if his assessment indicates that evacuation of local areas may be advisable, he must immediately notify appropriate local authorities. He must be available to help appropriate officials decide whether local areas should be evacuated; and

b. conduct immediate emergency notifications as stated below.

i. Notification to the Louisiana State Police, Department of Public Safety

(a). The emergency coordinator shall immediately, but in no case later than one hour, notify the

24-hour Louisiana Emergency Hazardous Materials Hotline by calling 1-877-922-6595 or 225-925-6595. This notification to the Louisiana State Police, Department of Public Safety shall be in accordance with LAC 33:I.Chapter 39 and shall include the following information:

(i). the name and telephone number, and employer of the contact person;

(ii). the company or responsible party's name;

(iii). where the incident occurred (mailing address and physical location);

(iv). date and time the incident began and ended;

(v). the identity of the hazardous material released or involved (this would include proper chemical name if available, an indication of whether it is an extremely hazardous substance and whether it is a solid, liquid or gas);

(vi). the actual amount or an estimate of the amount released; or in the absence of quantity data for the hazardous materials released, one of the following incident classifications: unusual event; site emergency; or general emergency;

(vii). whether the material released, escaped, or could reasonably be expected to escape beyond the site of the facility;

(viii). if available, the substance's hazard class and any other identifier (e.g., U.N. number, CHRIS code, etc.);

(ix). medium into which the hazardous materials was released (e.g. air, water, land);

(x). whether the release resulted in a fire or explosion;

(xi). injury to personnel, or a fatality resulting from the release or incident;

(xii). details regarding wind direction, wind speed, temperature, and precipitation;

(xiii). any need or a recommendation for, an off-site protective action (road closure, shelter-in-place, evacuation, or none);

(xiv). details of the release or incident; and

(xv). whether other responsible state and local agencies such as the local emergency planning committee have been notified.

(b). Updates During the Incident. The hotline must be immediately notified of any adverse change in the nature or rate of the discharge. Additional notifications must be made for discharges of multiple constituents when they originate from different causes or sources or they are substantially different in nature from the discharges in the initial notification.

ENVIRONMENTAL QUALITY

ii. Emergency Notifications to Other Regulatory Agencies. The owner or operator should be aware that other federal, state and local agencies may require immediate and/or follow-up notification of an emergency situation under other regulatory authorities, including, but not limited to, the following:

(a). the National Response Center by calling their 24-hour toll free number 1-800-424-8802, to the extent that immediate notification is required under 40 CFR 302.6 (exceedance of reportable quantities) or 40 CFR 110.6 (oil spills); and/or

(b).the appropriate local emergency planning committee having jurisdiction over the facility to the extent that immediate notification is required under 40 CFR part 355, subpart C or LAC 33:V.Subpart 2.Chapter 101. Contact information for each local emergency planning committee is available on the Louisiana State Police, Department of Public Safety's website.

5. During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing released waste, and removing or isolating containers.

6. If the facility stops operation in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

7. Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil, or surface water, or any other material that results from a release, fire, or explosion at the facility. Unless the owner or operator can demonstrate that the recovered material is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and must manage it in accordance with all applicable requirements.

8. The emergency coordinator must ensure that in the affected area(s) of the facility:

a. no waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and

b. all emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

9. The owner or operator shall note in the operating record the time, date, and details of any incident that requires implementation of the contingency plan. Written follow-up reports for any unauthorized discharge that requires notification shall be submitted by the owner or operator to SPOC in accordance with LAC 33:I.3925 and the Louisiana State Police, Department of Public Safety in accordance with LAC 33.V.Subpart 2.10111.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 16:614 (July 1990), LR 18:1256 (November 1992), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2472 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2456 (October 2005), LR 33:2104 (October 2007), LR 34:993 (June 2008), LR 35:1879 (September 2009), LR 38:777 (March 2012), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:931 (July 2020).

§1515. Personnel Training

A. Instruction Program

1. Facility personnel must successfully complete a program of classroom instruction or on-the-job training that teaches them to perform their duties in a way that ensures the facility's compliance with the requirements of this Section. The owner or operator must ensure that this program includes all the elements described in the document required in LAC 33:V.1515.D.3.

2. This program must be directed by a person trained in hazardous waste management procedures, and must include instruction which teaches facility personnel hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed.

3. At a minimum, the training program must be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including, where applicable:

- a. procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment;
 - b. key parameters for automatic waste feed cut-off systems;
 - c. communications or alarm systems;
 - d. response to fires or explosions;
 - e. response to groundwater contamination incidents;
- and
- f. shutdown of operations.

4. The facility operator shall conduct training sessions at regular intervals for appropriate facility personnel which includes the facility's contingency/emergency response teams, in routine plant operation, plant layout, location of possible hazards, emergency equipment location and operation, the evacuation plan and route, power and waste stream cut-offs, communications equipment and phone numbers of all required contacts, and other critical information and procedures. The facility operator shall afford representatives of local fire and police departments and local emergency response teams, the opportunity to participate in periodic training sessions.

5. For facility employees who receive emergency response training pursuant to Occupational Safety and Health Administration (OSHA) regulations in 29 CFR 1910.120(p)(8) and 1910.120(q), the facility is not required to provide separate emergency response training pursuant to this Section, provided that the overall facility training meets all the requirements of this Section.

B. Facility personnel must successfully complete the program required in LAC 33:V.1515.A within six months after the effective date of these regulations or six months after the date of their employment or assignment to a facility, whichever is later. Employees hired after the effective date of these regulations must not work in unsupervised positions until they have completed the training requirements in LAC 33:V.1515.A.

C. Facility personnel must take part in an annual review of the initial training required in LAC 33:V.1515.A.

D. The owner or operator must maintain the following documents and records at the facility:

1. the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job;

2. a written job description for each position listed in LAC 33:V.1515.D.1. This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but must include the requisite skill, education, or other qualifications and duties of employees assigned to each position;

3. a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed in LAC 33:V.1515.D.1; and

4. records documenting that the training or job experience required under LAC 33:V.1515.A, B, and C have been given to, and completed by, facility personnel.

E. Training records on current personnel must be kept until closure of the facility; training records on former employees must be kept for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of the Secretary, Legal Affairs Division, LR 34:993 (June 2008), amended by the Office of the Secretary, Legal Division, LR 43:1141 (June 2017).

§1516. Manifest System for Treatment, Storage, and Disposal (TSD) Facilities

A. Applicability

1. The regulations in this Section apply to owners and operators of both on-site and off-site TSD facilities, except

as LAC 33:V.1501 provides. Subsections B, C, and D of this Section do not apply to owners and operators that do not receive any hazardous waste from off-site sources, or to off-site facilities with respect to military munitions exempt from requirements. Paragraph C.3 of this Section only applies to permittees who treat, store, or dispose of hazardous wastes on-site where such wastes were generated.

2. The revised manifest form and procedures in 40 CFR Part 262 and the Appendix to Part 262 shall be effective as of September 5, 2006. As of September 5, 2006, Uniform Hazardous Waste Manifest forms must be obtained only from EPA-registered and approved sources as identified by the Manifest Registry. Contact the Office of Environmental Services, or access the U.S. Environmental Protection Agency's website to obtain information on EPA-registered and approved sources.

B. Use of the Manifest System

1. If a facility receives a hazardous waste accompanied by a manifest, the owner or operator, or his or her agent, shall:

a. sign and date each copy of the manifest to certify that the hazardous waste covered by the manifest was received, the waste was received except as noted in the Discrepancy block, or the waste was rejected;

b. note any significant discrepancies in the manifest (as defined in Paragraph C.1 of this Section) on each copy of the manifest. The administrative authority does not intend that the owner or operator of a facility whose procedures under LAC 33:V.1519.C include waste analysis must perform that analysis before signing the manifest and giving it to the transporter. Paragraph C.3 of this Section, however, requires reporting an unreconciled discrepancy discovered during later analysis;

c. immediately give the transporter at least one copy of the signed manifest;

d. within 30 working days after the delivery, send a signed copy of the manifest to the generator; and

e. within 30 days of delivery, send the top copy (page 1) of the manifest to the e-manifest system for purposes of data entry and processing. In lieu of mailing this paper copy to EPA, the owner or operator may transmit to the EPA system an image file of page 1 of the manifest, or both a data string file and the image file corresponding to page 1 of the manifest. Any data or image files transmitted to EPA under this Subparagraph must be submitted in data file and image file formats that are acceptable to EPA and that are supported by EPA's electronic reporting requirements and by the electronic manifest system; and

f. retain at the facility a copy of each manifest for at least three years from the date of delivery.

2. If a facility receives, from a rail or water (bulk shipment) transporter, hazardous waste that is accompanied by a shipping paper containing all the information required on the manifest (excluding the EPA identification numbers,

ENVIRONMENTAL QUALITY

generator's certification, and signatures), the owner or operator, or his agent, shall:

a. sign and date each copy of the manifest, or the shipping paper if the manifest has not been received, to certify that the hazardous waste covered by the manifest or shipping paper was received;

b. note any significant discrepancies (as defined in Paragraph C.1 of this Section) in the manifest, or the shipping paper if the manifest has not been received, on each copy of the manifest or shipping paper. The administrative authority does not intend that the owner or operator of a facility whose procedures under LAC 33:V.1519.C include waste analysis must perform that analysis before signing the shipping paper and giving it to the transporter. Paragraph C.3 of this Section, however, requires reporting an unreconciled discrepancy discovered during later analysis;

c. immediately give the rail or water (bulk shipment) transporter at least one copy of the manifest, or the shipping paper if the manifest has not been received;

d. within 30 days after the delivery, send a copy of the signed and dated manifest, or a signed and dated copy of the shipping paper, if the manifest has not been received within 30 days after delivery, to the generator; and

COMMENT: LAC 33:V.1107.D.3 requires the generator to send three copies of the manifest to the facility when hazardous waste is sent in bulk shipment by water.

e. retain at the facility a copy of the manifest, and the shipping paper if signed in lieu of the manifest at the time of delivery, for at least three years from the date of delivery.

3. Whenever a shipment of hazardous waste is initiated from a facility, the owner or operator of that facility must comply with the requirements of LAC 33:V.Chapters 10 and 11. The provisions of LAC 33:V.1013, 1015, and 1017 are applicable to the on-site accumulation of hazardous wastes by generators. Therefore, the provisions of LAC 33:V.1013, 1015, and 1017 only apply to owners or operators who are shipping hazardous waste which they generated at that facility or operating as a large quantity generator consolidating hazardous waste from very small quantity generators under LAC 33:V.1015.G.

4. Within three working days of the receipt of a shipment subject to LAC 33:V.Chapter 11.Subchapter B, the owner or operator of the facility shall provide a copy of the movement document bearing all required signatures to the exporter, to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave, NW, Washington, DC 20460, and to competent authorities of all other concerned countries. The original copy of the movement document shall be maintained at the facility for at least three years from the date of signature.

5. If a facility receives hazardous waste imported from a foreign source, the receiving facility shall mail a copy of the manifest and documentation confirming EPA's consent to

the import of hazardous waste to the following address within 30 days of delivery: Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, D.C. 20460-0001.

6. A facility shall determine whether the consignment state for a shipment regulates any additional wastes, beyond those regulated federally, as hazardous wastes under its state hazardous waste program. Facilities shall also determine whether the consignment state or generator state requires the facility to submit any copies of the manifest to these states.

C. Manifest Discrepancies

1. Manifest discrepancies are:

a. significant differences between the quantity or type of waste designated on the manifest and the quantity or type of waste a facility actually receives;

b. rejected wastes, either full or partial shipment, the TSD facility cannot accept; or

c. container residues exceeding the quantity for *empty containers*, as defined in LAC 33:V.109.

2. Significant discrepancies in quantity are, for bulk waste, greater than 10 percent in weight and, for batch waste, variation in piece count. Discrepancies in type are those discovered through inspection or waste analysis, or toxic constituents not reported on the manifest.

3. Upon discovering a significant discrepancy, the owner or operator shall attempt to reconcile the discrepancy with the waste generator or transporter (e.g., with telephone conversations). If the discrepancy is not resolved within 15 days after receiving the waste, the owner or operator shall immediately submit to the Office of Environmental Services a letter describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.

4. Rejected Wastes or Residues

a. Upon rejecting waste or identifying container residue exceeding "empty" limits, the facility shall consult the generator prior to forwarding waste to a facility that can manage it. If it is impossible to locate an alternate facility, the facility may return the rejected waste to the generator. Waste must be sent to an alternate facility or returned to the generator within 60 days of rejection.

b. While the facility is making arrangements for forwarding rejected wastes or residues, it shall ensure that either the delivering transporter retains custody of the waste, or the facility provides custody of the waste, pending delivery of the waste to the first transporter designated on the manifest prepared under Paragraph C.5 or 6 of this Section.

5. Alternate Facility

a. Except as provided in Subparagraph C.5.b of this Section, for rejected wastes or residues to be sent to an alternate facility, the facility is required to prepare a new

manifest in accordance with LAC 33:V.1107 and the following instructions.

i. Write the generator's EPA ID number in Item 1 of the new manifest. Write the generator's name and mailing address in Item 5, or if the generator's site address is different, write the site address in Item 5.

ii. Write the name and EPA ID number of the alternate facility in Item 8 of the new manifest.

iii. Copy the manifest tracking number in Item 4 of the old manifest to the Special Handling and Additional Information block of the new manifest, and indicate that the shipment is rejected waste or residue from the previous shipment.

iv. Copy the manifest tracking number in Item 4 of the new manifest to the manifest reference number line in the Discrepancy block of the old manifest (Item 18a).

v. Write the DOT description for the rejected waste or residue in Item 9 of the new manifest and enter the container type, quantity, and waste volume.

vi. Sign the generator's/offeror's certification to certify that the waste has been properly packaged, marked, and labeled, and is in condition for transportation, and mail a signed copy of the manifest to the generator identified in Item 5 of the new manifest.

b. For full load rejections made while the transporter remains at the facility, the facility may forward the rejected shipment to the alternate facility by completing Item 18b of the original manifest and supplying the information in the Alternate Facility block. The facility must retain a copy of this manifest for its records and give the remaining copies to the transporter. If the original manifest is not used, then the facility must use a new manifest and comply with Clauses C.5.a.i-vi of this Section.

6. Return to Generator

a. Except as provided in Subparagraph C.6.b of this Section, for rejected wastes or residues that must be sent back to the generator, the facility is required to prepare a new manifest in accordance with LAC 33:V.1107 and the following instructions.

i. Write the facility's EPA ID number in Item 1 of the new manifest. Write the facility's name and mailing address in Item 5, unless the mailing address is different, then write the facility's site address in the designated space for Item 5 of the new manifest.

ii. Write the name and EPA ID number of the initial generator in Item 8 of the new manifest.

iii. Copy the manifest tracking number in Item 4 of the old manifest to the Special Handling and Additional Information block of the new manifest, and indicate that the shipment is rejected waste or residue from the previous shipment.

iv. Copy the manifest tracking number in Item 4 of the new manifest to the manifest reference number line in the Discrepancy block of the old manifest (Item 18a).

v. Write the DOT description for the rejected waste or residue in Item 9 of the new manifest and enter the container type, quantity, and waste volume.

vi. Sign the generator's/offeror's certification to certify that the waste has been properly packaged, marked, and labeled, and is in condition for transportation.

b. For full load rejections made while the transporter remains at the facility, the facility may return the rejected shipment to the generator with the original manifest by completing Items 18a and 18b of the original manifest and supplying the generator's information in the Alternate Facility block. The facility must retain a copy of this manifest for its records and give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility must use a new manifest and comply with Clauses C.6.a.i-vi and Subparagraph C.6.c of this Section.

c. For full or partial load rejections and container residues contained in non-empty containers that are returned to the generator, the facility must also comply with the exception reporting requirements in LAC 33:V.1023.

7. If a facility rejects waste, or identifies residue that exceeds the limits for empty containers, as defined in LAC 33:V.109, after it has signed, dated, and returned a copy of the manifest to the delivering transporter or generator, the facility shall amend its copy of the manifest to indicate the rejected waste or residue in the Discrepancy block of the amended manifest. The facility shall also copy the manifest tracking number in Item 4 of the new manifest to the Discrepancy block of the amended manifest, and shall re-sign and date the manifest to certify that the information is amended. The facility shall retain the amended manifest for at least three years, and shall send a copy of the amended manifest to the transporter and generator that received copies prior to amendment within 30 days.

D. Unmanifested Waste Report. If a facility accepts for treatment, storage, or disposal any hazardous waste from an off-site source without an accompanying manifest, or without an accompanying shipping paper as described in LAC 33:V.1307.E.2, and if the waste is not excluded from the manifest requirements by LAC 33:V.1009, then the owner or operator must prepare and submit a single copy of a report to the administrative authority within 15 days after receiving the waste. The unmanifested waste report must be submitted to the Office of Environmental Services. The report must be designated "Unmanifested Waste Report" and include the following information:

1. the EPA identification number, name, and address of the facility;
2. the date the facility received the waste;
3. the EPA identification number, name, and address of the generator and the transporter, if available;

ENVIRONMENTAL QUALITY

4. a description and the quantity of each unmanifested hazardous waste the facility received;
5. the method of treatment, storage, or disposal for each hazardous waste;
6. the certification signed by the owner or operator of the facility, or his authorized representative; and
7. a brief explanation of why the waste was unmanifested, if known.

COMMENT: Small quantities of hazardous waste are excluded from regulation under LAC 33:V.Chapters 15-21, 23-29, and 31-37 and do not require a manifest. Where a facility receives unmanifested hazardous wastes, the department suggests that the owner or operator obtain from each generator a certification that the waste qualifies for exclusion. Otherwise, the department suggests that the owner or operator file an unmanifested waste report for the hazardous waste movement.

E. Reserved.

F. Legal Equivalence to Paper Manifests. Electronic manifests that are obtained, completed, and transmitted in accordance with LAC 33:V.1107.A.9, and used in accordance with this section in lieu of the paper manifest form are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these regulations to obtain, complete, sign, provide, use, or retain a manifest.

1. Any requirement in these regulations for the owner or operator of a facility to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 40 CFR 262.25.

2. Any requirement in these regulations to give, provide, send, forward, or to return to another person a copy of the manifest is satisfied when a copy of an electronic manifest is transmitted to the other person.

3. Any requirement in these regulations for a manifest to accompany a hazardous waste shipment is satisfied when a copy of an electronic manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the waste shipment.

4. Any requirement in these regulations for an owner or operator to keep or retain a copy of each manifest is satisfied by the retention of the facility's electronic manifest copies in its account on the e-manifest system, provided that such copies are readily available for viewing and production if requested by any EPA or authorized state inspector.

5. No owner or operator may be held liable for the inability to produce an electronic manifest for inspection under this Section if the owner or operator can demonstrate that the inability to produce the electronic manifest is due exclusively to a technical difficulty with the electronic manifest system for which the owner or operator bears no responsibility.

G. An owner or operator may participate in the electronic manifest system either by accessing the electronic manifest

system from the owner's or operator's electronic equipment, or by accessing the electronic manifest system from portable equipment brought to the owner's or operator's site by the transporter who delivers the waste shipment to the facility.

H. Special Procedures Applicable to Replacement Manifests. If a facility receives hazardous waste that is accompanied by a paper replacement manifest for a manifest that was originated electronically, the following procedures shall apply to the delivery of the hazardous waste by the final transporter.

1. Upon delivery of the hazardous waste to the designated facility, the owner or operator must sign and date each copy of the paper replacement manifest by hand in item 20 (designated facility certification of receipt) and note any discrepancies in item 18 (discrepancy indication space) of the paper replacement manifest.

2. The owner or operator of the facility must give one copy of the paper replacement manifest back to the final transporter.

3. Within 30 days of delivery of the waste to the designated facility, the owner or operator of the facility must send one signed and dated copy of the paper replacement manifest to the generator, and send an additional signed and dated copy of the paper replacement manifest to the electronic manifest system.

4. The owner or operator of the facility must retain at the facility one copy of the paper replacement manifest for at least three years from the date of delivery.

I. Special Procedures Applicable to Electronic Signature Methods Undergoing Tests. If an owner or operator using an electronic manifest signs this manifest electronically using an electronic signature method, which is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the owner or operator shall also sign with an ink signature the facility's certification of receipt or discrepancies on the printed copy of the manifest provided by the transporter. Upon executing its ink signature on this printed copy, the owner or operator shall retain this original copy among its records for at least three years from the date of delivery of the waste.

J. Imposition of User Fee for Electronic Manifest Use. An owner or operator who is a user of the electronic manifest format may be assessed a user fee by EPA for the origination or processing of each electronic manifest. An owner or operator may also be assessed a user fee by EPA for the collection and processing of paper manifest copies that owners or operators must submit to the electronic manifest system operator under LAC 33:V.1516.B.1.e. EPA shall maintain and update from time-to-time the current schedule of electronic manifest system user fees, which shall be determined based on current and projected system costs and level of use of the electronic manifest system. The current schedule of electronic manifest user fees shall be published as an appendix to 40 CFR part 262.

K. Electronic Manifest Signatures. Electronic manifest signatures shall meet the criteria described in 40 CFR 262.25.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of the Secretary, Legal Affairs Division, LR 32:825 (May 2006), amended LR 33:2104 (October 2007), LR 34:623 (April 2008), LR 34:1012 (June 2008), LR 38:777, 789 (March 2012), amended by the Office of the Secretary, Legal Division, LR 42:568 (April 2016), LR 43:1141 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:932 (July 2020).

§1517. General Requirements for Ignitable, Reactive, or Incompatible Wastes

A. The owner or operator must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. This waste must be separated and protected from sources of ignition or reaction including but not limited to: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical, or mechanical), spontaneous ignition (e.g., from heat-producing chemical reactions), and radiant heat. While ignitable or reactive waste is being handled, the owner or operator must restrict smoking and open flame to specially designated locations. "No Smoking" signs must be conspicuously placed wherever there is a hazard from ignitable or reactive waste.

B. The owner or operator of a facility that treats, stores, or disposes of ignitable or reactive waste, or mixes incompatible waste or incompatible wastes and other materials, must take precautions to prevent reactions which:

1. generate extreme heat or pressure, fire or explosions, or violent reactions;
2. produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health or the environment;
3. produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;
4. damage the structural integrity of the device or facility; and
5. through other like means threaten human health or the environment.

C. In landfills and burial sites, incompatible wastes shall be adequately separated to avoid mixing of the wastes during operation or after closure.

D. Treatment and storage facilities containing ignitable, reactive, or incompatible wastes shall be sufficiently separated or protected to prevent mixing, ignition, or reaction as a result of a spill, tank failure, or other cause. Protection shall include use of container materials compatible with the wastes contained therein.

E. When required to comply with LAC 33:V.1517.A and B, the owner or operator must document that compliance. This documentation may be based on references to published scientific or engineering literature, data from trial tests (e.g.,

bench scale or pilot scale tests), waste analyses, or the results of the treatment of similar wastes by similar treatment processes and under similar operating conditions.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of the Secretary, Legal Affairs Division, LR 34:73 (January 2008).

§1519. General Waste Analysis

A. Hazardous Waste Chemical and Physical Analysis

1. Before an owner or operator treats, stores, or disposes of any hazardous waste, or non-hazardous wastes if applicable under LAC 33:V.3513.D, he or she must obtain a detailed chemical and physical analysis of a representative sample of the waste. At a minimum, this analysis must contain all the information which must be known to treat, store, or dispose of the waste in accordance with all requirements of LAC 33:V.Chapters 15 and 22.

2. The analysis may include data developed under LAC 33:V.Chapter 49 and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes.

COMMENT: For example, the facility's records of analyses performed on the waste before the effective date of these regulations, or studies conducted on hazardous waste generated from processes similar to that which generated the waste to be managed at the facility, may be included in the data base required to comply with Paragraph A.1 of this Section. The owner or operator of an off-site facility may arrange for the generator of the hazardous waste to supply part of the information required by Paragraph A.1 of this Section, except as otherwise specified in LAC 33:V.2247.A and A.1. If the generator does not supply the information and the owner or operator chooses to accept a hazardous waste, the owner or operator is responsible for obtaining the information required to comply with this Section.

3. The analysis must be repeated as necessary to ensure that it is accurate and up to date. At a minimum, the analysis must be repeated:

- a. when the owner or operator is notified, or has reason to believe, that the process or operation generating the hazardous waste or nonhazardous waste if applicable under LAC 33:V.3513.D, has changed; and
- b. for off-site facilities, when the results of the inspection required in LAC 33:V.1519.A.4 indicate that the hazardous waste received at the facility does not match the waste designated in the accompanying manifest or shipping paper.

4. The owner or operator of an off-site facility must inspect and, if necessary, analyze each hazardous waste movement received at the facility to determine whether it matches the identity of the waste specified on the accompanying manifest or shipping paper.

B. The owner or operator must develop and follow a written waste analysis plan that describes the procedures that he or she will carry out to comply with LAC 33:V.1519.A.

ENVIRONMENTAL QUALITY

He or she must keep this plan at the facility. At a minimum, the plan must specify:

1. the parameters for which each hazardous waste, or non-hazardous waste if applicable under LAC 33:V.3513.D, will be analyzed and the rationale for the selection of these parameters (i.e., how analysis for these parameters will provide sufficient information on the waste's properties to comply with LAC 33:V.1519.A);

2. the test methods as specified in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846 as incorporated by reference at LAC 33:V.110, or an equivalent method approved by the administrative authority, which will be used to test for these parameters; and

3. the sampling method which will be used to obtain a representative sample of the waste to be analyzed. A representative sample may be obtained using a method approved by the administrative authority;

COMMENT: See LAC 33:V.105.I for related discussion.

4. the plan must further specify the frequency with which the initial analysis of the waste will be reviewed or repeated to ensure that the analysis is accurate and up to date;

5. the Quality Assurance and Quality Control (QA/QC) procedures used to ensure the waste sampling and analysis are satisfactory;

6. the plan must further specify for off-site facilities the waste analyses that hazardous waste generators have agreed to supply; and

7. where applicable, the methods which will be used to meet the additional waste analysis requirements for specific waste management methods as specified in LAC 33:V.1517, 1711.D, 1741.D, 1753, 2515, 3107, and 2245;

8. for surface impoundments exempted from land disposal prohibitions under LAC 33:V.2237, the procedures and schedules for:

a. the sampling of impoundment contents;

b. the analysis of test data; and

c. the annual removal of residues which are not delisted under LAC 33:V.105.M or which exhibit a characteristic of hazardous waste and either:

i. do not meet applicable treatment standards of LAC 33:V.Chapter 22.Subchapters A and B; or

ii. where no treatment standards have been established:

(a). such residues are prohibited from land disposal under LAC 33:V.2213; or

(b). such residues are prohibited from land disposal under LAC 33:V.2215; and

9. for owners and operators seeking an exemption to the air emission standards of LAC 33:V.Chapter 17. Subchapter C in accordance with LAC 33:V.1751:

a. if direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis, and the results of the analysis of test data to verify the exemption; or

b. if knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the hazardous waste, if the waste is received from off-site, that is used as the basis for knowledge of the waste.

C. For off-site facilities, the required waste analysis plan must also specify the procedures which will be used to inspect and, if necessary, analyze each movement of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. At a minimum, the plan must describe:

1. the procedures which will be used to determine the identity of each movement of waste managed at the facility; and

2. the sampling method which will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling; (LAC 33:V.517.C requires that the waste analysis plan be submitted with Part II of the permit application.)

3. the procedures that the owner or operator of an off-site landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container.

D. Certification. All waste analysis plans must be certified by a Louisiana licensed professional engineer (PE).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 15:378 (May 1989), LR 16:220 (March 1990), LR 17:478 (May 1991), LR 17:658 (July 1991), LR 18:1256 (November 1992), LR 20:1000 (September 1994), LR 20:1109 (October 1994), LR 21:266 (March 1995), LR 21:1334 (December 1995), LR 22:818 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1695 (September 1998).

§1521. Chemical, Physical, and Biological Treatment Facilities (Wastes Only)

In addition to the requirements listed below, a permit application shall address the technical requirements in LAC 33:V.Chapters 15, 19, 21, 29, 33, 35, and 37.

A. Below-surface basins are governed by LAC 33:V.2903.A.

B. Above-ground and mixing and other facilities in basins shall be certified by the designing engineer or manufacturer.

C. Treatment techniques shall include proper chemical analysis or data collecting such as is necessary to determine compatibility with existing treatment facilities, prevention of the release of toxic gases, and provisions for bacterial control and for safety of operating personnel.

D. Pilot or bench-scale tests or reliable operating data must be obtained for any new or altered hazardous waste prior to introduction into an existing or new treatment sequence.

E. Storage and handling procedures insuring protection of human health and the environment must be observed for all treatment chemicals or reagents.

F. Proper design and operation of all equipment must be maintained to insure minimum spillage, foaming, or misting.

G. Reserve emergency storage must be maintained for critical process areas to insure against operational mishaps and inadvertent volumetric surges.

H. Flow safeguards and cut-offs must be included in the flow system to avoid improper operation, overflow, or treatment defects.

I. Residual sludges or by-products shall be analyzed before disposition within the treatment sequence.

J. An air monitoring system is required under LAC 33:V.3305.E.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992).

§1523. Surveillance and Monitoring

A. Primary responsibility for the proper handling of hazardous wastes is assumed by the industry operating under these rules and regulations and cooperating with the department in meeting the purposes of the Act. As part of this responsibility, the owner or operator of any treatment, storage, or disposal facility shall develop a schedule of routine facility inspections and shall keep a log or record of all inspections carried out thereunder. The owner or operator shall likewise develop and adhere to a waste analysis plan to be approved by the department.

B. Department surveillance and monitoring includes the following:

1. analysis of manifests and manifest reports to determine that all wastes generated are disposed of in permitted sites and that the proper disposal method has been used;

2. periodic inspections required by the permit maintenance program to insure that facilities treating, storing, and disposing of hazardous wastes are operated in conformity with the terms of the permit and these rules and regulations;

3. spot inspections and sampling by the traveling laboratory and the analytical and inspection team;

4. a systematic program to conduct or to require investigations and recording of the groundwater, leachate, and air monitoring systems;

5. response to citizen complaints and suggestions concerning operation of the system; and

6. such other procedures as may be deemed necessary by the administrative authority.

C. Violations discovered through such surveillance and monitoring shall be the subject of enforcement actions pursuant to LAC 33:V.107 of these regulations.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§1525. Emergency Response

A. Purpose. To provide for control and clean-up of accidental spills and other emergency situations involving hazardous wastes resulting from a violation of a requirement of these regulations or the Act.

B. Program. The department, working with the Department of Public Safety, will establish the following program:

1. emergency response equipment and teams located in strategic locations;

2. emergency response plan involving a communication system, cooperation with local police and fire departments, training program based, as a minimum, on the "emergency information card," and an operations plan for each class of emergency situation; and

3. the Emergency Response Program will respond to all in-transit accidents and spills, and respond to on-site emergencies when called by the operator or in accordance with provisions of LAC 33:V.1513.F.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§1527. Receiving and Monitoring Incoming Waste

A. Each site which treats, stores, or disposes of hazardous wastes generated off site shall be equipped to accomplish the following:

1. provide control of all incoming waste to prevent entry of unrecorded and unanalyzed hazardous waste; and

2. measure quantity and type by taking and analyzing a representative sample of waste received to verify the information on the manifest, and to determine proper method for handling and disposal.

ENVIRONMENTAL QUALITY

B. Each facility within the site which receives hazardous wastes shall be equipped with necessary devices to record quantities, by classification or other identification, of hazardous wastes deposited into the facility system.

C. Each site shall be equipped with a central control and recordkeeping system which tabulates information from LAC 33:V.1527.A.2 and B.

D. Onsite Transfer Systems

1. All docking, mooring, loading, and unloading facilities for a hazardous waste treatment, storage, or disposal facility are considered part of the facility operation.

2. Hose couplings for truck, barge, or pipeline discharge shall be located within a natural or created containment, with an elevation above surface elevation sufficient to contain a 10-minute discharge. Groundwater protection shall be provided.

3. Hose couplings on a barge shall be in a containment area on the barge to prevent leakage from entering the waterway.

4. Hoses from a barge to the facility shall be supported by a land-based boom so that the low point of the hose is within the barge or site containment area.

5. Barge moorings shall be in a slack water area outside the navigation channel.

E. Receiving Waste from an Offsite Source. The owner or operator of a facility that receives hazardous waste from an off site source (except where the owner or operator is also the generator) must inform the generator in writing that he has the appropriate permit(s) for, and will accept, the waste the generator is shipping. The owner or operator must keep a copy of this written notice as part of the operating record.

F. Unmanifested Waste Reports. Any wastes presented for disposal that are not accompanied by a properly completed manifest shall be rejected. The TSD operator shall note the name of the driver, hauler, and the vehicle identification numbers. He shall notify SPOC by phone immediately and in writing within seven days of the refusal to accept the waste and provide the administrative authority with the required information.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2472 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2456 (October 2005), LR 33:2104 (October 2007).

§1529. Operating Record and Reporting Requirements

A. The owner or operator must keep a written operating record at his facility.

B. The following information must be recorded, as it becomes available, and maintained in the operating record

for three years, unless otherwise specified in Paragraphs B.1-22 of this Section:

1. a description and the quantity of each hazardous waste received, and the method(s) and date(s) of its treatment, storage, or disposal at the facility, utilizing specifications in Tables 1 and 2 of this Section. This information must be maintained in the operating record until closure of the facility;

2. each hazardous waste listed in LAC 33:V.109, and each hazardous waste characteristic defined in LAC 33:V.105.B has a four-digit EPA hazardous waste number assigned to it. This number must be used for recordkeeping and reporting purposes. Where a hazardous waste contains more than one listed hazardous waste, or where more than one hazardous waste characteristic applies to the waste, the waste description must include all applicable EPA hazardous waste numbers;

3. record the estimated or manifest-reported weight, or volume and density, where applicable, in one of the units of measure specified in Table 1:

Table 1. Units For Reporting	
Unit of Measure	Code ¹
Gallons	G
Gallons per Hour	E
Gallons per Day	U
Liters	L
Liters per Hour	H
Liters per Day	V
Short Tons per Hour	D
Metric Tons per Hour	W
Short Tons per Day	N
Metric Tons per Day	S
Pounds per Hour	J
Kilograms per Hour	R
Cubic Yards	Y
Cubic Meters	C
Acres	B
Acre-feet	A
Hectares	Q
Hectare-meter	F
Btu's per Hour	I
Pounds	P
Short tons	T
Kilograms	K
Tons	M

¹ Single digit symbols are used here for data processing purposes.

4. the method(s) [by handling code(s) as specified in Table 2] and date(s) of treatment, storage, or disposal:

Table 2. Handling Codes for Treatment, Storage, and Disposal Methods	
Enter the handling code(s) listed below that most closely represents the technique(s) used at the facility to treat, store, or dispose of each quantity of hazardous waste received.	
Storage	
S01	Container (barrel, drum, etc.)
S02	Tank
S03	Waste Pile
S04	Surface Impoundment
S05	Drip Pad
S06	Containment Building (Storage)

5. the location of each hazardous waste within the facility and the quantity at each location. For disposal facilities, the location and quantity of each hazardous waste must be recorded on a map or diagram that shows each cell or disposal area. For all facilities, this information must include cross-references to manifest document numbers, if the waste was accompanied by a manifest. This information must be maintained in the operating record until closure of the facility;

6. records and results of waste analyses and waste determinations performed as specified in these regulations and in LAC 33:V.1517, 1519, 1711, 1741, 1753, 2237.A, 2245, 2515, and 3107;

ENVIRONMENTAL QUALITY

7. summary reports and details of all incidents that require implementing the contingency plan;

8. records and results of inspections required by LAC 33:V.1509.D;

9. monitoring, testing, or analytical data, and corrective action where required by LAC 33:V.1504, 1711.C-F, 1713, 1741.D-I, 1743, 1751, 1753, 1755, 1757, 1759, 1761, 1763, 1765, 1767, 1903, 1907, 1911, 2304, 2306, 2309, 2504, 2507, 2508, 2509, 2709, 2711, 2719, 2904, 2906, 2907, 3119, 3203, 3205, and Chapter 33, as well as corrective action cites. Maintain this information in the operating record for three years, except for records and results pertaining to groundwater monitoring and cleanup, which must be maintained in the operating record until closure of the facility;

10. for off-site facilities, notices to generators that the TSD facility has the appropriate permits for and will accept the waste the generator is shipping;

11. all closure cost estimates and, for disposal facilities, all post-closure cost estimates. This information must be maintained in the operating record until closure of the facility;

12. records of the quantities (and date of placement) for each shipment of hazardous waste placed in land disposal units under an extension to the effective date of any land disposal prohibition granted in accordance with LAC 33:V.2239, a petition approved in accordance with LAC 33:V.2241 or 2271, a determination made under LAC 33:V.2273, or the applicable notice required by a generator under LAC 33:V.2245. This information must be maintained in the operating record until the closure of the facility;

13. for an off-site treatment facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator under LAC 33:V.2245 or 2247;

14. for an on-site treatment facility, the information contained in the notice (except the manifest number), and the certification and demonstration, if applicable, required of the generator or the owner or operator under LAC 33:V.2245 or 2247;

15. for an off-site land disposal facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator of a treatment facility under LAC 33:V.2245 or 2247, whichever is applicable;

16. for an on-site land disposal facility, the information contained in the notice required of the generator or owner or operator of a treatment facility under LAC 33:V.2245 or LAC 33:V.2247, except for the manifest number;

17. for an off-site storage facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator under LAC 33:V.2245 or 2247;

18. for an on-site storage facility, the information contained in the notice (except the manifest number), and the certification and demonstration, if applicable, required of the generator or the owner or operator under LAC 33:V.2245 or 2247;

19. a certification by the permittee no less often than annually, that the permittee has a program in place to reduce the volume and toxicity of hazardous waste that he generates to the degree determined by the permittee to be economically practicable, and that the proposed method of treatment, storage, or disposal is that practicable method currently available to the permittee which minimizes the present and future threat to human health and the environment;

20. any records required under LAC 33:V.1501.H.13;

21. monitoring, testing, or analytical data where required by LAC 33:V.3119. This information must be maintained in the operating record for five years; and

22. certifications as required by LAC 33:V.1913.F. This information must be maintained in the operating record until closure of the facility.

C. Availability, Retention, and Disposition of Records

1. All records, including plans, required under this Part must be furnished upon request, and made available at all reasonable times for inspection, by any officer, employee, or representatives who are duly designated by the administrative authority.

2. The retention period for all records required under this Section is extended automatically during the course of any unresolved enforcement action regarding the facility or as requested by the administrative authority.

3. A copy of records of waste disposal locations and quantities must be submitted to the administrative authority and local land authority upon closure of the facility.

D. Annual Report. The owner or operator shall complete and submit an annual report to the Office of Environmental Services by March 1 of each year. The annual report shall be submitted on the form provided by the administrative authority and it shall cover activities during the previous calendar (reporting) year. Information submitted on a more frequent basis may be included by reference or in synopsis form where it is not pertinent to reporting under LAC 33:V.1516 or monitoring reporting under LAC 33:V.3317. It shall include monitoring data where required.

E. Additional Reports. In addition to submitting the annual reports and unmanifested waste reports described in LAC 33:V.1516.D and Subsection D of this Section, the owner or operator shall also report to the administrative authority:

1. releases, fires, and explosions as specified in LAC 33:V.1513.F.9;

2. facility closures as specified in LAC 33:V.Chapter 35; and

3. as otherwise required by LAC 33:V.Chapters 17, 23, 25, 27, 29, and 33.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 15:378 (May 1989), LR 16:220 (March 1990), LR 16:399 (May 1990), LR 17:658 (July 1991), LR 18:1256 (November 1992), LR 20:1000 (September 1994), LR 21:266 (March 1995), LR 22:832 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1695 (September 1998), LR 25:437 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1799 (October 1999), LR 26:278 (February 2000), LR 26:2473 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 32:827 (May 2006), LR 33:2104 (October 2007), LR 34:623 (April 2008), LR 34:993 (June 2008), LR 34:1895 (September 2008), LR 35:1879 (September 2009), amended by the Office of the Secretary, Legal Division, LR 43:1141 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:933 (July 2020).

§1531. Required Notices

A. The owner or operator of a facility that has arranged to receive hazardous waste from a foreign source must notify the Office of Environmental Services in writing at least four weeks in advance of the date the waste is expected to arrive at the facility. Notice of subsequent shipments of the same waste from the same foreign source is not required.

B. The owner or operator of a recovery facility that has arranged to receive hazardous waste subject to LAC 33:V.Chapter 11.Subchapter B shall provide a copy of the movement document bearing all required signatures to the foreign exporter, to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave, NW, Washington, DC 20460, and to the competent authorities of all other concerned countries within three working days of receipt of the shipment. The original of the signed movement document shall be maintained at the facility for at least three years. In addition, such owner or operator shall, as soon as possible, but no later than 30 days after the completion of recovery and no later than one calendar year following the receipt of the hazardous waste, send a certificate of recovery to the foreign exporter and to the competent authority of the country of export and to EPA's Office of Enforcement and Compliance Assurance at the above address by mail, email (without a digital signature), or fax followed by mail.

C. The owner or operator of a facility that receives hazardous waste from an off-site source (except where the owner or operator is also the generator) must inform the generator in writing that he has the appropriate permit(s) for, and will accept, the waste the generator is shipping. The owner or operator must keep a copy of this written notice as part of the operating record.

D. Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the post-closure care period, the owner or operator must notify the new owner or operator in writing of the requirements of LAC 33:V.Subpart 1.

E. An owner's or operator's failure to notify the new owner or operator of the requirements in no way relieves the new owner or operator of his obligation to comply with all applicable requirements.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 15:378 (May 1989), LR 16:220 (March 1990), LR 16:399 (May 1990), LR 18:1256 (November 1992), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:666 (April 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2473 (November 2000), LR 27:294 (March 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2105 (October 2007), LR 38:789 (March 2012).

§1533. Relationship to Interim Status Standards

A. A facility owner or operator who has fully complied with the requirements for interim status, as defined in Section 3005(e) of RCRA and regulations under LAC 33:V.4301, must comply with the regulations specified in LAC 33:V.Chapter 43 in lieu of the regulations in this Chapter, until final administrative disposition of his permit application is made, except as provided under LAC 33:V.Chapter 26.

COMMENT: As stated in Section 3005(a) of RCRA, after the effective date of regulations under that Section, i.e., LAC 33:V.Chapters 3, 5, and 7, the treatment, storage, or disposal of hazardous waste is prohibited except in accordance with a permit. Section 3005(e) of RCRA provides for the continued operation of an existing facility which meets certain conditions until final administrative disposition of the owner's or operator's permit application is made.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:278 (February 2000).

§1535. Imminent Hazard Action

A. Notwithstanding any other provisions of these regulations, enforcement actions may be brought in accordance with R.S. 30:2050.8.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:278 (February 2000).

Chapter 17. Air Emission Standards

§1701. Applicability

A. The regulations in this Chapter apply to owners and operators of facilities that treat, store, or dispose of

hazardous wastes (except as provided in LAC 33:V.1501 and 1705).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1703. Definitions

A. As used in this Chapter, all terms not defined herein shall have the meanings given them in LAC 33:V.109.

Air Stripping Operation—a desorption operation employed to transfer one or more volatile components from a liquid mixture into a gas (air) either with or without the application of heat to the liquid. Packed towers, spray towers, and bubble-cap, sieve, or valve-type plate towers are among the process configurations used for contacting the air and a liquid.

Average Volatile Organic Concentration or Average VO Concentration—the mass-weighted average volatile organic concentration of a hazardous waste as determined in accordance with the requirements of LAC 33:V.4727.

Bottoms Receiver—a container or tank used to receive and collect the heavier bottoms fractions of the distillation feedstream that remain in the liquid phase.

Closed-Vent System—a system that is not open to the atmosphere and that is composed of piping, connections, and, if necessary, flow-inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device.

Closure Device—a cap, hatch, lid, plug, seal, valve, or other type of fitting that blocks an opening in a cover such that when the device is secured in the closed position it prevents or reduces air pollutant emissions to the atmosphere. Closure devices include devices that are detachable from the cover (e.g., a sampling port cap), manually operated (e.g., a hinged access lid or hatch), or automatically operated (e.g., a spring-loaded pressure relief valve).

Condenser—a heat-transfer device that reduces a thermodynamic fluid from its vapor phase to its liquid phase.

Connector—flanged, screwed, welded, or other joined fittings used to connect two pipelines or a pipeline and a piece of equipment. For the purposes of reporting and recordkeeping, connector means flanged fittings that are not covered by insulation or other materials that prevent location of the fittings.

Continuous Recorder—a data-recording device recording instantaneous data values at least every 15 minutes, or more frequently if reasonably available technology exists which will achieve increased recording frequency.

Continuous Seal—a seal that forms a continuous closure that completely covers the space between the edge of the floating roof and the wall of a tank. A continuous seal may

be a vapor-mounted seal, liquid-mounted seal, or metallic shoe seal. A continuous seal may be constructed of fastened segments so as to form a continuous seal.

Control Device—an enclosed combustion device, vapor recovery system, or flare. Any device the primary function of which is the recovery or capture of solvents or other organics for use, reuse, or sale (e.g., a primary condenser on a solvent recovery unit) is not a control device.

Control Device Shutdown—the cessation of operation of a control device for any purpose.

Cover—a device that provides a continuous barrier over the hazardous waste managed in a unit to prevent or reduce air pollutant emissions to the atmosphere. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment which can be detached and removed from the unit or a cover may be formed by structural features permanently integrated into the design of the unit.

Distillate Receiver—a container or tank used to receive and collect liquid material (condensed) from the overhead condenser of a distillation unit and from which the condensed liquid is pumped to larger storage tanks or other process units.

Distillation Operation—an operation, either batch or continuous, separating one or more feedstream(s) into two or more exit streams, each exit stream having component concentrations different from those in the feedstream(s). The separation is achieved by the redistribution of the components between the liquid and vapor phase as they approach equilibrium within the distillation unit.

Double Block and Bleed System—two block valves connected in series with a bleed valve or line that can vent the line between the two block valves.

Enclosure—a structure that surrounds a tank or container, captures organic vapors emitted from the tank or container, and vents the captured vapors through a closed-vent system to a control device.

Equipment—each valve, pump, compressor, pressure relief device, sampling connection system, open-ended valve or line, flange, or other connector and any control devices or systems required by this Chapter.

External Floating Roof—a pontoon-type or double-deck type cover that rests on the surface of the material managed in a tank with no fixed roof.

First Attempt at Repair—to take rapid action for the purpose of stopping or reducing leakage of organic material to the atmosphere using best practices.

Fixed Roof—a cover that is mounted on a unit in a stationary position and does not move with fluctuations in the level of the material managed in the unit.

Flame Zone—the portion of the combustion chamber in a boiler occupied by the flame envelope.

Floating Membrane Cover—a cover consisting of a synthetic flexible membrane material that rests upon and is supported by the hazardous waste being managed in a surface impoundment.

Floating Roof—a cover consisting of a double deck, pontoon single deck, or internal floating cover which rests upon and is supported by the material being contained, and is equipped with a continuous seal.

Flow Indicator—a device that indicates whether gas flow is present in a vent stream.

Fractionation Operation—a distillation operation or method used to separate a mixture of several volatile components of different boiling points in successive stages, each stage removing from the mixture some proportion of one of the components.

Hard-Piping—pipe or tubing that is manufactured and properly installed in accordance with relevant standards and good engineering practices.

Hazardous Waste Management Unit Shutdown—a work practice or operational procedure that stops operation of a hazardous waste management unit or part of a hazardous waste management unit. An unscheduled work practice or operational procedure that stops operation of a hazardous waste management unit or part of a hazardous waste management unit for less than 24 hours or a scheduled, routine work practice such as cessation of operation on a holiday or weekend is not a hazardous waste management unit shutdown. The use of spare equipment and technically feasible bypassing of equipment without stopping operation are not hazardous waste management unit shutdowns.

Hot Well—a container for collecting condensate as in a steam condenser serving a vacuum-jet or steam-jet ejector.

In Gas/Vapor Service—a piece of equipment that contains or contacts a hazardous waste stream that is in the gaseous state at operating conditions.

In Heavy Liquid Service—a piece of equipment that is not in gas/vapor service or in light liquid service.

In Light Liquid Service—a piece of equipment that contains or contacts a waste stream where the vapor pressure of one or more of the organic components in the stream is greater than 0.3 kilopascals (kPa) at 20°C, the total concentration of the pure organic components having a vapor pressure greater than 0.3 kPa at 20°C is equal to or greater than 20 percent by weight, and the fluid is a liquid at operating conditions.

In Light Material Service—the container is used to manage a material for which both of the following conditions apply: the vapor pressure of one or more of the organic constituents in the material is greater than 0.3 kilopascals (kPa) at 20°C; and the total concentration of the pure organic constituents having a vapor pressure greater than 0.3 kPa at 20°C is equal to or greater than 20 percent by weight.

In Situ Sampling Systems—nonextractive samplers or in-line samplers.

In Vacuum Service—equipment operating at an internal pressure that is at least 5 kPa below ambient pressure.

Internal Floating Roof—a cover that rests or floats on the material surface (but not necessarily in complete contact with it) inside a tank that has a fixed roof.

Liquid-Mounted Seal—a foam or liquid-filled primary seal mounted in contact with the hazardous waste between the tank wall and the floating roof continuously around the circumference of the tank.

Malfunction—any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions.

Maximum Organic Vapor Pressure—the sum of the individual organic constituent partial pressures exerted by the material contained in a tank at the maximum vapor pressure-causing conditions (e.g., temperature, agitation, pH effects of combining wastes, etc.) reasonably expected to occur in the tank. For the purpose of this Chapter, maximum organic vapor pressure is determined using the procedures specified in LAC 33:V.4727.

Metallic Shoe Seal—a continuous seal that is constructed of metal sheets which are held vertically against the wall of the tank by springs, weighted levers, or other mechanisms and is connected to the floating roof by braces or other means. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.

No Detectable Organic Emissions—no escape of organics to the atmosphere as determined using the procedure specified in LAC 33:V.4727.

Open-Ended Valve or Line—any valve, except pressure relief valves, having one side of the valve seat in contact with hazardous waste and one side open to the atmosphere, either directly or through open piping.

Point of Waste Origination—as follows:

a. when the facility owner or operator is the generator of the hazardous waste, the point of waste origination means the point where a solid waste produced by a system, process, or waste management unit is determined to be a hazardous waste as defined in LAC 33:V.109; or

[NOTE: In this case, this term is being used in a manner similar to the use of the term *point of generation* in air standards established for waste management operations under authority of the Clean Air Act in 40 CFR Parts 60, 61, and 63].

b. when the facility owner and operator are not the generator of the hazardous waste, point of waste origination means the point where the owner or operator accepts delivery or takes possession of the hazardous waste.

Point of Waste Treatment—the point where a hazardous waste to be treated in accordance with LAC 33:V.4725 exits the treatment process. Any waste determination shall be

made before the waste is conveyed, handled, or otherwise managed in a manner that allows the waste to volatilize to the atmosphere.

Pressure Release—the emission of materials resulting from the system pressure being greater than the set pressure of the pressure relief device.

Process Heater—a device that transfers heat liberated by burning fuel to fluids contained in tubes, including all fluids except water that are heated to produce steam.

Process Vent—any open-ended pipe or stack that is vented to the atmosphere either directly, through a vacuum-producing system, or through a tank (e.g., distillate receiver, condenser, bottoms receiver, surge control tank, separator tank, or hot well) associated with hazardous waste distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations.

Repaired—equipment is adjusted, or otherwise altered, to eliminate a leak.

Safety Device—a closure device, such as a pressure relief valve, frangible disc, fusible plug, or any other type of device, which functions exclusively to prevent physical damage or permanent deformation to a unit or its air emission control equipment by venting gases or vapors directly to the atmosphere during unsafe conditions resulting from an unplanned, accidental, or emergency event. For the purpose of this Chapter, a safety device is not used for routine venting of gases or vapors from the vapor headspace underneath a cover such as during filling of the unit or to adjust the pressure in this vapor headspace in response to normal daily diurnal ambient temperature fluctuations. A safety device is designed to remain in a closed position during normal operations and open only when the internal pressure, or another relevant parameter, exceeds the device threshold setting applicable to the air emission control equipment as determined by the owner or operator based on manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials.

Sampling Connection System—an assembly of equipment within a process or waste management unit used during periods of representative operation to take samples of the process or waste fluid. Equipment used to take non-routine grab samples is not considered a sampling connection system.

Sensor—a device that measures a physical quantity or the change in a physical quantity such as temperature, pressure, flow rate, pH, or liquid level.

Separator Tank—a device used for separation of two immiscible liquids.

Single-Seal System—a floating roof having one continuous seal. This seal may be vapor-mounted, liquid-mounted, or a metallic shoe seal.

Solvent Extraction Operation—an operation or method of separation in which a solid or solution is contacted with a liquid solvent (the two being mutually insoluble) to preferentially dissolve and transfer one or more components into the solvent.

Start-Up—the setting in operation of a hazardous waste management unit or control device for any purpose.

Steam Stripping Operation—a distillation operation in which vaporization of the volatile constituents of a liquid mixture takes place by the introduction of steam directly into the charge.

Surge Control Tank—a large-sized pipe or storage reservoir sufficient to contain the surging liquid discharge of the process tank to which it is connected.

Thin-Film Evaporation Operation—a distillation operation that employs a heating surface consisting of a large-diameter tube that may be either straight or tapered, horizontal or vertical. Liquid is spread on the tube wall by a rotating assembly of blades that maintain a close clearance from the wall or actually ride on the film of liquid on the wall.

Vapor Incinerator—any enclosed combustion device that is used for destroying organic compound vapors and does not extract energy in the form of steam or process heat.

Vapor-Mounted Seal—a continuous seal that is mounted such that there is a vapor space between the hazardous waste in the unit and the bottom of the seal.

Vented—discharged through an opening, typically an open-ended pipe or stack, allowing the passage of a stream of liquids, gases, or fumes into the atmosphere. The passage of liquids, gases, or fumes is caused by mechanical means such as compressors or vacuum-producing systems or by process-related means such as evaporation produced by heating and not caused by tank loading and unloading (working losses) or by natural means such as diurnal temperature changes.

Volatile Organic Concentration or VO Concentration—the fraction by weight of the volatile organic compounds contained in a hazardous waste expressed in terms of parts per million (ppmw) as determined by direct measurement or by knowledge of the waste in accordance with the requirements of LAC 33:V.4727. For the purpose of determining the VO concentration of a hazardous waste, organic compounds with a Henry's law constant value of at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m³) at 25°C must be included. LAC 33:V.1799.Appendix, Table 1 presents a list of compounds known to have a Henry's law constant value less than the cutoff level.

Waste Determination—performing all applicable procedures in accordance with the requirements of LAC 33:V.4727 to determine whether a hazardous waste meets standards specified in this Chapter. Examples of a

waste determination include performing the procedures in accordance with the requirements of LAC 33:V.4727 to determine the average VO concentration of a hazardous waste at the point of waste origination; the average VO concentration of a hazardous waste at the point of waste treatment and comparing the results to the exit concentration limit specified for the process used to treat the hazardous waste; the organic reduction efficiency and the organic biodegradation efficiency for a biological process used to treat a hazardous waste and comparing the results to the applicable standards; or the maximum volatile organic vapor pressure for a hazardous waste in a tank and comparing the results to the applicable standards.

Waste Stabilization Process—any physical or chemical process used to either reduce the mobility of hazardous constituents in a hazardous waste or eliminate free liquids as determined by Test Method 9095B (Paint Filter Liquids Test) in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846 as incorporated by reference in LAC 33:V.110. A waste stabilization process includes mixing the hazardous waste with binders or other materials and curing the resulting hazardous waste and binder mixture. Other synonymous terms used to refer to this process are waste fixation and waste solidification. This does not include the adding of absorbent materials to the surface of a waste, without mixing, agitation, or subsequent curing, to absorb free liquid.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1696 (September 1998), LR 25:437 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:278 (February 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1012 (June 2008).

Subchapter A. Process Vents

§1705. Applicability

A. The regulations in this Subchapter apply to owners and operators of facilities that treat, store, or dispose of hazardous wastes (except as provided in LAC 33:V.1501).

1. Except for LAC 33:V.1711.D and E, this Subchapter applies to process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations that manage hazardous wastes with organic concentrations of at least 10 parts per million by weight (ppmw), if these operations are conducted in one of the following:

a. a unit that is subject to the permitting requirements of LAC 33:V.Chapter 3, 5, 7, or 43;

b. a unit (including a hazardous waste recycling unit) that is not exempt from the permitting requirements under LAC 33:V.1015 (i.e., a hazardous waste recycling unit that is not a 90-day tank or container) and that is located on a hazardous waste management facility otherwise subject to

the permitting requirements of LAC 33:V.Chapter 3, 5, 7, or 43; or

c. a unit that is exempt from permitting under the provisions of LAC 33:V.1015 (i.e., a 90-day tank or container) and is not a recycling unit under the provisions of LAC 33:V.4105.

2. For the owner or operator of a facility subject to the requirements of this Subchapter and who received a final permit under RCRA Section 3005 and LAC 33:V.Subpart 1 prior to December 6, 1996, the requirements of this Subchapter shall be incorporated into the permit when the permit is reissued under LAC 33:V.705 or reviewed under LAC 33:V.315. Until such date when the owner or operator receives a final permit incorporating the requirements of this Subchapter, the owner or operator is subject to the requirements of LAC 33:V.Chapter 43.

[NOTE: The requirements of this Subchapter apply to process vents on hazardous waste recycling units previously exempt under LAC 33:V.4105.C. Other exemptions under LAC 33:V.105.D and 1501.C are not affected by these requirements.]

3. The requirements of this Subchapter do not apply to the process vents at a facility where the facility owner or operator certifies that all of the process vents that would otherwise be subject to this Subchapter are equipped with and operating air emission controls in accordance with the process vent requirements of an applicable Clean Air Act regulation codified under 40 CFR Part 60, Part 61, or Part 63. The documentation of compliance under regulations at 40 CFR Part 60, Part 61, or Part 63 shall be kept with, or made readily available with, the facility operating record.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 18:723 (July 1992), LR 20:1000 (September 1994), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1698 (September 1998), LR 25:437 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 27:294 (March 2001), amended by the Office of Environmental Assessment, LR 31:1572 (July 2005), amended by the Office of the Secretary, Legal Affairs Division, LR 32:606 (April 2006), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:933 (July 2020).

§1707. Standards: Process Vents

A. The owner or operator of a facility with process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations managing hazardous wastes with organic concentrations of at least 10 ppmw shall either:

1. reduce total organic emissions from all affected process vents at the facility below 1.4 kg/h (3 lb/h) and 2.8 Mg/yr (3.1 tons/yr); or

2. reduce, by use of a control device, total organic emissions from all affected process vents at the facility by 95 weight percent.

B. If the owner or operator installs a closed-vent system and control device to comply with the provisions of LAC 33:V.1707.A, the closed-vent system and control device must meet the requirements of LAC 33:V.1709.

C. Determinations of vent emissions and emission reductions or total organic compound concentrations achieved by add-on control devices may be based on engineering calculations or performance tests. If performance tests are used to determine vent emissions, emission reductions, or total organic compound concentrations achieved by add-on control devices, the performance tests must conform with the requirements of LAC 33:V.1711.C.

D. When an owner or operator and the administrative authority do not agree on determinations of vent emissions and/or emission reductions or total organic compound concentrations achieved by add-on control devices based on engineering calculations, the procedures in LAC 33:V.1711.C shall be used to resolve the disagreement.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1709. Standards: Closed-Vent Systems and Control Devices

A. Compliance

1. Owners or operators of closed-vent systems and control devices used to comply with provisions of LAC 33:V.Chapter 17 shall comply with the provisions of this Section.

2.a. The owner or operator of an existing facility who cannot install a closed-vent system and control device to comply with the provisions of this Subchapter on the effective date that the facility becomes subject to the provisions of this Subchapter must prepare an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The controls must be installed as soon as possible, but the implementation schedule may allow up to 30 months after the effective date that the facility becomes subject to this Subchapter for installation and start-up.

b. Any unit that begins operation after December 21, 1990, and is subject to the provisions of this Subchapter when operation begins, must comply with the rules immediately (i.e., must have control devices installed and operating on start-up of the affected unit); the 30-month implementation schedule does not apply.

c. The owner or operator of any facility in existence on the effective date of an EPA regulatory amendment that renders the facility subject to this Subchapter shall comply with all requirements of this Subchapter as soon as practicable, but no later than 30 months after the regulation's effective date. When control equipment required by this Subchapter cannot be installed and begin operation by the effective date of the regulation, the facility owner or operator

shall prepare an implementation schedule that includes the following information: specific calendar dates for award of contracts or issuance of purchase orders for the control equipment; initiation of on-site installation of the control equipment; completion of the control equipment installation; and performance of any testing to demonstrate that the installed equipment meets the applicable standards of this Subchapter. The owner or operator shall enter the implementation schedule in the operating record or in a permanent, readily available file located at the facility.

d. Owners and operators of facilities and units that become newly subject to the requirements of this Subchapter after December 8, 1997, due to an action other than those described in Subparagraph A.2.c of this Section must comply with all applicable requirements immediately (i.e., must have control devices installed and operating on the date the facility or unit becomes subject to this Subchapter; the 30-month implementation schedule does not apply).

B. Control Devices. A control device involving vapor recovery (e.g., a condenser or adsorber) shall be designed and operated to recover the organic vapors vented to it with an efficiency of 95 weight percent or greater unless the total organic emission limits of LAC 33:V.1707.A.1 for all affected process vents can be attained at an efficiency less than 95 weight percent.

C. Combustion Device. An enclosed combustion device (e.g., a vapor incinerator, boiler, or process heater) shall be designed and operated to reduce the organic emissions vented to it by 95 weight percent or greater; to achieve a total organic compound concentration of 20 ppmv, expressed as the sum of the actual compounds, not carbon equivalents, on a dry basis corrected to 3 percent oxygen; or to provide a minimum residence time of 0.50 seconds at a minimum temperature of 760°C. If a boiler or process heater is used as the control device, then the vent stream shall be introduced into the flame zone of the boiler or process heater.

D. Flare

1. **Visible Emissions.** A flare shall be designed for and operated with no visible emissions as determined by the methods specified in LAC 33:V.1709.E.1, except for periods not to exceed a total of five minutes during any two consecutive hours.

2. **Flame.** A flare shall be operated with a flame present at all times, as determined by the methods specified in LAC 33:V.1709.F.2.c.

3. **Combustible Heating Value.** A flare shall be used only if the net heating value of the gas being combusted is 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam-assisted or air-assisted, or if the net heating value of the gas being combusted is 7.45 MJ/scm (200 Btu/scf) or greater if the flare is nonassisted. The net heating value of the gas being combusted shall be determined by the methods specified in LAC 33:V.1709.E.2.

4. Steam-Assisted or Nonassisted

a. A steam-assisted or nonassisted flare shall be designed for and operated with an exit velocity, as determined by the methods specified in LAC 33:V.1709.E.3, of less than 18.3 m/s (60 ft/s), except as provided in LAC 33:V.1709.D.4.b and c.

b. A steam-assisted or nonassisted flare designed for and operated with an exit velocity, as determined by the methods specified in LAC 33:V.1709.E.3, equal to or greater than 18.3 m/s (60 ft/s) but less than 122 m/s (400 ft/s) is allowed if the net heating value of the gas being combusted is greater than 37.3 MJ/scm (1,000 Btu/scf).

c. A steam-assisted or nonassisted flare designed for and operated with an exit velocity, as determined by the methods specified in LAC 33:V.1709.E.3, of less than the velocity, V_{max} , as determined by the method specified in LAC 33:V.1709.E.4, and less than 122 m/s (400 ft/s), is allowed.

5. Air-Assisted. An air-assisted flare shall be designed and operated with an exit velocity less than the velocity, V_{max} , as determined by the method specified in LAC 33:V.1709.E.5.

6. Compliance. A flare used to comply with this Section shall be steam-assisted, air-assisted, or nonassisted.

E. Visible Emissions

1. Reference Method 22 in 40 CFR Part 60, Appendix A, incorporated by reference in LAC 33:III.3003, shall be used to determine the compliance of a flare with the visible emission provisions of this Subchapter. The observation period is two hours and shall be used according to Method 22.

2. The net heating value of the gas being combusted in a flare shall be calculated using the following equation.

$$H_T = K \left[\sum_{i=1}^n C_i H_i \right]$$

where:

H_T = net heating value of the sample, MJ/scm; where the net enthalpy per mole of offgas is based on combustion at 25°C and 760 mm Hg, but the standard temperature for determining the volume corresponding to 1 mol is 20°C

K = constant, 1.74×10^{-1} (1/ppm) (g mol/scm) (MJ/kcal), where standard temperature for (g mol/scm) is 20°C

C_i = concentration of sample component i in ppm on a wet basis, as measured for organics by Reference Method 18 in 40 CFR Part 60, Appendix A, incorporated by reference in LAC 33:III.3003, and measured for hydrogen and carbon monoxide by ASTM D 1946-82

H_i = net heat of combustion of sample component i , kcal/9 mol at 25°C and 760 mm Hg. The heats of combustion may be determined using ASTM D 2382-83 if published values are not available or cannot be calculated.

3. The actual exit velocity of a flare shall be determined by dividing the volumetric flow rate (in units of standard temperature and pressure), as determined by the methods in LAC 33:III.Chapter 60 as appropriate, by the unobstructed (free) cross-sectional area of the flare tip.

4. The maximum allowed velocity in m/s, V_{max} , for a flare complying with LAC 33:V.1709.D.4.c shall be determined by the following equation.

$$\text{LOG}_{10}(V_{max}) = \frac{(H_T + 28.8)}{31.7}$$

where:

28.8 = constant

31.7 = constant

H_T = the net heating value as determined in LAC 33:V.1709.E.2

5. The maximum allowed velocity in m/s, V_{max} , for an air-assisted flare shall be determined by the following equation.

$$V_{max} = 8.706 + 0.7084(H_T)$$

where:

8.706 = constant

0.7084 = constant

H_T = the net heating value as determined in LAC 33:V.1709.E.2

F. Inspection and Monitoring. The owner or operator shall monitor and inspect each control device required to comply with this Section to ensure proper operation and maintenance of the control device by implementing the following requirements.

1. Install, calibrate, maintain, and operate according to the manufacturer's specifications a flow indicator that provides a record of vent stream flow from each affected process vent to the control device at least once every hour. The flow indicator sensor shall be installed in the vent stream at the nearest feasible point to the control device inlet but before the point at which the vent streams are combined.

2. Install, calibrate, maintain, and operate according to the manufacturer's specifications a device to continuously monitor control device operation as specified below:

a. for a thermal vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device shall have an accuracy of ± 1 percent of the temperature being monitored in °C or $\pm 0.5^\circ\text{C}$, whichever is greater. The temperature sensor shall be installed at a location in the combustion chamber downstream of the combustion zone;

b. for a catalytic vapor incinerator, a temperature-monitoring device equipped with a continuous recorder. The device shall be capable of monitoring temperature at two locations and have an accuracy of ± 1 percent of the temperature being monitored in °C or $\pm 0.5^\circ\text{C}$, whichever is greater. One temperature sensor shall be installed in the vent stream at the nearest feasible point to the catalyst bed inlet, and a second temperature sensor shall be installed in the vent stream at the nearest feasible point to the catalyst bed outlet;

c. for a flare, a heat-sensing monitoring device equipped with a continuous recorder that indicates the continuous ignition of the pilot flame;

d. for a boiler or process heater having a design heat input capacity less than 44 MW, a temperature-monitoring device equipped with a continuous recorder. The device shall have an accuracy of ± 1 percent of the temperature being monitored in $^{\circ}\text{C}$ or $\pm 0.5^{\circ}\text{C}$, whichever is greater. The temperature sensor shall be installed at a location in the furnace downstream of the combustion zone;

e. for a boiler or process heater having a design heat input capacity greater than or equal to 44 MW, a monitoring device equipped with a continuous recorder to measure a parameter or parameters that indicate that good combustion operating practices are being used;

f. for a condenser, either:

i. a monitoring device equipped with a continuous recorder to measure the concentration level of the total organic compounds in the exhaust vent stream from the condenser; or

ii. a temperature-monitoring device equipped with a continuous recorder. The device shall be capable of monitoring temperature with an accuracy of ± 1 percent of the temperature being monitored in $^{\circ}\text{C}$ or $\pm 0.5^{\circ}\text{C}$, whichever is greater. The temperature sensor shall be installed at a location in the exhaust vent stream from the condenser exit (i.e., product side);

g. for a carbon adsorption system that regenerates the carbon bed directly in the control device such as a fixed-bed carbon adsorber, either:

i. a monitoring device equipped with a continuous recorder to measure the concentration level of the total organic compounds in the exhaust vent stream from the carbon bed; or

ii. a monitoring device equipped with a continuous recorder to measure a parameter that indicates the carbon bed is regenerated on a regular, predetermined time cycle.

3. Inspect the readings from each monitoring device required by LAC 33:V.1709.F.1 and 2 at least once each operating day to check control device operation and, if necessary, immediately implement the corrective measures necessary to ensure that the control device operates in compliance with the requirements of this Section.

G. Carbon Adsorption System, Regenerative. An owner or operator using a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates the carbon bed directly on-site in the control device shall replace the existing carbon in the control device with fresh carbon at a regular, predetermined interval that is no longer than the carbon service life established as a requirement of LAC 33:V.1713.B.4.c.vi.

H. Carbon Adsorption System, Nonregenerative. An owner or operator using a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly on-site in the control device shall replace the existing carbon in the control device with fresh carbon regularly by using one of the following procedures.

1. Monitor the concentration level of the organic compounds in the exhaust vent stream from the carbon adsorption system on a regular schedule, and replace the existing carbon with fresh carbon immediately when carbon breakthrough is indicated. The monitoring frequency shall be daily or at an interval no greater than 20 percent of the time required to consume the total carbon working capacity established as a requirement of LAC 33:V.1713.B.4.c.vii, whichever is longer.

2. Replace the existing carbon with fresh carbon at a regular, predetermined interval that is less than the design carbon replacement interval established as a requirement of LAC 33:V.1713.B.4.c.vii.

I. Alternative Process or Operational Parameters. An alternative operational or process parameter may be monitored if it can be demonstrated that another parameter will ensure that the control device is operated in conformance with these standards and the control device's design specifications.

J. Alternative Control Device: Documentation. An owner or operator of an affected facility seeking to comply with the provisions of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, 37 by using a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system is required to develop documentation including sufficient information to describe the control device operation and identify the process parameter or parameters that indicate proper operation and maintenance of the control device.

K. A closed-vent system shall meet either of the following design requirements:

1. a closed-vent system shall be designed to operate with no detectable emissions, as indicated by an instrument reading of less than 500 ppmv above background as determined by the procedure in LAC 33:V.1711.B and by visual inspections; or

2. a closed-vent system shall be designed to operate at a pressure below atmospheric pressure. The system shall be equipped with at least one pressure gauge or other pressure measurement device that can be read from a readily accessible location to verify that negative pressure is being maintained in the closed-vent system when the control device is operating.

L. The owner or operator shall monitor and inspect each closed-vent system required to comply with this Section to ensure proper operation and maintenance of the closed-vent system by implementing the following requirements.

1. Each closed-vent system that is used to comply with Paragraph K.1 of this Section shall be inspected and monitored in accordance with the following requirements.

a. An initial leak detection monitoring of the closed-vent system shall be conducted by the owner or operator on or before the date that the system becomes subject to this Section. The owner or operator shall monitor

the closed-vent system components and connections using the procedures specified in LAC 33:V.1711.B to demonstrate that the closed-vent system operates with no detectable emissions, as indicated by an instrument reading of less than 500 ppmv above background.

b. After initial leak detection monitoring required in Subparagraph L.1.a of this Section, the owner or operator shall inspect and monitor the closed-vent system as follows.

i. Closed-vent system joints, seams, or other connections that are permanently or semi-permanently sealed (e.g., a welded joint between two sections of hard piping or a bolted and gasketed ducting flange) shall be visually inspected at least once per year to check for defects that could result in air pollutant emissions. The owner or operator shall monitor a component or connection using the procedures specified in LAC 33:V.1711.B to demonstrate that it operates with no detectable emissions following any time the component is repaired or replaced (e.g., a section of damaged hard piping is replaced with new hard piping) or the connection is unsealed (e.g., a flange is unbolted).

ii. Closed-vent system components or connections other than those specified in Clause L.1.b.i of this Section shall be monitored annually and at other times as requested by the administrative authority, except as provided for in Subsection O of this Section, using the procedures specified in LAC 33:V.1711.B to demonstrate that the components or connections operate with no detectable emissions.

c. In the event that a defect or leak is detected, the owner or operator shall repair the defect or leak in accordance with the requirements of Paragraph L.3 of this Section.

d. The owner or operator shall maintain a record of the inspection and monitoring in accordance with the requirements specified in LAC 33:V.1713.

2. Each closed-vent system that is used to comply with Paragraph K.2 of this Section shall be inspected and monitored in accordance with the following requirements:

a. the closed-vent system shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in ductwork or piping or loose connections;

b. the owner or operator shall perform an initial inspection of the closed-vent system on or before the date that the system becomes subject to this Section. Thereafter, the owner or operator shall perform the inspections at least once every year;

c. in the event that a defect or leak is detected, the owner or operator shall repair the defect in accordance with the requirements of Paragraph L.3 of this Section; and

d. the owner or operator shall maintain a record of the inspection and monitoring in accordance with the requirements specified in LAC 33:V.1713.

3. The owner or operator shall repair all detected defects as follows:

a. detectable emissions, as indicated by visual inspection or by an instrument reading greater than 500 ppmv above background, shall be controlled as soon as practicable, but not later than 15 calendar days after the emission is detected, except as provided for in Subparagraph L.3.c of this Section;

b. a first attempt at repair shall be made no later than five calendar days after the emission is detected;

c. delay of repair of a closed-vent system for which leaks have been detected is allowed if the repair is technically infeasible without a process unit shutdown or if the owner or operator determines that emissions resulting from immediate repair would be greater than the fugitive emissions likely to result from delay of repair. Repair of such equipment shall be completed by the end of the next process unit shutdown; and

d. the owner or operator shall maintain a record of the defect repair in accordance with the requirements specified in LAC 33:V.1713.

M. Closed-vent systems and control devices used to comply with provisions of this Chapter shall be operated at all times when emissions may be vented to them.

N. The owner or operator using a carbon adsorption system to control air pollutant emissions shall document that all carbon that is a hazardous waste and that is removed from the control device is managed in one of the following manners, regardless of the average volatile organic concentration of the carbon:

1. regenerated or reactivated in a thermal treatment unit that meets one of the following:

a. the owner or operator of the unit has been issued a final permit under LAC 33:V.Chapter 5 which implements the requirements of LAC 33:V.Chapter 32;

b. the unit is equipped with and operating air emission controls in accordance with the applicable requirements of Subchapters A and C of this Chapter or of LAC 33:V.Chapter 43; or

c. the unit is equipped with and operating air emission controls in accordance with a national emission standard for hazardous air pollutants under 40 CFR Part 61 or Part 63;

2. incinerated in a hazardous waste incinerator for which the owner or operator either:

a. has been issued a final permit under LAC 33:V.Chapter 5 that implements the requirements of LAC 33:V.Chapter 31; or

b. has designed and operates the incinerator in accordance with the interim status requirements of LAC 33:V.Chapter 43.Subchapter N;

3. burned in a boiler or industrial furnace for which the owner or operator either:

ENVIRONMENTAL QUALITY

a. has been issued a final permit under LAC 33:V.Chapter 5 that implements the requirements of LAC 33:V.Chapter 30; or

b. has designed and operates the boiler or industrial furnace in accordance with the interim status requirements of LAC 33:V.Chapter 30.

O. Any components of a closed-vent system that are designated, as described in LAC 33:V.1713.C.9, as unsafe to monitor are exempt from the requirements of Clause L.1.b.ii of this Section if:

1. the owner or operator of the closed-vent system determines that the components of the closed-vent system are unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with Clause L.1.b.ii of this Section; and

2. the owner or operator of the closed-vent system adheres to a written plan that requires monitoring the closed-vent system components using the procedure specified in Clause L.1.b.ii of this Section as frequently as practicable during safe-to-monitor times.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 20:1000 (September 1994), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1698 (September 1998), LR 25:438 (March 1999), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1895 (September 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:933 (July 2020).

§1711. Test Methods and Procedures

A. Each owner or operator subject to the provisions of this Subchapter shall comply with the test methods and procedures requirements provided in this Section.

B. When a closed-vent system is tested for compliance with no detectable emissions, as required in LAC 33:V.1709.L, the test shall comply with the following requirements.

1. Monitoring shall comply with Reference Method 21 in 40 CFR Part 60, Appendix A, incorporated by reference in LAC 33:III.3003.

2. The detection instrument shall meet the performance criteria of Reference Method 21.

3. The instrument shall be calibrated before use on each day of its use by the procedures specified in Reference Method 21.

4. Calibration gases shall be:

a. zero air (less than 10 ppm of hydrocarbon in air);

b. a mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppm methane or n-hexane.

5. The background level shall be determined as set forth in Reference Method 21.

6. The instrument probe shall be traversed around all potential leak interfaces as close to the interface as possible, as described in Reference Method 21.

7. The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with 500 ppm for determining compliance.

C. Performance tests to determine compliance with LAC 33:V.1707.A and with the total organic compound concentration limit of LAC 33:V.1709.C shall comply with the following.

1. Performance tests to determine total organic compound concentrations and mass flow rates entering and exiting control devices shall be conducted and data reduced in accordance with the following reference methods and calculation procedures:

a. Method 2 in 40 CFR Part 60, Appendix A, incorporated by reference in LAC 33:III.3003, for velocity and volumetric flow rate;

b. Method 18 or Method 25A in 40 CFR Part 60, Appendix A, incorporated by reference in LAC 33:III.3003, for organic content. If Method 25A is used, the organic hazardous air pollutants (HAP) used as the calibration gas must be the single organic HAP representing the largest percent by volume of the emissions. The use of Method 25A is acceptable if the response from the high-level calibration gas is at least 20 times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.

c. Each performance test shall consist of three separate runs; each run shall be conducted for at least one hour under the conditions that exist when the hazardous waste management unit is operating at the highest load or capacity level reasonably expected to occur. For the purpose of determining total organic compound concentrations and mass flow rates, the average of results of all runs shall apply. The average shall be computed on a time-weighted basis.

d. Total organic mass flow rates shall be determined by one of the following equations:

$$E_h = Q_{2sd} \left[\sum_{i=1}^n C_i MW_i \right] [0.0416] [10^{-6}]$$

i. for sources utilizing Method 18:

where:

E_h = total organic mass flow rate, kg/h

Q_{2sd} = volumetric flow rate of gases entering or exiting control device, as determined by Method 2, dscm/h

n = number of organic compounds in the vent gas

C_i = organic concentration in ppm, dry basis, of compound i in the vent gas, as determined by Method 18

MW_i = molecular weight of organic compound i in the vent gas, kg/kg-mol

0.0416 = conversion factor for molar volume, kg-mol/m³
 (@ 293 K and 760 mm Hg)
 10⁻⁶ = conversion from ppm

ii. for sources utilizing Method 25A:

$$E_h = (Q)(C)(MW)(0.0416)(10^{-6})$$

where:

E_h = total organic mass flow rate, kg/h
 Q = volumetric flow rate of gases entering or exiting control device, as determined by Method 2, dscm/h
 C = organic concentration in ppm, dry basis, as determined by Method 25A
 MW = molecular weight of propane, 44
 0.0416 = conversion factor for molar volume, kg-mol/m³
 (@ 293 K and 760 mm Hg)
 10⁻⁶ = conversion from ppm

e. The annual total organic emission rate shall be determined by the following equation.

$$E_A = (E_h)(H)$$

where:

E_A = total organic mass emission rate, kg/y
 E_h = total organic mass flow rate for the process vent, kg/h
 H = total annual hours of operations for the affected unit, h

f. Total organic emissions from all affected process vents at the facility shall be determined by summing the hourly total organic mass emission rates (E_h as determined in LAC 33:V.1711.C.1.d) and by summing the annual total organic mass emission rates (E_A , as determined in LAC 33:V.1711.C.1.e) for all affected process vents at the facility.

2. The owner or operator shall record such process information as may be necessary to determine the conditions of the performance tests. Operations during periods of start-up, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test.

3. The owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

- a. sampling ports adequate for the test methods specified in LAC 33:V.1711.C.1;
- b. safe sampling platform(s);
- c. safe access to sampling platform(s); and
- d. utilities for sampling and testing equipment.

4. For the purpose of making compliance determinations, the time-weighted average of the results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the owner or operator's control, compliance may,

upon the administrative authority's approval, be determined using the average of the results of the two other runs.

D. To show that a process vent associated with a hazardous waste distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation is not subject to the requirements of this Subchapter, the owner or operator must make an initial determination that the time-weighted, annual average total organic concentration of the waste managed by the waste management unit is less than 10 ppmw using one of the following two methods.

1. Direct measurement of the organic concentration of the waste using the following procedures.

a. The owner or operator must take a minimum of four grab samples of waste for each waste stream managed in the affected unit under process conditions expected to cause the maximum waste organic concentration.

b. For waste generated on-site, the grab samples must be collected at a point before the waste is exposed to the atmosphere such as in an enclosed pipe or other closed system that is used to transfer the waste after generation to the first affected distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation. For waste generated off-site, the grab samples must be collected at the inlet to the first waste management unit that receives the waste provided the waste has been transferred to the facility in a closed system such as a tank truck and the waste is not diluted or mixed with other waste.

c. Each sample shall be analyzed, and the total organic concentration of the sample shall be computed using Method 9060A (incorporated by reference in LAC 33:V.110) of *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA Publication SW-846, or each sample shall be analyzed for its individual organic constituents.

d. The arithmetic mean of the results of the analyses of the four samples shall apply for each waste stream managed in the unit in determining the time-weighted, annual average total organic concentration of the waste. The time-weighted average is to be calculated using the annual quantity of each waste stream processed and the mean organic concentration of each waste stream managed in the unit.

2. Using knowledge of the waste to determine that its total organic concentration is less than 10 ppmw. Documentation of the waste determination is required. Examples of documentation that shall be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the waste is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to generate a waste stream having a total organic content less than 10 ppmw, or prior speciation analysis results on the same waste stream where it can also be documented that no process changes have occurred since

that analysis that could affect the waste total organic concentration.

E. The determination that distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations manage hazardous wastes with time-weighted, annual average total organic concentrations less than 10 ppmw shall be made as follows:

1. by the effective date that the facility becomes subject to the provisions of this Subchapter or by the date when the waste is first managed in a waste management unit, whichever is later; and

2. for continuously generated waste, annually; or

3. whenever there is a change in the waste being managed or a change in the process that generates or treats the waste.

F. When an owner or operator and the administrative authority do not agree on whether a distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation manages a hazardous waste with organic concentrations of at least 10 ppmw based on knowledge of the waste, the dispute may be resolved by using direct measurement as specified in Paragraph D.1 of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 20:1000 (September 1994), LR 22:818 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1699 (September 1998), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1012 (June 2008), LR 34:1895 (September 2008).

§1713. Recordkeeping Requirements

A. Compliance

1. Each owner or operator subject to the provisions of this Subchapter shall comply with the recordkeeping requirements of this Section.

2. An owner or operator of more than one hazardous waste management unit subject to the provisions of this Subchapter may comply with the recordkeeping requirements for these hazardous waste management units in one recordkeeping system if the system identifies each record by each hazardous waste management unit.

B. Implementation Schedule and Documentation. Owners and operators must record the following information in the facility operating record:

1. for facilities that comply with the provisions of LAC 33:V.1709.A.2, an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The schedule must also include a rationale of why the installation cannot be completed at an earlier date. The implementation schedule must be in the facility operating record by the effective date

that the facility becomes subject to the provisions of this Subchapter;

2. up-to-date documentation of compliance with the process vent standards in LAC 33:V.1707, including:

a. information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for each affected vent and for the overall facility (i.e., the total emissions for all affected vents at the facility), and the approximate location within the facility of each affected unit (e.g., identify the hazardous waste management units on a facility plot plan);

b. information and data supporting determinations of vent emissions and emission reductions achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, determinations of vent emissions and emission reductions must be made using operating parameter values (i.e., temperatures, flow rates, or vent stream organic compounds and concentrations) that represent the conditions that result in maximum organic emissions, such as when the waste management unit is operating at the highest load or capacity level reasonably expected to occur. If the owner or operator takes any action (e.g., managing a waste of different composition or increasing operating hours of affected waste management units) that would result in an increase in total organic emissions from affected process vents at the facility, then a new determination is required;

3. where an owner or operator chooses to use test data to determine the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan. The test plan must include:

a. a description of how it is determined that the planned test is going to be conducted when the hazardous waste management unit is operating at the highest load or capacity level reasonably expected to occur. This shall include the estimated or design flow rate and organic content of each vent stream and define the acceptable operating ranges of key process and control device parameters during the test program;

b. a detailed engineering description of the closed-vent system and control device including:

i. manufacturer's name and model number of control device;

ii. type of control device;

iii. dimensions of the control device;

iv. capacity; and

v. construction materials;

c. a detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis;

4. documentation of compliance with LAC 33:V.1709 shall include the following information:

a. a list of all information references and sources used in preparing the documentation;

b. records, including the dates, of each compliance test required by LAC 33:V.1709.K;

c. if engineering calculations are used, a design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions," as incorporated by reference at LAC 33:V.110, or other engineering texts acceptable to the administrative authority that present basic control device design information. Documentation provided by the control device manufacturer or vendor that describes the control device design in accordance with LAC 33:V.1713.B.4.c.i-vii may be used to comply with this requirement. The design analysis shall address the vent stream characteristics and control device operation parameters as specified below:

i. for a thermal vapor incinerator, the design analysis shall consider the vent stream composition, constituent concentrations, and flow rate. The design analysis shall also establish the design minimum and average temperature in the combustion zone and the combustion zone residence time;

ii. for a catalytic vapor incinerator, the design analysis shall consider the vent stream composition, constituent concentrations, and flow rate. The design analysis shall also establish the design minimum and average temperatures across the catalyst bed inlet and outlet;

iii. for a boiler or process heater, the design analysis shall consider the vent stream composition, constituent concentrations, and flow rate. The design analysis shall also establish the design minimum and average flame zone temperatures, combustion zone residence time, and description of method and location where the vent stream is introduced into the combustion zone;

iv. for a flare, the design analysis shall consider the vent stream composition, constituent concentrations, and flow rate. The design analysis shall also consider the requirements specified in LAC 33:V.1709.D;

v. for a condenser, the design analysis shall consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis shall also establish the design outlet organic compound concentration level, design average temperature of the condenser exhaust vent stream, and design average temperatures of the coolant fluid at the condenser inlet and outlet;

vi. for a carbon adsorption system such as a fixed-bed absorber that regenerates the carbon bed directly on-site in the control device, the design analysis shall consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis

shall also establish the design exhaust vent stream organic compound concentration level, number and capacity of carbon beds, type and working capacity of activated carbon used for carbon beds, design total steam flow over the period of each complete carbon bed regeneration cycle, duration of the carbon bed steaming and cooling/drying cycles, design carbon bed temperature after regeneration, design carbon bed regeneration time, and design service life of carbon;

vii. for a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly on-site in the control device, the design analysis shall consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis shall also establish the design outlet organic concentration level, capacity of carbon bed, type and working capacity of activated carbon used for the carbon bed, and design carbon replacement interval based on the total carbon working capacity of the control device and source operating schedule;

d. a statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur;

e. a statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of 95 percent or greater unless the total organic concentration limit of LAC 33:V.1707.A is achieved at an efficiency less than 95 weight percent, or the total organic emission limits of LAC 33:V.1707.A for all affected process vents at the facility can be attained by a control device involving vapor recovery at an efficiency less than 95 weight percent. A statement provided by the control device manufacturer or vendor certifying that the control equipment meets the design specifications may be used to comply with this requirement;

f. if performance tests are used to demonstrate compliance, all test results.

C. Design: Documentation, Monitoring, Operating, and Inspection. Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37 shall be recorded and kept up-to-date in the facility operating record. The information shall include:

1. a description and the date of each modification made to the closed-vent system or control device design;

2. identification of operating parameter, description of monitoring device, and diagram of monitoring sensor location or locations used to comply with LAC 33:V.1709.F.1 and 2;

3. monitoring, operating, and inspection information required by LAC 33:V.1709.F-K;

ENVIRONMENTAL QUALITY

4. date, time, and duration of each period that occurs while the control device is operating when any monitored parameter exceeds the value established in the control device design analysis as specified below:

a. for a thermal vapor incinerator designed to operate with a minimum residence time of 0.50 second at a minimum temperature of 760°C, each period when the combustion temperature is below 760°C;

b. for a thermal vapor incinerator designed to operate with an organic emission reduction efficiency of 95 weight percent or greater, each period when the combustion zone temperature is more than 28°C below the design average combustion zone temperature established as a requirement of LAC 33:V.1713.B.4.c.i;

c. for a catalytic vapor incinerator, each period when:

i. temperature of the vent stream at the catalyst bed inlet is more than 28°C below the average temperature of the inlet vent stream established as a requirement of LAC 33:V.1713.B.4.c.ii; or

ii. temperature difference across the catalyst bed is less than 80 percent of the design average temperature difference established as a requirement of LAC 33:V.1713.B.4.c.ii;

d. for a boiler or process heater, each period when:

i. flame zone temperature is more than 28°C below the design average flame zone temperature established as a requirement of LAC 33:V.1713.B.4.c.iii; or

ii. position changes where the vent stream is introduced to the combustion zone from the location established as a requirement of LAC 33:V.1713.B.4.c.iii;

e. for a flare, each period when the pilot flame is not ignited;

f. for a condenser that complies with LAC 33:V.1709.F.2.f.i, each period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the condenser are more than 20 percent greater than the design outlet organic compound concentration level established as a requirement of LAC 33:V.1713.B.4.c.v;

g. for a condenser that complies with LAC 33:V.1709.F.2.f.ii, each period when:

i. temperature of the exhaust vent stream from the condenser is more than 6°C above the design average exhaust vent stream temperature established as a requirement of LAC 33:V.1713.B.4.c.v; or

ii. temperature of the coolant fluid exiting the condenser is more than 6°C above the design average coolant fluid temperature at the condenser outlet established as a requirement of LAC 33:V.1713.B.4.c.v;

h. for a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates the carbon bed directly on-site in the control device and complies with

LAC 33:V.1709.F.2.g.i, each period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the carbon bed are more than 20 percent greater than the design exhaust vent stream organic compound concentration level established as a requirement of LAC 33:V.1713.B.4.c.v;

i. for a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates the carbon bed directly on-site in the control device and complies with LAC 33:V.1709.F.2.g.ii, each period when the vent stream continues to flow through the control device beyond the predetermined carbon bed regeneration time established as a requirement of LAC 33:V.1713.B.4.c.vi;

5. explanation for each period recorded under LAC 33:V.1713.C.4 of the cause for the control device operating parameter exceeding the design value and the measures implemented to correct the control device operation;

6. for a carbon adsorption system operated subject to requirements specified in LAC 33:V.1709.G or H.2, the date when existing carbon in the control device is replaced with fresh carbon;

7. for a carbon adsorption system operated subject to requirements specified in LAC 33:V.1709.H.1, a log that records:

a. date and time when the control device is monitored for carbon breakthrough and the monitoring device reading; and

b. date when existing carbon in the control device is replaced with fresh carbon;

8. date of each control device start-up and shutdown;

9. an owner or operator designating any components of a closed-vent system as unsafe to monitor pursuant to LAC 33:V.1709.O shall record in a log that is kept in the facility operating record, the identification of closed-vent system components that are designated as unsafe to monitor in accordance with the requirements of LAC 33:V.1709.O, an explanation for each closed-vent system component stating why the closed-vent system component is unsafe to monitor, and the plan for monitoring each closed-vent system component;

10. when each leak is detected as specified in LAC 33:V.1709.L, the following information shall be recorded:

a. the instrument identification number, the closed-vent system component identification number, and the operator name, initials, or identification number;

b. the date the leak was detected and the date of first attempt to repair the leak;

c. the date of successful repair of the leak; and

d. maximum instrument reading measured by Method 21 of 40 CFR Part 60, Appendix A after it is successfully repaired or determined to be nonrepairable;

e. “repair delayed” and the reason for the delay if a leak is not repaired within 15 calendar days after discovery of the leak:

i. the owner or operator may develop a written procedure that identifies the conditions that justify a delay of repair. In such cases, reasons for delay of repair may be documented by citing the relevant sections of the written procedure;

ii. if delay of repair was caused by depletion of stocked parts, there must be documentation that the spare parts were sufficiently stocked on-site before depletion and the reason for depletion.

D. Record Retention. Records of the monitoring, operating, and inspection information required by Paragraphs C.3-10 of this Section must be kept on site for three years following the date of each occurrence, measurement, maintenance, corrective action, or record.

E. Alternative Control Devices. For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the administrative authority will specify the appropriate recordkeeping requirements.

F. Log. Up-to-date information and data used to determine whether or not a process vent is subject to the requirements in LAC 33:V.1707 including supporting documentation as required by LAC 33:V.1711.D.2 when application of the knowledge of the nature of the hazardous waste stream or the process by which it was produced is used, shall be recorded in a log that is kept in the facility operating record.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 18:723 (July 1992), LR 20:1000 (September 1994), LR 22:818 (September 1996), amended by the Office Of Waste Services, Hazardous Waste Division, LR 24:1700 (September 1998), LR 25:438 (March 1999), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:933 (July 2020).

§1715. Reporting Requirements

A. A semiannual report shall be submitted by owners and operators subject to the requirements of this Subchapter to the Office of Environmental Services by dates specified by the administrative authority. The report shall include the following information:

1. the Environmental Protection Agency identification number, name, and address of the facility; and
2. for each month during the semiannual reporting period, dates when the control device exceeded or operated outside of the design specifications as defined in LAC 33:V.1713.C.4 and as indicated by the control device monitoring required by LAC 33:V.1709.F and such exceedances were not corrected within 24 hours, or that a flare operated with visible emissions as defined in

LAC 33:V.1709.D and as determined by Method 22 monitoring, the duration and cause of each exceedance or visible emissions, and any corrective measures taken.

B. If, during the semiannual reporting period, the control device does not exceed or operate outside of the design specifications as defined in LAC 33:V.1713.C.4 for more than 24 hours or a flare does not operate with visible emissions as defined in LAC 33:V.1709.D, a report to the administrative authority is not required.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2473 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2456 (October 2005), LR 33:2105 (October 2007).

Subchapter B. Equipment Leaks

§1717. Applicability

A. The regulations in this Subchapter apply to owners and operators of facilities that treat, store, or dispose of hazardous wastes (except as provided in LAC 33:V.1501).

B. Except as provided in LAC 33:V.1743.K, this Subchapter applies to equipment that contains or contacts hazardous wastes with organic concentrations of at least 10 percent by weight that are managed in one of the following:

1. a unit that is subject to the permitting requirements of LAC 33:V.Chapter 3, 5, 7, or 43; or
2. a unit (including a hazardous waste recycling unit) that is not exempt from permitting under the provisions of LAC 33:V.1015 (i.e., a hazardous waste recycling unit that is not a 90-day tank or container) and that is located at a hazardous waste management facility otherwise subject to the permitting requirements of LAC 33:V.Chapter 3, 5, 7, or 43; or
3. a unit that is exempt from permitting under the provisions of LAC 33:V.1015 (i.e., a 90-day tank or container) and is not a recycling unit under the provisions of LAC 33:V.4105.

C. For the owner or operator of a facility subject to the requirements of this Subchapter and who has received a final permit under RCRA Section 3005 and LAC 33:V.Subpart 1 prior to December 6, 1996, the requirements of this Subchapter must be incorporated when the permit is reissued under LAC 33:V.705 or reviewed under LAC 33:V.315. Until such date when the owner or operator receives a final permit incorporating the requirements of this Subchapter, the owner or operator is subject to the requirements of LAC 33:V.Chapter 43.Subchapter Q.

D. Each piece of equipment to which this Subchapter applies shall be marked in such a manner that it can be distinguished readily from other pieces of equipment.

ENVIRONMENTAL QUALITY

E. Equipment that is in vacuum service is excluded from the requirements of LAC 33:V.1719-1735 if it is identified as required in LAC 33:V.1743.G.5.

F. Equipment that contains or contacts hazardous waste with an organic concentration of at least 10 percent by weight for less than 300 hours per calendar year is excluded from the requirements of LAC 33:V.1719-1735 if it is identified, as required in LAC 33:V.1743.

G. Purged coatings and solvents from surface coating operations subject to the national emission standards for hazardous air pollutants (NESHAP) for the surface coating of automobiles and light-duty trucks at LAC 33:III.5122 (40 CFR Part 63, Subpart IIII), are not subject to the requirements of this Subchapter.

[NOTE: The requirements of this Subchapter apply to equipment associated with hazardous waste recycling units previously exempt under LAC 33:V.4105.C. Other exemptions under LAC 33:V.105.D and 1501.C are not affected by these requirements.]

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 20:1000 (September 1994), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1700 (September 1998), LR 25:438 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 27:294 (March 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2540 (October 2005), LR 32:607 (April 2006), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:933 (July 2020).

§1719. Standards: Pumps in Light Liquid Service

A. Monitoring

1. Each pump in light liquid service shall be monitored monthly to detect leaks by the methods specified in LAC 33:V.1741.B, except as provided in Subsections D, E, and F of this Section.

2. Each pump in light liquid service shall be checked by visual inspection each calendar week for indications of liquids dripping from the pump seal.

B. Leak Detection

1. If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

2. If there are indications of liquids dripping from the pump seal, a leak is detected.

C. Repair

1. When a leak is detected, it shall be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in LAC 33:V.1733.

2. A first attempt at repair (e.g., tightening the packing gland) shall be made no later than five calendar days after each leak is detected.

D. Dual Mechanical Seal Exemption. Each pump equipped with a dual mechanical seal system that includes a

barrier fluid system is exempt from the requirements of LAC 33:V.1719.A provided the following requirements are met.

1. Operation and Equipment. Each dual mechanical seal system must be:

a. operated with the barrier fluid at a pressure that is at all times greater than the pump stuffing box pressure; or

b. equipped with a barrier fluid degassing reservoir that is connected by a closed-vent system to a control device that complies with the requirements of LAC 33:V.1735; or

c. equipped with a system that purges the barrier fluid into a hazardous waste stream with no detectable emissions to the atmosphere.

2. Barrier Fluid System. The barrier fluid system must not be a hazardous waste with organic concentrations 10 percent or greater by weight.

3. Barrier Fluid System Sensor. Each barrier fluid system must be equipped with a sensor that will detect failure of the seal system, the barrier fluid system, or both.

4. Pump Inspection. Each pump must be checked by visual inspection, each calendar week, for indications of liquids dripping from the pump seals.

5. Seal System and Sensor Function

a. Each sensor as described in LAC 33:V.1719.D.3 must be checked daily or be equipped with an audible alarm that must be checked monthly to ensure that it is functioning properly.

b. The owner or operator must determine, on the basis of design considerations and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.

6. Leak Detection and Repair

a. If there are indications of liquids dripping from the pump seal or the sensor indicates failure of the seal system, the barrier fluid system, or both on the basis of the criterion determined in LAC 33:V.1719.D.5.b, a leak is detected.

b. When a leak is detected, it shall be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in LAC 33:V.1733.

c. A first attempt at repair (e.g., relapping the seal) shall be made no later than five calendar days after each leak is detected.

E. No Detectable Emission Exemption. Any pump that is designated, as described in LAC 33:V.1743.G.2, for no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, is exempt from the requirements of LAC 33:V.1719.A, C, and D if the pump meets the following requirements.

1. The pump must have no externally actuated shaft penetrating the pump housing.

2. The pump must operate with no detectable emissions as indicated by an instrument reading of less than 500 ppm above background as measured by the methods specified in LAC 33:V.1741.C.

3. The pump must be tested for compliance with LAC 33:V.1719.E.2 initially upon designation, annually, and at other times as requested by the administrative authority.

F. Closed Vent System Exemption. If any pump is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal or seals to a control device that complies with the requirements of LAC 33:V.1735, it is exempt from the requirements of LAC 33:V.1719.A-E.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1721. Standards: Compressors

A. Equipment. Each compressor shall be equipped with a seal system that includes a barrier fluid system and that prevents leakage of total organic emissions to the atmosphere, except as provided in LAC 33:V.1721.H and I.

B. Seal System. Each compressor seal system as required in LAC 33:V.1721.A shall be:

1. operated with the barrier fluid at a pressure that is at all times greater than the compressor stuffing box pressure; or

2. equipped with a barrier fluid system that is connected by a closed-vent system to a control device that complies with the requirements of LAC 33:V.1735; or

3. equipped with a system that purges the barrier fluid into a hazardous waste stream with no detectable emissions to atmosphere.

C. Barrier Fluid System. The barrier fluid must not be a hazardous waste with organic concentrations 10 percent or greater by weight.

D. Barrier Fluid System Sensor. Each barrier fluid system as described in LAC 33:V.1721.A-C shall be equipped with a sensor that will detect failure of the seal system, barrier fluid system, or both.

E. Seal System and Sensor Function

1. Each sensor as required in LAC 33:V.1721.D shall be checked daily or shall be equipped with an audible alarm that must be checked monthly to ensure that it is functioning properly unless the compressor is located within the boundary of an unmanned plant site, in which case the sensor must be checked daily.

2. The owner or operator shall determine, on the basis of design considerations and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.

F. Leak Detection. If the sensor indicates failure of the seal system, the barrier fluid system, or both on the basis of the criterion determined under LAC 33:V.1721.E.2, a leak is detected.

G. Leak Repair

1. When a leak is detected, it shall be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in LAC 33:V.1733.

2. A first attempt at repair (e.g., tightening the packing gland) shall be made no later than five calendar days after each leak is detected.

H. Closed-Vent System Exemption. A compressor is exempt from the requirements of LAC 33:V.1721.A and B if it is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal to a control device that complies with the requirements of LAC 33:V.1735, except as provided in LAC 33:V.1721.I.

I. No Detectable Emission Exemption. Any compressor that is designated, as described in LAC 33:V.1743.G.2, for no detectable emissions as indicated by an instrument reading of less than 500 ppm above background is exempt from the requirements of LAC 33:V.1721.A-H if the compressor:

1. is determined to be operating with no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, as measured by the method specified in LAC 33:V.1741.C; and

2. is tested for compliance with LAC 33:V. 1721.I.1 initially upon designation, annually, and at other times as required by the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1723. Standards: Pressure Relief Devices in Gas/Vapor Service

A. Operation. Except during pressure releases, each pressure relief device in gas/vapor service shall be operated with no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, as measured by the method specified in LAC 33:V.1741.C.

B. Monitoring

1. After each pressure release, the pressure relief device shall be returned to a condition of no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, as soon as practicable, but no later than five calendar days after each pressure release, except as provided in LAC 33:V.1733.

2. No later than five calendar days after the pressure release, the pressure relief device shall be monitored to confirm the condition of no detectable emissions, as indicated by an instrument reading of less than 500 ppm

above background, as measured by the method specified in LAC 33:V.1741.C.

C. Exemption. Any pressure relief device that is equipped with a closed-vent system capable of capturing and transporting leakage from the pressure relief device to a control device as described in LAC 33:V.1735 is exempt from the requirements of LAC 33:V.1723.A and B.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1725. Standards: Sampling Connection Systems

A. Each sampling connection system shall be equipped with a closed purge, closed loop, or closed-vent system. This system shall collect the sample purge for return to the process or for routing to the appropriate treatment system. Gases displaced during filling of the sample container are not required to be collected or captured.

B. Each closed-purge, closed loop, or closed-vent system, as required in Subsection A of this Section, shall meet one of the following requirements:

1. return the purged process fluid directly to the process line;
2. collect and recycle the purged process fluid; or
3. be designed and operated to capture and transport all the purged process fluid to a waste management unit that complies with the applicable requirements of LAC 33:V.1755-1759 or a control device that complies with the requirements of LAC 33:V.1735.

C. In situ sampling systems and sampling systems without purges are exempt from the requirements of Subsections A and B of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1700 (September 1998).

§1727. Standards: Open-Ended Valves or Lines

A. Equipment

1. Each open-ended valve or line shall be equipped with a cap, blind flange, plug, or a second valve.

2. The cap, blind flange, plug, or second valve shall seal the open end at all times except during operations requiring hazardous waste stream flow through the open-ended valve or line.

B. Operation. Each open-ended valve or line equipped with a second valve shall be operated in a manner such that the valve on the hazardous waste stream end is closed before the second valve is closed.

C. Compliance. When a double block and bleed system is being used, the bleed valve or line may remain open during operations that require venting the line between the block valves but shall comply with LAC 33:V.1727.A at all other times.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1729. Standards: Valves in Gas/Vapor Service or in Light Liquid Service

A. Monitoring, General. Each valve in gas/vapor or light liquid service shall be monitored monthly to detect leaks by the methods specified in LAC 33:V.1741.B and shall comply with LAC 33:V.1729.B-E, except as provided in LAC 33:V.1729.F, G, and H, and LAC 33:V.1737 and 1739.

B. Leak Detection. If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

C. Monitoring Intervals

1. Any valve for which a leak is not detected for two successive months may be monitored the first month of every succeeding quarter, beginning with the next quarter, until a leak is detected.

2. If a leak is detected, the valve shall be monitored monthly until a leak is not detected for two successive months.

D. Repair, General

1. When a leak is detected, it shall be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected, except as provided in LAC 33:V.1733.

2. A first attempt at repair shall be made no later than five calendar days after each leak is detected.

E. Repair Methods. First attempts at repair include, but are not limited to, the following best practices where practicable:

1. tightening of bonnet bolts;
2. replacement of bonnet bolts;
3. tightening of packing gland nuts; and
4. injection of lubricant into lubricated packing.

F. No Detectable Emission Exemption. Any valve that is designated, as described in LAC 33:V.1743.G.2, for no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, is exempt from the requirements of LAC 33:V.1729.A if the valve:

1. has no external actuating mechanism in contact with the hazardous waste stream;
2. is operated with emissions less than 500 ppm above background as determined by the method specified in LAC 33:V.1741.C; and

3. is tested for compliance with LAC 33:V.1729.F.2 initially upon designation, annually, and at other times as requested by the administrative authority.

G. **Unsafe-to-Monitor Exemption.** Any valve that is designated, as described in LAC 33:V.1743.H.1, as an unsafe-to-monitor valve is exempt from the requirements of LAC 33:V.1729.A if:

1. the owner or operator of the valve determines that the valve is unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with LAC 33:V.1729.A; and

2. the owner or operator of the valve adheres to a written plan that requires monitoring of the valve as frequently as practicable during safe-to-monitor times.

H. **Difficult-to-Monitor Exemption.** Any valve that is designated, as described in LAC 33:V.1743.H.2, as a difficult-to-monitor valve is exempt from the requirements of LAC 33:V.1729.A if:

1. the owner or operator of the valve determines that the valve cannot be monitored without elevating the monitoring personnel more than two meters above a support surface;

2. the hazardous waste management unit within which the valve is located was in operation before June 21, 1990; and

3. the owner or operator of the valve follows a written plan that requires monitoring of the valve at least once per calendar year.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1731. Standards: Pumps and Valves in Heavy Liquid Service, Pressure Relief Devices in Light Liquid or Heavy Liquid Service, and Flanges and Other Connectors

A. **Monitoring.** Pumps and valves in heavy liquid service, pressure relief devices in light liquid or heavy liquid service, and flanges and other connectors shall be monitored within five days by the method specified in LAC 33:V.1741.B if evidence of a potential leak is found by visual, audible, olfactory, or any other detection method.

B. **Leak Detection.** If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

C. **Repair**

1. When a leak is detected, it shall be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in LAC 33:V.1733.

2. The first attempt at repair shall be made no later than five calendar days after each leak is detected.

D. **Repair Methods.** First attempts at repair include, but are not limited to, the best practices described under LAC 33:V.1729.E.

E. Any connector that is inaccessible or is ceramic or ceramic-lined (e.g., porcelain, glass, or glass-lined) is exempt from the monitoring requirements of Subsection A of this Section and from the recordkeeping requirements of LAC 33:V.1743.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1701 (September 1998).

§1733. Standards: Delay of Repair

A. Delay of repair of equipment for which leaks have been detected will be allowed if the repair is technically infeasible without a hazardous waste management unit shutdown. In such a case, repair of this equipment shall occur before the end of the next hazardous waste management unit shutdown.

B. Delay of repair of equipment for which leaks have been detected will be allowed for equipment that is isolated from the hazardous waste management unit and that does not continue to contain or contact hazardous waste with organic concentrations at least 10 percent by weight.

C. Delay of repair for valves will be allowed if:

1. the owner or operator determines that emissions of purged material resulting from immediate repair are greater than the emissions likely to result from delay of repair;

2. repair procedures are effected, the purged material is collected and destroyed or recovered in a control device complying with LAC 33:V.1735.

D. Delay of repair for pumps will be allowed if:

1. repair requires the use of a dual mechanical seal system that includes a barrier fluid system;

2. repair is completed as soon as practicable, but not later than six months after the leak was detected.

E. Delay of repair beyond a hazardous waste management unit shutdown will be allowed for a valve if valve assembly replacement is necessary during the hazardous waste management unit shutdown, valve assembly supplies have been depleted, and valve assembly supplies had been sufficiently stocked before the supplies were depleted. Delay of repair beyond the next hazardous waste management unit shutdown will not be allowed unless the next hazardous waste management unit shutdown occurs sooner than six months after the first hazardous waste management unit shutdown.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991).

§1735. Standards: Closed-Vent Systems and Control Devices

A. Owners or operators of closed-vent systems and control devices subject to this Subchapter shall comply with the provisions of LAC 33:V.1709.

B.1. The owner or operator of an existing facility who cannot install a closed-vent system and control device to comply with the provisions of this Subchapter on the effective date that the facility becomes subject to the provisions of this Subchapter must prepare an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The controls must be installed as soon as possible, but the implementation schedule may allow up to 30 months after the effective date that the facility becomes subject to this Subchapter for installation and start-up.

2. Any unit that begins operation after December 21, 1990, and is subject to the provisions of this Subchapter when operation begins, must comply with the rules immediately (i.e., must have control devices installed and operating on start-up of the affected unit); the 30-month implementation schedule does not apply.

3. The owner or operator of any facility in existence on the effective date of an EPA regulatory amendment that renders the facility subject to this Subchapter shall comply with all requirements of this Subchapter as soon as practicable, but no later than 30 months after the regulation's effective date. When control equipment required by this Subchapter can not be installed and begin operation by the effective date of the amendment, the facility owner or operator shall prepare an implementation schedule that includes the following information: specific calendar dates for award or contracts or issuance of purchase orders for the control equipment; initiation of on-site installation of the control equipment; completion of the control equipment installation; and performance of any testing to demonstrate that the installed equipment meets the applicable standards of this Subchapter. The owner or operator shall enter the implementation schedule in the operating record or in a permanent, readily available file located at the facility.

4. Owners and operators of facilities and units that become newly subject to the requirements of this Subchapter after December 8, 1997, due to an action other than those described in Paragraph B.3 of this Section must comply with all applicable requirements immediately (i.e., must have control devices installed and operating on the date the facility or unit becomes subject to this Subchapter; the 30-month implementation schedule does not apply).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:439 (March 1999).

§1737. Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Percentage of Valves Allowed to Leak

A. An owner or operator subject to the requirements of LAC 33:V.1729 may elect to have all valves within a hazardous waste management unit comply with an alternative standard that allows no greater than 2 percent of the valves to leak.

B. The following requirements shall be met if an owner or operator decides to comply with the alternative standard of allowing 2 percent of the valves to leak.

1. A performance test as specified in Subsection C of this Section shall be conducted initially upon designation, annually, and at other times requested by the administrative authority.

2. If a valve leak is detected, it shall be repaired in accordance with LAC 33:V.1729.D and E.

C. Performance tests shall be conducted in the following manner.

1. All valves subject to the requirements of LAC 33:V.1729 within the hazardous waste management unit shall be monitored within one week by the methods specified in LAC 33:V.1741.B.

2. If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

3. The leak percentage shall be determined by dividing the number of valves subject to the requirements in LAC 33:V.1729 for which leaks are detected by the total number of valves subject to the requirements in LAC 33:V.1729 within the hazardous waste management unit.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2473 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2456 (October 2005), LR 33:2105 (October 2007), LR 34:994 (June 2008).

§1739. Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Skip Period Leak Detection and Repair

A. **Alternative Work Practices.** An owner or operator subject to the requirements of LAC 33:V.1729 may elect for all valves within a hazardous waste management unit to comply with one of the alternative work practices specified in Paragraphs B.2 and 3 of this Section.

B. Leak Detection Skip Period

1. An owner or operator shall comply with the requirements for valves, as described in LAC 33:V.1729, except as described in LAC 33:V.1739.B.2 and 3.

2. After two consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less

than 2 percent, an owner or operator may begin to skip one of the quarterly leak detection periods (i.e., monitor for leaks once every six months) for the valves subject to the requirements in LAC 33:V.1729.

3. After five consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than 2 percent, an owner or operator may begin to skip three of the quarterly leak detection periods (i.e., monitor for leaks once every year) for the valves subject to the requirements in LAC 33:V.1729.

4. If the percentage of valves leaking is greater than 2 percent, the owner or operator shall monitor monthly in compliance with the requirements in LAC 33:V.1729, but may again elect to use this Section after meeting the requirements of LAC 33:V.1729.C.1.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:439 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2473 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2457 (October 2005), LR 33:2105 (October 2007), LR 34:994 (June 2008).

§1741. Test Methods and Procedures

A. Each owner or operator subject to the provisions of this Subchapter shall comply with the test methods and procedures requirements provided in this Section.

B. Leak detection monitoring, as required in LAC 33:V.1719-1739, shall comply with the following requirements.

1. Monitoring shall comply with Reference Method 21 in 40 CFR Part 60, Appendix A, incorporated by reference in LAC 33:III.3003.

2. The detection instrument shall meet the performance criteria of Reference Method 21.

3. The instrument shall be calibrated before use on each day of its use by the procedures specified in Reference Method 21.

4. Calibration gases shall be:

a. zero air (less than 10 ppm of hydrocarbon in air); and

b. a mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppm methane or n-hexane.

5. The instrument probe shall be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.

C. When equipment is tested for compliance with no detectable emissions, as required in LAC 33:V.1719.E, 1721.I, 1723, and 1729.F, the test shall comply with the following requirements.

1. The requirements of LAC 33:V.1741.B.1-4 shall apply.

2. The background level shall be determined as set forth in Reference Method 21.

3. The instrument probe shall be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.

4. The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with 500 ppm for determining compliance.

D. In accordance with the waste analysis plan required by LAC 33:V.1519.B, an owner or operator of a facility must determine, for each piece of equipment, whether the equipment contains or contacts a hazardous waste with organic concentration that equals or exceeds 10 percent by weight using the following:

1. methods described in ASTM Methods D 2267-88, E 169-87, E 168-88, E 260-85, as incorporated by reference at LAC 33:V.110;

2. Method 9060A (incorporated by reference in LAC 33:V.110) of Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846, for computing total organic concentration of the sample or analyzing for its individual organic constituents; or

3. application of the knowledge of the nature of the hazardous waste stream or the process by which it was produced. A waste determination by knowledge must be documented. Examples of documentation that shall be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the waste is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to have a total organic content less than 10 percent, or prior speciation analysis results on the same waste stream where it can also be documented that no process changes have occurred since that analysis that could affect the waste total organic concentration.

E. If an owner or operator determines that a piece of equipment contains or contacts a hazardous waste with organic concentrations at least 10 percent by weight, the determinations can be revised only after following the procedures in LAC 33:V.1741.D.1 or 2.

F. When an owner or operator and the administrative authority do not agree on whether a piece of equipment contains or contacts a hazardous waste with organic concentrations at least 10 percent by weight, the procedures in LAC 33:V.1741.D.1 or 2 can be used to resolve the dispute.

G. Samples used in determining the percentage organic content shall be representative of the highest total organic content hazardous waste that is expected to be contained in or contact the equipment.

ENVIRONMENTAL QUALITY

H. To determine whether pumps or valves are in light liquid service, the vapor pressures of constituents may be obtained from standard reference texts or may be determined by ASTM D-2879-86, as incorporated by reference at LAC 33:V.110.

I. Performance tests to determine whether a control device achieves 95 weight percent organic emission reduction shall comply with the procedures of LAC 33:V.1711.C.1-4.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 20:1000 (September 1994), LR 22:819 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1701 (September 1998), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1013 (June 2008), LR 34:1896 (September 2008).

§1743. Recordkeeping Requirements

A. Compliance with Recordkeeping

1. Each owner or operator subject to the provisions of this Subchapter shall comply with the recordkeeping requirements of this Section.

2. An owner or operator of more than one hazardous waste management unit subject to the provisions of this Subchapter may comply with the recordkeeping requirements for these hazardous waste management units in one recordkeeping system if the system identifies each record by each hazardous waste management unit.

B. Facility Operating Record. Owners and operators must record the following information in the facility operating record:

1. for each piece of equipment to which LAC 33:V.Chapter 17.Subchapter B, applies:

a. equipment identification number and hazardous waste management unit identification;

b. approximate locations within the facility (e.g., identify the hazardous waste management unit on a facility plot plan);

c. type of equipment (e.g., a pump or pipeline valve);

d. percent-by-weight total organics in the hazardous waste stream at the equipment;

e. hazardous waste state at the equipment (e.g., gas/vapor or liquid); and

f. method of compliance with the standard (i.e., “monthly leak detection and repair” or “equipped with dual mechanical seals”);

2. for facilities that comply with the provisions of LAC 33:V.1709.A.2, an implementation schedule as specified in LAC 33:V.1709.A.2;

3. where an owner or operator chooses to use test data to demonstrate the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan as specified in LAC 33:V.1713.B.3;

4. documentation of compliance with LAC 33:V.1735, including the detailed design documentation or performance test results specified in LAC 33:V.1713.B.4.

C. Leak Detection. When each leak is detected as specified in LAC 33:V.1719, 1721, 1729, and 1731, the following requirements apply.

1. A weatherproof and readily visible identification, marked with the equipment identification number, the date evidence of a potential leak was found in accordance with LAC 33:V.1731.A, and the date the leak was detected, shall be attached to the leaking equipment.

2. The identification on equipment, except on a valve, may be removed after it has been repaired.

3. The identification on a valve may be removed after it has been monitored for two successive months as specified in LAC 33:V.1729.C, and no leak has been detected during those two months.

D. Inspection Log. When each leak is detected as specified in LAC 33:V.1719, 1721, 1729, and 1731, the following information shall be recorded in an inspection log and shall be kept in the facility operating record:

1. the instrument and operator identification numbers and the equipment identification number;

2. the date evidence of a potential leak was found in accordance with LAC 33:V.1731.A;

3. the date the leak was detected and the dates of each attempt to repair the leak;

4. repair methods applied in each attempt to repair the leak;

5. “above 10,000” if the maximum instrument reading measured by the methods specified in LAC 33:V.1741.B after each repair attempt is equal to or greater than 10,000 ppm;

6. “repair delayed” and the reason for the delay if a leak is not repaired within 15 calendar days after discovery of the leak;

7. documentation supporting the delay of repair of a valve in compliance with LAC 33:V.1733.C;

8. the signature of the owner or operator (or the designee authorized by the owner or operator in writing in the operating record) whose decision it was that repair could not be effected without a hazardous waste management unit shutdown;

9. the expected date of successful repair of the leak if a leak is not repaired within 15 calendar days; and

10. the date of successful repair of the leak.

E. Design Documentation and Monitoring, Operating, and Inspection Information. Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of LAC 33:V.1735 shall be recorded and kept up-to-date in the facility operating record as specified in LAC 33:V.1713.C. Design documentation is specified in LAC 33:V.1713.C.1 and 2, and monitoring, operating, and inspection information in LAC 33:V.1713.C.3-8.

F. Control Device Exemptions. For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the administrative authority will specify the appropriate recordkeeping requirements.

G. Equipment Information Log. The following information pertaining to all equipment subject to the requirements in LAC 33:V.1719-1735 shall be recorded in a log that is kept in the facility operating record.

1. Identification Numbers: General. A list of identification numbers for equipment (except welded fittings) subject to the requirements of this Subchapter shall be kept in the log.

2. Identification Numbers: No Detectable Emission Equipment

a. A list of identification numbers for equipment that the owner or operator elects to designate for no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, under the provisions of LAC 33:V.1719.E, 1721.I, and 1729.F, shall be kept in the log.

b. The designation of this equipment as subject to the requirements of LAC 33:V.1719.E, 1721.I, or 1729.F shall be signed by the owner or operator.

3. Identification Numbers: Pressure Relief Devices. A list of equipment identification numbers for pressure relief devices required to comply with LAC 33:V.1723.A shall be kept in the log.

4. Compliance Test. The following compliance test information shall be included:

a. the dates of each compliance test required in LAC 33:V.1719.E, 1721.I, 1723, and 1729.F;

b. the background level measured during each compliance test; and

c. the maximum instrument reading measured at the equipment during each compliance test.

5. Identification Numbers: Equipment in Vacuum Service. A list of identification numbers for equipment in vacuum service shall be kept in the log.

6. Identification. Either by list or location (area or group) of equipment that contains or contacts hazardous waste with an organic concentration of at least 10 percent by weight for less than 300 hours per calendar year.

H. Identification Numbers: Valves. The following information pertaining to all valves subject to the requirements of LAC 33:V.1729.G and H shall be recorded in a log that is kept in the facility operating record:

1. a list of identification numbers for valves that are designated as unsafe to monitor, an explanation for each valve stating why the valve is unsafe to monitor, and the plan for monitoring each valve; and

2. a list of identification numbers for valves that are designated as difficult to monitor, an explanation for each valve stating why the valve is difficult to monitor, and the planned schedule for monitoring each valve.

I. Valve Information Log. The following information shall be recorded in the facility operating record for valves complying with LAC 33:V.1739:

1. a schedule of monitoring; and

2. the percentage of valves found leaking during each monitoring period.

J. Pump Seal System Information Log. The following information shall be recorded in a log that is kept in the facility operating record:

1. criteria required in LAC 33:V.1719.D.5.b and 1721.E.2 and an explanation of the design criteria; and

2. any changes to these criteria and the reasons for the changes.

K. Exemption Log. The following information shall be recorded in a log that is kept in the facility operating record for use in determining exemptions as provided in the applicability Section of this Subchapter and other specific Subchapters.

1. An analysis determining the design capacity of the hazardous waste management unit shall be recorded in the log.

2. A statement listing the hazardous waste influent to and effluent from each hazardous waste management unit subject to the requirements in LAC 33:V.1719-1735 and an analysis determining whether these hazardous wastes are heavy liquids shall be recorded in the log.

3. An up-to-date analysis and the supporting information and data used to determine whether or not equipment is subject to the requirements in LAC 33:V.1719-1735 shall be recorded in the log. The record shall include supporting documentation as required in LAC 33:V.1741.D.3 when application of the knowledge of the nature of the hazardous waste stream or the process by which it was produced is used. If the owner or operator takes any action (e.g., changing the process that produced the waste) that could result in an increase in the total organic content of the waste contained in or contacted by equipment determined not to be subject to the requirements in LAC 33:V.1719-1735, then a new determination is required.

L. Record Retention Period for Equipment Leak Information. Records of the equipment leak information

required by LAC 33:V.1743.D and the operating information required by LAC 33:V.1743.E must be kept for three years.

M. The owner or operator of a facility with equipment that is subject to this Subchapter and to regulations at 40 CFR Part 60, Part 61, or Part 63 may elect to determine compliance with this Subchapter by documentation either in accordance with this Section or by documentation of compliance with the regulations at 40 CFR Part 60, Part 61, or Part 63 in accordance with the relevant provisions of the regulations at 40 CFR Part 60, Part 61, or Part 63. The documentation of compliance under the regulation at 40 CFR Part 60, Part 61, or Part 63 shall be kept with or made readily available with the facility operating record.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended LR 18:723 (July 1992), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1701 (September 1998), LR 25:439 (March 1999).

§1745. Reporting Requirements

A. A semiannual report shall be submitted by owners and operators subject to the requirements of this Subchapter to the Office of Environmental Services by dates specified by the administrative authority. The report shall include the following information.

1. The Environmental Protection Agency identification number, name, and address of the facility shall be included.

2. For each month during the semiannual reporting period, the following shall be included:

a. the equipment identification number of each valve for which a leak was not repaired as required in LAC 33:V.1729.D;

b. the equipment identification number of each pump for which a leak was not repaired as required in LAC 33:V.1719.C and D.6; and

c. the equipment identification number of each compressor for which a leak was not repaired as required in LAC 33:V.1721.G.

3. Dates of hazardous waste management unit shutdowns that occurred within the semiannual reporting period shall be included.

4. For each month during the semiannual reporting period, dates when the control device installed as required by LAC 33:V.1719, 1721, 1723, or 1725 exceeded or operated outside of the design specifications as defined in LAC 33:V.1743.E and as indicated by the control device monitoring required by LAC 33:V.1735 and was not corrected within 24 hours, the duration and cause of each exceedance, and any corrective measures taken shall be included.

B. If, during the semiannual reporting period, leaks from valves, pumps, and compressors are repaired as required in

LAC 33:V.1729.D, LAC 33:V.1719.C and D.6, and LAC 33:V.1721.G, respectively, and the control device does not exceed or operate outside of the design specifications as defined LAC 33:V.1743.E for more than 24 hours, a report to the administrative authority is not required.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 17:658 (July 1991), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2474 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2457 (October 2005), LR 33:2105 (October 2007).

Subchapter C. Air Emission Standards for Tanks, Surface Impoundments, and Containers

§1747. Applicability

A. The requirements of this Subchapter apply to owners and operators of all facilities that treat, store, or dispose of hazardous waste in tanks, surface impoundments, or containers subject to either Chapter 19, 21, or 29, except as LAC 33:V.1501 and Subsection B of this Section provide otherwise.

B. The requirements of this Subchapter do not apply to the following waste management units at the facility:

1. a waste management unit that holds hazardous waste placed in the unit before December 6, 1996, and in which no hazardous waste is added to the unit on or after December 6, 1996;

2. a container that has a design capacity less than or equal to 0.1 m³;

3. a tank in which an owner or operator has stopped adding hazardous waste and the owner or operator has begun implementing or completed closure pursuant to an approved closure plan;

4. a surface impoundment in which an owner or operator has stopped adding hazardous waste (except to implement an approved closure plan) and the owner or operator has begun implementing or completed closure pursuant to an approved closure plan;

5. a waste management unit that is used solely for on-site treatment or storage of hazardous waste that is placed in the unit as a result of implementing remedial activities required under the corrective action authorities of RCRA Sections 3004(u), 3004(v), or 3008(h), CERCLA authorities, or similar state authorities;

6. a waste management unit that is used solely for the management of radioactive mixed waste in accordance with all applicable regulations under the authority of the Atomic Energy Act and the Nuclear Waste Policy Act;

7. a hazardous waste management unit that the owner or operator certifies is equipped with and operating air emission controls in accordance with the requirements of an

applicable Clean Air Act regulation codified under 40 CFR Part 60, Part 61, or Part 63. For the purpose of complying with this Paragraph, a tank for which the air emission control includes an enclosure, as opposed to a cover, must be in compliance with the enclosure and control device requirements of LAC 33:V.1755.I, except as provided in LAC 33:V.1751.C.5; and

8. a tank that has a process vent as defined in LAC 33:V.1703.

C. For the owner and operator of a facility subject to this Chapter and who received a final permit under RCRA Section 3005 and LAC 33:V.Subpart 1 prior to December 6, 1996, the requirements of this Chapter must be incorporated into the permit when the permit is reissued in accordance with the requirements of LAC 33:V.705 or reviewed in accordance with the requirements of LAC 33:V.315. Until such date when the permit is reissued in accordance with the requirements of LAC 33:V.705 or reviewed in accordance with the requirements of LAC 33:V.315, the owner and operator are subject to the requirements of LAC 33:V.Chapter 43.Subchapter V.

D. The requirements of this Subchapter, except for the recordkeeping requirements specified in LAC 33:V.1765.I, are administratively stayed for a tank or a container used for the management of hazardous waste generated by organic peroxide manufacturing and its associated laboratory operations when the owner or operator of the unit meets all of the following conditions:

1. the owner or operator identifies that the tank or container receives hazardous waste generated by an organic peroxide manufacturing process producing more than one functional family of organic peroxides or multiple organic peroxides within one functional family, that one or more of these organic peroxides could potentially undergo self-accelerating thermal decomposition at or below ambient temperatures, and that organic peroxides are the predominant products manufactured by the process. For the purpose of meeting the conditions of this paragraph, organic peroxide means an organic compound that contains the bivalent —O—O— structure and which may be considered to be a structural derivative of hydrogen peroxide where one or both of the hydrogen atoms has been replaced by an organic radical;

2. the owner or operator prepares documentation, in accordance with the requirements of LAC 33:V.1765.I, explaining why an undue safety hazard would be created if air emission controls specified in LAC 33:V.1755-1761 are installed and operated on the tanks and containers used at the facility to manage the hazardous waste generated by the organic peroxide manufacturing process or processes meeting the conditions of Paragraph D.1 of this Section; and

3. the owner or operator notifies the Office of Environmental Services, in writing, that hazardous waste generated by an organic peroxide manufacturing process or processes meeting the conditions of Paragraph D.1 of this Section are managed at the facility in tanks or containers meeting the conditions of Paragraph D.2 of this Section. The

notification shall state the name and address of the facility and be signed and dated by an authorized representative of the facility owner or operator.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1701 (September 1998), LR 25:440 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:279 (February 2000), LR 26:2474 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2457 (October 2005), LR 33:2105 (October 2007) .

§1749. Definitions

A. As used in this Chapter, all terms shall have the meaning given to them in LAC 33:V.1703 and 109.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1702 (September 1998).

§1751. Standards: General

A. This Section applies to the management of hazardous waste in tanks, surface impoundments, and containers subject to this Subchapter.

B. The owner or operator shall control air pollutant emissions from each hazardous waste management unit in accordance with standards specified in LAC 33:V.1755-1761, as applicable to the hazardous waste management unit, except as provided for in Subsection C of this Section.

C. A tank, surface impoundment, or container is exempt from standards specified in LAC 33:V.1755-1761, as applicable, provided that the waste management unit is one of the following:

1. a tank, surface impoundment, or container for which all hazardous waste entering the unit has an average VO concentration at the point of waste origination of less than 500 parts per million by weight (ppmw). The average VO concentration shall be determined using the procedures specified in LAC 33:V.1753.A. The owner or operator shall review and update, as necessary, this determination at least once every 12 months following the date of the initial determination for the hazardous waste streams entering the unit;

2. a tank, surface impoundment, or container for which the organic content of all the hazardous waste entering the waste management unit has been reduced by an organic destruction or removal process that achieves any one of the following conditions:

a. a process that removes or destroys the organics contained in the hazardous waste to a level such that the average VO concentration of the hazardous waste at the point of waste treatment is less than the exit concentration limit (C_e) established for the process. The average VO concentration of the hazardous waste at the point of waste treatment and the exit concentration limit for the process

shall be determined using the procedures specified in LAC 33:V.1753.B;

b. a process that removes or destroys the organics contained in the hazardous waste to a level such that the organic reduction efficiency (R) for the process is equal to or greater than 95 percent, and the average VO concentration of the hazardous waste at the point of waste treatment is less than 100 ppmw. The organic reduction efficiency for the process and the average VO concentration of the hazardous waste at the point of waste treatment shall be determined using the procedures specified in LAC 33:V.1753.B;

c. a process that removes or destroys the organics contained in the hazardous waste to a level such that the actual organic mass removal rate (MR) for the process is equal to or greater than the required organic mass removal rate (RMR) established for the process. The required organic mass removal rate and the actual organic mass removal rate for the process shall be determined using the procedures specified in LAC 33:V.1753.B;

d. a biological process that destroys or degrades the organics contained in the hazardous waste, such that either of the following conditions is met:

i. the organic reduction efficiency (R) for the process is equal to or greater than 95 percent and the organic biodegradation efficiency (R_{bio}) for the process is equal to or greater than 95 percent. The organic reduction efficiency and the organic biodegradation efficiency for the process shall be determined using the procedures specified in LAC 33:V.1753.B; or

ii. the total actual organic mass biodegradation rate (MR_{bio}) for all hazardous waste treated by the process is equal to or greater than the required organic mass removal rate (RMR). The required organic mass removal rate and the actual organic mass biodegradation rate for the process shall be determined using the procedures specified in LAC 33:V.1753.B;

e. a process that removes or destroys the organics contained in the hazardous waste and meets all of the following conditions:

i. from the point of waste origination through the point where the hazardous waste enters the treatment process, the hazardous waste is managed continuously in waste management units that use air emission controls in accordance with the standards specified in LAC 33:V.1755-1761, as applicable to the waste management unit;

ii. from the point of waste origination through the point where the hazardous waste enters the treatment process, any transfer of the hazardous waste is accomplished through continuous hard-piping or other closed system transfer that does not allow exposure of the waste to the atmosphere. The EPA considers a drain system that meets the requirements of 40 CFR Part 63, Subpart RR—National Emission Standards for Individual Drain Systems to be a closed system; and

iii. the average VO concentration of the hazardous waste at the point of waste treatment is less than the lowest average VO concentration at the point of waste origination determined for each of the individual waste streams entering the process or 500 ppmw, whichever value is lower. The average VO concentration of each individual waste stream at the point of waste origination shall be determined using the procedures specified in LAC 33:V.1753.A. The average VO concentration of the hazardous waste at the point of waste treatment shall be determined using the procedures specified in LAC 33:V.1753.B;

f. a process that removes or destroys the organics contained in the hazardous waste to a level such that the organic reduction efficiency (R) for the process is equal to or greater than 95 percent and the owner or operator certifies that the average VO concentration at the point of waste origination for each of the individual waste streams entering the process is less than 10,000 ppmw. The organic reduction efficiency for the process and the average VO concentration of the hazardous waste at the point of waste origination shall be determined using the procedures specified in LAC 33:V.1753.A and B, respectively;

g. a hazardous waste incinerator for which the owner or operator has either:

i. been issued a final permit under LAC 33:V.Chapter 5 that implements the requirements of LAC 33:V.Chapter 31; or

ii. designed and operates the incinerator in accordance with the interim status requirements of LAC 33:V.Chapter 43.Subchapter N;

h. a boiler or industrial furnace for which the owner or operator has either:

i. been issued a final permit under LAC 33:V.Chapter 5 that implements the requirements of LAC 33:V.Chapter 30; or

ii. designed and operates the boiler or industrial furnace in accordance with the interim status requirements of LAC 33:V.Chapter 30;

i. for the purpose of determining the performance of an organic destruction or removal process in accordance with the conditions in each of Subparagraphs C.2.a-f of this Section, the owner or operator shall account for VO concentrations determined to be below the limit of detection of the analytical method by using the following VO concentration:

i. if Method 25D in 40 CFR Part 60, Appendix A is used for the analysis, one-half the blank value determined in the method at Section 4.4 of Method 25D in 40 CFR 60, Appendix A, or a value of 25 ppmw, whichever is less; or

ii. if any other analytical method is used, one-half the limit of detection established for each organic constituent in the waste that has a Henry's law constant value at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) [which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/ m^3] at 25°C;

3. a tank or surface impoundment used for biological treatment of hazardous waste in accordance with the requirements of Subparagraph C.2.d of this Section;

4. a tank, surface impoundment, or container for which all hazardous waste placed in the unit either:

a. meets the numerical concentration limits for organic hazardous constituents applicable to the hazardous waste, as specified in LAC 33:V.2299.Appendix, Table 2, Treatment Standards for Hazardous Waste; or

b. the organic hazardous constituents in the waste have been treated by the treatment technology established by the EPA for the waste in LAC 33:V.2227.A or have been removed or destroyed by an equivalent method of treatment approved by EPA pursuant to 40 CFR 268.42(b);

5. a tank used for bulk feed of hazardous waste to a waste incinerator and all of the following conditions are met:

a. the tank is located inside an enclosure vented to a control device that is designed and operated in accordance with all applicable requirements specified under 40 CFR Part 61, Subpart FF-National Emission Standards for Benzene Waste Operations for a facility at which the total annual benzene quantity from the facility waste is equal to or greater than 10 megagrams per year;

b. the enclosure and control device serving the tank were installed and began operation prior to November 25, 1996; and

c. the enclosure is designed and operated in accordance with the criteria for a permanent total enclosure as specified in *Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure* under 40 CFR 52.741, Appendix B. The enclosure may have permanent or temporary openings to allow worker access; passage of material into or out of the enclosure by conveyor, vehicles, or other mechanical or electrical equipment; or to direct air flow into the enclosure. The owner or operator shall perform the verification procedure for the enclosure as specified in Section 5.0 to *Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure* annually.

D. The administrative authority may at any time perform or request that the owner or operator perform a waste determination for a hazardous waste managed in a tank, surface impoundment, or container exempted from using air emission controls under the provisions of this Section as follows.

1. The waste determination for average VO concentration of a hazardous waste at the point of waste origination shall be performed using direct measurement in accordance with the applicable requirements of LAC 33:V.1753.A. The waste determination for a hazardous waste at the point of waste treatment shall be performed in accordance with the applicable requirements of LAC 33:V.1753.B.

2. In performing a waste determination in accordance with Paragraph D.1 of this Section, the sample preparation and analysis shall be conducted as follows:

a. in accordance with the method used by the owner or operator to perform the waste analysis, except in the case specified in Subparagraph D.2.b of this Section; and

b. if the administrative authority determines that the method used by the owner or operator was not appropriate for the hazardous waste managed in the tank, surface impoundment, or container, then the administrative authority may choose an appropriate method.

3. In a case when the owner or operator is requested to perform the waste determination, the administrative authority may elect to have an authorized representative observe the collection of the hazardous waste samples used for the analysis.

4. In a case when the results of the waste determination performed or requested by the administrative authority do not agree with the results of a waste determination performed by the owner or operator using knowledge of the waste, then the results of the waste determination performed in accordance with the requirements of Paragraph D.1 of this Section shall be used to establish compliance with the requirements of this Subchapter.

5. In a case when the owner or operator has used an averaging period greater than one hour for determining the average VO concentration of a hazardous waste at the point of waste origination, the administrative authority may elect to establish compliance with this Subchapter by performing or requesting that the owner or operator perform a waste determination using direct measurement based on waste samples collected within a one-hour period as follows:

a. the average VO concentration of the hazardous waste at the point of waste origination shall be determined by direct measurement in accordance with the requirements of LAC 33:V.1753.A;

b. results of the waste determination performed or requested by the administrative authority showing that the average VO concentration of the hazardous waste at the point of waste origination is equal to or greater than 500 ppmw shall constitute noncompliance with this Subchapter, except in a case as provided for in Subparagraph D.5.c of this Section; and

c. for the case when the average VO concentration of the hazardous waste at the point of waste origination previously has been determined by the owner or operator using an averaging period greater than one hour to be less than 500 ppmw, but because of normal operating process variations the VO concentration of the hazardous waste determined by direct measurement for any given one-hour period may be equal to or greater than 500 ppmw, information that was used by the owner or operator to determine the average VO concentration of the hazardous waste (e.g., test results, measurements, calculations, and other documentation) and recorded in the facility records in accordance with the requirements of LAC 33:V.1753.A and 1765 shall be considered by the administrative authority together with the results of the waste determination

performed or requested by the administrative authority in establishing compliance with this Subchapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1702 (September 1998), LR 25:440 (March 1999), amended by the Office of the Secretary, Legal Division, LR 43:1141 (June 2017).

§1753. Waste Determination Procedures

A. Waste Determination Procedure to Determine Average Volatile Organic (VO) Concentration of a Hazardous Waste at the Point of Waste Origination

1. An owner or operator shall determine the average VO concentration at the point of waste origination for each hazardous waste placed in a waste management unit exempted under the provisions of LAC 33:V.1751.C.1 from using air emission controls in accordance with standards specified in LAC 33:V.4727, as applicable to the waste management unit.

a. An initial determination of the average VO concentration of the waste stream shall be made before the first time any portion of the material in the hazardous waste stream is placed in a waste management unit exempted under the provisions of LAC 33:V.1751.C.1 from using air emission controls, and thereafter, an initial determination of the average VO concentration of the waste stream shall be made for each averaging period that a hazardous waste is managed in the unit.

b. Perform a new waste determination whenever changes to the source generating the waste stream are reasonably likely to cause the average VO concentration of the hazardous waste to increase to a level that is equal to or greater than the applicable VO concentration limits specified in LAC 33:V.1751.

2. For a waste determination that is required by Paragraph A.1 of this Section, the average VO concentration of a hazardous waste at the point of waste origination shall be determined in accordance with the procedures specified in LAC 33:V.4727.A.2-4.

B. Waste Determination Procedures for Treated Hazardous Waste

1. An owner or operator shall perform the applicable waste determinations for each treated hazardous waste placed in waste management units exempted under the provisions of LAC 33:V.1751.C.2.a-f from using air emission controls in accordance with standards specified in LAC 33:V.1755-1761, as applicable to the waste management unit.

a. An initial determination of the average VO concentration of the waste stream shall be made before the first time any portion of the material in the treated waste stream is placed in the exempt waste management unit, and thereafter, the information used for the waste determination shall be updated at least once every 12 months following the date of the initial waste determination.

b. Perform a new waste determination whenever changes to the process generating or treating the waste stream are reasonably likely to cause the average VO concentration of the hazardous waste to increase to a level such that the applicable treatment conditions specified in LAC 33:V.1751.C.2 are not achieved.

2. The waste determination for a treated hazardous waste shall be performed in accordance with the procedures specified in LAC 33:V.4727, as applicable to the treated hazardous waste.

C. Procedure to Determine the Maximum Organic Vapor Pressure of a Hazardous Waste in a Tank

1. An owner or operator shall determine the maximum organic vapor pressure for each hazardous waste placed in a tank using Tank Level 1 controls in accordance with standards specified in LAC 33:V.1755.C.

2. The maximum organic vapor pressure of the hazardous waste may be determined in accordance with the procedures specified in LAC 33:V.4727.

D. The procedure for determining no detectable organic emissions for the purpose of complying with this Subchapter shall be conducted in accordance with the procedures specified in LAC 33:V.4727.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1704 (September 1998), LR 25:440 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:279 (February 2000).

§1755. Standards: Tanks

A. The provisions of this Section apply to the control of air pollutant emissions from tanks for which LAC 33:V.1751.B references the use of this Section for such air emission control.

B. The owner or operator shall control air pollutant emissions from each tank subject to this Section in accordance with the following requirements, as applicable:

1. for a tank that manages hazardous waste that meets all of the conditions specified in Subparagraphs B.1.a-c of this Section, the owner or operator shall control air pollutant emissions from the tank in accordance with the Tank Level 1 controls specified in Subsection C of this Section or the Tank Level 2 controls specified in Subsection D of this Section:

a. the hazardous waste in the tank has a maximum organic vapor pressure that is less than the maximum organic vapor pressure limit for the tank’s design capacity category as follows:

i. for a tank design capacity equal to or greater than 151 m³, the maximum organic vapor pressure limit for the tank is 5.2 kPa;

ii. for a tank design capacity equal to or greater than 75 m³, but less than 151 m³, the maximum organic vapor pressure limit for the tank is 27.6 kPa;

iii. for a tank design capacity less than 75 m³, the maximum organic vapor pressure limit for the tank is 76.6 kPa;

b. the hazardous waste in the tank is not heated by the owner or operator to a temperature that is greater than the temperature at which the maximum organic vapor pressure of the hazardous waste is determined for the purpose of complying with Subparagraph B.1.a of this Section; and

c. the hazardous waste in the tank is not treated by the owner or operator using a waste stabilization process, as defined in LAC 33:V.4721; and

2. for a tank that manages hazardous waste that does not meet all of the conditions specified in Subparagraphs B.1.a-c of this Section, the owner or operator shall control air pollutant emissions from the tank by using Tank Level 2 controls in accordance with the requirements of Subsection D of this Section. Examples of tanks required to use Tank Level 2 controls include a tank used for a waste stabilization process and a tank for which the hazardous waste in the tank has a maximum organic vapor pressure that is equal to or greater than the maximum organic vapor pressure limit for the tank's design capacity category as specified in Subparagraph B.1.a of this Section.

C. Owners and operators controlling air pollutant emissions from a tank using Tank Level 1 controls shall meet the requirements specified in Paragraphs C.1-4 of this Section.

1. The owner or operator shall determine the maximum organic vapor pressure for a hazardous waste to be managed in the tank using Tank Level 1 controls before the first time the hazardous waste is placed in the tank. The maximum organic vapor pressure shall be determined using the procedures specified in LAC 33:V.1753.C. Thereafter, the owner or operator shall perform a new determination whenever changes to the hazardous waste managed in the tank could potentially cause the maximum organic vapor pressure to increase to a level that is equal to or greater than the maximum organic vapor pressure limit for the tank design capacity category specified in Subparagraph B.1.a of this Section, as applicable to the tank.

2. The tank shall be equipped with a fixed roof designed to meet the following specifications.

a. The fixed roof and its closure devices shall be designed to form a continuous barrier over the entire surface area of the hazardous waste in the tank. The fixed roof may be a separate cover installed on the tank (e.g., a removable cover mounted on an open-top tank) or may be an integral part of the tank structural design (e.g., a horizontal cylindrical tank equipped with a hatch).

b. The fixed roof shall be installed in a manner such that there are no visible cracks, holes, gaps, or other open spaces between roof section joints or between the interface of the roof edge and the tank wall.

c. Each opening in the fixed roof, and any manifold system associated with the fixed roof, shall be either:

i. equipped with a closure device designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the opening and the closure device; or

ii. connected by a closed-vent system that is vented to a control device. The control device shall remove or destroy organics in the vent stream, and shall be operating whenever hazardous waste is managed in the tank, except as follows:

(a). during periods when it is necessary to provide access to the tank for performing the activities of Subclause C.2.c.ii.(b) of this Section, venting of the vapor headspace underneath the fixed roof to the control device is not required, opening of closure devices is allowed, and removal of the fixed roof is allowed. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, and resume operation of the control device; or

(b). during periods of routine inspection, maintenance, or other activities needed for normal operations, and for removal of accumulated sludge or other residues from the bottom of the tank.

d. The fixed roof and its closure devices shall be made of suitable materials that will minimize exposure of the hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices shall include organic vapor permeability; the effects of any contact with the hazardous waste or its vapors managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.

3. Whenever a hazardous waste is in the tank, the fixed roof shall be installed with each closure device secured in the closed position except as follows.

a. Opening of closure devices or removal of the fixed roof is allowed at the following times:

i. to provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample the liquid in the tank or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank;

ii. to remove accumulated sludge or other residues from the bottom of the tank.

ENVIRONMENTAL QUALITY

b. Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device that vents to the atmosphere is allowed during normal operations for the purpose of maintaining the tank internal pressure in accordance with the tank design specifications. The device shall be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens shall be established such that the device remains in the closed position whenever the tank internal pressure is within the internal pressure operating range determined by the owner or operator based on the tank manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the tank internal pressure exceeds the internal pressure operating range for the tank as a result of loading operations or diurnal ambient temperature fluctuations.

c. Opening of a safety device, as defined in LAC 33:V.4721, is allowed at any time conditions require doing so to avoid an unsafe condition.

4. The owner or operator shall inspect the air emission control equipment in accordance with the following requirements:

a. the fixed roof and its closure devices shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices;

b. the owner or operator shall perform an initial inspection of the fixed roof and its closure devices on or before the date that the tank becomes subject to this Section. Thereafter, the owner or operator shall perform the inspections at least once every year, except under the special conditions provided for in Subsection L of this Section;

c. in the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subsection K of this Section; and

d. the owner or operator shall maintain a record of the inspection in accordance with the requirements specified in LAC 33:V.1765.B.

D. Owners and operators controlling air pollutant emissions from a tank using Tank Level 2 controls shall use one of the following tanks:

1. a fixed-roof tank equipped with an internal floating roof in accordance with the requirements specified in Subsection E of this Section;

2. a tank equipped with an external floating roof in accordance with the requirements specified in Subsection F of this Section;

3. a tank vented through a closed-vent system to a control device in accordance with the requirements specified in Subsection G of this Section;

4. a pressure tank designed and operated in accordance with the requirements specified in Subsection H of this Section; or

5. a tank located inside an enclosure that is vented through a closed-vent system to an enclosed combustion control device in accordance with the requirements specified in Subsection I of this Section.

E. The owner or operator who controls air pollutant emissions from a tank using a fixed roof with an internal floating roof shall meet the requirements specified in Paragraphs E.1-3 of this Section.

1. The tank shall be equipped with a fixed roof and an internal floating roof in accordance with the following requirements.

a. The internal floating roof shall be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.

b. The internal floating roof shall be equipped with a continuous seal between the wall of the tank and the floating roof edge that meets either of the following requirements:

i. a single continuous seal that is either a liquid-mounted seal or a metallic shoe seal, as defined in LAC 33:V.4721; or

ii. two continuous seals mounted one above the other. The lower seal may be a vapor-mounted seal.

c. The internal floating roof shall meet the following specifications:

i. each opening in a noncontact internal floating roof, except for automatic bleeder vents (vacuum breaker vents) and the rim space vents, is to provide a projection below the liquid surface;

ii. each opening in the internal floating roof shall be equipped with a gasketed cover or a gasketed lid except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains;

iii. each penetration of the internal floating roof for the purpose of sampling shall have a slit fabric cover that covers at least 90 percent of the opening;

iv. each automatic bleeder vent and rim space vent shall be gasketed;

v. each penetration of the internal floating roof that allows for passage of a ladder shall have a gasketed sliding cover; and

vi. each penetration of the internal floating roof that allows for passage of a column supporting the fixed roof

shall have a flexible fabric sleeve seal or a gasketed sliding cover.

2. The owner or operator shall operate the tank in accordance with the following requirements:

a. when the floating roof is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be completed as soon as practical;

b. automatic bleeder vents are to be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports; and

c. prior to filling the tank, each cover, access hatch, gauge float well, or lid on any opening in the internal floating roof shall be bolted or fastened closed (i.e., no visible gaps). Rim space vents are to be set to open only when the internal floating roof is not floating or when the pressure beneath the rim exceeds the manufacturer's recommended setting.

3. The owner or operator shall inspect the internal floating roof in accordance with the procedures specified as follows:

a. the floating roof and its closure devices shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, the internal floating roof is not floating on the surface of the liquid inside the tank; liquid has accumulated on top of the internal floating roof; any portion of the roof seals have detached from the roof rim; holes, tears, or other openings are visible in the seal fabric; the gaskets no longer close off the hazardous waste surface from the atmosphere; or the slotted membrane has more than 10 percent open area;

b. the owner or operator shall inspect the internal floating roof components as follows, except as provided in Subparagraph E.3.c of this Section:

i. visually inspect the internal floating roof components through openings on the fixed-roof (e.g., manholes and roof hatches) at least once every 12 months after initial fill; and

ii. visually inspect the internal floating roof, primary seal, secondary seal (if one is in service), gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every 10 years;

c. as an alternative to performing the inspections specified in Subparagraph E.3.b of this Section for an internal floating roof equipped with two continuous seals mounted one above the other, the owner or operator may visually inspect the internal floating roof, primary and secondary seals, gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every five years;

d. prior to each inspection required by Subparagraph E.3.b or c of this Section, the owner or operator shall notify the Office of Environmental Services in advance of each inspection to provide the administrative

authority with the opportunity to have an observer present during the inspection. The owner or operator shall notify the administrative authority of the date and location of the inspection as follows:

i. prior to each visual inspection of an internal floating roof in a tank that has been emptied and degassed, written notification shall be prepared and sent by the owner or operator so that it is received by the administrative authority at least 30 calendar days before refilling the tank except when an inspection is not planned as provided for in Clause E.3.d.ii of this Section;

ii. when a visual inspection is not planned and the owner or operator could not have known about the inspection 30 calendar days before refilling the tank, the owner or operator shall notify the Office of Environmental Services as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the administrative authority at least seven calendar days before refilling the tank;

e. in the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subsection K of this Section; and

f. the owner or operator shall maintain a record of the inspection in accordance with the requirements specified in LAC 33:V.1765.B.

4. Safety devices, as defined in LAC 33:V.4721, may be installed and operated as necessary on any tank complying with the requirements of Subsection E of this Section.

F. The owner or operator who controls air pollutant emissions from a tank using an external floating roof shall meet the requirements specified in Paragraphs F.1-3 of this Section.

1. The owner or operator shall design the external floating roof in accordance with the following requirements:

a. the external floating roof shall be designed to float on the liquid surface except when the floating roof must be supported by the leg supports;

b. the floating roof shall be equipped with two continuous seals, one above the other, between the wall of the tank and the roof edge. The lower seal is referred to as the primary seal, and the upper seal is referred to as the secondary seal:

i. the primary seal shall be a liquid-mounted seal or a metallic shoe seal, as defined in LAC 33:V.4721. The total area of the gaps between the tank wall and the primary seal shall not exceed 212 square centimeters (cm²) per meter of tank diameter, and the width of any portion of these gaps shall not exceed 3.8 centimeters (cm). If a metallic shoe seal is used for the primary seal, the metallic shoe seal shall be designed so that one end extends into the liquid in the tank

ENVIRONMENTAL QUALITY

and the other end extends a vertical distance of at least 61 centimeters above the liquid surface; and

ii. the secondary seal shall be mounted above the primary seal and cover the annular space between the floating roof and the wall of the tank. The total area of the gaps between the tank wall and the secondary seal shall not exceed 21.2 square centimeters (cm²) per meter of tank diameter, and the width of any portion of these gaps shall not exceed 1.3 centimeters (cm); and

c. the external floating roof shall meet the following specifications:

i. except for automatic bleeder vents (vacuum breaker vents) and rim space vents, each opening in a noncontact external floating roof shall provide a projection below the liquid surface;

ii. except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof shall be equipped with a gasketed cover, seal, or lid;

iii. each access hatch and each gauge float well shall be equipped with a cover designed to be bolted or fastened when the cover is secured in the closed position;

iv. each automatic bleeder vent and each rim space vent shall be equipped with a gasket;

v. each roof drain that empties into the liquid managed in the tank shall be equipped with a slotted membrane fabric cover that covers at least 90 percent of the area of the opening;

vi. each unslotted and slotted guide pole well shall be equipped with a gasketed sliding cover or a flexible fabric sleeve seal;

vii. each unslotted guide pole shall be equipped with a gasketed cap on the end of the pole;

viii. each slotted guide pole shall be equipped with a gasketed float or other device which closes off the liquid surface from the atmosphere; and

ix. each gauge hatch and each sample well shall be equipped with a gasketed cover.

2. The owner or operator shall operate the tank in accordance with the following requirements:

a. when the floating roof is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be completed as soon as practical;

b. except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof shall be secured and maintained in a closed position at all times except when the closure device must be open for access;

c. covers on each access hatch and each gauge float well shall be bolted or fastened when secured in the closed position;

d. automatic bleeder vents shall be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports;

e. rim space vents shall be set to open only at those times that the roof is being floated off the roof leg supports or when the pressure beneath the rim seal exceeds the manufacturer's recommended setting;

f. the cap on the end of each unslotted guide pole shall be secured in the closed position at all times except when measuring the level or collecting samples of the liquid in the tank;

g. the cover on each gauge hatch or sample well shall be secured in the closed position at all times except when the hatch or well must be opened for access; and

h. both the primary seal and the secondary seal shall completely cover the annular space between the external floating roof and the wall of the tank in a continuous fashion except during inspections.

3. The owner or operator shall inspect the external floating roof in accordance with the procedures specified as follows.

a. The owner or operator shall measure the external floating roof seal gaps in accordance with the following requirements:

i. the owner or operator shall perform measurements of gaps between the tank wall and the primary seal within 60 calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every five years;

ii. the owner or operator shall perform measurements of gaps between the tank wall and the secondary seal within 60 calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every year;

iii. if a tank ceases to hold hazardous waste for a period of one year or more, subsequent introduction of hazardous waste into the tank shall be considered an initial operation for the purposes of Clauses F.3.a.i and ii of this Section;

iv. the owner or operator shall determine the total surface area of gaps in the primary seal and in the secondary seal individually using the following procedure:

(a). the seal gap measurements shall be performed at one or more floating roof levels when the roof is floating off the roof supports;

(b). seal gaps, if any, shall be measured around the entire perimeter of the floating roof in each place where a 0.32-centimeter (cm) diameter uniform probe passes freely (without forcing or binding against the seal) between the seal and the wall of the tank and measure the circumferential distance of each such location;

(c). for a seal gap measured under Paragraph F.3 of this Section, the gap surface area shall be determined by

using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance;

(d). the total gap area shall be calculated by adding the gap surface areas determined for each identified gap location for the primary seal and the secondary seal individually, and then dividing the sum for each seal type by the nominal diameter of the tank. These total gap areas for the primary seal and secondary seal are then compared to the respective standards for the seal type as specified in Subparagraph F.1.b of this Section;

v. in the event that the seal gap measurements do not conform to the specifications in Subparagraph F.1.b of this Section, the owner or operator shall repair the defect in accordance with the requirements of Subsection K of this Section; and

vi. the owner or operator shall maintain a record of the inspection in accordance with the requirements specified in LAC 33:V.1765.B.

b. The owner or operator shall visually inspect the external floating roof in accordance with the following requirements:

i. the floating roof and its closure devices shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, holes, tears, or other openings in the rim seal or seal fabric of the floating roof; a rim seal detached from the floating roof; all or a portion of the floating roof deck being submerged below the surface of the liquid in the tank; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices;

ii. the owner or operator shall perform an initial inspection of the external floating roof and its closure devices on or before the date that the tank becomes subject to this Section. Thereafter, the owner or operator shall perform the inspections at least once every year except for the special conditions provided for in Subsection L of this Section;

iii. in the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subsection K of this Section; and

iv. the owner or operator shall maintain a record of the inspection in accordance with the requirements specified in LAC 33:V.1765.B.

c. Prior to each inspection required by Subparagraph F.3.a or F.3.b of this Section, the owner or operator shall notify the Office of Environmental Services in advance of each inspection to provide the administrative authority with the opportunity to have an observer present during the inspection. The owner or operator shall notify the administrative authority of the date and location of the inspection as follows:

i. prior to each inspection to measure external floating roof seal gaps as required under Subparagraph F.3.a

of this Section, written notification shall be prepared and sent by the owner or operator so that it is received by the administrative authority at least 30 calendar days before the date the measurements are scheduled to be performed;

ii. prior to each visual inspection of an external floating roof in a tank that has been emptied and degassed, written notification shall be prepared and sent by the owner or operator so that it is received by the administrative authority at least 30 calendar days before refilling the tank, except when an inspection is not planned as provided for in Clause F.3.c.iii of this Section; and

iii. when a visual inspection is not planned and the owner or operator could not have known about the inspection 30 calendar days before refilling the tank, the owner or operator shall notify the administrative authority as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation stating why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the administrative authority at least seven calendar days before refilling the tank.

4. Safety devices, as defined in LAC 33:V.4721, may be installed and operated as necessary on any tank complying with the requirements of Subsection F of this Section.

G. The owner or operator who controls air pollutant emissions from a tank by venting the tank to a control device shall meet the requirements specified in Paragraphs G.1-3 of this Section.

1. The tank shall be covered by a fixed roof and vented directly through a closed-vent system to a control device in accordance with the following requirements:

a. the fixed roof and its closure devices shall be designed to form a continuous barrier over the entire surface area of the liquid in the tank;

b. each opening in the fixed roof not vented to the control device shall be equipped with a closure device. If the pressure in the vapor headspace underneath the fixed roof is less than atmospheric pressure when the control device is operating, the closure devices shall be designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device. If the pressure in the vapor headspace underneath the fixed roof is equal to or greater than atmospheric pressure when the control device is operating, the closure device shall be designed to operate with no detectable organic emissions;

c. the fixed roof and its closure devices shall be made of suitable materials that will minimize exposure of the hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and

ENVIRONMENTAL QUALITY

designing the fixed roof and closure devices shall include organic vapor permeability; the effects of any contact with the liquid and its vapor managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed; and

d. the closed-vent system and control device shall be designed and operated in accordance with the requirements of LAC 33:V.1761.

2. Whenever a hazardous waste is in the tank, the fixed roof shall be installed with each closure device secured in the closed position and the vapor headspace underneath the fixed roof vented to the control device except as follows.

a. Venting to the control device is not required, and opening of closure devices or removal of the fixed roof is allowed at the following times:

i. to provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample liquid in the tank or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank; and

ii. to remove accumulated sludge or other residues from the bottom of a tank.

b. Opening of a safety device, as defined in LAC 33:V.4721, is allowed at any time conditions require doing so to avoid an unsafe condition.

3. The owner or operator shall inspect and monitor the air emission control equipment in accordance with the following procedures:

a. the fixed roof and its closure devices shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices;

b. the closed-vent system and control device shall be inspected and monitored by the owner or operator in accordance with the procedures specified in LAC 33:V.1761;

c. the owner or operator shall perform an initial inspection of the air emission control equipment on or before the date that the tank becomes subject to this Section. Thereafter, the owner or operator shall perform the inspections at least once every year, except for the special conditions provided for in Subsection L of this Section;

d. in the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subsection K of this Section; and

e. the owner or operator shall maintain a record of the inspection in accordance with the requirements specified in LAC 33:V.1765.B.

H. The owner or operator who controls air pollutant emissions by using a pressure tank shall meet the following requirements:

1. the tank shall be designed not to vent to the atmosphere as a result of compression of the vapor headspace in the tank during filling of the tank to its design capacity;

2. all tank openings shall be equipped with closure devices designed to operate with no detectable organic emissions as determined using the procedure specified in LAC 33:V.1753.D; and

3. whenever a hazardous waste is in the tank, the tank shall be operated as a closed system that does not vent to the atmosphere except under either of the following conditions as specified in Subparagraphs H.3.a and b of this Section:

a. at those times when opening of a safety device, as defined in LAC 33:V.1703, is required to avoid an unsafe condition; or

b. at those times when purging of inerts from the tank is required and the purge stream is routed to a closed-vent system and control device designed and operated in accordance with the requirements of LAC 33:V.1761.

I. The owner or operator who controls air pollutant emissions by using an enclosure vented through a closed-vent system to an enclosed combustion control device shall meet the requirements specified in Paragraphs I.1-4 of this Section:

1. the tank shall be located inside an enclosure. The enclosure shall be designed and operated in accordance with the criteria for a permanent total enclosure as specified in Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure under 40 CFR 52.741, Appendix B. The enclosure may have permanent or temporary openings to allow worker access; passage of material into or out of the enclosure by conveyor, vehicles, or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The owner or operator shall perform the verification procedure for the enclosure as specified in Section 5.0 to Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure initially when the enclosure is first installed and, thereafter, annually;

2. the enclosure shall be vented through a closed-vent system to an enclosed combustion control device that is designed and operated in accordance with the standards for either a vapor incinerator, boiler, or process heater specified in LAC 33:V.1761;

3. safety devices, as defined in LAC 33:V.4721, may be installed and operated as necessary on any enclosure, closed-vent system, or control device used to comply with the requirements of Paragraphs I.1 and 2 of this Section; and

4. the owner or operator shall inspect and monitor the closed-vent system and control device as specified in LAC 33:V.1761.

J. The owner or operator shall transfer hazardous waste to a tank subject to this Section in accordance with the following requirements:

1. transfer of hazardous waste, except as provided in Paragraph J.2 of this Section, to the tank from another tank subject to this Section or from a surface impoundment subject to LAC 33:V.1757 shall be conducted using continuous hard-piping or another closed system that does not allow exposure of the hazardous waste to the atmosphere. For the purpose of complying with this provision, an individual drain system is considered to be a closed system when it meets the requirements of 40 CFR Part 63, Subpart RR—National Emission Standards for Individual Drain Systems; and

2. the requirements of Paragraph J.1 of this Section do not apply when transferring a hazardous waste to the tank under any of the following conditions:

a. the hazardous waste meets the average VO concentration conditions specified in LAC 33:V.1751.C.1 at the point of waste origination;

b. the hazardous waste has been treated by an organic destruction or removal process to meet the requirements in LAC 33:V.1751.C.2; or

c. the hazardous waste meets the requirements of LAC 33:V.1751.C.4.

K. The owner or operator shall repair each defect detected during an inspection performed in accordance with the requirements of Paragraph C.4, E.3, F.3, or G.3 of this Section as follows:

1. the owner or operator shall make first efforts at repair of the defect no later than five calendar days after detection, and repair shall be completed as soon as possible, but no later than 45 calendar days after detection, except as provided in Paragraph K.2 of this Section; and

2. repair of a defect may be delayed beyond 45 calendar days if the owner or operator determines that repair of the defect requires emptying or temporary removal from service of the tank and no alternative tank capacity is available at the site to accept the hazardous waste normally managed in the tank. In this case, the owner or operator shall repair the defect the next time the process or unit that is generating the hazardous waste managed in the tank stops operation. Repair of the defect shall be completed before the process or unit resumes operation.

L. Following the initial inspection and monitoring of the cover as required by the applicable provisions of this Subchapter, subsequent inspection and monitoring may be performed at intervals longer than one year under the following special conditions:

1. in the case when inspecting or monitoring the cover would expose a worker to dangerous, hazardous, or other

unsafe conditions, then the owner or operator may designate a cover as an “unsafe to inspect and monitor cover” and comply with all of the following requirements:

a. prepare a written explanation for the cover stating the reasons why the cover is unsafe to visually inspect or to monitor, if required; and

b. develop and implement a written plan and schedule to inspect and monitor the cover, using the procedures specified in the applicable Section of this Subchapter, as frequently as practicable during those times when a worker can safely access the cover; and

2. in the case when a tank is buried partially or entirely underground, an owner or operator is required to inspect and monitor, as required by the applicable provisions of this Section, only those portions of the tank cover and those connections to the tank (e.g., fill ports, access hatches, gauge wells, etc.) that are located on or above the ground surface.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1704 (September 1998), amended LR 25:440 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:279 (February 2000), LR 26:2474 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2106 (October 2007).

§1757. Standards: Surface Impoundments

A. The provisions of this Section apply to the control of air pollutant emissions from surface impoundments for which LAC 33:V.1751.B references the use of this Section for such air emission control.

B. The owner or operator shall control air pollutant emissions from the surface impoundment by installing and operating either of the following:

1. a floating membrane cover in accordance with the provisions specified in Subsection C of this Section; or

2. a cover that is vented through a closed-vent system to a control device in accordance with the provisions specified in Subsection D of this Section.

C. The owner or operator who controls air pollutant emissions from a surface impoundment using a floating membrane cover shall meet the requirements specified in Paragraphs C.1-3 of this Section:

1. the surface impoundment shall be equipped with a floating membrane cover designed to meet the following specifications:

a. the floating membrane cover shall be designed to float on the liquid surface during normal operations and form a continuous barrier over the entire surface area of the liquid;

b. the cover shall be fabricated from a synthetic membrane material that is either:

ENVIRONMENTAL QUALITY

i. high density polyethylene (HDPE) with a thickness no less than 2.5 millimeters (mm); or

ii. a material or a composite of different materials determined to have both organic permeability properties that are equivalent to those of the material listed in Clause C.1.b.i of this Section and chemical and physical properties that maintain the material integrity for the intended service life of the material;

c. the cover shall be installed in a manner such that there are no visible cracks, holes, gaps, or other open spaces between cover section seams or between the interface of the cover edge and its foundation mountings;

d. except as provided for in Subparagraph C.1.e of this Section, each opening in the floating membrane cover shall be equipped with a closure device designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device;

e. the floating membrane cover may be equipped with one or more emergency cover drains for removal of stormwater. Each emergency cover drain shall be equipped with a slotted membrane fabric cover that covers at least 90 percent of the area of the opening or a flexible fabric sleeve seal; and

f. the closure devices shall be made of suitable materials that will minimize exposure of the hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the closure devices throughout their intended service life. Factors to be considered when selecting the materials of construction and designing the cover and closure devices shall include: organic vapor permeability; the effects of any contact with the liquid and its vapor managed in the surface impoundment; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the surface impoundment on which the floating membrane cover is installed;

2. whenever a hazardous waste is in the surface impoundment, the floating membrane cover shall float on the liquid and each closure device shall be secured in the closed position except as follows:

a. opening of closure devices or removal of the cover is allowed at the following times:

i. to provide access to the surface impoundment for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample the liquid in the surface impoundment or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the owner or operator shall promptly replace the cover and secure the closure device in the closed position, as applicable; and

ii. to remove accumulated sludge or other residues from the bottom of the surface impoundment; and

b. opening of a safety device, as defined in LAC 33:V.4721, is allowed at any time conditions require doing so to avoid an unsafe condition; and

3. the owner or operator shall inspect the floating membrane cover in accordance with the following procedures:

a. the floating membrane cover and its closure devices shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the cover section seams or between the interface of the cover edge and its foundation mountings; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices; and

b. the owner or operator shall perform an initial inspection of the floating membrane cover and its closure devices on or before the date that the surface impoundment becomes subject to this Section. Thereafter, the owner or operator shall perform the inspections at least once every year, except for the special conditions provided for in Subsection G of this Section;

c. in the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subsection F of this Section; and

d. the owner or operator shall maintain a record of the inspection in accordance with the requirements specified in LAC 33:V.1765.C.

D. The owner or operator who controls air pollutant emissions from a surface impoundment using a cover vented to a control device shall meet the requirements specified in Paragraphs D.1-3 of this Section.

1. The surface impoundment shall be covered by a cover and vented directly through a closed-vent system to a control device in accordance with the following requirements:

a. the cover and its closure devices shall be designed to form a continuous barrier over the entire surface area of the liquid in the surface impoundment;

b. each opening in the cover not vented to the control device shall be equipped with a closure device. If the pressure in the vapor headspace underneath the cover is less than atmospheric pressure when the control device is operating, the closure devices shall be designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device. If the pressure in the vapor headspace underneath the cover is equal to or greater than atmospheric pressure when the control device is operating, the closure device shall be designed to operate with no detectable organic emissions using the procedure specified in LAC 33:V.1753.D;

c. the cover and its closure devices shall be made of suitable materials that will minimize exposure of the

hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the cover and closure devices throughout their intended service life. Factors to be considered when selecting the materials of construction and designing the cover and closure devices shall include: organic vapor permeability; the effects of any contact with the liquid or its vapors managed in the surface impoundment; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the surface impoundment on which the cover is installed; and

d. the closed-vent system and control device shall be designed and operated in accordance with the requirements of LAC 33:V.1761.

2. Whenever a hazardous waste is in the surface impoundment, the cover shall be installed with each closure device secured in the closed position and the vapor headspace underneath the cover vented to the control device except as follows.

a. Venting to the control device is not required, and opening of closure devices or removal of the cover is allowed at the following times:

i. to provide access to the surface impoundment for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample liquid in the surface impoundment or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the surface impoundment; and

ii. to remove accumulated sludge or other residues from the bottom of the surface impoundment.

b. Opening of a safety device, as defined in LAC 33:V.4721, is allowed at any time conditions require doing so to avoid an unsafe condition.

3. The owner or operator shall inspect and monitor the air emission control equipment in accordance with the following procedures:

a. the surface impoundment cover and its closure devices shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the cover section seams or between the interface of the cover edge and its foundation mountings; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices;

b. the closed-vent system and control device shall be inspected and monitored by the owner or operator in accordance with the procedures specified in LAC 33:V.1761;

c. the owner or operator shall perform an initial inspection of the air emission control equipment on or before the date that the surface impoundment becomes subject to

this Section. Thereafter, the owner or operator shall perform the inspections at least once every year, except for the special conditions provided for in Subsection G of this Section;

d. in the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subsection F of this Section; and

e. the owner or operator shall maintain a record of the inspection in accordance with the requirements specified in LAC 33:V.1765.C.

E. The owner or operator shall transfer hazardous waste to a surface impoundment subject to this Section in accordance with the following requirements:

1. transfer of hazardous waste, except as provided in Paragraph E.2 of this Section, to the surface impoundment from another surface impoundment subject to this Section or from a tank subject to LAC 33:V.1755 shall be conducted using continuous hard-piping or another closed system that does not allow exposure of the waste to the atmosphere. For the purpose of complying with this provision, an individual drain system is considered to be a closed system when it meets the requirements of 40 CFR Part 63, Subpart RR—National Emission Standards for Individual Drain Systems; and

2. the requirements of Paragraph E.1 of this Section do not apply when transferring a hazardous waste to the surface impoundment under either of the following conditions:

a. the hazardous waste meets the average VO concentration conditions specified in LAC 33:V.1751.C.1 at the point of waste origination;

b. the hazardous waste has been treated by an organic destruction or removal process to meet the requirements in LAC 33:V.1751.C.2;

c. the hazardous waste meets the requirements of LAC 33:V.1751.C.4.

F. The owner or operator shall repair each defect detected during an inspection performed in accordance with the requirements of Paragraph C.3 or D.3 of this Section.

1. The owner or operator shall make first efforts at repair of the defect no later than five calendar days after detection, and repair shall be completed as soon as possible, but no later than 45 calendar days, after detection except as provided in Paragraph F.2 of this Section.

2. Repair of a defect may be delayed beyond 45 calendar days if the owner or operator determines that repair of the defect requires emptying or temporary removal from service of the surface impoundment and no alternative capacity is available at the site to accept the hazardous waste normally managed in the surface impoundment. In this case, the owner or operator shall repair the defect the next time the process or unit that is generating the hazardous waste managed in the surface impoundment stops operation.

Repair of the defect shall be completed before the process or unit resumes operation.

G. Following the initial inspection and monitoring of the cover as required by the applicable provisions of this Subchapter, subsequent inspection and monitoring may be performed at intervals longer than one year in the case when inspecting or monitoring the cover would expose a worker to dangerous, hazardous, or other unsafe conditions. In this case, the owner or operator may designate the cover as an "unsafe to inspect and monitor cover" and comply with all of the following requirements:

1. prepare a written explanation for the cover stating the reasons why the cover is unsafe to visually inspect or to monitor, if required; and

2. develop and implement a written plan and schedule to inspect and monitor the cover using the procedures specified in the applicable Section of this Subchapter as frequently as practicable during those times when a worker can safely access the cover.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1710 (September 1998), amended LR 25:441 (March 1999).

§1759. Standards: Containers

A. The provisions of this Section apply to the control of air pollutant emissions from containers for which LAC 33:V.1751.B references the use of this Section for such air emission control.

B. General Requirements

1. The owner or operator shall control air pollutant emissions from each container subject to this Section in accordance with the following requirements, as applicable to the container, except when the special provisions for waste stabilization processes specified in Paragraph B.2 of this Section apply to the container:

a. for a container having a design capacity greater than 0.1 m³ and less than or equal to 0.46 m³, the owner or operator shall control air pollutant emissions from the container in accordance with the Container Level 1 standards specified in Subsection C of this Section;

b. for a container having a design capacity greater than 0.46 m³ that is not in light material service, the owner or operator shall control air pollutant emissions from the container in accordance with the Container Level 1 standards specified in Subsection C of this Section; and

c. for a container having a design capacity greater than 0.46 m³ that is in light material service, the owner or operator shall control air pollutant emissions from the container in accordance with the Container Level 2 standards specified in Subsection D of this Section.

2. When a container having a design capacity greater than 0.1 m³ is used for treatment of a hazardous waste by a

waste stabilization process, the owner or operator shall control air pollutant emissions from the container in accordance with the Container Level 3 standards specified in Subsection E of this Section at those times during the waste stabilization process when the hazardous waste in the container is exposed to the atmosphere.

C. Container Level 1 Standards

1. A container using Container Level 1 controls is one of the following:

a. a container that meets the applicable U.S. Department of Transportation (DOT) regulations on packaging hazardous materials for transportation, as specified in Subsection F of this Section;

b. a container equipped with a cover and closure devices that form a continuous barrier over the container openings such that when the cover and closure devices are secured in the closed position there are no visible holes, gaps, or other open spaces into the interior of the container. The cover may be a separate cover installed on the container (e.g., a lid on a drum or a suitably secured tarp on a roll-off box) or may be an integral part of the container structural design (e.g., a "portable tank" or bulk cargo container equipped with a screw-type cap);

c. an open-top container in which an organic-vapor-suppressing barrier is placed on or over the hazardous waste in the container such that no hazardous waste is exposed to the atmosphere. One example of such a barrier is application of a suitable organic-vapor-suppressing foam.

2. A container used to meet the requirements of Subparagraph C.1.b or c of this Section shall be equipped with covers and closure devices, as applicable to the container, that are composed of suitable materials to minimize exposure of the hazardous waste to the atmosphere and to maintain the equipment integrity, for as long as the container is in service. Factors to be considered in selecting the materials of construction and designing the cover and closure devices shall include: organic vapor permeability; the effects of contact with the hazardous waste or its vapor managed in the container; the effects of outdoor exposure of the closure device or cover material to wind, moisture, and sunlight; and the operating practices for which the container is intended to be used.

3. Whenever a hazardous waste is in a container using Container Level 1 controls, the owner or operator shall install all covers and closure devices for the container, as applicable to the container, and secure and maintain each closure device in the closed position except as follows:

a. opening of a closure device or cover is allowed for the purpose of adding hazardous waste or other material to the container as follows:

i. in the case when the container is filled to the intended final level in one continuous operation, the owner or operator shall promptly secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation; and

ii. in the case when discrete quantities or batches of material intermittently are added to the container over a period of time, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level, the completion of a batch loading after which no additional material will be added to the container within 15 minutes, the person performing the loading operation leaving the immediate vicinity of the container, or the shutdown of the process generating the material being added to the container, whichever condition occurs first;

b. opening of a closure device or cover is allowed for the purpose of removing hazardous waste from the container as follows:

i. for the purpose of meeting the requirements of this Section an empty container, as defined in LAC 33:V.109, may be open to the atmosphere at any time (i.e., covers and closure devices are not required to be secured in the closed position on an empty container);

ii. in the case when discrete quantities or batches of material are removed from the container but the container does not meet the conditions to be an empty container, as defined in LAC 33:V.109, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within 15 minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first;

c. opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous waste. Examples of such activities include those times when a worker needs to open a port to measure the depth of or sample the material in the container or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container;

d. opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device that vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device shall be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens shall be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the owner or operator based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for

the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations; and

e. opening of a safety device, as defined in LAC 33:V.4721, is allowed at any time conditions require doing so to avoid an unsafe condition.

4. The owner or operator of containers using Container Level 1 controls shall inspect the containers and their covers and closure devices as follows.

a. In the case when a hazardous waste already is in the container at the time the owner or operator first accepts possession of the container at the facility and the container is not emptied within 24 hours after the container is accepted at the facility (i.e., does not meet the conditions for an empty container as specified in LAC 33:V.109), the owner or operator shall visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection shall be conducted on or before the date that the LAC 33:V.Chapter 17.Subchapter C container is accepted at the facility (i.e., the date the container becomes subject to the container standards of this Section). For purposes of this requirement, the date of acceptance is the date of signature that the facility owner or operator enters on Item 20 of the Uniform Hazardous Waste Manifest (EPA Forms 8700-22 and 8700-22A, DEQ Form HW-3), as required under LAC 33:V.1516.B. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subparagraph C.4.c of this Section.

b. In the case when a container used for managing hazardous waste remains at the facility for a period of one year or more, the owner or operator shall visually inspect the container and its cover and closure devices initially and, thereafter, at least once every 12 months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subparagraph C.4.c of this Section.

c. When a defect is detected for the container, cover, or closure devices, the owner or operator shall make first efforts at repair of the defect no later than 24 hours after detection, and repair shall be completed as soon as possible, but no later than five calendar days, after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous waste shall be removed from the container and the container shall not be used to manage hazardous waste until the defect is repaired.

5. The owner or operator shall maintain at the facility a copy of the procedure used to determine that containers with a capacity of 0.46 m³ or greater, which do not meet

applicable DOT regulations as specified in Subsection F of this Section, are not managing hazardous waste in light material service.

D. Container Level 2 Standards

1. A container using Container Level 2 controls is one of the following:

a. a container that meets the applicable DOT regulations on packaging hazardous materials for transportation, as specified in Subsection F of this Section;

b. a container that operates with no detectable organic emissions as defined in LAC 33:V.4721 and determined in accordance with the procedure specified in Subsection G of this Section;

c. a container that has been demonstrated within the preceding 12 months to be vapor-tight by using 40 CFR Part 60, Appendix A, Method 27 in accordance with the procedure specified in Subsection H of this Section.

2. Transfer of hazardous waste in or out of a container using Container Level 2 controls shall be conducted in such a manner as to minimize exposure of the hazardous waste to the atmosphere, to the extent practical, considering the physical properties of the hazardous waste and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that the EPA considers to meet the requirements of this Paragraph include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container, a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations, or a fitted opening in the top of a container through which the hazardous waste is filled and subsequently purging the transfer line before removing it from the container opening.

3. Whenever a hazardous waste is in a container using Container Level 2 controls, the owner or operator shall install all covers and closure devices for the container and secure and maintain each closure device in the closed position except as follows.

a. Opening of a closure device or cover is allowed for the purpose of adding hazardous waste or other material to the container as follows.

i. In the case when the container is filled to the intended final level in one continuous operation, the owner or operator shall promptly secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.

ii. In the case when discrete quantities or batches of material intermittently are added to the container over a period of time, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level, the completion of a batch loading after which no additional material will be added to the container within 15 minutes, the person

performing the loading operation leaving the immediate vicinity of the container, or the shutdown of the process generating the material being added to the container, whichever condition occurs first.

b. Opening of a closure device or cover is allowed for the purpose of removing hazardous waste from the container as follows.

i. For the purpose of meeting the requirements of this Section an empty container, as defined in LAC 33:V.109, may be open to the atmosphere at any time (i.e., covers and closure devices are not required to be secured in the closed position on an empty container).

ii. In the case when discrete quantities or batches of material are removed from the container but the container does not meet the conditions to be an empty container, as defined in LAC 33:V.109, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within 15 minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.

c. Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous waste. Examples of such activities include those times when a worker needs to open a port to measure the depth of or sample the material in the container or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container.

d. Opening of a spring-loaded, pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device that vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device shall be designed to operate with no detectable organic emission when the device is secured in the closed position. The settings at which the device opens shall be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the owner or operator based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.

e. Opening of a safety device, as defined in LAC 33:V.4721, is allowed at any time conditions require doing so to avoid an unsafe condition.

4. The owner or operator of containers using Container Level 2 controls shall inspect the containers and their covers and closure devices as follows.

a. In the case when a hazardous waste already is in the container at the time the owner or operator first accepts possession of the container at the facility and the container is not emptied within 24 hours after the container is accepted at the facility (i.e., does not meet the conditions for an empty container as specified in LAC 33:V.109), the owner or operator shall visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection shall be conducted on or before the date that the container is accepted at the facility (i.e., the date the container becomes subject to the LAC 33:V.Chapter 17.Subchapter C container standards of this Section). For purposes of this requirement, the date of acceptance is the date of signature that the facility owner or operator enters on Item 20 of the Uniform Hazardous Waste Manifest (EPA Forms 8700-22 and 8700-22A, DEQ Form HW-3), as required under LAC 33:V.1516.B. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subparagraph D.4.c of this Section.

b. In the case when a container used for managing hazardous waste remains at the facility for a period of one year or more, the owner or operator shall visually inspect the container and its cover and closure devices initially and, thereafter, at least once every 12 months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of Subparagraph D.4.c of this Section.

c. When a defect is detected for the container, cover, or closure devices, the owner or operator shall make first efforts at repair of the defect no later than 24 hours after detection, and repair shall be completed as soon as possible, but no later than five calendar days, after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous waste shall be removed from the container and the container shall not be used to manage hazardous waste until the defect is repaired.

E. Container Level 3 Standards

1. A container using Container Level 3 controls is one of the following:

a. a container that is vented directly through a closed-vent system to a control device in accordance with the requirements of Subparagraph E.2.b of this Section;

b. a container that is vented inside an enclosure that is exhausted through a closed-vent system to a control

device in accordance with the requirements of Subparagraphs E.2.a and b of this Section.

2. The owner or operator shall meet the following requirements, as applicable to the type of air emission control equipment selected by the owner or operator:

a. the container enclosure shall be designed and operated in accordance with the criteria for a permanent total enclosure as specified in *Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure* under 40 CFR 52.741, Appendix B. The enclosure may have permanent or temporary openings to allow worker access, passage of containers through the enclosure by conveyor or other mechanical means, entry of permanent mechanical or electrical equipment, or direct airflow into the enclosure. The owner or operator shall perform the verification procedure for the enclosure as specified in Section 5.0 to *Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure* initially when the enclosure is first installed and, thereafter, annually; and

b. the closed-vent system and control device shall be designed and operated in accordance with the requirements of LAC 33:V.1761.

3. Safety devices, as defined in LAC 33:V.4721, may be installed and operated as necessary on any container, enclosure, closed-vent system, or control device used to comply with the requirements of Paragraph E.1 of this Section.

4. Owners and operators using Container Level 3 controls in accordance with the provisions of this Subchapter shall inspect and monitor the closed-vent systems and control devices as specified in LAC 33:V.1761.

5. Owners and operators that use Container Level 3 controls in accordance with the provisions of this Subchapter shall prepare and maintain the records specified in LAC 33:V.1765.D.

6. Transfer of hazardous waste in or out of a container using Container Level 3 controls shall be conducted in such a manner as to minimize exposure of the hazardous waste to the atmosphere, to the extent practical, considering the physical properties of the hazardous waste and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that the department considers to meet the requirements of this Paragraph include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous waste is filled and subsequently purging the transfer line before removing it from the container opening.

F. For the purpose of compliance with Subparagraph C.1.a or D.1.a of this Section, containers shall be used that meet the applicable DOT regulations on packaging hazardous materials for transportation as follows:

ENVIRONMENTAL QUALITY

1. the container meets the applicable requirements specified in 49 CFR Part 178—Specifications for Packaging or 49 CFR Part 179—Specifications for Tank Cars;

2. hazardous waste is managed in the container in accordance with the applicable requirements specified in 49 CFR Part 107, Subpart B—Exemptions; 49 CFR Part 172—Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements; 49 CFR Part 173—Shippers—General Requirements for Shipments and Packages; and 49 CFR Part 180—Continuing Qualification and Maintenance of Packagings;

3. for the purpose of complying with this Subchapter, no exceptions to the 49 CFR Part 178 or Part 179 regulations are allowed except as provided for in Paragraph F.4 of this Section; and

4. for a lab pack that is managed in accordance with the requirements of 49 CFR Part 178 for the purpose of complying with this Subchapter, an owner or operator may comply with the exceptions for combination packagings specified in 49 CFR 173.12(b).

G. To determine compliance with the detectable organic emissions requirement of Subparagraph D.1.b of this Section, the procedure specified in LAC 33:V.1753.D shall be used.

1. Each potential leak interface (i.e., a location where organic vapor leakage could occur) on the container, its cover, and associated closure devices, as applicable to the container, shall be checked. Potential leak interfaces that are associated with containers include, but are not limited to, the interface of the cover rim and the container wall, the periphery of any opening on the container or container cover and its associated closure device, and the sealing seat interface on a spring-loaded pressure-relief valve.

2. The test shall be performed when the container is filled with a material having a volatile organic concentration representative of the range of volatile organic concentrations for the hazardous wastes expected to be managed in this type of container. During the test, the container cover and closure devices shall be secured in the closed position.

H. The owner or operator shall use the procedure for determining a container to be vapor-tight using Method 27 of 40 CFR Part 60, Appendix A for the purpose of complying with Subparagraph D.1.c of this Section.

1. The test shall be performed in accordance with Method 27 of 40 CFR Part 60, Appendix A.

2. A pressure measurement device shall be used that has a precision of +2.5 mm water and that is capable of measuring above the pressure at which the container is to be tested for vapor tightness.

3. If the test results determined by Method 27 indicate that the container sustains a pressure change less than or equal to 750 Pascals within five minutes after it is pressurized to a minimum of 4,500 Pascals, then the container is determined to be vapor-tight.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1712 (September 1998), amended LR 25:441 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:279 (February 2000).

§1761. Standards: Closed-Vent Systems and Control Devices

A. This Section applies to each closed-vent system and control device installed and operated by the owner or operator to control air emissions in accordance with standards of this Subchapter.

B. The closed-vent system shall meet the following requirements:

1. shall route the gases, vapors, and fumes emitted from the hazardous waste in the waste management unit to a control device that meets the requirements specified in Subsection C of this Section;

2. shall be designed and operated in accordance with the requirements specified in LAC 33:V.1709.K;

3. in the case when the closed-vent system includes bypass devices that could be used to divert the gas or vapor stream to the atmosphere before entering the control device, each bypass device shall be equipped with either a flow indicator as specified in Subparagraph B.3.a of this Section or a seal or locking device as specified in Subparagraph B.3.b of this Section. For the purpose of complying with this Paragraph, low leg drains, high point bleeds, analyzer vents, open-ended valves or lines, spring-loaded pressure-relief valves, and other fittings used for safety purposes are not considered to be bypass devices:

a. if a flow indicator is used to comply with this Subsection, the indicator shall be installed at the inlet to the bypass line used to divert gases and vapors from the closed-vent system to the atmosphere at a point upstream of the control device inlet. For this paragraph, a flow indicator means a device that indicates the presence of either gas or vapor flow in the bypass line;

b. if a seal or locking device is used to comply with this Subsection, the device shall be placed on the mechanism by which the bypass device position is controlled (e.g., valve handle, damper lever) when the bypass device is in the closed position such that the bypass device cannot be opened without breaking the seal or removing the lock. Examples of such devices include, but are not limited to, a car-seal or a lock-and-key configuration valve. The owner or operator shall visually inspect the seal or closure mechanism at least once every month to verify that the bypass mechanism is maintained in the closed position;

4. shall be inspected and monitored by the owner or operator in accordance with the procedure specified in LAC 33:V.1709.L.

C. The control device shall meet the following requirements:

1. shall be one of the following devices:
 - a. a control device designed and operated to reduce the total organic content of the inlet vapor stream vented to the control device by at least 95 percent by weight;
 - b. an enclosed combustion device designed and operated in accordance with the requirements of LAC 33:V.1709.C; or
 - c. a flare designed and operated in accordance with the requirements of LAC 33:V.1709.D;
2. the owner or operator who elects to use a closed-vent system and control device to comply with the requirements of this Section shall comply with the requirements specified in Subparagraphs C.2.a-f of this Section:
 - a. periods of planned routine maintenance of the control device, during which the control device does not meet the specifications of Subparagraph C.1.a, b, or c of this Section, as applicable, shall not exceed 240 hours per year;
 - b. the specifications and requirements in Subparagraph C.1.a, b, or c of this Section for control devices do not apply during periods of planned routine maintenance;
 - c. the specifications and requirements in Subparagraph C.1.a, b, or c of this Section for control devices do not apply during a control device system malfunction;
 - d. the owner or operator shall demonstrate compliance with the requirements of Subparagraph C.2.a of this Section (i.e., planned routine maintenance of a control device, during which the control device does not meet the specifications of Subparagraph C.1.a, b, or c of this Section, as applicable, shall not exceed 240 hours per year) by recording the information specified in LAC 33:V.1765.E.1.e;
 - e. the owner or operator shall correct control device system malfunctions as soon as practicable after their occurrence in order to minimize excess emissions of air pollutants; and
 - f. the owner or operator shall operate the closed-vent system such that gases, vapors, or fumes are not actively vented to the control device during periods of planned maintenance or control device system malfunction (i.e., periods when the control device is not operating or not operating normally) except in cases when it is necessary to vent the gases, vapors, and/or fumes to avoid an unsafe condition or to implement malfunction corrective actions or planned maintenance actions;
3. the owner or operator using a carbon adsorption system to comply with Paragraph C.1 of this Section shall operate and maintain the control device in accordance with the following requirements:
 - a. following the initial startup of the control device, all activated carbon in the control device shall be replaced with fresh carbon on a regular basis in accordance with the requirements of LAC 33:V.1709.G or H; and

- b. all carbon that is a hazardous waste and that is removed from the control device shall be managed in accordance with the requirements of LAC 33:V.1709.N, regardless of the average volatile organic concentration of the carbon;
4. an owner or operator using a control device other than a thermal vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with Paragraph C.1 of this Section shall operate and maintain the control device in accordance with the requirements of LAC 33:V.1709.J;
5. the owner or operator shall demonstrate that a control device achieves the performance requirements of Paragraph C.1 of this Section as follows:
 - a. an owner or operator shall demonstrate, using either a performance test as specified in Subparagraph C.5.c of this Section or a design analysis as specified in Subparagraph C.5.d of this Section, the performance of each control device except for the following:
 - i. a flare;
 - ii. a boiler or process heater with a design heat input capacity of 44 megawatts or greater;
 - iii. a boiler or process heater into which the vent stream is introduced with the primary fuel;
 - iv. a boiler or industrial furnace burning hazardous waste for which the owner or operator has been issued a final permit under LAC 33:V.Chapter 5 and has designed and operates the unit in accordance with the requirements of LAC 33:V.Chapter 30; or
 - v. a boiler or industrial furnace burning hazardous waste for which the owner or operator has designed and operates in accordance with the interim status requirements of LAC 33:V.Chapter 30;
 - b. an owner or operator shall demonstrate the performance of each flare in accordance with the requirements specified in LAC 33:V.1709.E;
 - c. for a performance test conducted to meet the requirements of Subparagraph C.5.a of this Section, the owner or operator shall use the test methods and procedures specified in LAC 33:V.1711.C.1-4;
 - d. for a design analysis conducted to meet the requirements of Subparagraph C.5.a of this Section, the design analysis shall meet the requirements specified in LAC 33:V.1713.B.4.c; and
 - e. the owner or operator shall demonstrate that a carbon adsorption system achieves the performance requirements of Paragraph C.1 of this Section based on the total quantity of organics vented to the atmosphere from all carbon adsorption system equipment that is used for organic adsorption, organic desorption or carbon regeneration, organic recovery, and carbon disposal;
6. if the owner or operator and the administrative authority do not agree on a demonstration of control device

performance using a design analysis, then the disagreement shall be resolved using the results of a performance test performed by the owner or operator in accordance with the requirements of Subparagraph C.5.c of this Section. The administrative authority may choose to have an authorized representative observe the performance test; and

7. the closed-vent system and control device shall be inspected and monitored by the owner or operator in accordance with the procedures specified in LAC 33:V.1709.F.2 and L. The readings from each monitoring device required by LAC 33:V.1709.F.2 shall be inspected at least once each operating day to check control device operation. Any necessary corrective measures shall be immediately implemented to ensure the control device is operated in compliance with the requirements of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1716 (September 1998), amended LR 25:442 (March 1999).

§1763. Inspection and Monitoring Requirements

A. The owner or operator shall inspect and monitor air emission control equipment used to comply with this Chapter in accordance with the applicable requirements specified in LAC 33:V.1755-1761.

B. The owner or operator shall develop and implement a written plan and schedule to perform the inspections and monitoring required by Subsection A of this Section. The owner or operator shall incorporate this plan and schedule into the facility inspection plan required under LAC 33:V.1509.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1718 (September 1998).

§1765. Recordkeeping Requirements

A. Each owner or operator of a facility subject to requirements in this Subchapter shall record and maintain the information specified in Subsections B-J of this Section, as applicable to the facility. Except for air emission control equipment design documentation and information required by Subsections I and J of this Section, records required by this Section shall be maintained in the operating record for a minimum of three years. Air emission control equipment design documentation shall be maintained in the operating record until the air emission control equipment is replaced or otherwise no longer in service. Information required by Subsections I and J of this Section shall be maintained in the operating record for as long as the waste management unit is not using air emission controls specified in LAC 33:V.1755-1761 in accordance with the conditions specified in LAC 33:V.1747.B.7 or D, respectively.

B. The owner or operator of a tank using air emission controls in accordance with the requirements of

LAC 33:V.1755 shall prepare and maintain records for the tank that include the following information:

1. for each tank using air emission controls in accordance with the requirements of LAC 33:V.1755, the owner or operator shall record:

a. a tank identification number (or other unique identification description as selected by the owner or operator); and

b. a record for each inspection required by LAC 33:V.1755 that includes the following information:

i. date inspection was conducted; and

ii. for each defect detected during the inspection the location of the defect, a description of the defect, the date of detection, and corrective action taken to repair the defect. In the event that repair of the defect is delayed in accordance with the requirements of LAC 33:V.1755, the owner or operator shall also record the reason for the delay and the date that completion of repair of the defect is expected; and

2. in addition to the information required by Paragraph B.1 of this Section, the owner or operator shall record the following information, as applicable to the tank:

a. the owner or operator using a fixed roof to comply with the Tank Level 1 control requirements specified in LAC 33:V.1755.C shall prepare and maintain records for each determination for the maximum organic vapor pressure of the hazardous waste in the tank performed in accordance with the requirements of LAC 33:V.1755.C. The records shall include the date and time the samples were collected, the analysis method used, and the analysis results;

b. the owner or operator using an internal floating roof to comply with the Tank Level 2 control requirements specified in LAC 33:V.1755.E shall prepare and maintain documentation describing the floating roof design;

c. owners and operators using an external floating roof to comply with the Tank Level 2 control requirements specified in LAC 33:V.1755.F shall prepare and maintain the following records:

i. documentation describing the floating roof design and the dimensions of the tank; and

ii. records for each seal gap inspection required by LAC 33:V.1755.F.3 describing the results of the seal gap measurements. The records shall include the date that the measurements were performed, the raw data obtained for the measurements, and the calculations of the total gap surface area. In the event that the seal gap measurements do not conform to the specifications in LAC 33:V.1755.F.1, the records shall include a description of the repairs that were made, the date the repairs were made, and the date the tank was emptied, if necessary; and

d. each owner or operator using an enclosure to comply with the Tank Level 2 control requirements specified in LAC 33:V.1755.I shall prepare and maintain the following records:

i. records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in *Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure* under 40 CFR 52.741, Appendix B; and

ii. records required for the closed-vent system and control device in accordance with the requirements of Subsection E of this Section.

C. The owner or operator of a surface impoundment using air emission controls in accordance with the requirements of LAC 33:V.1757 shall prepare and maintain records for the surface impoundment that include the following information:

1. a surface impoundment identification number (or other unique identification description as selected by the owner or operator);

2. documentation describing the floating membrane cover or cover design, as applicable to the surface impoundment, that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design and certification by the owner or operator that the cover meets the specifications listed in LAC 33:V.1757.C;

3. a record for each inspection required by LAC 33:V.1757 that includes the following information:

a. date inspection was conducted; and

b. for each defect detected during the inspection, include the following, the location of the defect, a description of the defect, the date of detection, and corrective action taken to repair the defect. In the event that repair of the defect is delayed in accordance with the provisions of LAC 33:V.1757.F, the owner or operator shall also record the reason for the delay and the date that completion of repair of the defect is expected; and

4. for a surface impoundment equipped with a cover and vented through a closed-vent system to a control device, the owner or operator shall prepare and maintain the records specified in Subsection E of this Section.

D. The owner or operator of containers using Container Level 3 air emission controls in accordance with the requirements of LAC 33:V.1759 shall prepare and maintain records that include the following information:

1. records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in *Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure* under 40 CFR 52.741, Appendix B; and

2. records required for the closed-vent system and control device in accordance with the requirements of Subsection E of this Section.

E. The owner or operator using a closed-vent system and control device in accordance with the requirements of

LAC 33:V.1761 shall prepare and maintain records that include documentation for the closed-vent system and control device that includes:

1. certification that is signed and dated by the owner or operator stating that the control device is designed to operate at the performance level documented by a design analysis as specified in Paragraph E.2 of this Section or by performance tests as specified in Paragraph E.3 of this Section when the tank, surface impoundment, or container is or would be operating at capacity or the highest level reasonably expected to occur;

2. if a design analysis is used, then design documentation as specified in LAC 33:V.1713.B.4. The documentation shall include information prepared by the owner or operator or provided by the control device manufacturer or vendor that describes the control device design in accordance with LAC 33:V.1713.B.4.c and certification by the owner or operator that the control equipment meets the applicable specifications;

3. if performance tests are used, then a performance test plan as specified in LAC 33:V.1713.B.3 and all test results;

4. information as required by LAC 33:V.1713.C.1 and 2, as applicable;

5. an owner or operator shall record, on a semiannual basis, the information specified in Subparagraphs E.5.a and b of this Section for those planned routine maintenance operations that would require the control device not to meet the requirements of LAC 33:V.1761.C.1.a, b, or c, as applicable:

a. a description of the planned routine maintenance that is anticipated to be performed for the control device during the next six-month period. This description shall include the type of maintenance necessary, planned frequency of maintenance, and lengths of maintenance periods; and

b. a description of the planned routine maintenance that was performed for the control device during the previous six-month period. This description shall include the type of maintenance performed and the total number of hours during those six months that the control device did not meet the requirements of LAC 33:V.1761.C.1.a, b, or c, as applicable, due to planned routine maintenance;

6. an owner or operator shall record the information specified in Subparagraphs E.6.a-c of this Section for those unexpected control device system malfunctions that would require the control device not to meet the requirements of LAC 33:V.1761.C.1.a, b, or c, as applicable:

a. the occurrence and duration of each malfunction of the control device system;

b. the duration of each period during a malfunction when gases, vapors, or fumes are vented from the waste management unit through the closed-vent system to the control device while the control device is not properly functioning; and

ENVIRONMENTAL QUALITY

c. actions taken during periods of malfunction to restore a malfunctioning control device to its normal or usual manner of operation; and

7. records of the management of carbon removed from a carbon adsorption system conducted in accordance with LAC 33:V.1761.C.3.b.

F. The owner or operator of a tank, surface impoundment, or container exempted from standards in accordance with the provisions of LAC 33:V.1751.C shall prepare and maintain the following records, as applicable.

1. For tanks, surface impoundments, and containers exempted under the hazardous waste organic concentration conditions specified in LAC 33:V.1751.C.1 or 2.a-f, the owner or operator shall record the information used for each waste determination (e.g., test results, measurements, calculations, and other documentation) in the facility operating log. If analysis results for waste samples are used for the waste determination, then the owner or operator shall record the date, time, and location that each waste sample is collected in accordance with applicable requirements of LAC 33:V.1753.

2. For tanks, surface impoundments, or containers exempted under the provisions of LAC 33:V.1751.C.2.g or h, the owner or operator shall record the identification number for the incinerator, boiler, or industrial furnace in which the hazardous waste is treated.

G. An owner or operator designating a cover as "unsafe to inspect and monitor" in accordance with LAC 33:V.1755.L or 1757.G shall record in a log that is kept in the facility operating record the following information: the identification numbers for waste management units with covers that are designated as "unsafe to inspect and monitor"; the explanation for each cover stating why the cover is unsafe to inspect and monitor; and the plan and schedule for inspecting and monitoring each cover.

H. The owner or operator of a facility that is subject to this Subchapter and to the control device standards in 40 CFR Part 60, Subpart VV or 40 CFR Part 61, Subpart V may elect to demonstrate compliance with the applicable Sections of this Subchapter by documentation either in accordance with this Subchapter or the provisions of 40 CFR Part 60, Subpart VV or 40 CFR Part 61, Subpart V, to the extent that the documentation required by 40 CFR Part 60 or 61 duplicates the documentation required by this Section.

I. For each tank or container not using air emission controls specified in LAC 33:V.1755-1761 in accordance with the conditions specified in LAC 33:V.1747.D, the owner or operator shall record and maintain the following information:

1. a list of the individual organic peroxide compounds manufactured at the facility that meet the conditions specified in LAC 33:V.1747.D.1;

2. a description of how the hazardous waste containing the organic peroxide compounds identified in

Paragraph I.1 of this Section are managed at the facility in tanks and containers. This description shall include:

a. for the tanks used at the facility to manage this hazardous waste, sufficient information shall be provided to describe, for each tank, a facility identification number for the tank; the purpose and placement of this tank in the management train of this hazardous waste, and the procedures used to ultimately dispose of the hazardous waste managed in the tanks; and

b. for containers used at the facility to manage these hazardous wastes, sufficient information shall be provided to describe a facility identification number for the container or group of containers, the purpose and placement of this container or group of containers in the management train of this hazardous waste, and the procedures used to ultimately dispose of the hazardous waste handled in the containers;

3. an explanation of why managing the hazardous waste containing the organic peroxide compounds identified in Paragraph I.1 of this Section in the tanks and containers as described in Paragraph I.2 of this Section would create an undue safety hazard if the air emission controls, as required under LAC 33:V.1755-1761, are installed and operated on these waste management units. This explanation shall include the following information:

a. for tanks used at the facility to manage these hazardous wastes, sufficient information shall be provided to explain how use of the required air emission controls on the tanks would affect the tank design features and facility operating procedures currently used to prevent an undue safety hazard during the management of this hazardous waste in the tanks, and why installation of safety devices on the required air emission controls, as allowed under this Subchapter, will not address those situations in which evacuation of tanks equipped with these air emission controls is necessary and consistent with good engineering and safety practices for handling organic peroxides; and

b. for containers used at the facility to manage these hazardous wastes, sufficient information shall be provided to explain how use of the required air emission controls on the containers would affect the container design features and handling procedures currently used to prevent an undue safety hazard during the management of this hazardous waste in the containers, and why installation of safety devices on the required air emission controls, as allowed under this Subchapter, will not address those situations in which evacuation of containers equipped with these air emission controls is necessary and consistent with good engineering and safety practices for handling organic peroxides.

J. For each hazardous waste management unit not using air emission controls specified in LAC 33:V.1755-1761 in accordance with the requirements of LAC 33:V.1747.B.7, the owner and operator shall record and maintain the following information:

1. certification that the waste management unit is equipped with and operating air emission controls in

accordance with the requirements of an applicable Clean Air Act regulation codified under 40 CFR Part 60, Part 61, or Part 63; and

2. identification of the specific requirements codified under 40 CFR Part 60, Part 61, or Part 63 with which the waste management unit is in compliance.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1718 (September 1998), amended LR 25:442 (March 1999).

§1767. Reporting Requirements

A. Each owner or operator managing hazardous waste in a tank, surface impoundment, or container exempted from using air emission controls under the provisions of LAC 33:V.1751.C shall report to the Office of Environmental Compliance each occurrence when hazardous waste is placed in the waste management unit in noncompliance with the conditions specified in LAC 33:V.1751.C.1 or 2, as applicable. Examples of such occurrences include placing in the waste management unit a hazardous waste having an average VO concentration equal to or greater than 500 ppmw at the point of waste origination or placing in the waste management unit a treated hazardous waste of which the organic content has been reduced by an organic destruction or removal process that fails to achieve the applicable conditions specified in LAC 33:V.1751.C.2.a-f. The owner or operator shall submit a written report within 15 calendar days of the time that the owner or operator becomes aware of the occurrence. The written report shall contain the EPA identification number, facility name and address, a description of the noncompliance event and the cause, the dates of the noncompliance, and the actions taken to correct the noncompliance and prevent recurrence of the noncompliance. The report shall be signed and dated by an authorized representative of the owner or operator.

B. Each owner or operator using air emission controls on a tank in accordance with the requirements LAC 33:V.1755.C shall report to the Office of Environmental Compliance each occurrence when hazardous waste is managed in the tank in noncompliance with the conditions specified in LAC 33:V.1755.B. The owner or operator shall submit a written report within 15 calendar days of the time that the owner or operator becomes aware of the occurrence. The written report shall contain the EPA identification number, facility name and address, a description of the noncompliance event and the cause, the dates of the noncompliance, and the actions taken to correct the noncompliance and prevent recurrence of the noncompliance. The report shall be signed and dated by an authorized representative of the owner or operator.

C. Each owner or operator using a control device in accordance with the requirements of LAC 33:V.1761 shall submit a semiannual written report to the Office of Environmental Compliance, except as provided for in Subsection D of this Section. The report shall describe each

occurrence during the previous six-month period when either:

1. a control device is operated continuously for 24 hours or longer in noncompliance with the applicable operating values defined in LAC 33:V.1713.C.4; or

2. a flare is operated with visible emissions for five minutes or longer in a two-hour period, as defined in LAC 33:V.1709.D. The written report shall include the EPA identification number, facility name and address, an explanation why the control device could not be returned to compliance within 24 hours, and actions taken to correct the noncompliance. The report shall be signed and dated by an authorized representative of the owner or operator.

D. A report to the administrative authority in accordance with the requirements of Subsection C of this Section is not required for a six-month period during which all control devices subject to this Chapter are operated by the owner or operator such that:

1. during no period of 24 hours or longer did a control device operate continuously in noncompliance with the applicable operating values defined in LAC 33:V.1713.C.4; and

2. no flare was operated with visible emissions for five minutes or longer in a two-hour period, as defined in LAC 33:V.1709.D.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1720 (September 1998), amended LR 25:442 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2474 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2106 (October 2007).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1721 (September 1998), amended by the Office of the Secretary, Legal Affairs Division, LR 34:624 (April 2008).

Chapter 18. Containment Buildings

§1801. Applicability

A. The requirements of this Section apply to owners or operators who store or treat hazardous waste in units designed and operated under LAC 33:V.1802. These provisions became effective on February 18, 1993, although an owner or operator may have notified EPA or the administrative authority of his intent to be bound by this Section or its federal equivalent at an earlier time. The owner or operator is not subject to the definition of land disposal in LAC 33:V.2203 or R.S. 30:2193 provided that the unit:

1. is a completely enclosed, self-supporting structure that is designed and constructed of manmade materials of sufficient strength and thickness to support themselves, the waste contents, and any personnel and heavy equipment that operate within the unit, and to prevent failure due to pressure gradients, settlement, compression, uplift, physical contact with the hazardous wastes to which they are exposed, climatic conditions, and the stresses of daily operation, including the movement of heavy equipment within the unit and contact of such equipment with containment walls;

2. has a primary barrier that is designed to be sufficiently durable to withstand the movement of personnel, wastes, and handling equipment within the unit;

3. when used to manage liquids:

a. has a primary barrier designed and constructed of materials to prevent migration of hazardous constituents into the barrier;

b. has a liquid collection system designed and constructed of materials to minimize the accumulation of liquid on the primary barrier; and

c. has a secondary containment system designed and constructed of materials to prevent migration of hazardous constituents into the barrier, with a leak detection and liquid collection system capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest

practicable time, unless the unit has been granted a variance from the secondary containment system requirements under LAC 33:V.1802.B.4;

4. has controls as needed to permit fugitive dust emissions to meet the no visible emission standard in LAC 33:V.1802.C.1.d; and

5. has been designed and is operated to ensure containment and prevent the tracking of materials from the unit by personnel or equipment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended LR 21:944 (September 1995).

§1802. Design and Operating Standards

A. All containment buildings must comply with the following design standards.

1. The containment building must be completely enclosed with a floor, walls, and a roof to prevent exposure to the elements, (e.g., precipitation, wind, run-on) and to ensure containment of managed wastes.

2. The floor and containment walls of the unit, including the secondary containment system if required under LAC 33:V.1802.B, must be designed and constructed of materials of sufficient strength and thickness to support themselves, the waste contents, and any personnel and heavy equipment that operate within the unit and to prevent failure due to pressure gradients, settlement, compression, uplift, physical contact with the hazardous wastes to which they are exposed, climatic conditions, and the stresses of daily operation, including the movement of heavy equipment within the unit and contact of such equipment with containment walls. The unit must be designed so that it has sufficient structural strength to prevent collapse or other failure. All surfaces to be in contact with hazardous wastes must be chemically compatible with those wastes. The administrative authority will consider standards established by professional organizations generally recognized by the industry, such as the American Concrete Institute (ACI) and the American Society of Testing Materials (ASTM), in judging the structural integrity requirements of LAC 33:V.1802.A. If appropriate to the nature of the waste management operation to take place in the unit, an exception to the structural strength requirement may be made for light-weight doors and windows that meet these criteria:

a. they provide an effective barrier against fugitive dust emissions under LAC 33:V.1802.C.1.d; and

b. the unit is designed and operated in a fashion that ensures that wastes will not actually come in contact with these openings.

3. Incompatible hazardous wastes or treatment reagents must not be placed in the unit or its secondary containment system if they could cause the unit or secondary containment system to leak, corrode, or otherwise fail.

4. A containment building must have a primary barrier designed to withstand the movement of personnel, waste, and handling equipment in the unit during the operating life of the unit and be appropriate for the physical and chemical characteristics of the waste to be managed.

B. For a containment building used to manage hazardous wastes containing free liquids or treated with free liquids (the presence of which is determined by the paint filter test, a visual examination, or other appropriate means), the owner or operator must include:

1. a primary barrier designed and constructed of materials to prevent the migration of hazardous constituents into the barrier (e.g., a geomembrane covered by a concrete wear surface);

2. a liquid collection and removal system to minimize the accumulation of liquid on the primary barrier of the containment building:

a. the primary barrier must be sloped to drain liquids to the associated collection system; and

b. liquids and waste must be collected and removed to minimize hydraulic head on the containment system at the earliest practicable time;

3. a secondary containment system including a secondary barrier designed and constructed to prevent migration of hazardous constituents into the barrier and a leak detection system that is capable of detecting failure of the primary barrier and collecting accumulated hazardous wastes and liquids at the earliest practicable time;

a. the requirements of the leak detection component of the secondary containment system are satisfied by installation of a system that is, at a minimum:

i. constructed with a bottom slope of 1 percent or more; and

ii. constructed of a granular drainage material with a hydraulic conductivity of 1×10^{-2} cm/sec or more and a thickness of 12 inches (30.5 cm) or more, or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} m²/sec or more;

b. if treatment is to be conducted in the building, an area in which such treatment will be conducted must be designed to prevent the release of liquids, wet materials, or liquid aerosols to other portions of the building;

c. the secondary containment system must be constructed of materials that are chemically resistant to the waste and liquids managed in the containment building and of sufficient strength and thickness to prevent collapse under the pressure exerted by overlaying materials and by any equipment used in the containment building (Containment buildings can serve as secondary containment systems for tanks placed within the building under certain conditions. A containment building can serve as an external liner system for a tank, provided it meets the requirements of LAC 33:V.1907.E.1. In addition, the containment building must meet the requirements of LAC 33:V.1907.B and C.1 and 2 to

be considered an acceptable secondary containment system for a tank.);

4. for existing units other than 90-day generator units, the administrative authority or EPA may delay the secondary containment requirement for up to two years, based on a demonstration by the owner or operator that the unit substantially meets the standards of this Section. In making this demonstration, the owner or operator must:

a. have provided written notice to the administrative authority of their request by November 16, 1992. This notification must describe the unit and its operating practices with specific reference to the performance of existing containment systems and specific plans for retrofitting the unit with secondary containment;

b. respond to any comments from the administrative authority on these plans within 30 days; and

c. fulfill the terms of the revised plans, if such plans are approved by the administrative authority.

C. Owners or operators of all containment buildings must:

1. use controls and practices to ensure containment of the hazardous waste within the unit; and, at a minimum:

a. maintain the primary barrier to be free of significant cracks, gaps, corrosion, or other deterioration that could cause hazardous waste to be released from the primary barrier;

b. maintain the level of the stored/treated hazardous waste within the containment walls of the unit so that the height of any containment wall is not exceeded;

c. take measures to prevent the tracking of hazardous waste out of the unit by personnel or by equipment used in handling the waste. An area must be designated to decontaminate equipment and any rinsate must be collected and properly managed; and

d. take measures to control fugitive dust emissions such that any openings (doors, windows, vents, cracks, etc.) exhibit no visible emissions (see 40 CFR Part 60, Appendix A, Visual Determination of Fugitive Emissions from Material Sources and Smoke Emissions from Flares). In addition, all associated particulate collection devices (e.g., fabric filter, electrostatic precipitator) must be operated and maintained with sound air pollution control practices (see LAC 33:III.3544 for guidance). This state of no visible emissions must be maintained effectively at all times during normal operating and maintenance conditions, including when vehicles and personnel are entering and exiting the unit;

2. obtain certification by a qualified registered professional engineer that the containment building design meets the requirements of LAC 33:V.1802.A-C. For units placed into operation prior to February 18, 1993, this certification must be placed in the facility's operating record (on-site files for generators who are not formally required to have operating records) no later than 60 days after the date

of initial operation of the unit. After February 18, 1993, PE certification will be required prior to operation of the unit;

3. promptly repair any condition which the owner or operator detects throughout the active life of the containment building that could lead to or has caused a release of hazardous waste in accordance with the following procedures:

a. upon detection of a condition that has led to a release of hazardous waste (e.g., upon detection of leakage from the primary barrier) the owner or operator must:

i. enter a record of the discovery in the facility operating record;

ii. immediately remove the portion of the containment building affected by the condition from service;

iii. determine what steps must be taken to repair the containment building, remove any leakage from the secondary collection system, and establish a schedule for accomplishing the cleanup and repairs; and

iv. within seven days after the discovery of the condition, notify the Office of Environmental Services of the condition and, within 14 working days, provide a written notice to the administrative authority with a description of the steps taken to repair the containment building and the schedule for accomplishing the work;

b. the administrative authority will review the information submitted, make a determination regarding whether the containment building must be removed from service completely or partially until repairs and cleanup are complete, and notify the owner or operator of the determination and the underlying rationale in writing;

c. upon completing all repairs and cleanup, the owner or operator must notify the Office of Environmental Services in writing and provide a verification, signed by a qualified, registered professional engineer, that the repairs and cleanup have been completed according to the written plan submitted in accordance with LAC 33:V.1802.C.3.a.iv; and

4. inspect and record in the facility operating record, at least once every seven days, data gathered from monitoring and leak detection equipment as well as the containment building and the area immediately surrounding the containment building to detect signs of releases of hazardous waste.

D. For a containment building that contains both areas with and without secondary containment, the owner or operator must:

1. design and operate each area in accordance with the requirements enumerated in LAC 33:V.1802.A-C;

2. take measures to prevent the release of liquids or wet materials into areas without secondary containment; and

3. keep in the facility's operating log a written description of the operating procedures used to maintain the integrity of areas without secondary containment.

E. Notwithstanding any other provision of this Chapter, the administrative authority may waive requirements for secondary containment for a permitted containment building where the owner or operator demonstrates that the only free liquids in the unit are limited amounts of dust suppression liquids required to meet occupational health and safety requirements and where containment of managed wastes and liquids can be ensured without a secondary containment system.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2475 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2106 (October 2007), LR 34:624 (April 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:934 (July 2020).

§1803. Closure and Post-Closure Care

A. At closure of a containment building, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated subsoils, and structures and equipment contaminated with waste and leachate and manage them as hazardous waste unless LAC 33:V.109. *Hazardous Waste* applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for containment buildings must meet all of the requirements specified in LAC 33:V.Chapters 35 and 37.

B. If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in Subsection A of this Section, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, he must either:

1. close the facility and perform post-closure care in accordance with the closure and post-closure requirements that apply to landfills (LAC 33:V.2521). In addition, for the purposes of closure, post-closure, and financial responsibility, such a containment building is then considered to be a landfill and the owner or operator must meet all of the requirements for landfills specified in LAC 33:V.Chapters 35 and 37; or

2. perform a risk assessment to demonstrate that closure with the remaining contaminant levels in protective of human health and the environment in accordance with LAC 33:I.Chapter 13. Any such risk assessment is subject to approval by the administrative authority and must demonstrate that post-closure care is not necessary to adequately protect human health and the environment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste,

Hazardous Waste Division, LR 21:266 (March 1995), amended by the Office of the Secretary, LR 24:2245 (December 1998).

Chapter 19. Tanks

§1901. Applicability

A. The requirements of this Chapter apply to owners and operators of facilities that use tank systems for storing or treating hazardous waste except as otherwise provided in Subsections A and B of this Section or LAC 33:V.1501.

B. Tank systems that are used to store or treat hazardous waste that contains no free liquids and are situated inside a building with an impermeable floor are exempted from the requirements of LAC 33:V.1907. To demonstrate the absence or presence of free liquids in the stored/treated waste, the following test method must be used: EPA Method 9095B (Paint Filter Liquids Test) as described in *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110.

C. Tank systems, including sumps, as defined in LAC 33:V.109, that serve as part of a secondary containment system to collect or contain releases of hazardous wastes are exempted from the requirements in LAC 33:V.1907.A.

D. Tanks, sumps, and other such collection devices or systems used in conjunction with drip pads, as defined in LAC 33:V.109 and regulated under LAC 33:V.Chapter 28, must meet the requirements of this Chapter.

E. See LAC 33:V.1013.C.3 for applicable requirements for small quantity generators accumulating hazardous waste in tanks. See LAC 33:V.1015.B.2 for applicable requirements for large quantity generators accumulating hazardous waste in tanks.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:651 (November 1987), LR 16:614 (July 1990), LR 18:1375 (December 1992), LR 22:819 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1107 (June 1998), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1013 (June 2008), LR 36:1235 (June 2010), repromulgated LR 36:1536 (July 2010), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 44:41 (January 2018), LR 46:933 (July 2020).

§1903. Assessment of Existing Tank System's Integrity

A. For each existing tank system that does not have secondary containment meeting the requirements of LAC 33:V.1907.B-I, the owner or operator shall determine that the tank system is not leaking or is fit for use. Except as provided in Subsection C of this Section, the owner or operator shall obtain and keep on file at the facility a written assessment reviewed and certified by an independent, qualified professional engineer, in accordance with LAC 33:V.513, that attests to the tank system's integrity by November 20, 1988. Tanks excluded from permitting requirements under LAC 33:V.1015.B.2 must have an

assessment as described in this Section by November 20, 1990.

B. This assessment must determine that the tank system is adequately designed and has sufficient structural strength and compatibility with the waste(s) to be stored or treated, to ensure that it will not collapse, rupture or fail. At a minimum, this assessment must consider the following:

1. design standards(s), if available, according to which the tank and ancillary equipment were constructed;
2. hazardous characteristics of the waste(s) that have been and will be handled;
3. existing corrosion protection measures;
4. documented age of the tank system, if available (otherwise, an estimate of the age); and
5. results of a leak test, internal inspection or other tank integrity examination such that:

a. for non-enterable underground tanks, the assessment must include a leak test that is capable of taking into account the effects of temperature variations, tank end deflection, vapor pockets and high water table effects; and

b. for other than non-enterable underground tanks and for ancillary equipment, this assessment must include either a leak test, as described above, or other integrity examination, that is certified by an independent, qualified professional engineer in accordance with LAC 33:V.513, that addresses cracks, leaks, corrosion and erosion;

C. Tank systems that store or treat materials that become hazardous wastes subsequent to July 14, 1986, shall conduct this assessment within 12 months after the date that the waste becomes a hazardous waste.

D. If, as a result of the assessment conducted in accordance with LAC 33:V.1903.A, a tank system is found to be leaking or unfit for use, the owner or operator shall comply with the requirements of LAC 33:V.1913.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:651 (November 1987), LR 16:614 (July 1990), LR 18:1256 (November 1992), amended by the Office of the Secretary, Legal Affairs Division, LR 34:994 (June 2008), amended by the Office of the Secretary, Legal Division, LR 43:1142 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:934 (July 2020).

§1905. Design and Installation of New Tank Systems or Components

A. Owners or operators of new tank systems or components must obtain and submit to the Office of Environmental Services, at the time of submittal of Part II information, a written assessment, reviewed and certified by an independent, qualified professional engineer, in accordance with LAC 33:V.513, attesting that the tank system has sufficient structural integrity and is acceptable

for the storing and treating of hazardous waste. The assessment must show that the foundation, structural support, seams, connections and pressure controls (if applicable) are adequately designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be stored or treated, and corrosion protection to ensure that it will not collapse, rupture or fail. This assessment, which will be used by the administrative authority to review and approve or disapprove the acceptability of the tank system design, must include, at a minimum, the following information:

1. design standard(s) according to which tank(s) and/or the ancillary equipment are constructed;
2. hazardous characteristics of the waste(s) to be handled;

3. for new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system will be in contact with the soil or with water, a determination by a corrosion expert of:

a. factors affecting the potential for corrosion, including but not limited to:

- i. soil moisture content;
- ii. soil pH;
- iii. soil sulfides level;
- iv. soil resistivity;
- v. structure to soil potential;
- vi. influence of nearby underground metal structures (e.g., piping);
- vii. existence of stray electric current;
- viii. existing corrosion-protection measures (e.g., coating, cathodic protection); and

b. the type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:

- i. corrosion-resistant materials of construction such as special alloys, fiberglass reinforced plastic, etc;
- ii. corrosion-resistant coating (such as epoxy, fiberglass, etc.) with cathodic protection (e.g. impressed current or sacrificial anodes); and
- iii. electrical isolation devices such as insulating joints, flanges, etc.;

4. for underground tank systems components that are likely to be adversely affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and

5. design considerations to ensure that:
 - a. tank foundations will maintain the load of a full tank;

ENVIRONMENTAL QUALITY

b. tank systems will be anchored to prevent flotation or dislodgment where the tank system is placed in a saturated zone, or is located within a seismic fault zone subject to the standards of LAC 33:V.1503.A.3; and

c. tank systems will withstand the effects of frost heave.

B. The owner or operator of a new tank system must ensure that proper handling procedures are adhered to in order to prevent damage to the system during installation.

1. Prior to covering, enclosing, or placing a new tank system or component in use, an independent, qualified installation inspector or an independent, qualified professional engineer, either of whom is trained and experienced in the proper installation of tank systems or components, must inspect the system for the presence of any of the following items:

- a. weld breaks;
- b. punctures;
- c. scrapes of protective coatings;
- d. cracks;
- e. corrosion;
- f. other structural damage or inadequate construction/installation.

2. All discrepancies must be remedied before the tank system is covered, enclosed, or placed in use.

C. New tank systems or components that are placed underground and that are backfilled must be provided with a backfill material that is a noncorrosive, porous, homogeneous substance and that is installed so that the backfill is placed completely around the tank and compacted to ensure that the tank and piping are fully and uniformly supported.

D. All new tanks and ancillary equipment must be tested for tightness prior to being covered, enclosed, or placed in use. If a tank system is found not to be tight, all repairs necessary to remedy the leak(s) in the system must be performed prior to the tank system being covered, enclosed, or placed into use.

E. Ancillary equipment must be supported and protected against physical damage and excessive stress due to settlement, vibration, expansion, or contraction.

F. The owner or operator must provide the type and degree of corrosion protection recommended by an independent corrosion expert, licensed in Louisiana, based on the information provided under LAC 33:V.1905.A.3 of this Section, or other corrosion protection if the administrative authority believes other corrosion protection is necessary to ensure the integrity of the tank system during use of the tank system. The installation of a corrosion protection system that is field fabricated must be supervised by an independent corrosion expert to ensure proper installation.

G. The owner or operator must obtain and keep on file at the facility written statements by those persons required to certify the design of the tank system and supervise the installation of the tank system in accordance with the requirements of LAC 33:V.1905.A, C, D, E and F of this Section, that attest that the tank system was properly designed and installed and that repairs, pursuant to LAC 33:V.1905.B, C and D of this Section, were performed. These written statements must also include the certification statement as required in LAC 33:V.513.

H. Owners or operators of new tanks systems or components subject to the accumulation time exclusion of LAC 33:V.1015.B must obtain and submit to the Office of Environmental Services, prior to placing the tank system in service, a written assessment, reviewed and certified by an independent registered professional engineer, in accordance with LAC 33:V.513, attesting that the tank system has sufficient structural integrity and is acceptable for storing or treating hazardous waste. The assessment must show that the foundation, structural support, seams, connections, and pressure controls (if applicable) are adequately designed, and that the tank system has sufficient structural strength, compatibility with the waste(s) to be stored or treated, and corrosion protection to ensure that it will not collapse, rupture, or fail. The assessment, which will be used by the administrative authority to review the acceptability of the tank system design, must include at a minimum the requirements specified in LAC 33:V.1905.A.1-5.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:651 (November 1987), LR 16:614 (July 1990), LR 16:683 (August 1990), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2475 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2107 (October 2007), LR 34:995 (June 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:934 (July 2020).

§1907. Containment and Detection of Releases

A. In order to prevent the release of hazardous waste or hazardous constituents to the environment, secondary containment that meets the requirements of this Section must be provided (except as provided in Subsections F and G of this Section):

1. for all new and existing tank systems or components, prior to their being put into service; and

2. for tank systems that store or treat materials that become hazardous wastes, within two years of the hazardous waste listing, or when the tank system has reached 15 years of age, whichever comes later.

B. Secondary containment systems must be:

1. designed, installed and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, groundwater or surface water at any time during the use of the tank system; and

2. capable of detecting and collecting releases and accumulated liquids until the collected material is removed.

C. To meet the requirements of Subsection B of this Section, secondary containment systems must be at a minimum:

1. constructed of or lined with materials that are compatible with the waste(s) to be placed in the tank system and must have sufficient strength and thickness to prevent failure owing to pressure gradients (including static head and external hydrological forces), physical contact with the waste to which it is exposed, climatic conditions, and the stress of daily operation (including stresses from nearby vehicular traffic);

2. placed on a foundation or base capable of providing support to the secondary containment system, resistance to pressure gradients above and below the system, and capable of preventing failure due to settlement, compression, or uplift;

3. provide with a leak-detection system that is designed and operated so that it will detect the failure of either the primary or secondary containment structure or the presence of any release of hazardous waste or accumulated liquid in the secondary containment system within 24 hours, or at the earliest practicable time if the owner or operator can demonstrate to the administrative authority that existing detection technologies or site conditions will not allow detection of a release within 24 hours; and

4. sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked waste and accumulated precipitation must be removed from the secondary containment system within 24 hours, or in as timely a manner as is possible to prevent harm to human health and the environment, if the owner or operator can demonstrate to the administrative authority that removal of the released waste or accumulated precipitation cannot be accomplished within 24 hours.

NOTE: If the collected material is a *hazardous waste* as defined in LAC 33:V.109, it is subject to management as a hazardous waste in accordance with all applicable requirements of LAC 33:V.Chapters 10, 11, 13, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 33, 35, 37, and 43. If the collected material is discharged through a point source to waters of the United States, it is subject to the requirements of Sections 301, 304, and 402 of the Clean Water Act, as amended. If discharged to a Publicly Owned Treatment Works (POTW), it is subject to the requirements of Section 307 of the Clean Water Act, as amended. If the collected material is released to the environment, it may be subject to the reporting requirements of 40 CFR Part 302.

D. Secondary containment for tanks must include one or more of the following devices:

1. a liner (external to the tank);
2. a vault;
3. a double-walled tank; or
4. an equivalent device as approved by the administrative authority.

E. In addition to the requirements of Subsections B-D of this Section, secondary containment systems must satisfy the following requirements.

1. External liner systems must be:

a. designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;

b. designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. Such additional capacity must be sufficient to contain precipitation from a 25-year, 24-hour rainfall event;

c. free of cracks or gaps;

d. designed and installed to surround the tank completely and to cover all surrounding earth likely to come into contact with the waste if the waste is released from the tank(s);

e. impermeable to the extent that it will prevent lateral as well as vertical migration of waste into the environment (this is not intended to address releases to the air); and

f. if concrete is used as an external liner system:

i. the liner system must be:

(a). provided with a coating or lining that is compatible with the stored waste and meets the requirements of Subparagraph E.1.d and e of this Section except as specified in Clause E.1.f.ii and Subsection J of this Section;

(b). constructed with chemical-resistant water stops in place at all joints (if any), in liner systems installed after June 20, 2010, and in liner systems undergoing significant modification after June 20, 2010; and

(c). constructed with chemical-resistant joint sealants at all joints and cracks (if any);

ii. the owner or operator of a tank equipped with an uncoated/unlined concrete external liner system may demonstrate compliance with Subclause E.1.f.i.(a) of this Section by submitting the information described in Subsection J of this Section for review and obtaining written approval by the Office of Environmental Services.

2. Vault systems must be:

a. designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;

b. designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. Such additional capacity must be sufficient to contain precipitation from a 25-year, 24-hour rainfall event;

c. constructed with chemical-resistant water stops in place at all joints (if any);

ENVIRONMENTAL QUALITY

d. constructed with chemical-resistant joint sealants at all joints and cracks (if any), in vault systems installed after June 20, 2010, and in vault systems undergoing significant modification after June 20, 2010;

e. provided with an impermeable interior coating or lining that is compatible with the stored waste and that will prevent migration of waste into the concrete;

f. provided with a means to protect against the formation of and ignition of vapors within the vault, if the waste being stored or treated:

i. meets any of the definitions of ignitable waste under LAC 33:V.4903.B; or

ii. meets the definition of reactive waste under LAC 33:V.4903.D, and may form an ignitable or explosive vapor; and

g. provided with an exterior moisture barrier or be otherwise designed or operated to prevent migration of moisture into the vault if the vault is subject to hydraulic pressure.

3. Double-walled tanks must be:

a. designed as an integral structure (i.e., an inner tank completely enveloped within an outer shell) so that any release from the inner tank is contained by the outer shell;

b. protected, if constructed of metal, from both corrosion of the primary tank interior and of the external surface of the outer shell; and

c. provided with a built-in continuous leak detection system capable of detecting a release within 24 hours, or at the earliest practicable time, if the owner or operator can demonstrate to the administrative authority, and the administrative authority concludes that the existing detection technology or site conditions would not allow detection of a release within 24 hours.

F. Ancillary equipment must be provided with secondary containment (e.g., trench, jacketing, double-walled piping) that meets the requirements of Subsections B and C of this Section, except for:

1. aboveground piping (exclusive of flanges, joints, valves and other connections) that are visually inspected for leaks on a daily basis;

2. welded flanges, welded joints, and welded connections, that are visually inspected for leaks on a daily basis;

3. sealless or magnetic coupling pumps and sealless valves that are visually inspected for leaks daily; and

4. pressurized aboveground piping systems with automatic shut-off devices (e.g., excess flow check valves, flow metering shutdown devices, loss of pressure actuated shut-off devices) that are visually inspected for leaks on a daily basis.

G. The owner or operator may obtain a variance from the requirements of this Section if the administrative authority

finds, as a result of a demonstration by the owner or operator that alternative design and operating practices, together with location characteristics, will prevent the migration of any hazardous waste or hazardous constituents into the groundwater; or surface water at least as effectively as secondary containment during the active life of the tank system or that in the event of a release that does migrate to groundwater or surface water, no substantial present or potential hazard will be posed to human health or the environment. New underground tank systems may not, per a demonstration in accordance with Paragraph G.2 of this Section, be exempted from the secondary containment requirements of this Section.

1. In deciding whether to grant a variance based on a demonstration of equivalent protection of groundwater and surface water, the administrative authority will consider:

a. the nature and quantity of the wastes;

b. the proposed alternate design and operation;

c. the hydrogeologic setting of the facility, including the thickness of soils present between the tank system and groundwater; and

d. all other factors that would influence the quality and mobility of the hazardous constituents and the potential for them to migrate to groundwater or surface water.

2. In deciding whether to grant a variance based on a demonstration of no substantial present or potential hazard, the administrative authority will consider:

a. the potential adverse effects on groundwater, surface water, and land quality, taking into account:

i. the physical and chemical characteristics of the waste in the tank system, including its potential for migration;

ii. the hydrogeological characteristics of the facility and surrounding land;

iii. the potential for health risks caused by human exposure to waste constituents;

iv. the potential for damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents; and

v. the persistence and permanence of the potential adverse effects;

b. the potential adverse effects of a release on groundwater quality, taking into account:

i. the quantity and quality of groundwater and the direction of groundwater flow;

ii. the patterns of rainfall in the region;

iii. the proximity and withdrawal rates of groundwater users;

iv. the current and future uses of groundwater in the area; and

v. the existing quality of groundwater, including other sources of contamination and their cumulative impact on the groundwater quality; and

c. the potential adverse effects of a release on surface water quality, taking into account:

i. the quantity and quality of groundwater and the direction of groundwater flow;

ii. the patterns of rainfall in the region;

iii. the proximity of the tank system to surface waters;

iv. the current and future uses of surface waters in the area, and any water quality standards established for those surface waters; and

v. the existing quality of surface water, including other sources of contamination and the cumulative impact on surface water quality; and

d. the potential adverse effects of a release on the land surrounding the tank system, taking into account:

i. the patterns of rainfall in the region; and

ii. the current and future uses of the surrounding land.

3. The owner or operator of a tank system, for which a variance from secondary containment has been granted in accordance with requirements of Paragraph G.1 of this Section, at which a release of hazardous waste has occurred from the primary tank system but has not migrated beyond the zone of engineering control (as established in the variance), must:

a. comply with the requirements of LAC 33:V.1913, except 1913.D; and

b. decontaminate or remove contaminated soil to the extent necessary to:

i. enable the tank system for which the variance was granted to resume operation with the capability for the detection of releases at least equivalent to the capability it had prior to the release; and

ii. prevent the migration of hazardous waste or hazardous constituents to groundwater or surface water; or

c. if contaminated soil cannot be removed or decontaminated in accordance with Subparagraph G.3.b of this Section, comply with the requirements of LAC 33:V.1915.B.

4. The owner or operator of a tank system, for which a variance from secondary containment has been granted in accordance with the requirements of Paragraph G.1 of this Section, at which a release of hazardous waste has occurred from the primary tank system and has migrated beyond the zone of engineering control (as established in the variance), must:

a. comply with requirements of LAC 33:V.1913.A-D;

b. prevent the migration of hazardous waste or hazardous constituents to groundwater or surface water, if possible, and decontaminate or remove contaminated soil. If contaminated soil cannot be decontaminated or removed or if groundwater has been contaminated, the owner or operator must comply with requirements of LAC 33:V.1915.B; and

c. if repairing, replacing or reinstalling the tank system, provide secondary containment in accordance with the requirements of Subsections A-F of this Section or reapply for a variance from secondary containment and meet the requirements for new tank systems in LAC 33:V.1905 if the tank system is replaced. The owner or operator must comply with these requirements even if contaminated soil can be decontaminated or removed and groundwater or surface water has not been contaminated.

H. The following procedures must be followed in order to request a variance from secondary containment.

1. The Office of Environmental Assessment must be notified in writing by the owner or operator that he intends to conduct and submit a demonstration for a variance from secondary containment as allowed in Subsection G of this Section according to the following schedule:

a. for existing tank systems, at least 24 months prior to the date that secondary containment must be provided in accordance with Subsection A of this Section;

b. for new tank systems, at least 30 days prior to entering into a contract for installation.

2. As part of the notification, the owner or operator must also submit to the administrative authority a description of the steps necessary to conduct the demonstration and a timetable for completing each of the steps. The demonstration must address each of the factors listed in Paragraph G.1 or 2 of this Section.

3. The demonstration for a variance must be completed within 180 days after notifying the administrative authority of an intent to conduct the demonstration.

4. If a variance is granted under this Paragraph, the administrative authority will require the permittee to construct and operate the tank system in the manner that was demonstrated to meet the requirements for the variance.

I. All tank systems, until such time as secondary containment that meets the requirements of this Section is provided, must comply with the following.

1. For non-enterable underground tanks, a leak test that meets the requirements of LAC 33:V.1903.A or other tank integrity method, as approved or required by the administrative authority, must be conducted at least annually.

2. For other than non-enterable underground tanks, the owner or operator must either:

a. conduct a leak test as in Paragraph I.1 or 2 of this Section; or

b. develop a schedule and procedure for an assessment of the overall condition of the tank system by an

ENVIRONMENTAL QUALITY

independent, qualified professional engineer. The schedule and procedure must be adequate to detect obvious cracks, leaks, and corrosion or erosion that may lead to cracks and leaks. The owner or operator must remove the stored waste from the tank, if necessary, to allow the condition of all internal tank surfaces to be assessed. The frequency of these assessments must be based on the material of construction of the tank and its ancillary equipment, the age of the system, the type of corrosion or erosion protection used, the rate of corrosion or erosion observed during the previous inspection, and the characteristics of the waste being stored or treated.

3. For ancillary equipment, a leak test or other integrity assessment as approved by the administrative authority must be conducted at least annually.

4. The owner or operator must maintain on file at the facility a record of the results of the assessments conducted in accordance with Paragraphs I.1-3 of this Section.

5. If a tank system or component is found to be leaking or unfit for use as a result of the leak test or assessment in Paragraphs I.1-3 of this Section, the owner or operator must comply with the requirements of LAC 33:V.1913.

J. Unlined/Uncoated Concrete Liner Systems—Demonstration of Sufficiency Process

1. Submittals to the Office of Environmental Services intended to secure its approval of uncoated/unlined concrete liner systems, as provided for in Clause E.1.f.ii of this Section, must contain documentation regarding the information described below.

a. The owner or operator must provide detailed information on the uncoated/unlined external liner, including, but not limited to:

i. the design and installation specifications for any concrete joints, including water stops;

ii. the characteristics of any joint sealant used, including its compatibility with the waste stored in the tank system; and

iii. the characteristics of the concrete mix used, the design and construction specifications of the concrete liner and secondary containment system, and any American Concrete Institute or other applicable standards used.

b. The owner or operator must also provide the following information:

i. the physical and chemical characteristics of the waste in the tank system, including its potential for migration and its compatibility with the unlined/uncoated concrete external liner system;

ii. the persistence and permanence of the potential adverse effects from a release of the waste constituents to the environment;

iii. the risk to human health and the environment posed by a potential release of the waste constituents contained in the tank to the soil or groundwater;

iv. any factor that specifically influences the potential mobility of the waste contained in the tank and its potential to migrate through the unlined/uncoated concrete external liner system to the environment;

v. any additional protections afforded by the design and construction of the tank system, such as tank liners, lined piping, welded flanges, double bottoms, and/or elevation of the tank above the unlined/uncoated concrete external liner; and

vi. any other information requested by the administrative authority.

2. Submittals may also contain other documentation demonstrating that an unlined/uncoated concrete external liner system is appropriate, such as documentation regarding the following:

a. any natural or man-made hydrogeological characteristic of the facility and surrounding land that affords a barrier to the migration of waste into the environment;

b. any applicable regulation or permit requirement, or standard, such as, for example:

i. any schedule of more frequent than normal internal inspection of the tank pursuant to appropriate standards (e.g. American Petroleum Institute (API), American Society of Mechanical Engineers (ASME), etc.);

ii. any schedule of more frequent than normal external inspection of the tank pursuant to appropriate standards (e.g. API, ASME, etc.);

iii. any certification by a registered professional engineer regarding the permeability of the concrete that comprises the concrete liner system; and

c. the cost of installing and maintaining an impermeable coating or lining versus the potential benefits to be derived therefrom.

3. In deciding whether to approve the use of an unlined/uncoated concrete external liner system in lieu of the requirements of Subclause E.1.f.i.(a) of this Section:

a. the administrative authority shall consider each submittal on its own merits;

b. the stringency of the administrative authority's requirements may vary depending on the tank's contents (e.g., the concentration or type of material involved); and

c. the administrative authority shall approve the use of an unlined/uncoated concrete external liner system if it reasonably determines that the unlined/uncoated concrete external liner system:

i. will prevent lateral and vertical migration of waste into the environment; or

ii. is otherwise appropriate based on the potential risk to human health and the environment.

4. Within 30 days after receipt of an administratively complete submittal pursuant to this Subsection, the department shall provide written acknowledgment to the owner or operator that the submittal is under consideration. Subclause E.1.f.i.(a) of this Section shall not apply to the concrete external liner system while the administrative authority considers the owner's or operator's submittal. The administrative authority shall notify the owner or operator in writing of the administrative authority's approval or disapproval of the proposed use of an unlined/uncoated concrete external liner system. If the administrative authority does not approve the use of an unlined/uncoated concrete external liner system, it shall give the owner or operator a reasonable period of time to provide an appropriate coating or lining for the concrete external liner system, or another acceptable means of secondary containment.

5. If the use of an unlined/uncoated concrete external liner system is approved:

a. the owner or operator shall maintain on-site:

i. the written approval received from the administrative authority, or a legible copy thereof; and

ii. documentation sufficient to establish that any conditions upon which that approval was based are being fulfilled; and

b. the owner or operator shall provide written notification to the Office of Environmental Services of any change in the tank system, the service of the tank system, the concrete external liner system, the waste stored in the tank(s), or the information submitted by the owner or operator pursuant to Paragraph 1 or 2 of this Subsection that could result in a significant increase in the risk to human health or the environment posed by a potential release of waste constituents contained in the tank(s). Such notice shall be provided within 15 days of the owner's or operator's discovery of any such change. The department thereafter may require the submittal of additional information by the owner or operator, and/or revoke the approval for the owner's or operator's continued use of the unlined/uncoated concrete external liner system.

K. Effective Date/Due Date

1. Subparagraph E.1.f of this Section shall be effective:

a. one year from June 20, 2010, for tanks meeting the requirements for the accumulation time exclusion of LAC 33:V.305.C.2 and 1015.B; and

b. 180 days from June 20, 2010, for tanks subject to permitting.

2. Submittals under Subsection J of this Section shall be due:

a. within one year from June 20, 2010, for tanks existing prior to this date and that meet the requirements for

the accumulation time exclusion of LAC 33:V.305.C.2 and 1015.B;

b. within 180 days from June 20, 2010, for tanks existing prior to this date and that are subject to permitting;

c. prior to tank installation, for tanks and/or tank systems installed after June 20, 2010, that meet the requirements for the accumulation time exclusion of LAC 33:V.305.C.2 and 1015.B;

d. contemporaneously with the submittal of the permit application, for new tanks and/or tank systems that are installed after June 20, 2010, and are subject to permitting; and

e. within such reasonable period of time as shall be established by the administrative authority upon request by the owner or operator, for any tank that is installed or undergoes a change in service within one year of June 20, 2010.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:651 (November 1987), LR 14:790 (November 1988), LR 16:614 (July 1990), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2475 (November 2000), amended by the Office of Environmental Assessment, LR 31:1572 (July 2005), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2107 (October 2007), LR 34:624 (April 2008), LR 34:995 (June 2008), LR 34:1896 (September 2008), LR 36:1235 (June 2010), repromulgated LR 36:1536 (July 2010), amended by the Office of the Secretary, Legal Division, LR 38:2756 (November 2012), LR 43:1142 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 43:2138 (November 2017), LR 46:934 (July 2020).

§1909. General Operating Requirements

A. Hazardous wastes or treatment reagents must not be placed in a tank system if they could cause the tank, its ancillary equipment, or the containment system to rupture, leak, corrode, or otherwise fail.

B. The owner or operator must use appropriate controls and practices to prevent spills and overflows from tank or containment systems. These include at a minimum:

1. spill prevention controls (e.g., check valves, dry disconnect couplings);

2. overflow prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff or bypass to a standby tank); and

3. maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation.

C. The owner or operator must comply with the requirements of LAC 33:V.1913 if a leak or spill occurs in the tank system.

D. Owners or operators must provide documentation, maintained on-site, that batch tanks subject to the

accumulation time exclusions of LAC 33:V.1013.C and 1015.B have been emptied and cleaned of all residues and/or sludges at least once in each 90-day period for large quantity generators and at least once in each 180-day period for small quantity generators.

1. A batch tank is deemed emptied and cleaned for the purposes of this Subsection if it has been emptied to the maximum extent practicable and:

a. for tanks used to store similar wastes (compatible), cleaning/rinsing or removal of hazardous waste to a level at which no more than 2.5 centimeters (1 inch) of waste on the bottom of the tank or 3 percent by volume of the total tank capacity remains in the tank is required; or

b. for tanks that may be used to store dissimilar (incompatible) wastes, cleaning/rinsing by method(s) necessary to remove all hazardous wastes to a level which precludes any incompatibility reactions and is sufficient to allow visible inspection of all tank interior surfaces is required.

2. Notwithstanding the provisions of Paragraph D.1 of this Section, except to the extent otherwise approved by the administrative authority, batch tanks subject to the accumulation time exclusions of LAC 33:V.1013.C and 1015.B must be completely emptied and cleaned once per year to a level sufficient to allow visual inspection of all tank interior surfaces.

E. Owners or operators must provide documentation, maintained on-site, that continuous-flow tanks subject to the accumulation time exclusions of LAC 33:V.1013.C and 1015.B have been emptied at least once in each 90-day period for large quantity generators and once in each 180-day period for small quantity generators.

1. A continuous-flow tank is deemed emptied if the owner or operator can demonstrate, via a mass balance approach and appropriate documentation or methodology, that hazardous waste has not been stored therein for more than the accumulation time limits. The key parameters in the mass balance approach are the volume of the tank, the daily throughput of the hazardous waste, and the time period the hazardous waste “resides” in the tank. As an example, in the case of a large quantity generator with a 6,000 gallon tank and daily throughput of 300 gallons per day, the hazardous waste would have a residence time of 20 days (i.e., 6,000 gallons/300 gallons per day) and would meet the requirements of LAC 33:V.1015.B since the hazardous waste has been in the tank for less than 90 days.

2. The documentation or methodology that is used by the owner or operator to confirm a continuous-flow tank’s compliance with Paragraph E.1 of this Section must be reasonable and easily discernible to the department.

3. A continuous-flow tank in which a significant amount of residue or sludge is accumulated may not qualify for the accumulation time exclusions of LAC 33:V.1013.C and 1015.B. Therefore, the owner or operator of a continuous-flow tank for which that exclusion is claimed

must ensure that significant accumulation of residue or sludge does not occur in the tank by satisfying the requirements either of Subsection D of this Section (in which case the words “continuous-flow tank” shall be substituted for the words “batch tank” in each instance where “batch tank” appears in that Subsection), or of Paragraph E.4 of this Section.

4. The owner or operator must provide documentation, maintained on-site, establishing that significant accumulations of residue or sludge do not occur within the tank; i.e., almost all residues or sludges in the tank at the beginning of the 90-day or 180-day accumulation period have been removed (or displaced by incoming waste or newly-formed residues or sludges) by the end of the 90-day or 180-day accumulation period. The determination of what constitutes “significant accumulation of residue or sludge” shall be made on a case-by-case basis. However, no significant accumulation of residues or sludges shall be deemed to have occurred if the residues or sludges that accumulate in the tank constitute less than 5 percent by volume of the total tank capacity. To the extent that there is no significant accumulation of residue or sludge in the tank, the one-year storage prohibition under LAC 33:V.2205 shall not apply to any residue or sludge contained therein.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:651 (November 1987), LR 16:614 (July 1990), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1804 (October 1999), amended by the Office of the Secretary, Legal Affairs Division, LR 36:1237 (June 2010), repromulgated LR 36:1538 (July 2010), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:935 (July 2020).

§1911. Inspections

A. The owner or operator must develop and follow a schedule and procedure for inspecting overfill controls.

B. The owner or operator must inspect, at least once each operating day, data gathered from monitoring and leak detection equipment (e.g., pressure or temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design.

C. In addition, except as noted under Subsection D of this Section, the owner or operator must inspect at least once each operating day:

1. aboveground portions of the tank system, if any, to detect corrosion or releases of waste; and

2. the construction materials and the area immediately surrounding the externally accessible portion of the tank system, including the secondary containment system (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation).

D. Owners or operators of tank systems that either use leak detection systems to alert facility personnel to leaks, or implement established workplace practices to ensure that

leaks are promptly identified, must inspect at least weekly those areas described in Paragraphs C.1 and 2 of this Section. Use of the alternate inspection schedule must be documented in the facility's operating record. This documentation must include a description of the established workplace practices at the facility.

E. Ancillary equipment that is not provided with secondary containment, as described in LAC 33:V.1907.F.1-4, must be inspected at least once each operating day.

F. The owner or operator must inspect cathodic protection systems, if present, according to, at a minimum, the following schedule to ensure that they are functioning properly:

1. the proper operation of the cathodic protection system must be confirmed within six months after initial installation and annually thereafter; and

2. all sources of impressed current must be inspected and/or tested, as appropriate, at least bimonthly (i.e., every other month).

G. The owner or operator must document in the operating record of the facility an inspection of those items in Subsections A-C and F of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 13:651 (November 1987), LR 14:790 (November 1988), amended by the Office of the Secretary, Legal Affairs Division, LR 34:995 (June 2008).

§1913. Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems

A tank system or secondary containment system from which there has been a leak or spill, or that is unfit for use, must be removed from service immediately, and the owner or operator must satisfy the following requirements.

A. Cessation of Use; Prevent Flow or Addition of Wastes. The owner or operator must immediately stop the flow of hazardous waste into the tank system or secondary containment system and inspect the system to determine the cause of the release.

B. Removal of Waste from Tank System or Secondary Containment System

1. If the release was from the tank system, the owner/operator must, within 24 hours after detection of the leak or, if the owner/operator demonstrates that it is not possible, at the earliest practicable time, remove as much of the waste as is necessary to prevent further release of hazardous waste to the environment and to allow inspection and repair of the tank system to be performed.

2. If the material released was to a secondary containment system all released material must be removed within 24 hours or in as timely a manner as is possible to prevent harm to human health and the environment.

C. Containment of Visible Releases to the Environment. The owner/operator must immediately conduct a visual inspection of the release and, based upon that inspection:

1. prevent further migration of the leak or spill to soils or surface water; and

2. remove, and properly dispose of, any visible contamination of the soil or surface water.

D. Notifications, Reports (LAC 33:V.105.A)

1. Any release to the environment, except as provided in LAC 33:V.1913.D.2, must be reported to the Office of Environmental Compliance in accordance with LAC 33:I.3923 within 24 hours of its detection. If the release has been reported in accordance with LAC 33:V.105.J, that report will satisfy this requirement.

2. A leak or spill of hazardous waste is exempted from this Subsection if it is:

- a. less than or equal to a quantity of one pound; and
- b. immediately contained and cleaned-up.

3. Within 30 days of detection of a release to the environment, a report containing the following information must be submitted to SPOC:

- a. likely route of migration of the release;
- b. characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate);
- c. results of any monitoring or sampling conducted in connection with the release (if available). If sampling or monitoring data relating to the release are not available within 30 days, these data must be submitted to the administrative authority as soon as they become available;
- d. proximity to downgradient drinking water, surface water, and population areas; and
- e. description of response actions taken or planned.

E. Provision of Secondary Containment, Repair or Closure

1. Unless the owner/operator satisfies the requirements of LAC 33:V.1913.E.2-3 the tank system must be closed in accordance with LAC 33:V.1915.

2. If the cause of the release was a spill that has not damaged the integrity of the system, the owner/operator may return the system to service as soon as the released waste is removed and repairs, if necessary, are made.

3. If the cause of the release was a leak from the primary tank system into the secondary containment system, the system must be repaired prior to returning the tank system to service.

4. If the source of the release was a leak to the environment from a component of a tank system without secondary containment, the owner/operator must provide the component of the system from which the leak occurred with secondary containment that satisfies the requirements of LAC 33:V.1907 before it can be returned to service, unless

the source of the leak is an aboveground portion of a tank system that can be inspected visually. If the source is an aboveground component that can be inspected visually, the component must be repaired and may be returned to service without secondary containment as long as the requirements of LAC 33:V.1913.F are satisfied. If a component is replaced to comply with the requirements of this Subparagraph, that component must satisfy the requirements for new tank systems or components in LAC 33:V.1905 and 1907. Additionally, if a leak has occurred in any portion of a tank system component that is not readily accessible for visual inspection (e.g., the bottom of an inground or onground tank), the entire component must be provided with secondary containment in accordance with LAC 33:V.1907 prior to being returned to use.

F. Certification of Major Repairs. If the owner/operator has repaired a tank system in accordance with Subsection E of this Section and the repair has been extensive (e.g., installation of an internal liner; repair of a ruptured primary containment or secondary containment vessel), the tank system must not be returned to service unless the owner/operator has obtained a certification by an independent, qualified professional engineer in accordance with LAC 33:V.513 that the repaired system is capable of handling hazardous wastes without release for the intended life of the system. This certification must be placed in the operating record and maintained until closure of the facility.

[NOTE: The administrative authority may, on the basis of any information received that there is or has been a release of hazardous waste or hazardous constituents into the environment, issue an order requiring corrective action or such other response as is deemed necessary to protect human health or the environment.]

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 13:651 (November 1987), LR 16:614 (July 1990), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2475 (November 2000), LR 30:1673 (August 2004), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2457 (October 2005), LR 33:2107 (October 2007), LR 34:996 (June 2008).

§1915. Closure and Post-Closure Care

A. At closure of a tank system, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated soils, and structures and equipment contaminated with waste, and manage them as hazardous waste, unless LAC 33:V.109.*Hazardous Waste*.6 applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for tank systems must meet all the requirements specified in LAC 33:V.Chapters 35 and 37.

B. If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in Subsection A of this Section, then the owner or operator must either:

1. close the tank system and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills, LAC 33:V.2521. In addition, for the purposes of closure, post-closure, and financial responsibility, such a tank system is then considered to be a landfill, and the owner or operator must meet all the requirements for landfills specified in LAC 33:V.Chapters 35 and 37;

2. perform a risk assessment to demonstrate that closure with the remaining contaminant levels is protective of human health and the environment in accordance with LAC 33:I.Chapter 13. Any such risk assessment is subject to approval by the administrative authority and must demonstrate that post-closure care is not necessary to adequately protect human health and the environment.

C. If an owner or operator has a tank system that does not have secondary containment that meets the requirements of LAC 33:V.1907.B-F and is not exempt from the secondary containment requirements in accordance with LAC 33:V.1907.G, then:

1. the closure plan for the tank system must include both a plan for complying with Subsection A of this Section and a contingent plan for complying with Subsection B of this Section;

2. a contingent post-closure plan for complying with Subsection B of this Section must be prepared and submitted as part of the permit application;

3. the cost estimates calculated for closure and post-closure care must reflect the costs of complying with the contingent closure plan and the contingent post-closure plan, if those costs are greater than the costs of complying with the closure plan prepared for the expected closure under Subsection A of this Section;

4. financial assurance must be based on the cost estimates in LAC 33:V.1915.C.3;

5. for the purposes of the contingent closure and post-closure plans, such a tank system is considered to be a landfill, and the contingent plans must meet all of the closure, post-closure, and financial responsibility requirements for landfills under LAC 33:V.Chapters 35 and 37.

D. Owners or operators of tanks subject to the accumulation exclusion of LAC 33:V.1015.B are exempt from the requirements of LAC 33:V.Chapters 35 and 37, except for LAC 33:V.3507.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 13:651 (November 1987), amended LR 16:614 (July 1990), LR 18:1256 (November 1992), amended by the Office of Waste Services, Hazardous Waste Division, LR 23:1511 (November 1997), amended by the Office of the Secretary, LR 24:2245 (December 1998), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:935 (July 2020).

§1917. Special Requirements for Ignitable or Reactive Wastes

A. Ignitable or reactive waste must not be placed in tank systems, unless:

1. the waste is treated, rendered, or mixed before or immediately after placement in the tank system so that:

a. the resulting waste, mixture, or dissolved material no longer meets the definition of ignitable or reactive waste under LAC 33:V.4903.B or D; and

b. LAC 33:V.1517.B is complied with; or

2. the waste is stored or treated in such a way that it is protected from any material or conditions that may cause the waste to ignite or react; or

3. the tank system is used solely for emergencies.

B. The owner or operator of a facility where ignitable or reactive waste is stored or treated in a tank must comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in Tables 2-1 through 2-6 of the National Fire Protection Association's "Flammable and Combustible Liquids Code," (1977 or 1981), as incorporated by reference at LAC 33:V.110.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 13:651 (November 1987), amended LR 22:819 (September 1996), amended by the Office of Environmental Assessment, LR 31:1572 (July 2005).

§1919. Special Requirements for Incompatible Wastes

A. Incompatible wastes, or incompatible wastes and materials, must not be placed in the same tank system, unless LAC 33:V.1517.B is complied with.

B. Hazardous waste must not be placed in a tank system that has not been decontaminated and that previously held an incompatible waste or material, unless LAC 33:V.1517.B is complied with.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 13:651 (November 1987).

§1921. Air Emission Standards

A. The owner or operator shall manage all hazardous waste placed in a tank in accordance with the applicable requirements of LAC 33:V.Chapter 17.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1724 (September 1998).

Chapter 20. Integration with Maximum Achievable Control Technology (MACT) Standards

§2001. Options for Incinerators, Cement and Lightweight Aggregate Kilns, Solid Fuel and Liquid Fuel Boilers, and Hydrochloric Acid Production Furnaces to Minimize Emissions from Startup, Shutdown, and Malfunction Events

NOTE: This Chapter is written in a special format to make it easier to understand the regulatory requirements. Like other department regulations, this establishes enforceable legal requirements. For this Chapter, "I" and "you" refer to the owner/operator.

A. Facilities with Existing Permits

1. Revisions to Permit Conditions after Documenting Compliance with MACT. The owner or operator of a RCRA-permitted incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace may request that the administrative authority address permit conditions that minimize emissions from startup, shutdown, and malfunction events under any of the following options when requesting removal of permit conditions that are no longer applicable according to LAC 33:V.3105.B and LAC 33:V.3001.B.

a. Retain Relevant Permit Conditions. Under this option, the administrative authority will:

i. retain permit conditions that address releases during startup, shutdown, and malfunction events, including releases from emergency safety vents, as these events are defined in the facility's startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2); and

ii. specify that these permit conditions apply only when the facility is operating under its startup, shutdown, and malfunction plan.

b. Revise Relevant Permit Requirements

i. Under this option, the administrative authority will:

(a). identify a subset of relevant existing permit requirements, or develop alternative permit requirements, that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history; and

(b). retain or add these permit requirements to the permit to apply only when the facility is operating under its startup, shutdown, and malfunction plan.

ii. Changes That May Significantly Increase Emissions

(a). You must notify the administrative authority in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that

ENVIRONMENTAL QUALITY

may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. You must notify the administrative authority of such changes within five days of making such changes. You must identify in the notification recommended revisions to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.

(b). The administrative authority may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents either upon permit renewal or, if warranted, by modifying the permit under LAC 33:V.323.B.2.c or LAC 33:V.321.C.

c. Remove Permit Conditions. Under this option:

i. you must document that the startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2) has been approved by the administrator under 40 CFR 63.1206(c)(2)(ii)(B); and

ii. the administrative authority will remove permit conditions that are no longer applicable according to LAC 33:V.3105.B and LAC 33:V.3001.B.

2. Addressing Permit Conditions upon Permit Reissuance. The owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that has conducted a comprehensive performance test and submitted to the administrator a Notification of Compliance documenting compliance with the standards of 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122, may request in the application to reissue the permit for the combustion unit that the administrative authority control emissions from startup, shutdown, and malfunction events under any of the following options.

a. RCRA Option A. Under this option, the administrative authority will:

i. include, in the permit, requirements that ensure compliance with LAC 33:V.3117.B and C or LAC 33:V.3005.E.1 and 2.c to minimize emissions of toxic compounds from startup, shutdown, and malfunction events, including releases from emergency safety vents; and

ii. specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan.

b. RCRA Option B

i. Under this option, the administrative authority will:

(a). include, in the permit, conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history; and

(b). specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan.

ii. Changes That May Significantly Increase Emissions

(a). You must notify the administrative authority in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. You must notify the administrative authority of such changes within five days of making such changes. You must identify in the notification recommended revisions to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.

(b). The administrative authority may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents either upon permit renewal or, if warranted, by modifying the permit under LAC 33:V.323.B.2.c or LAC 33:V.321.C.

c. CAA Option. Under this option:

i. you must document that the startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2) has been approved by the administrator under 40 CFR 63.1206(c)(2)(ii)(B); and

ii. the administrative authority will remove permit conditions that are no longer applicable under LAC 33:V.3105.B and LAC 33:V.3001.B.

B. Interim Status Facilities

1. Interim Status Operations. In compliance with LAC 33:V.4513 and LAC 33:V.3001.B, the owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of LAC 33:V.Chapters 30 and 43 may control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options after conducting a comprehensive performance test and submitting to the administrator a Notification of Compliance documenting compliance with the standards of 40 CFR Part 63, Subpart EEE, as incorporated by reference at LAC 33:III.5122.

a. RCRA Option. Under this option, you must continue to comply with the interim status emission standards and operating requirements of LAC 33:V.Chapters 30 and 43 relevant to control of emissions from startup, shutdown, and malfunction events. Those standards and requirements apply only during startup, shutdown, and malfunction events.

b. CAA Option. Under this option, you are exempt from the interim status standards of LAC 33:V.Chapters 30 and 43 relevant to control of emissions of toxic compounds during startup, shutdown, and malfunction events upon

submission of written notification and documentation to the administrative authority that the startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2) has been approved by the administrator under 40 CFR 63.1206(c)(2)(ii)(B).

2. Operations under a Subsequent RCRA Permit. When an owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of LAC 33:V.Chapters 30 and 43 submits a RCRA permit application, the owner or operator may request that the administrative authority control emissions from startup, shutdown, and malfunction events under any of the options provided by Subparagraph A.2.a, b, or c of this Section.

C. New Units. Hazardous waste incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, and hydrochloric acid production furnace units that become subject to RCRA permit requirements after October 12, 2005, must control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options:

1. comply with the requirements specified in 40 CFR 63.1206(c)(2); or

2. request to include in the RCRA permit, conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information, including the source's startup, shutdown, and malfunction plan and design. The administrative authority will specify that these permit conditions apply only when the facility is operating under its startup, shutdown, and malfunction plan.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 29:320 (March 2003), amended by the Office of the Secretary, Legal Affairs Division, LR 34:624 (April 2008).

Chapter 21. Containers

§2101. Applicability

A. The regulations in this Chapter apply to owners and operators of all hazardous waste facilities that store hazardous waste in containers, except as otherwise provided in LAC 33:V.1501. Under the definition of *empty container* in LAC 33:V.109 and 4901.D.3, if a hazardous waste is emptied from a container the residue remaining in the container is not considered a hazardous waste if the container meets the definition of *empty container* as defined in LAC 33:V.109. In that event, management of the container is exempt from the requirements of this Chapter.

B. Containers not exempted from these regulations shall be considered hazardous and shall be disposed of or treated by an acceptable waste disposal or treatment method.

C. If a hazardous waste is emptied from a container, the residue remaining in the container is not considered a hazardous waste if the container is empty as defined in LAC 33:V.109. In that event, management of the container is exempt from the requirements of this Chapter.

D. Empty containers sent to a reclaimer are considered product, and thus are not subject to these rules and regulations. Residue from the reclaimer's operations must be disposed of in a permitted facility.

E. The storage of hazardous waste prohibited from land disposal must also be in accordance with the requirements of LAC 33:V.2205.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1107 (June 1998), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:936 (July 2020).

§2103. Condition of Containers

A. If a container holding hazardous waste is not in good condition (e.g., severe rusting, apparent structural defects) or if it begins to leak, the owner or operator must transfer the hazardous waste from this container to a container that is in good condition or manage the waste in some other way that complies with the requirements of this Chapter.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2105. Compatibility of Waste with Containers

A. The owner or operator must use a container made of or lined with materials which will not react with, or be incompatible with, the hazardous waste to be stored, so that the ability of the container to contain the waste is not impaired.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2107. Management of Containers

A. A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.

B. A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste,

ENVIRONMENTAL QUALITY

Hazardous Waste Division, LR 10:200 (March 1984), repromulgated LR 18:1256 (November 1992).

§2109. Inspections

A. At least weekly, the owner or operator must inspect areas where containers are stored. The owner or operator must look for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors. Remedial action as described in LAC 33:V.1509.C and 2103 shall be taken if deterioration or leaks are detected.

B. All containers must be stacked in such a fashion that each container identification label can be read from the access aisle.

C. All inspection records must be maintained according to the recordkeeping requirements of LAC 33:V.1529.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), repromulgated LR 18:1256 (November 1992), amended by the Office of the Secretary, Legal Affairs Division, LR 34:996 (June 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:936 (July 2020).

§2111. Containment

A. Container storage areas must have a containment system that is designed and operated in accordance with LAC 33:V.2111.B except as otherwise provided by LAC 33:V.2111.C.

B. A containment system must be designed and operated as follows:

1. a base must underlie the containers which is free of cracks or gaps and is sufficiently impervious to contain leaks, spills, and accumulated precipitation until the collected material is detected and removed;

2. the base must be sloped or the containment system must be otherwise designed and operated to drain and remove liquids resulting from leaks, spills, or precipitation, unless the containers are elevated or are otherwise protected from contact with accumulated liquids;

3. the containment system must have sufficient capacity to contain 10 percent of the volume of containers or the volume of the largest container, whichever is greater. Containers that do not contain free liquids need not be considered in this determination;

4. run-on into the containment system must be prevented unless the collection system has sufficient excess capacity in addition to that required in LAC 33:V.2111.B.3 to contain any run-on which might enter the system;

5. spilled or leaked waste and accumulated precipitation must be removed from the sump or collection area in as timely a manner as is necessary to prevent overflow of the collection system; and

6. if the collected material is a hazardous waste, it must be managed as a hazardous waste in accordance with all applicable requirements.

C. Storage areas that store containers holding only wastes that do not contain free liquids need not have a containment system defined by LAC 33:V.2111.B, except as provided by LAC 33:V.2111.D or provided that:

1. the storage area is sloped or is otherwise designed and operated to drain and remove liquid resulting from precipitation; or

2. the containers are elevated or are otherwise protected from contact with accumulated liquid.

D. Storage areas that store containers holding the wastes listed below must have a containment system defined by LAC 33:V.2111.B even when these wastes do not contain free liquids: F020, F021, F022, F023, F026, and F027.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:220 (March 1990).

§2113. Special Requirements for Ignitable or Reactive Wastes

A. Containers holding ignitable or reactive waste must be located at least 15 meters (50 feet) from the facility property line. (See LAC 33:V.1517 for additional requirements or LAC 33:V.4321 for additional requirements for interim status facilities.)

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2115. Special Requirements for Incompatible Wastes

A. Incompatible wastes, or incompatible wastes and materials, must not be placed in the same container unless LAC 33:V.1517 or LAC 33:V.4321 for interim status facilities is complied with.

B. Hazardous wastes must not be placed in an unwashed container that previously held an incompatible waste or material.

C. A storage container holding a hazardous waste that is incompatible with any waste or other materials stored nearby in other containers, piles, open tanks, or surface impoundments must be separated from the other materials or protected from them by means of a dike, berm, wall, other device, or approved management technique.

D. The owner or operator must place the results of each waste analysis and trial test and any documented information regarding compatibility testing in the operating record of the facility.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 18:1256 (November 1992).

§2117. Closure

A. At closure, all hazardous waste and hazardous waste residues must be removed from the containment system. Remaining containers, liners, bases, and soil containing or contaminated with hazardous waste or hazardous waste residues must be decontaminated or removed. At closure, as throughout the operating period, unless the owner or operator can demonstrate in accordance with LAC 33:V.109.Hazardous Waste.6 that the solid waste removed from the containment system is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and must manage it in accordance with all applicable requirements of LAC 33:V.Chapters 10-43.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:936 (July 2020).

§2119. Air Emission Standards

A. The owner or operator shall manage all hazardous waste placed in a container in accordance with the applicable requirements of LAC 33:V.Chapter 17.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1724 (September 1998).

Chapter 22. Prohibitions on Land Disposal
Subchapter A. Land Disposal Restrictions

§2201. Purpose, Scope, and Applicability

A. This Chapter is adopted pursuant to the authority of Act 1984, Number 803, as amended by Act 1986, Number 422, and Act 1987, Number 852, cited as Louisiana Revised Statutes Title 30, Section 2193.

B. The purpose of these regulations is to provide for prohibitions and incentives designed to encourage alternative methods of hazardous waste disposal, destruction, and reduction; to lessen the possibility of hazardous waste releases from existing land disposal sites; and to provide for the eventual prohibition of land disposal of hazardous waste.

C. This Chapter identifies hazardous wastes that are restricted from land disposal and defines those limited circumstances under which an otherwise prohibited waste may continue to be land disposed.

D. The requirements of this Chapter apply to all persons who generate or transport hazardous waste and to owners and operators of hazardous waste treatment, storage, and disposal facilities.

E. These regulations shall be construed and implemented to support the use of the following waste management practices in the following order of priority:

1. reduction of hazardous waste generated;
2. recycling of hazardous waste;
3. treatment of hazardous waste; and
4. land disposal of residuals from hazardous waste recycling and treatment.

F. The policies and determinations that the administrative authority makes pursuant to these regulations shall assert and reflect the primacy of waste reduction.

G. Prohibited wastes may continue to be land disposed as follows:

1. where persons have been granted an extension to the effective date of a prohibition under LAC 33:V.Chapter 22.Subchapter A or in accordance with LAC 33:V.2239 with respect to those wastes covered by the extension;

2. where persons have been granted an approval from a prohibition in accordance with a petition under LAC 33:V.2241 or 2271, or a determination made in accordance with LAC 33:V.2273, with respect to those wastes and units covered by the petition;

3. Reserved.

4. wastes that are hazardous only because they exhibit a hazardous characteristic, and which are otherwise prohibited under this Chapter, are not prohibited if the wastes:

a. are disposed into a nonhazardous or hazardous injection well as defined in LAC 43:XVII.203.C; and

b. do not exhibit any prohibited characteristic of hazardous waste identified in LAC 33:V.4903 at the point of injection at the well head;

5. wastes that are hazardous only because they exhibit a hazardous characteristic and which are otherwise prohibited under this Chapter are not prohibited if the wastes meet any of the following criteria, unless the wastes are subject to a specified method of treatment other than DEACT in LAC 33:V.2299.Appendix, Table 2, or are D003 reactive cyanide:

a. the wastes are managed in a treatment system which subsequently discharges to waters of the United States pursuant to a permit issued under Section 402 of the Clean Water Act; or

b. the wastes are treated for purposes of the pretreatment requirements of Section 307 of the Clean Water Act; or

ENVIRONMENTAL QUALITY

c. the wastes are managed in a zero discharge system engaged in Clean Water Act-equivalent treatment as defined in LAC 33:V.2221.D.1; and

d. the wastes no longer exhibit a prohibited characteristic at the point of land disposal (i.e., placement in a surface impoundment).

H. The requirements of this Section shall not affect the availability of a waiver under Section 121(d)(4) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA).

I. The following hazardous wastes are not subject to any provision of this Chapter:

1. waste pesticides that a farmer disposes of in accordance with LAC 33:V.1003.C;

2. waste identified or listed as hazardous after November 8, 1984, for which EPA has not promulgated land disposal prohibitions or treatment standards;

3. de minimis losses of characteristic wastes to wastewaters are not considered to be prohibited wastes and are defined as losses from normal material handling operations (e.g., spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves or other devices used to transfer materials); minor leaks of process equipment, storage tanks, or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; rinsate from empty containers or from containers that are rendered empty by that rinsing; and laboratory wastes not exceeding 1 percent of the total flow of wastewater into the facility's headworks on an annual basis or with a combined annualized average concentration not exceeding one part per million in the headworks of the facility's wastewater treatment or pretreatment facility;

4. waste generated by *very small quantity generators*, as defined in LAC 33:V.1009;

5. universal waste handlers and universal waste transporters (as defined in LAC 33:V.3813) are exempt from LAC 33:V.2205, 2245.A-I, 2246.E, and 2247 for the wastes listed below. These handlers are subject to regulation under LAC 33:V.Chapter 38, when handling the below listed universal wastes:

- a. batteries as described in LAC 33:V.3803;
- b. pesticides as described in LAC 33:V.3805;
- c. mercury-containing equipment as described in LAC 33:V.3807;
- d. lamps as described in LAC 33:V.3809;
- e. electronics as described in LAC 33:V.3810; and
- f. antifreeze as described in LAC 33:V.3811.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:398 (May 1990), LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 18:723 (July 1992), LR 21:266 (March 1995), LR 22:22 (January 1996), LR 23:568 (May 1997), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:300 (February 1998), LR 24:666 (April 1998), LR 24:1107 (June 1998), LR 24:1724 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1799 (October 1999), LR 27:711 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 31:3117 (December 2005), amended by the Office of the Secretary, Legal Division, LR 43:1142 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:936 (July 2020).

§2203. Definitions Applicable to This Chapter

A. When used in this Chapter the following terms have the meanings given below.

Cone of Influence—that area around the well within which increased injection zone pressures caused by injection into the waste injection well could drive fluids into an underground source of drinking water (USDW).

Confining Zone—a geological formation, group of formations, or part of a formation that is capable of limiting fluid movement above an injection zone.

Debris—solid material exceeding a 60-mm particle size that is intended for disposal and that is a manufactured object, or plant or animal matter, or natural geologic material. However, the following materials are not debris: any material for which a specific treatment standard is provided in LAC 33:V.Chapter 22.Subchapter A, namely lead acid batteries, cadmium batteries, and radioactive lead solids; process residuals such as smelter slag and residues from the treatment of waste, wastewater, sludges, or air emission residues; and intact containers of hazardous waste that are not ruptured and that retain at least 75 percent of their original volume. A mixture of debris that has not been treated to the standards provided by LAC 33:V.2230 with other material is subject to regulation as debris if the mixture is comprised primarily of debris, by volume, based on visual inspection.

Duly Authorized Representative—an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager or superintendent, or a position of equivalent responsibility (a duly authorized representative may be thus be either a named individual or any individual occupying a named position), designated or named in writing by one of the following:

a. for a corporation, by a responsible corporate officer; for the purposes of this Chapter, *responsible corporate officer* means:

i. a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

ii. the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

b. for a partnership or sole proprietorship, by a general partner or the proprietor, respectively;

c. for a municipality, state, federal, or other public agency, by either a principal executive officer or ranking elected official.

Formation—a body of consolidated or unconsolidated rock characterized by a degree of lithologic homogeneity which is prevailing, but not necessarily, tabular and is mappable on the earth's surface or traceable in the subsurface.

Halogenated Organic Compounds or *HOCs*—those compounds having a carbon-halogen bond which are listed in LAC 33:V.2299, Appendix, Table 5.

Hazardous Constituent(s)—those constituents listed in LAC 33:V.3105, Table 1.

Hazardous Debris—debris that contains a hazardous waste listed in LAC 33:V.4903 or that exhibits a characteristic of hazardous waste identified in LAC 33:V.4901. Any deliberate mixing of prohibited hazardous waste with debris that changes its treatment classification (i.e., from waste to hazardous debris) is not allowed under the dilution prohibition in LAC 33:V.2207.

Injection Interval—the part of the injection zone in which the well is screened, or in which the waste is otherwise directly emplaced.

Injection Zone—a geological formation, group of formations, or part of a formation receiving fluids through an injection well.

Inorganic Metal-Bearing Waste—a waste for which the department has established treatment standards for metal hazardous constituents and which does not otherwise contain significant organic or cyanide content as described in LAC 33:V.2207.C.1, and is specifically listed in LAC 33:V.2299, Appendix, Table 5.

Land Disposal—placement in or on the land, except in a corrective action management unit or staging pile, and includes, but is not limited to, placement in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt-dome formation, salt-bed formation, underground mine or cave, or placement in a concrete vault or bunker intended for disposal purposes.

Mechanical Integrity—an injection well has mechanical integrity if:

a. there is no significant leak in the casing, tubing, or packer; and

b. there is no significant fluid movement into an underground source of drinking water through vertical channels adjacent to the injection well bore.

Nonwastewaters—wastes that do not meet the criteria for wastewaters defined in this Section.

Petitioner—a person, or his or her duly authorized representative, who has legal authority and responsibility for a facility that generates, transports, treats, stores, or disposes of any hazardous waste, and who submits a written request to the administrative authority for an exemption, extension, or variance to allow the land disposal of an otherwise prohibited waste.

Polychlorinated Biphenyls or *PCBs*—any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees, or any combination of substances which contains such substance.

Soil—unconsolidated earth material composing the superficial geologic strata (material overlying bedrock), consisting of clay, silt, sand, or gravel size particles as classified by the U.S. Soil Conservation Service, or a mixture of such materials with liquids, sludges, or solids, that is inseparable by simple mechanical removal processes and is made up primarily of soil by volume based on visual inspection. Any deliberate mixing of prohibited hazardous waste with soil that changes its treatment classification (i.e., from waste to contaminated soil) is not allowed under the dilution prohibition in LAC 33:V.2207.

Transmissive Fault or Fracture—a fault or fracture that has sufficient permeability and vertical extent to allow fluids to move between formations.

Underground Source of Drinking Water or *USDW*—an aquifer or its portion:

- a. which supplies any public water system; or
- b. which contains a sufficient quantity of groundwater to supply a public water system, and:
 - i. currently supplies drinking water for human consumption; or
 - ii. contains fewer than 10,000 mg/L total dissolved solids; and
- c. which is not an aquifer exempted by the Department of Natural Resources, Office of Conservation.

Underlying Hazardous Constituent—any constituent listed in LAC 33:V.2299, Appendix, Table 7, Universal Treatment Standards, except fluoride, selenium, sulfides, vanadium, and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste at a concentration above the constituent-specific UTS treatment standard.

Wastewaters—wastes that contain less than 1 percent by weight total organic carbon (TOC) and less than 1 percent by weight total suspended solids (TSS).

B. All other terms are used as defined in Chapter 1 of these regulations.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:221 (March 1990), LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 21:266 (March 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:667 (April 1998), LR 25:442 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:280 (February 2000), amended by the Office of the Secretary, Legal Division, LR 43:1142 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:896 (July 2020).

§2205. Storage of Prohibited Wastes

A. The storage of hazardous wastes prohibited from land disposal is prohibited except under the following conditions.

1. A generator may store such wastes in tanks, containers, or containment buildings on-site solely for the purpose of accumulating such quantities of hazardous waste as are necessary to facilitate proper recovery, treatment, or disposal and the generator complies with the requirements of LAC 33:V.1013, 1015, Chapters 10, 11, 15, 17, 18, 19, 21, 23, 24, 25, 26, 27, 28, 29, 31, 32, 33, 35, 37, 43, and 51.

2. An owner/operator of a hazardous waste treatment, storage, or disposal facility may store such wastes in tanks, containers, or containment buildings solely for the purpose of accumulating such quantities of hazardous waste as are necessary to facilitate proper recovery, treatment, or disposal provided that:

a. each container is clearly marked to identify its contents and with:

i. the words "Hazardous Waste";

ii. the applicable EPA hazardous waste number(s) (EPA hazardous waste codes) in LAC 33:V.4901 and 4903; or use a nationally recognized electronic system, such as bar coding, to identify the EPA hazardous waste number(s);

iii. an indication of the hazards of the contents (examples include, but are not limited to, the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic); hazard communication consistent with the U.S. Department of Transportation requirements at 49 CFR part 172 subpart E (labeling) or subpart F (placarding); a hazard statement or pictogram consistent with the U.S. Occupational Safety and Health Administration Hazard Communication Standard at 29 CFR 1910.1200; or a chemical hazard label consistent with the National Fire Protection Association code 704); and

iv. the date each period of accumulation begins; and

b. each tank is clearly marked with a description of its contents, the quantity of each hazardous waste received, and the date each period of accumulation begins, or such

information for each tank is recorded and maintained in the operating record at that facility. Regardless of whether the tank itself is marked, an owner/operator must comply with the operating record requirements specified in LAC 33:V.1529 or 4357.

3. A transporter may store manifested shipments of such wastes at a transfer facility for 10 days or less with the approval of the administrative authority in accordance with LAC 33:V.1305.

B. An owner/operator of a treatment, storage, or disposal facility may store such wastes for up to one year provided that such storage is solely for the purpose of accumulating such quantities of hazardous wastes as are necessary to facilitate proper recovery, treatment, or disposal. In response to a request from the administrative authority, the owner/operator must prove that storage for less than one year is solely for the purpose of accumulating such quantities of hazardous waste as are necessary to facilitate proper recovery, treatment, or disposal.

C. An owner/operator of a treatment, storage, or disposal facility may store such wastes beyond one year with the approval of the administrative authority; however, the owner/operator bears the burden of proving that such storage is solely for the purpose of accumulation of such quantities of hazardous waste as are necessary to facilitate proper recovery, treatment, or disposal.

D. The prohibition in Subsection A of this Section does not apply to hazardous wastes that are the subject of an approval under LAC 33:V.2241 or 2271, or a determination under LAC 33:V.2273, a case-by-case extension of time under LAC 33:V.2239, or a national capacity variance.

E. The prohibition in Subsection A of this Section does not apply to hazardous wastes that:

1. meet the treatment standards specified under LAC 33:V.2223 or 2227; or

2. have been granted a variance under LAC 33:V.2231; or

3. if treatment standards have not been specified, are in compliance with the applicable prohibitions specified in LAC 33:V.2213.

F. Liquid hazardous wastes containing polychlorinated biphenyls (PCBs) at concentrations greater than or equal to 50 ppm must be stored at a facility that meets the requirements of 40 CFR 761.65(b) and must be removed from storage and treated or disposed as required by this Chapter within one year of the date when such wastes are first placed into storage. The provisions of Subsection C of this Section do not apply to PCB wastes prohibited under LAC 33:V.2213.

G. Notwithstanding the above, any storage facility must be in full compliance with all applicable hazardous waste rules pertaining to storage.

H. The prohibition and requirements in this Section do not apply to hazardous remediation wastes stored in a staging pile approved in accordance with to LAC 33:V.2605.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:220 (March 1990), LR 17:658 (July 1991), LR 21:266 (March 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1724 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1799 (October 1999), LR 26:280 (February 2000), LR 27:711 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 32:827 (May 2006), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:936 (July 2020).

§2207. Dilution Prohibited as a Substitute for Treatment

A. Except as provided in Subsection B of this Section, no generator, transporter, handler, or owner or operator of a treatment, storage, or disposal facility shall in any way dilute a prohibited waste or the residual from treatment of a prohibited waste as a substitute for adequate treatment to achieve compliance with this Chapter, to circumvent the effective date of or otherwise avoid a prohibition listed in Subchapter A of this Chapter, or to circumvent a land disposal prohibition imposed by RCRA section 3004.

B. Dilution of wastes that are hazardous only because they exhibit a characteristic in treatment systems that include land-based units which treat wastes subsequently discharged to a water of the United States pursuant to a permit issued under Section 402 of the Clean Water Act (CWA) or which treat wastes in a CWA-equivalent treatment system or which treat wastes for purposes of pretreatment requirements under Section 307 of the CWA is not impermissible dilution for purposes of this Section unless a method other than DEACT has been specified in LAC 33:V.2223 as the treatment standard, or unless the waste is a D003 reactive cyanide wastewater or nonwastewater.

C. Combustion of the hazardous waste codes listed in LAC 33:V.2299.Appendix, Table 5 is prohibited, unless the waste, at the point of generation, or after any bona fide treatment, such as cyanide destruction prior to combustion, can be demonstrated to comply with one or more of the following criteria (unless otherwise specifically prohibited from combustion):

1. the waste contains hazardous organic constituents or cyanide at levels exceeding the constituent-specific treatment standard found in LAC 33:V.2299.Appendix, Table 7;

2. the waste consists of organic, debris-like materials (e.g., wood, paper, plastic, or cloth) contaminated with an inorganic metal-bearing hazardous waste;

3. the waste, at point of generation, has reasonable heating value, such as greater than or equal to 5,000 BTU per pound;

4. the waste is cogenerated with wastes for which combustion is a required method of treatment;

5. the waste is subject to federal and/or state requirements necessitating reduction of organics (including biological agents); or

6. the waste contains greater than 1 percent Total Organic Carbon (TOC).

D. It is a form of impermissible dilution, and therefore prohibited, to add iron filings or other metallic forms of iron to lead-containing hazardous wastes in order to achieve any land disposal restriction treatment standard for lead. Lead-containing wastes include D008 wastes (wastes exhibiting a characteristic due to the presence of lead), all characteristic wastes containing lead as an underlying hazardous constituent, listed wastes containing lead as a regulated constituent, and hazardous media containing any of the aforementioned lead-containing wastes.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:1057 (December 1990), LR 21:266 (March 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:667 (April 1998), LR 25:443 (March 1999), amended by the Office of the Secretary, Legal Division, LR 43:1142 (June 2017).

§2208. Waste-Specific Prohibitions—Dyes and/or Pigments Production Wastes

A. Effective August 23, 2005, the waste specified in 40 CFR Part 261 as EPA Hazardous Waste Number K181, and soil and debris contaminated with this waste, radioactive wastes mixed with this waste, and soil and debris contaminated with radioactive wastes mixed with this waste are prohibited from land disposal.

B. The requirements of Subsection A of this Section do not apply if:

1. the wastes meet the applicable treatment standards specified in LAC 33:V.2223;

2. persons have been granted an exemption from a prohibition pursuant to a petition under LAC 33:V.2241, with respect to those wastes and units covered by the petition;

3. the wastes meet the applicable treatment standards established pursuant to a petition granted under LAC 33:V.2231;

4. hazardous debris has met the treatment standards in LAC 33:V.2223, or the alternative treatment standards in LAC 33:V.2230; or

5. persons have been granted an extension to the effective date of a prohibition in accordance with LAC 33:V.2239, with respect to those wastes covered by the extension.

C. To determine whether a hazardous waste identified in this Section exceeds the applicable treatment standards specified in LAC 33:V.2223, the initial generator must test a sample of the waste extract or the entire waste, depending on whether or not the treatment standards are expressed as concentrations in the waste extract of the waste, or the generator may use knowledge of the waste. If the waste contains regulated constituents in excess of the applicable LAC 33:V.2223 levels, the waste is prohibited from land disposal, and all requirements of this Chapter are applicable, except as otherwise specified.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of the Secretary, Legal Affairs Division, LR 32:828 (May 2006).

§2209. Waste-Specific Prohibitions—Wood Preserving Wastes

A. Effective September 20, 1998, the following wastes are prohibited from land disposal: the wastes specified in LAC 33:V.Chapter 49 as EPA hazardous waste numbers F032, F034, and F035.

B. Effective May 12, 1999, the following wastes are prohibited from land disposal: soil and debris contaminated with F032, F034, F035, and radioactive wastes mixed with EPA hazardous waste numbers F032, F034, and F035.

C. Between September 20, 1998 and May 12, 1999, soil and debris contaminated with F032, F034, F035, and radioactive waste mixed with F032, F034, and F035 may be disposed in a landfill or surface impoundment only if such unit is in compliance with the requirements specified in 40 CFR 268.5(h)(2).

D. The requirements of Subsections A and B of this Section do not apply if:

1. an exemption or an approval has been granted in accordance with a petition under LAC 33:V.2241 or 2271, or a determination made under LAC 33:V.2273, with respect to those wastes and units covered by the petition;

2. the wastes meet the applicable alternate treatment standards established in accordance with a petition granted under LAC 33:V.2231;

3. the wastes meet the applicable treatment standards specified in this Subchapter; or

4. persons have been granted an extension to the effective date of a prohibition in accordance with LAC 33:V.2239, with respect to those wastes covered by the extension.

E. To determine whether a hazardous waste identified in this Section exceeds the applicable treatment standards specified in LAC 33:V.2223, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable Universal

Treatment Standard levels of LAC 33:V.2299.Appendix, Table 7, the waste is prohibited from land disposal and all requirements of this Chapter are applicable, except as otherwise specified.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 17:658 (July 1991), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1725 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1800 (October 1999), amended by the Office of the Secretary, Legal Division 43:1143 (June 2017).

§2211. Waste-Specific Prohibitions—Dioxin-Containing Wastes

A. The following wastes containing dioxin are deemed to pose the greatest risk to the public when disposed of on land. Therefore, the dioxin-containing wastes specified in LAC 33:V.Chapter 49 as Hazardous Waste Numbers F020, F021, F022, F023, F026, F027, and F028 are prohibited from land disposal.

B. The requirements of Subsection A of this Section do not apply if:

1. the wastes are treated to meet the standard of LAC 33:V.Chapter 22.Subchapter A; or

2. the wastes are disposed of at a facility that has been granted an approval from a prohibition in accordance with a petition under LAC 33:V.2241 or 2271, or a determination made under LAC 33:V.2273, with respect to those wastes covered by the exemption or approval or determination; or

3. an extension to the effective date of a prohibition in accordance with LAC 33:V.2239, with respect to those wastes covered by the extension.

C. Between the effective date of these regulations and November 8, 1990, wastes which are contaminated soil or debris resulting from a response action taken under section 104 or 106 of CERCLA or a corrective action taken under subtitle C of RCRA may be land disposed in a landfill or surface impoundment only if such unit is in compliance with the requirements specified in 40 CFR 268.5(h)(2) and all other applicable requirements of LAC 33:V.Chapter 15 or Chapter 43.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1725 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1800 (October 1999), amended by the Office of the Secretary, Legal Division, LR 43:1143 (June 2017).

§2213. Waste-Specific Prohibitions—Chlorinated Aliphatic Wastes

A. Effective May 8, 2001, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers K174 and K175, soil and debris contaminated with these wastes, radioactive wastes mixed with these wastes, and soil and debris contaminated with radioactive wastes mixed with these wastes are prohibited from land disposal.

B. The requirements of Subsection A of this Section do not apply if:

1. the wastes meet the applicable treatment standards specified in this Chapter;

2. persons have been granted an exemption from a prohibition in accordance with a petition under LAC 33:V.2241 or 2271, with respect to those wastes and units covered by the petition;

3. the wastes meet the applicable treatment standards established in accordance with a petition granted under LAC 33:V.2231;

4. hazardous debris has met the treatment standards in LAC 33:V.2223 or the alternative treatment standards in LAC 33:V.2230; or

5. persons have been granted an extension to the effective date of the prohibition granted in accordance with LAC 33:V.2239, with respect to the wastes covered by the extension.

C. To determine whether a hazardous waste identified in this Section exceeds the applicable treatment standards specified in LAC 33:V.2223, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains regulated constituents in excess of the applicable levels of LAC 33:V.2223, the waste is prohibited from land disposal and all requirements of this Chapter are applicable, except as otherwise specified.

D. Disposal of K175 wastes that have complied with all applicable LAC 33:V.2223 treatment standards must also be macroencapsulated in accordance with LAC 33:V.2299.Appendix, Table 8, unless the waste is placed in:

1. a RCRA Subtitle C monofill containing only K175 wastes that meet all applicable LAC 33:V.2223 treatment standards; or

2. a dedicated RCRA Subtitle C landfill cell in which all other wastes being disposed are at a pH less than or equal to 6.0.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 28:1000 (May 2002).

§2215. Waste Specific Prohibitions—Soils Exhibiting the Toxicity Characteristic for Metals and Containing PCBs

A. Effective December 26, 2000, the following wastes are prohibited from land disposal: any volume of soils exhibiting the toxicity characteristic solely because of metals (D004-D011) and containing PCBs.

B. Requirements of Subsection A of this Section do not apply if:

1. the wastes contain halogenated organic compounds (see LAC 33:V.2299.Appendix, Table 9) in total concentrations of less than 1,000 mg/kg and meet the treatment standards specified in LAC 33:V.2223 for EPA Hazardous Waste Numbers D004-D011, as applicable;

2. the wastes contain halogenated organic compounds in total concentrations of less than 1,000 mg/kg and meet the alternative treatment standards specified in LAC 33:V.2236 for contaminated soil;

3. persons have been granted an exemption from a prohibition in accordance with a petition under LAC 33:V.2241, with respect to those wastes and units covered by the petition; or

4. the wastes meet applicable alternative treatment standards established in accordance with a petition granted under LAC 33:V.2231.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 28:1001 (May 2002).

§2216. Waste-Specific Prohibitions—Toxicity Characteristic Metal Wastes

A. Effective April 20, 1999, the following wastes are prohibited from land disposal: the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers D004-D011 that are newly identified (i.e., wastes, soil, or debris identified as hazardous by the toxicity characteristic leaching procedure, but not the extraction procedure) and waste, soil, or debris from mineral processing operations that is identified as hazardous by the specifications in LAC 33:V.Chapter 49.

B. Effective April 20, 1999, the following waste is prohibited from land disposal: slag from secondary lead smelting which exhibits the toxicity characteristic due to the presence of one or more metals.

C. Effective May 26, 2000, the following wastes are prohibited from land disposal: newly identified characteristic wastes from elemental phosphorus processing; radioactive wastes mixed with EPA Hazardous Waste Numbers D004-D011 that are newly identified (i.e., wastes, soil, or debris identified as hazardous by the toxicity characteristic leaching procedure, but not the extraction procedure); or mixed with newly identified characteristic mineral processing wastes, soil, or debris.

ENVIRONMENTAL QUALITY

D. Between April 20, 1999 and May 26, 2000, newly identified characteristic wastes from elemental phosphorus processing, radioactive waste mixed with EPA hazardous waste numbers D004-D011, wastes that are newly identified (i.e., wastes, soil, or debris identified as hazardous by the toxicity characteristic leaching procedure, but not the extraction procedure) or mixed with newly identified characteristic mineral processing wastes, soil, or debris may be disposed in a landfill or surface impoundment only if such unit is in compliance with the requirements specified in 40 CFR 268.5(h).

E. The requirements of Subsections A and B of this Section do not apply if:

1. the wastes meet the applicable treatment standards specified in LAC 33:V.2223-2236;
2. persons have been granted an exemption from a prohibition in accordance with a petition under LAC 33:V.2241 or 2271, with respect to those wastes and units covered by the petition;
3. the wastes meet the applicable alternate treatment standards established in accordance with a petition granted under LAC 33:V.2231; or
4. persons have been granted an extension to the effective date of a prohibition in accordance with LAC 33:V.2239, with respect to these wastes covered by the extension.

F. To determine whether a hazardous waste identified in this Section exceeds the applicable treatment standards specified in LAC 33:V.2223, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents (including underlying hazardous constituents in characteristic wastes) in excess of the applicable universal treatment standard levels of LAC 33:V.2233, the waste is prohibited from land disposal, and all requirements of this Chapter are applicable, except as otherwise specified.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 25:443 (March 1999), repromulgated LR 25:855 (May 1999), amended by the Office of the Secretary, Legal Division, LR 43:1143 (June 2017).

§2218. Waste-Specific Prohibitions—Petroleum Refining Wastes

A. Effective April 20, 1999, the wastes specified in LAC 33:V.4901.C, Table 2 as EPA Hazardous Wastes Numbers K169, K170, K171, and K172, soils and debris contaminated with these hazardous wastes, radioactive wastes mixed with these hazardous wastes, and soils and debris contaminated with these radioactive mixed wastes, are prohibited from land disposal.

B. The requirements of Subsection A of this Section do not apply if:

1. the wastes meet the applicable treatment standards specified in LAC 33:V.2223-2236;
2. persons who have been granted an exemption from a prohibition in accordance with a petition under LAC 33:V.2241 or 2271, with respect to those wastes and units covered by the petition;
3. the wastes meet the applicable treatment standards established in accordance with a petition granted under LAC 33:V.2231;
4. hazardous debris that have meet the treatment standards in LAC 33:V.2223 or in the alternative treatment standards in LAC 33:V.2230; or
5. persons have been granted an extension to the effective date of a prohibition in accordance with LAC 33:V.2239.

C. To determine whether a hazardous waste identified in this Subsection exceeds the applicable treatment standards specified in LAC 33:V.2223, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable universal treatment standard levels of LAC 33:V.2233, the waste is prohibited from land disposal and all requirements of this Chapter are applicable, except as otherwise stated.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 25:444 (March 1999), repromulgated LR 25:856 (May 1999).

§2219. Waste Specific Prohibitions—Inorganic Chemical Wastes

A. Effective May 20, 2002, the wastes specified in 40 CFR Part 261 as EPA Hazardous Waste Numbers K176, K177, and K178, soil and debris contaminated with these wastes, radioactive wastes mixed with these wastes, and soil and debris contaminated with radioactive wastes mixed with these wastes are prohibited from land disposal.

B. The requirements of Subsection A of this Section do not apply if:

1. the wastes meet the applicable treatment standards specified in LAC 33:V.2223 and LAC 33:V.2299.Appendix, Table 2;
2. persons have been granted an exemption from a prohibition in accordance with a petition under LAC 33:V.2241, with respect to those wastes and units covered by the petition;
3. the wastes meet the applicable treatment standards established in accordance with a petition granted under LAC 33:V.2231;

4. hazardous debris has met the treatment standards in LAC 33:V.2223 or the alternative treatment standards in LAC 33:V.2230; or

5. persons have been granted an extension to the effective date of a prohibition in accordance with LAC 33:V.2239, with respect to those wastes covered by the extension.

C. To determine whether a hazardous waste identified in this Section exceeds the applicable treatment standards specified in LAC 33:V.2223, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains regulated constituents in excess of the applicable levels in LAC 33:V.2223 and LAC 33:V.2299.Appendix, Table 2, the waste is prohibited from land disposal, and all requirements of this Chapter are applicable, except as otherwise specified.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 29:321 (March 2003).

§2221. Schedule of Wastes Identified or Listed after November 8, 1984

A. - C. Reserved.

D. Waste-Specific Prohibitions: Ignitable and Corrosive Characteristic Wastes Whose Treatment Standards Were Vacated

1. Effective March 20, 1995, the wastes specified in LAC 33:V.4903.B as D001 (and is not in the High TOC Ignitable Liquids Subcategory) and specified in LAC 33:V.4903.C as D002 that are managed in systems other than those whose discharge is regulated under the Clean Water Act (CWA) or that inject in Class I deep wells regulated under the Safe Drinking Water Act (SDWA) or that are zero-dischargers that engage in CWA-equivalent treatment before ultimate land disposal are prohibited from land disposal. CWA-equivalent treatment means biological treatment for organics, alkaline chlorination, or ferrous sulfate precipitation for cyanide, precipitation/sedimentation for metals, reduction of hexavalent chromium, or other treatment technology that can be demonstrated to perform equally or better than these technologies.

2. Effective March 20, 1995, the wastes specified in LAC 33:V.4903.B as D001 (and is not in the High TOC Ignitable Liquids Subcategory) and specified in LAC 33:V.4903.C as D002 that are managed in systems defined in LAC 43:XVII.103.C as Class V injection wells that do not engage in CWA-equivalent treatment before injection are prohibited from land disposal.

E. Waste-Specific Prohibitions: Newly Identified Organic Toxicity Characteristic Wastes and Newly Listed Coke By-product and Chlorotoluene Production Wastes

1. Effective September 20, 1995, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers K141, K142, K143, K144, K145, K147, K148, K149, K150, and K151 are prohibited from land disposal. In addition, debris contaminated with EPA Hazardous Waste Numbers F037, F038, K107-K112, K117, K118, K123-K126, K131, K132, K136, U328, U353, and U359 and soil and debris contaminated with D012-D043, K141-K145, and K147-K151 are prohibited from land disposal. The following wastes that are specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers D012, D013, D014, D015, D016, D017, D018, D019, D020, D021, D022, D023, D024, D025, D026, D027, D028, D029, D030, D031, D032, D033, D034, D035, D036, D037, D038, D039, D040, D041, D042, and D043 that are not radioactive or that are managed in systems other than those whose discharge is regulated under the CWA or that are zero dischargers that do not engage in CWA-equivalent treatment before ultimate land disposal or that are injected in Class I deep wells regulated under the SDWA are prohibited from land disposal. CWA-equivalent treatment means biological treatment for organics, alkaline chlorination or ferrous sulfate precipitation for cyanide, precipitation/sedimentation for metals, reduction of hexavalent chromium, or other treatment technology that can be demonstrated to perform equally or better than these technologies.

2. On September 19, 1996, radioactive wastes that are mixed with D018-D043 that are managed in systems other than those whose discharge is regulated under the CWA or that inject in Class I deep wells regulated under the SDWA or that are zero dischargers that engage in CWA-equivalent treatment before ultimate land disposal are prohibited from land disposal. CWA-equivalent treatment means biological treatment of organics, alkaline chlorination or ferrous sulfate precipitation for cyanide, precipitation/sedimentation for metals, reduction of hexavalent chromium, or other treatment technology that can be demonstrated to perform equally or better than these technologies. Radioactive wastes mixed with K141-K145 and K147-K151 are also prohibited from land disposal. In addition, soil and debris contaminated with these radioactive mixed wastes are prohibited from land disposal.

3. Between March 20, 1995 and September 19, 1996, the wastes included in LAC 33:V.2221.E.2 may be disposed in a landfill or surface impoundment, only if such unit is in compliance with the requirements specified in 40 CFR 268.5(h)(2).

4. The requirements of LAC 33:V.2221.E.1-3 do not apply if the following conditions are met:

a. the wastes meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A;

b. persons have been granted an exemption from a prohibition in accordance with a petition under LAC 33:V.2241, with respect to those wastes and units covered by the petition;

c. the wastes meet the applicable alternate treatment standards established in accordance with a petition granted under LAC 33:V.2231; and

d. persons have been granted an extension to the effective date of a prohibition in accordance with LAC 33:V.2239, with respect to those wastes covered by the extension.

5. To determine whether a hazardous waste identified in LAC 33:V.2221 exceeds the applicable treatment standards specified in LAC 33:V.2299.Appendix, Table 2, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable LAC 33:V.2299.Appendix, Table 2 levels, the waste is prohibited from land disposal, and all requirements of this Chapter are applicable, except as otherwise specified.

F. Waste-Specific Prohibitions: Spent Aluminum Potliners and Reactive and Carbamate Wastes

1. Effective April 20, 1998, the wastes specified in LAC 33:V.4901.C as EPA Hazardous Waste Numbers K156-K159, K161, and in LAC 33:V.4901.E as EPA Hazardous Waste Numbers P127, P128, P185, P188-P192, P194, P196-P199, P201-P205, U271, U278-U280, U364, U367, U372, U373, U387, U389, U394, U395, U404, and U409-U411 are prohibited from land disposal. In addition, soil and debris contaminated with these wastes are prohibited from land disposal.

2. Effective April 20, 1998, the wastes identified in LAC 33:V.4903.D as D003 that are managed in systems other than those whose discharge is regulated under the Clean Water Act (CWA) or that inject in Class I deep wells regulated under the Safe Drinking Water Act (SDWA) or that are zero dischargers that engage in CWA-equivalent treatment before ultimate land disposal, are prohibited from land disposal. This prohibition does not apply to unexploded ordnance and other explosive devices, which have been the subject of an emergency response. Such D003 wastes are prohibited unless they meet the treatment standard of DEACT before land disposal (see LAC 33:V.2223).

3. On September 21, 1998, the wastes specified in LAC 33:V.4901.C as EPA Hazardous Waste Number K088 are prohibited from land disposal. In addition, soil and debris contaminated with these wastes are prohibited from land disposal.

4. On April 20, 1998, radioactive wastes mixed with K088, K156-K159, K161, P127, P128, P185, P188-P192, P194, P196-P199, P201-P205, U271, U278-U280, U364, U367, U372, U373, U387, U389, U394, U395, U404, and U409-U411 are also prohibited from land disposal. In addition, soil and debris contaminated with these radioactive mixed wastes are prohibited from land disposal.

5. Between July 8, 1996, and April 20, 1998, the wastes included in 40 CFR 268.39(a), (c), and (d) may be disposed in a landfill or surface impoundment, only if such

unit is in compliance with the requirements specified in 40 CFR 268.5(h)(2).

6. The requirements of Paragraphs F.1-4 of this Section do not apply if:

a. the wastes meet the applicable treatment standards specified in this Chapter;

b. persons have been granted an exemption from a prohibition pursuant to a petition under LAC 33:V.2241, with respect to those wastes and units covered by the petition;

c. the wastes meet the applicable alternate treatment standards established pursuant to a petition granted under LAC 33:V.2231; or

d. persons have been granted an extension to the effective date of a prohibition pursuant to LAC 33:V.2239, with respect to these wastes covered by the extension.

7. To determine whether a hazardous waste identified in this Section exceeds the applicable treatment standards specified in LAC 33:V.2223, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable treatment levels, the waste is prohibited from land disposal and all requirements of this Chapter are applicable, except as otherwise specified.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 17:658 (July 1991), LR 21:266 (March 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:667 (April 1998), LR 24:1725 (September 1998), LR 25:444 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:280 (February 2000), amended by the Office of the Secretary, Legal Division, LR 43:1143 (June 2017).

§2223. Applicability of Treatment Standards

A. A prohibited waste identified in the LAC 33:V.2299.Appendix, Table 2 may be land disposed only if it meets the requirements found in Table 2. For each waste, the table identifies one of the three types of treatment standard requirements:

1. all hazardous constituents in the waste or in the treatment residue must be at or below the values found in the table for that waste (total waste standards);

2. the hazardous constituents in the extract of the waste or in the extract of the treatment residue must be at or below the values found in the table (waste extract standards); or

3. the waste must be treated using the technology specified in the table (technology standard), which are described in detail in LAC 33:V.2299.Appendix, Table 3,

Technology Codes and Description of Technology-Based Standards.

B. For wastewaters, compliance with concentration level standards is based on maximums for any one day, except for D004-D011 wastes for which the previously promulgated treatment standards based on grab samples remain in effect. For all nonwastewaters, compliance with concentration level standards is based on grab sampling. For wastes covered by the waste extract standards, the Test Method 1311, the Toxicity Characteristic Leaching Procedure as described in *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110, must be used to measure compliance. An exception is made for D004 and D008, for which either of two test methods may be used: Method 1311 or Method 1310B, the Extraction Procedure Toxicity Test. For wastes covered by a technology standard, the wastes may be land disposed after being treated using that specified technology or an equivalent treatment technology approved by the administrative authority under the procedures set forth in LAC 33:V.2227.

C. When wastes with differing treatment standards for a constituent of concern are combined for purposes of treatment, the treatment residue must meet the lowest treatment standard for the constituent of concern.

D. Notwithstanding the prohibitions specified in Subsection A of this Section, treatment and disposal facilities may demonstrate (and certify in accordance with LAC 33:V.2247.C) compliance with the treatment standards for organic constituents specified by footnote in LAC 33:V.2299.Appendix, Table 2, Treatment Standards for Hazardous Wastes, provided the following conditions are satisfied:

1. the treatment standards for the organic constituents were established based on incineration in units operated in accordance with the technical requirements of LAC 33:V.Chapter 31 or based on combustion in fuel substitution units operating in accordance with applicable technical requirements;

2. the treatment or disposal facility has used the methods referenced in Paragraph D.1 of this Section to treat the organic constituents; and

3. the treatment or disposal facility may demonstrate compliance with organic constituents if good-faith analytical efforts achieve detection limits for the regulated organic constituents that do not exceed the treatment standards specified in this Section by an order of magnitude.

E. For characteristic wastes (D001-D043) that are subject to treatment standards in LAC 33:V.2299.Appendix, Table 2, Treatment Standards for Hazardous Wastes, and are not managed in a wastewater treatment system that is regulated under the Clean Water Act (CWA), that is CWA-equivalent, or that is injected into a Class I nonhazardous deep injection well, all underlying hazardous constituents (as defined in LAC 33:V.2203) must meet Universal Treatment

Standards, found in LAC 33:V.2299.Appendix, Table 7, prior to land disposal as defined in LAC 33:V.2203.

F. The treatment standards for F001-F005 nonwastewater constituents carbon disulfide, cyclohexanone, and/or methanol apply to wastes that contain only one, two, or three of these constituents. Compliance is measured for these constituents in the waste extract from Test Method 1311, the Toxicity Characteristic Leaching Procedure found in *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110. If the waste contains any of these three constituents along with any of the other 25 constituents found in F001-F005, then compliance with treatment standards for carbon disulfide, cyclohexanone, and/or methanol are not required.

G. Between August 26, 1997, and April 20, 1999, the treatment standards for the wastes specified in LAC 33:V.4901.C as EPA Hazardous Waste Numbers K156-K161 and in LAC 33:V.4901.E-F as EPA Hazardous Waste Numbers P127, P128, P185, P188-P192, P194, P196-P199, P201-P205, U271, U278-U280, U364-U367, U372, U373, U375-U379, U381-U387, U389-U396, U404, and U409-U411 and soil contaminated with these wastes were satisfied by either meeting the constituent concentrations presented in LAC 33:V.2299.Appendix, Table 2, or by treating the waste by the following technologies: combustion, as defined by the technology code CMBST at LAC 33:V.2299.Appendix, Table 3, for nonwastewaters; and biodegradation as defined by the technology code BIODG, carbon adsorption as defined by the technology code CARBN, chemical oxidation as defined by the technology code CHOXD, or combustion as defined as technology code CMBST at LAC 33:V.2299.Appendix, Table 3, for wastewaters.

H. Prohibited D004-D011 mixed radioactive wastes and mixed radioactive listed wastes containing metal constituents that were previously treated by stabilization to the treatment standards in effect at that time and then put into storage, do not have to be retreated to meet treatment standards in this Section prior to land disposal.

I. Effective September 4, 1998, the treatment standards for the wastes specified in LAC 33:V.4901.D as EPA Hazardous Waste Numbers P185, P191, P192, P197, U364, U394, and U395 may be satisfied by either meeting the constituent concentrations presented in LAC 33:V.2299.Appendix, Table 2, Treatment Standards for Hazardous Wastes, or by treating the waste by the following technologies: combustion, as defined by the technology code CMBST in LAC 33:V.2299.Appendix, Table 3, for nonwastewaters; and biodegradation as defined by the technology code BIODG, carbon adsorption as defined by the technology code CARBN, chemical oxidation as defined by the technology code CHOXD, or combustion as defined as technology code CMBST in LAC 33:V.2299.Appendix, Table 3, for wastewaters.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste,

Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 21:266 (March 1995), LR 22:22 (January 1996), LR 22:819 (September 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:668 (April 1998), LR 24:1726 (September 1998), LR 25:444 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:280 (February 2000), LR 30:1682 (August 2004), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1014 (June 2008).

§2227. Treatment Standards Expressed as Specified Technologies

A. The wastes specified in LAC 33:V.2299.Appendix, Table 2, for which standards are expressed as a treatment method rather than a concentration level, must be treated using the technology or technologies specified in LAC 33:V.2299.Appendix, Table 3, entitled “Technology Codes and Description of Technology-Based Standards.”

B. Reserved.

NOTE: Persons demonstrating an alternative treatment method must apply to the EPA administrator or designee in accordance with 40 CFR 268.42(b).

C. As an alternative to the otherwise applicable LAC 33:V.Chapter 22.Subchapter A treatment standards, lab packs are eligible for land disposal provided all of the following requirements are met:

1. the lab packs comply with the applicable provisions of LAC 33:V.2519 and 4511;
2. the lab packs do not contain any of the wastes listed in LAC 33:V.2299.Appendix, Table 6;
3. the lab packs are incinerated in accordance with the requirements of LAC 33:V.Chapter 31 and Chapter 43.Subchapter N; and
4. any incinerator residues from lab packs containing D004, D005, D006, D007, D008, D010, or D011 are treated in compliance with the applicable treatment standards specified for such wastes in LAC 33:V.Chapter 22.Subchapter A.

D. Radioactive hazardous mixed wastes are subject to the treatment standards in LAC 33:V.2223. Where treatment standards are specified for radioactive mixed wastes in LAC 33:V.2299.Appendix, Table 2, those treatment standards will govern. Where there is no specific treatment standard for radioactive mixed waste, the treatment standard for the hazardous waste (as designated by EPA waste code) applies. Hazardous debris containing radioactive waste is subject to the treatment standards specified in LAC 33:V.2230.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 21:266 (March 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:300 (February 1998), LR 25:445 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR

26:2476 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2457 (October 2005), LR 33:2107 (October 2007), amended by the Office of the Secretary, Legal Affairs Division, LR 43:1143 (June 2017).

§2230. Treatment Standards for Hazardous Debris

A. Treatment Standards. Hazardous debris must be treated prior to land disposal unless the administrative authority determines under LAC 33:V.109.Hazardous Waste.6.b that the debris is no longer contaminated with hazardous waste or the debris is treated to the waste-specific treatment standard in LAC 33:V.2299.Appendix, Table 8 for the waste contaminating the debris.

1. Hazardous debris must be treated for each contaminant subject to treatment defined by LAC 33:V.2230.B using the technology or technologies identified in LAC 33:V.2299.Appendix, Table 8.

2. Hazardous debris that exhibits the characteristic of ignitability, corrosivity, or reactivity identified under LAC 33:V.4903.B, C, and D, respectively, must be deactivated by treatment identified in LAC 33:V.2299.Appendix, Table 8.

3. The treatment standard of LAC 33:V.2299.Appendix, Table 8 must be achieved for each type of debris contained in a mixture of debris types. If an immobilization technology is used in a treatment train, it must be the last treatment technology used.

4. Debris that is contaminated with two or more contaminants subject to treatment identified under LAC 33:V.2230.B must be treated for each contaminant using one or more of the treatment technologies identified in LAC 33:V.2299.Appendix, Table 8. If an immobilization technology is used in a treatment train, it must be the last treatment technology used.

5. Hazardous debris that is also a waste PCB under 40 CFR Part 761 is subject to the requirements of 40 CFR Part 761 or the requirements of this Section, whichever is more stringent.

B. Hazardous debris must be treated for each “contaminant subject to treatment.” The contaminants subject to treatment must be determined as follows:

1. the contaminants subject to treatment for debris that exhibit the Toxicity Characteristic (TC) described in LAC 33:V.4903.E are those extraction procedure (EP) constituents for which debris exhibit the TC toxicity characteristic;

2. the contaminants subject to treatment for debris that is contaminated with a prohibited listed hazardous waste are those constituents or wastes for which treatment standards are established under LAC 33:V.2299.Appendix, Table 2; and

3. hazardous debris that is reactive because of cyanide must be treated for cyanide.

C. Hazardous debris that has been treated using one of the specified extraction or destruction technologies in LAC 33:V.2299.Appendix, Table 8 and does not exhibit a

characteristic of hazardous waste identified under LAC 33:V.4903 after treatment is not a hazardous waste and need not be managed in a Subtitle C facility. Hazardous debris contaminated with a listed waste that is treated by an immobilization technology specified in LAC 33:V.2299.Appendix, Table 8 is a hazardous waste and must be managed in a Subtitle C facility.

D. Treatment Residues

1. General Requirements

a. Residue from the treatment of hazardous debris must be separated from the treated debris using simple physical or mechanical means; and

b. residue from the treatment of hazardous debris is subject to the waste-specific treatment standards provided by LAC 33:V.Chapter 22.Subchapter B for the waste contaminating the debris.

2. Residue from the deactivation of ignitable, corrosive, or reactive characteristic hazardous debris (other than cyanide-reactive) that is not contaminated with a contaminant subject to treatment defined by LAC 33:V.2230.B must be deactivated prior to land disposal and is not subject to the waste-specific treatment standard of LAC 33:V.2299.Appendix, Table 2.

3. Residue from the treatment of debris that is reactive because of cyanide must meet the treatment standards for D003 in LAC 33:V.2299.Appendix, Table 2.

4. Ignitable nonwastewater residue containing equal to or greater than 10 percent total organic carbon is subject to the technology-based standards for D001, ignitable liquids.

5. Layers of debris removed by spalling are hazardous debris that remain subject to the treatment standards of LAC 33:V.2230.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended LR 22:22 (January 1996), LR 23:565 (May 1997), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:445 (March 1999), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1897 (September 2008).

§2231. Variance from a Treatment Standard

A. - F. Reserved.

G. Based on a petition filed by a generator or treater of hazardous waste, the administrative authority may approve a site-specific variance from an applicable treatment standard if:

1. it is not physically possible to treat the waste to the level specified in the treatment standard or by the method specified as the treatment standard. To show that this is the case, the petitioner must demonstrate that because the physical or chemical properties of the waste differ significantly from waste analyzed in developing the

treatment standard, the waste cannot be treated to the specified level or by the specified method; or

2. it is inappropriate to require the waste to be treated to the level specified in the treatment standard or by the method specified as the treatment standard, even though such treatment is technically possible. To show that this is the case, the petitioner must either demonstrate that:

a. treatment to the specified level or by the specified method is technically inappropriate (e.g., resulting in combustion of large amounts of mildly contaminated environmental media where the treatment standard is not based on combustion of such media); or

b. for remediation waste only, treatment to the specified level or by the specified method is environmentally inappropriate because it would likely discourage aggressive remediation;

3. for contaminated soil only, treatment to the level or by the method specified in the soil treatment standard would result in concentrations of hazardous constituents that are below (i.e., lower than) the concentrations necessary to minimize short and long term threats to human health and the environment. Treatment variances approved under this Subsection must:

a. at a minimum, impose alternative land disposal restriction treatment standards that, using a reasonable maximum exposure scenario:

i. for carcinogens, achieve constituent concentrations that result in the total excess risk to an individual exposed over a lifetime generally falling within a range from 10^{-4} to 10^{-6} ; and

ii. for constituents with noncarcinogenic effects, achieve constituent concentrations that an individual could be exposed to on a daily basis without appreciable risk of deleterious effect during a lifetime;

b. not consider post-land-disposal controls;

4. for contaminated soil only, treatment to the level or by the method specified in the soil treatment standards would result in concentrations of hazardous constituents that are below (i.e., lower than) natural background concentrations at the site where the contaminated soil will be land disposed;

5. public notice and a reasonable opportunity for public comment must be provided before granting or denying a petition.

H. Each application for a site-specific variance from a treatment standard must include the information in LAC 33:V.105.H.2.

I. After receiving an application for a site-specific variance from a treatment standard, the administrative authority or his delegated representative may request any additional information or samples which may be required to evaluate the application.

J. A generator, treatment facility, or disposal facility that is managing a waste covered by a site-specific variance from a treatment standard must comply with the waste analysis requirements for restricted wastes found under LAC 33:V.2245 and 2247.

K. During the application review process the applicant for a site-specific variance must comply with all restrictions on land disposal under LAC 33:V.2231 once the effective date for the waste has been reached.

L. The facilities listed in LAC 33:V.2299.Appendix, Table 10 are excluded from the treatment standard under LAC 33:V.2299.Appendix, Table 2 and are subject to the constituent concentrations.

M. For all variances the petitioner must also demonstrate that compliance with any given treatment variance is sufficient to minimize threats to human health and the environment posed by land disposal of the waste. In evaluating this demonstration, the department may take into account whether a treatment variance should be approved if the subject waste is to be used in a manner constituting disposal in accordance with LAC 33:V.Chapter 41.Subchapter C.

NOTE: Persons obtaining a non-site-specific variance from a treatment standard must submit a petition to the EPA administrator or designee in accordance with 40 CFR 268.44.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 21:266 (March 1995), LR 21:1334 (December 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 25:445 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2476 (November 2000), LR 27:1015 (July 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2458 (October 2005), LR 33:2108 (October 2007), amended by the Office of the Secretary, Legal Division, LR 43:1144 (June 2017).

§2233. Universal Treatment Standards

A. LAC 33:V.2299.Appendix, Table 7 identifies the hazardous constituents, along with the nonwastewater and wastewater treatment standard levels that are used to regulate most prohibited hazardous wastes with numerical limits. For determining compliance with treatment standards for underlying hazardous constituents as defined in LAC 33:V.2203.A, these treatment standards may not be exceeded. Compliance with these treatment standards is measured by an analysis of grab samples, unless otherwise noted in LAC 33:V.2299.Appendix, Table 7.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 22:22 (January 1996).

§2236. Alternative Land Disposal Restriction (LDR) Treatment Standards for Contaminated Soil

A. Applicability. You must comply with LDRs prior to placing soil that exhibits a characteristic of hazardous waste, or exhibited a characteristic of hazardous waste at the time it was generated, into a land disposal unit. The following chart describes whether you must comply with LDRs prior to placing soil contaminated by listed hazardous waste into a land disposal unit.

If LDRs	And If LDRs	And If	Then You
applied to the listed waste when it contaminated the soil*	apply to the listed waste now		must comply with LDRs
did not apply to the listed waste when it contaminated the soil*	apply to the listed waste now	the soil is determined to contain the listed waste when the soil is first generated	must comply with LDRs
did not apply to the listed waste when it contaminated the soil*	apply to the listed waste now	the soil is determined not to contain the listed waste when the soil is first generated	need not comply with LDRs
did not apply to the listed waste when it contaminated the soil*	do not apply to the listed waste now		need not comply with LDRs
*To determine the date any given listed hazardous waste contaminated any given volume of soil, use the last date any given listed hazardous waste was placed into any given land disposal unit or, in the case of an accidental spill, the date of the spill.			

B. Prior to land disposal, contaminated soil identified by Subsection A of this Section as needing to comply with LDRs must be treated according to the applicable treatment standards specified in Subsection C of this Section or according to the universal treatment standards specified in LAC 33:V.2233 applicable to the contaminating listed hazardous waste and/or the applicable characteristic of hazardous waste if the soil is characteristic. The treatment standards specified in Subsection C of this Section and the universal treatment standards may be modified through a treatment variance approved in accordance with LAC 33:V.2233.

C. Treatment Standards for Contaminated Soils. Prior to land disposal, contaminated soil identified by Subsection A of this Section as needing to comply with LDRs must be treated according to all the standards specified in this Subsection or according to the universal treatment standards specified in LAC 33:V.2233.

1. All Soils. Prior to land disposal, all constituents subject to treatment must be treated as follows.

a. For nonmetals except carbon disulfide, cyclohexanone, and methanol, treatment must achieve 90 percent reduction in total constituent concentrations, except as provided by Subparagraph C.1.c of this Section.

b. For metals and carbon disulfide, cyclohexanone, and methanol, treatment must achieve 90 percent reduction in constituent concentrations as measured in leachate from the treated media (tested according to the toxicity characteristic leaching procedure, TCLP) or 90 percent reduction in total constituent concentrations (when a metal removal treatment technology is used), except as provided by Subparagraph C.1.c of this Section.

c. When treatment of any constituent subject to treatment to a 90 percent reduction standard would result in a concentration less than 10 times the universal treatment standard for that constituent, treatment to achieve constituent concentrations less than 10 times the universal treatment standard is not required. Universal treatment standards are identified in LAC 33:V.2299.Appendix, Table 7.

2. Soils That Exhibit the Characteristic of Ignitability, Corrosivity, or Reactivity. In addition to the treatment required by Paragraph C.1 of this Section, prior to land disposal, soils that exhibit the characteristic of ignitability, corrosivity, or reactivity must be treated to eliminate these characteristics.

3. Soils That Contain Nonanalyzable Constituents. In addition to the treatment requirements of Paragraphs C.1 and 2 of this Section, prior to land disposal, the following treatment is required for soils that contain nonanalyzable constituents:

a. for soil that also contains only analyzable and nonanalyzable organic constituents, treatment of the analyzable organic constituents to the levels specified in Paragraphs C.1 and 2 of this Section; or

b. for soil that contains only nonanalyzable constituents, treatment by the method(s) specified in LAC 33:V.2227 for the waste contained in the soil.

D. Constituents Subject to Treatment. When applying the soil treatment standards in Subsection C of this Section, constituents subject to treatment are any constituents listed in LAC 33:V.2299.Appendix, Table 7 (Universal Treatment Standards) that are reasonably expected to be present in any given volume of contaminated soil, except fluoride, selenium, sulfides, vanadium, and zinc, and that are present at concentrations greater than 10 times the universal treatment standard. PCBs are not a constituent subject to treatment in any given volume of soil that exhibits the toxicity characteristic solely because of the presence of metals.

E. Management of Treatment Residuals. Treatment residuals from treating contaminated soil identified by Subsection A of this Section as needing to comply with LDRs must be managed as follows:

1. soil residuals are subject to the treatment standards of this Section; and

2. nonsoil residuals are subject to:

a. for soils contaminated by listed hazardous waste, the RCRA Subtitle C standards applicable to the listed hazardous waste; and

b. for soils that exhibit a characteristic of hazardous waste, if the nonsoil residual also exhibits a characteristic of hazardous waste, the treatment standards applicable to the characteristic hazardous waste.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, LR 25:446 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:281 (February 2000), LR 27:294 (March 2001), LR 28:1001 (May 2002).

§2237. Exemption for Surface Impoundments Treating Hazardous Waste

A. Wastes that are otherwise prohibited from land disposal under this Chapter may be treated in a surface impoundment or series of impoundments provided that:

1. treatment of such wastes must occur in the exempt impoundment;

2. the following conditions must be met:

a. Sampling and Testing. For wastes with treatment standards and/or prohibition levels in LAC 33:V.Chapter 22.Subchapter A or RCRA Section 3004(d), the residues from the treatment must be analyzed, as specified in LAC 33:V.2245, 2247, or 2213.F and G to determine if they meet the applicable treatment standards or where no treatment standards have been established for the waste, the applicable prohibition levels. The sampling method, specified in the waste analysis plan under LAC 33:V.1519 or 4313, must be designed such that representative samples of the sludge and the supernatant are tested separately rather than mixed to form homogeneous samples;

b. Removal

i. the following treatment residues (including any liquid wastes) must be removed at least once every year:

(a). residues which do not meet the treatment standards promulgated under LAC 33:V.Chapter 22.Subchapter A;

(b). residues which do not meet the prohibition levels established under Subchapter A of this Chapter or imposed by statute (where no treatment standards have been established);

(c). residues which are from the treatment of wastes prohibited from land disposal under Subchapter A of this Chapter (where no treatment standards have been established and no prohibition levels apply); or

(d). residues from the management of listed wastes which are not delisted by EPA or by the administrative authority;

ii. if the volume of liquid flowing through the impoundment or series of impoundments in a one-year period is greater than the volume of the impoundment or impoundments, this flow-through constitutes removal of the supernatant for the purpose of this requirement;

ENVIRONMENTAL QUALITY

- iii. Reserved;
- iv. the administrative authority may require removal of treatment residues more frequently than once per year;

c. Subsequent Management. Treatment residues may not be placed in any other surface impoundment for subsequent management;

d. Recordkeeping. Sampling and testing and recordkeeping provisions of LAC 33:V.1519 and 4313 apply;

e. Certification. Each waste analysis plan must be certified by a Louisiana licensed professional engineer (PE);

3. the impoundment must meet the applicable design requirements of LAC 33:V.Chapter 29 or 43, although the unit may not be new, expanded, or a replacement, and be in compliance with applicable groundwater monitoring requirements of LAC 33:V.Chapter 33 or 43 unless:

a. the impoundment is exempted in accordance with LAC 33:V.2903.J or K or 4462.C or D; or

b. the owner or operator has applied for and the administrative authority, after notice and opportunity to comment, has granted a waiver of the design requirements on the basis that the surface impoundment:

i. has at least one liner (and there is no evidence that such liner is leaking) and one compacted clay or other department-approved liner;

ii. is located more than 1/4 mile from an underground source of drinking water; and

iii. is in compliance with generally applicable groundwater monitoring requirements for facilities with permits;

c. the owner or operator has applied for and the administrative authority, after notice and an opportunity to comment, has granted a modification to the design requirements on the basis of a demonstration that the surface impoundment is located, designed, and operated so as to ensure that no hazardous constituents will migrate into groundwater or surface water at any time;

4. the owner or operator must submit to the Office of Environmental Services a written certification that the requirements of Paragraph A.3 of this Section have been met and a copy of the waste analysis plan required under Paragraph A.2 of this Section. The following certification is required.

“I certify under penalty of law that the requirements of LAC 33:V.2237.A.3 have been met for all surface impoundments being used to treat prohibited wastes. I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.”

B. Evaporation of hazardous constituents as the principal means of treatment is not considered to be treatment for purposes of an exemption under this Section.

C. Surface Impoundment Exemptions

1. This Subsection defines additional circumstances under which an otherwise prohibited waste may continue to be placed in a surface impoundment.

2. Wastes which are newly identified or listed under LAC 33:V.2221 after November 8, 1984, and stored in a surface impoundment that is newly subject to Subtitle C of RCRA as a result of the additional identification or listing may continue to be stored in the surface impoundment for 48 months after the promulgation of the additional listing or characteristic, notwithstanding that the waste is otherwise prohibited from land disposal, provided that the surface impoundment is in compliance with the requirements of LAC 33:V.Chapter 43.Subchapter E within 12 months after promulgation of the listing or characteristic.

3. Wastes which are newly listed or identified under LAC 33:V.2221 after November 8, 1984 and treated in a surface impoundment that is newly subject to Subtitle C of RCRA as a result of the additional listing or identification may continue to be treated in that surface impoundment, notwithstanding that the waste is otherwise prohibited from land disposal, provided that the surface impoundment is in compliance with the requirements of LAC 33:Chapter 43.Subchapter E within 12 months after promulgation of the listing or characteristic. In addition, if the surface impoundment continues to treat hazardous waste after 48 months from promulgation of the addition listing or characteristic, it must then be in compliance with LAC 33:V.2237.A and B.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 17:658 (July 1991), LR 21:266 (March 1995), LR 21:1334 (December 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1727 (September 1998), LR 25:447 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2476 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2458 (October 2005), LR 33:2108 (October 2007).

§2239. Procedures for Case-by-Case Extensions of an Effective Date

NOTE: Persons obtaining a case-by-case extension of the effective date of any land disposal prohibition must submit a petition to the EPA administrator or designee in accordance with 40 CFR 268.5.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1727 (September 1998),

amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2477 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2458 (October 2005), LR 33:2108 (October 2007), amended by the Office of the Secretary, Legal Division, LR 43:1144 (June 2017).

§2241. Exemptions to Allow Land Disposal of a Prohibited Waste Except by Deep Well Injection

NOTE: Persons obtaining an exemption to allow land disposal except by deep well injection of a prohibited hazardous waste in a particular unit or units must submit a petition to the EPA administrator or designee in accordance with 40 CFR 268.6.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:220 (March 1990), LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1727 (September 1998), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2477 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2458 (October 2005), LR 33:2109 (October 2007), amended by the Office of the Secretary, Legal Division, LR 43:1144 (June 2017).

§2243. Administrative Procedures for Exemptions under LAC 33:V.2271 and No-Alternative Determinations under LAC 33:V.2273

A. Before making a final decision on the exemption or determination request, the department will provide the person requesting the exemption or determination and the public, through a newspaper notice in the official state journal and the local newspaper in the affected area, the cost of which will be charged to the person requesting the exemption or determination, the opportunity to submit written comments on the request on the conditions of the exemption or determination, allowing a 45-day comment period. The notices referred to in this Section will be provided in the local newspaper in three separate issues; however, the comment or notice period shall begin with the notice in the official state journal. The administrative authority will also, in response to a request or at his or her own discretion, hold a public hearing whenever such a hearing might clarify one or more issues concerning the exemption or determination request. The administrative authority will give public notice of the hearing at least 30 days before it occurs. (Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments.)

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:1057 (December 1990), LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1800 (October 1999), LR 26:2478 (November 2000), amended by the Office of the Secretary, Legal Division, LR 43:1144 (June 2017).

§2245. Generators' Waste Analysis, Recordkeeping, and Notice Requirements

A. Requirements for Generators. A generator of hazardous waste must determine if the waste has to be treated before it can be land disposed. This is done by determining if the hazardous waste meets the treatment standards in LAC 33:V.2223, 2230, or 2236. This determination can be made concurrently with the hazardous waste determination required in LAC 33:V.1005 in either of two ways: testing the waste or using knowledge of the waste. If the generator tests the waste, testing would normally determine the total concentration of hazardous constituents, or the concentration of hazardous constituents in an extract of the waste obtained using Test Method 1311 in *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110, depending on whether the treatment standard for the waste is expressed as a total concentration or concentration of hazardous constituent in the waste's extract. Alternatively, the generator must send the waste to a RCRA-permitted hazardous waste treatment facility, where the waste treatment facility must comply with the requirements of LAC 33:V.1519 and 2247.A. In addition, some hazardous wastes must be treated by particular treatment methods before they can be land disposed, and some soils are contaminated by such hazardous wastes. These treatment standards are also found in LAC 33:V.2223, and are described in detail in LAC 33:V.2299.Appendix, Table 3. These wastes, and soils contaminated with such wastes, do not need to be tested (however, if they are in a waste mixture, other wastes with concentration level treatment standards would have to be tested). If a generator determines they are managing a waste, or soil contaminated with a waste, that displays a hazardous characteristic of ignitability, corrosivity, reactivity, or toxicity, they must comply with the special requirements of LAC 33:V.2246 in addition to any applicable requirements in this Section.

B. If the waste or contaminated soil does not meet the treatment standards, or if the generator chooses not to make the determination of whether his waste must be treated, with the initial shipment of waste to each treatment or storage facility, the generator must send a one-time written notice to each treatment or storage facility receiving the waste and place a copy in the file. The notice must include the information in column "LAC 33:V.2245.B" of the Generator Paperwork Requirements Table in Subsection D of this Section. Alternatively, if the generator chooses not to make the determination of whether the waste must be treated, the notification must include the EPA hazardous waste numbers and manifest number of the first shipment and must state, "This hazardous waste may or may not be subject to the LDR treatment standards. The treatment facility must make the determination." No further notification is necessary until such time as the waste or facility changes, in which case a new notification must be sent and a copy placed in the generator's file.

ENVIRONMENTAL QUALITY

1. For contaminated soil, the following certification statement should be included, signed by an authorized representative.

“I certify under penalty of law that I personally have examined this contaminated soil and it [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and requires treatment to meet the soil treatment standards as provided by LAC 33:V.2236.C.”

C. If the waste or contaminated soil meets the treatment standard at the original point of generation:

1. with the initial shipment of waste to each treatment, storage, or disposal facility, the generator must send a one-time written notice to each treatment, storage, or disposal facility receiving the waste and place a copy in the file. The notice must include the information indicated in column “LAC 33:V.2245.C” of the Generator Paperwork Requirements Table in Subsection D of this Section and the following certification statement, signed by an authorized representative.

“I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification that the waste complies with the treatment standards specified in LAC 33:V.2223-2233. I believe that the information I submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting a false certification, including the possibility of a fine and imprisonment”;

2. for contaminated soil, with the initial shipment of wastes to each treatment, storage, or disposal facility, the generator must send a one-time written notice to each facility receiving the waste and place a copy in the file. The notice must include the information in Subsection D of this Section of the Generator Paperwork Requirements Table;

3. if the waste changes, the generator must send a new notice and certification to the receiving facility, and place a copy in their files. Generators of hazardous debris excluded from the definition of hazardous waste under LAC 33:V.109.Hazardous Waste.6 are not subject to these requirements.

D. For reporting, tracking, and recordkeeping when exceptions allow certain wastes or contaminated soil that do not meet the treatment standards to be land disposed, there are certain exemptions from the requirement that hazardous wastes or contaminated soil meet treatment standards before they can be land disposed. These include, but are not limited to, case-by-case extensions under LAC 33:V.2239, disposal in a no-migration unit under LAC 33:V.2241, or a national capacity variance or case-by-case capacity variance under LAC 33:V.2209-2221. If a generator’s waste is so exempt, then with the initial shipment of waste, the generator must send a one-time written notice to each land disposal facility receiving the waste. The notice must include the information indicated in column “LAC 33:V.2245.D” of the Generator Paperwork Requirements Table in this Subsection. If the waste changes, the generator must send a new notice to the receiving facility and place a copy in their files.

Generator Paperwork Requirements Table				
Required Information	LAC 33:V. 2245.B	LAC 33:V. 2245.C	LAC 33:V. 2245.D	LAC 33:V. 2245.I
EPA Hazardous Waste Numbers and Manifest Numbers of first shipment.	X	X	X	X
Statement: This waste is not prohibited from land disposal.			X	
The waste is subject to the LDRs. The constituents of concern for F001-F005 and F039, and underlying hazardous constituents in characteristic wastes, unless the waste will be treated and monitored for all constituents. If all constituents will be treated and monitored, there is no need to put them all on the LDR notice.	X	X		
The notice must include the applicable wastewater/nonwastewater category (see LAC 33:V.2203.A) and subdivisions made within a waste code based on waste-specific criteria (such as D003 reactive cyanide).	X	X		
Waste analysis data (when available).	X	X	X	
Date the waste is subject to the prohibition.			X	
For hazardous debris, when treating with the alternative treatment technologies provided by LAC 33:V.2230: the contaminants subject to treatment, as described in LAC 33:V.2230; and an indication that these contaminants are being treated to comply with LAC 33:V.2230.			X	
For contaminated soil subject to LDRs as provided in LAC 33:V.2236.A, the constituents subject to treatment as described in LAC 33:V.2236.D, and the following statement: This contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and [is subject to/complies with] the soil treatment standards as provided by LAC 33:V.2236.C or the universal treatment standards.	X	X		
A certification is needed (see applicable Section for exact wording).		X		X

E. If a generator is managing and treating a prohibited waste or contaminated soil in tanks, containers, or containment buildings regulated under LAC 33:V.1011, 1013, or 1015 to meet applicable LDR treatment standards found in LAC 33:V.2223, the generator must develop and follow a written waste analysis plan that describes the procedures the generator will carry out to comply with the treatment standards. (Generators treating hazardous debris under the alternative treatment standards of LAC 33:V.2299.Appendix, Table 8, however, are not subject to

these waste analysis requirements.) The plan must be kept on-site in the generator's records, and the following requirements must be met.

1. The waste analysis plan must be based on a detailed chemical and physical analysis of a representative sample of the prohibited waste(s) being treated, and contain all information necessary to treat the waste(s) in accordance with the requirements of this Chapter, including the selected testing frequency.

2. Such plan must be filed with the Office of Environmental Services, a minimum of 30 days prior to the treatment activity, with delivery verified.

3. Wastes shipped off-site in accordance with this Section must comply with the notification requirements of Subsection C of this Section.

F. If a generator determines that the waste or contaminated soil is prohibited solely on the basis of his or her knowledge of the waste, all supporting data used to make this determination must be retained on-site in the generator's files. If a generator determines whether the waste is prohibited on the basis of tests of this waste or an extract developed using the Test Method 1311 described in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110, all waste analysis data must be retained on-site in the generator's files.

G. If a generator determines that he is managing a prohibited waste that is excluded from the definition of hazardous or solid waste or exempted from regulation under LAC 33:V.Chapter 1 or 41 subsequent to the point of generation (including deactivated characteristic hazardous wastes managed in wastewater treatment systems subject to the Clean Water Act (CWA) as specified in LAC 33:V.105.D.1.b, or that are CWA-equivalent, or are managed in an underground injection well regulated by the Solid Disposal Waste Act, SDWA), the generator must place a one-time notice stating such generation, subsequent exclusion from the definition of hazardous or solid waste or exemption from the regulation under LAC 33:V.Subpart 1, and the disposition of the waste, in the facility's on-site file.

H. Generators must retain on-site a copy of all notices, certifications, demonstrations, waste analysis data, and other documentation produced in accordance with this Section for at least three years from the date that the waste that is the subject of such documentation was last sent to on-site or off-site treatment, storage, or disposal. The three-year record retention period is automatically extended during the course of any unresolved enforcement action regarding the regulated activity or as requested by the administrative authority. The requirements of this Paragraph apply to solid wastes even when the hazardous characteristic is removed prior to disposal, or when the waste is excluded from the definition of hazardous or solid waste under LAC 33:V.Chapter 1 or 41, or exempted from regulation under LAC 33:V.Subpart 1, subsequent to the point of generation.

I. If a generator is managing a lab pack that contains hazardous wastes and wishes to use the alternative treatment standard for lab packs found at LAC 33:V.2227.C.

1. With the initial shipment of waste to a treatment facility, the generator must submit a notice that provides the information in column "LAC 33:V.2245.I" in the Generator Paperwork Requirements Table of Subsection D of this Section and the following certification. The certification that must be signed by an authorized representative and must be placed in the generator's files, must say the following.

"I certify under penalty of law that I personally have examined and am familiar with the waste, and that the lab pack contains only wastes that have not been excluded under LAC 33:V.2299.Appendix, Table 6, and that this lab pack will be sent to a combustion facility in compliance with the alternative treatment standards for lab packs at LAC 33:V.2227.C. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine or imprisonment."

2. No further notification is necessary until such time that the wastes in the lab pack change or the receiving facility changes, in which case a new notice and certification must be sent and a copy placed in the generator's file.

3. If the lab pack contains characteristic hazardous wastes (D001-D043), underlying hazardous constituents (as defined in LAC 33:V.2203) need not be determined.

4. The generator must also comply with the requirements in Subsections F and G of this Section.

J. Certification. Each waste minimization plan must be certified by a Louisiana registered professional engineer (PE).

K. All large quantity generators shall develop and retain a waste minimization plan on-site. The plan shall be submitted to the administrative authority within 30 days of receipt of a request by the administrative authority. The plan shall include ongoing and proposed waste minimization projects and tentative beginning dates for proposed projects.

L. Small quantity generators with tolling agreements pursuant to LAC 33:V.1107.A.4 shall comply with the applicable notification and certification requirements of Paragraph A of this Section for the initial shipment of the waste subject to the agreement. Such generators shall retain on-site a copy of the notification and certification, together with the tolling agreement, for at least three years after termination or expiration of the agreement. The three-year record retention period is automatically extended during the course of any unresolved enforcement action regarding the regulated activity or as requested by the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR 16:1057 (December 1990), LR 17:658 (July 1991), LR 21:266, 267 (March 1995), LR 21:1334 (December 1995), LR 22:22 (January 1996), LR 22:820 (September 1996), LR 22:1130 (November 1996), LR 23:565 (May 1997), amended by the Office of Waste

Services, Hazardous Waste Division, LR 24:669 (April 1998), LR 24:1728 (September 1998), LR 25:447 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:281 (February 2000), LR 26:2478 (November 2000), LR 27:295 (March 2001), LR 27:711 (May 2001), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2459 (October 2005), LR 33:2109 (October 2007), LR 34:996 (June 2008), amended by the Office of the Secretary, Legal Division, LR 43:1144 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 44:41 (January 2018), LR 46:937 (July 2020).

§2246. Special Rules Regarding Wastes That Exhibit a Characteristic

A. The initial generator of a solid waste must determine each EPA Hazardous Waste Number (waste code) applicable to the waste in order to determine the applicable treatment standards under this Chapter. This determination may be made concurrently with the hazardous waste determination required in LAC 33:V.1005. For purposes of this Chapter, the waste will carry the waste code for any applicable listing under LAC 33:V.4901. In addition, where the waste exhibits a characteristic, the waste will carry one or more of the characteristic waste codes (LAC 33:V.4903), except when the treatment standard for the listed waste operates in lieu of the treatment standard for the characteristic waste, as specified in Subsection B of this Section. If the generator determines that his waste displays a hazardous characteristic (and is not D001 nonwastewaters treated by CMBST, RORGS, or POLYM of LAC 33:V.2299.Appendix, Table 3), the generator must determine the *underlying hazardous constituents* (as defined in LAC 33:V.2203.A), in the characteristic waste.

B. Where a prohibited waste is both listed under LAC 33:V.4901 and exhibits a characteristic under LAC 33:V.4903, the treatment standard for the waste code listed in LAC 33:V.4901 will operate in lieu of the standard for the waste code under LAC 33:V.4903, provided that the treatment standard for the listed waste includes a treatment standard for the constituent that causes the waste to exhibit the characteristic. Otherwise, the waste must meet the treatment standards for all applicable listed and characteristic waste codes.

C. In addition to any applicable standards determined from the initial point of generation, no prohibited waste that exhibits a characteristic under LAC 33:V.4903 may be land disposed unless the waste complies with the treatment standards under LAC 33:V.2299.Appendix, Table 2.

D. Wastes that exhibit a characteristic are also subject to the requirements of LAC 33:V.2245, except that once the waste is no longer hazardous, a one-time notification and certification must be placed in the generator's or treater's on-site files. The notification and certification must be updated if the process or operation generating the waste changes and/or if the solid waste disposal facility receiving the waste changes.

1. The notification must include the following information:

a. name and address of the RCRA Subtitle D facility receiving the waste shipment; and

b. a description of the waste as initially generated, including the applicable EPA Hazardous Waste Number(s), treatability group(s), and underlying hazardous constituents (as defined in LAC 33:V.2203), unless the waste will be treated and monitored for all underlying hazardous constituents. If all underlying hazardous constituents will be treated and monitored, there is no requirement to list any of the underlying hazardous constituents on the notice.

2. The certification must be signed by an authorized representative and must state the language found in LAC 33:V.2247.C.

3. If treatment removes the characteristic but does not meet standards applicable to underlying hazardous constituents, then the certification found in LAC 33:V.2247.C.4 applies.

E. Generators or treaters who first claim that hazardous debris is excluded from the definition of *hazardous waste* under LAC 33:V.109.Hazardous Waste.6 (i.e., debris treated by an extraction or destruction technology provided by LAC 33:V.2299.Appendix, Table 8, and debris that the administrative authority has determined does not contain hazardous waste) are subject to the following notification and certification requirements.

1. A one-time notification, including the following information, must be submitted to the Office of Environmental Services:

a. the name and address of the RCRA Subtitle D facility receiving the treated debris;

b. a description of the hazardous debris as initially generated, including the applicable EPA Hazardous Waste Number(s); and

c. for debris excluded under LAC 33:V.109.Hazardous Waste.6, the technology from LAC 33:V.2299.Appendix, Table 8, used to treat the debris.

2. The notification must be updated if the debris is shipped to a different facility and, for debris excluded under LAC 33:V.109.Hazardous Waste.6, if a different type of debris is treated or if a different technology is used to treat the debris.

3. For debris excluded under LAC 33:V.109.Hazardous Waste.6, the owner or operator of the treatment facility must document and certify compliance with the treatment standards of LAC 33:V.2299.Appendix, Table 8 as follows:

a. records must be kept of all inspections, evaluations, and analyses of treated debris that are made to determine compliance with the treatment standards;

b. records must be kept of any data or information the treater obtains during treatment of the debris that identifies key operating parameters of the treatment unit; and

c. for each shipment of treated debris, a certification of compliance with the treatment standards must be signed by an authorized representative and placed in the facility's files. The certification must state the following.

"I certify under penalty of law that the debris has been treated in accordance with the requirements of LAC 33:V.2299.Appendix, Table 8. I am aware that there are significant penalties for making a false certification, including the possibility of fine and imprisonment."

F. Generators and treaters who first receive from the administrative authority a determination that a given contaminated soil subject to LDRs as provided in LAC 33:V.2236.A no longer contains a listed hazardous waste and generators and treaters who first determine that a contaminated soil subject to LDRs as provided in LAC 33:V.2236.A no longer exhibits a characteristic of hazardous waste must:

1. prepare a one-time only documentation of these determinations including all supporting information; and
2. maintain that information in the facility files and other records for a minimum of three years.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:1057 (December 1990), amended LR 17:658 (July 1991), LR 21:266 (March 1995), LR 22:22 (January 1996), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:669 (April 1998), LR 24:1730 (September 1998), LR 25:449 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:281 (February 2000), LR 26:2478 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2459 (October 2005), LR 33:2109 (October 2007), LR 34:997 (June 2008), LR 34:1897 (September 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:937 (July 2020).

§2247. Owners or Operators of Treatment or Disposal Facilities: Testing, Waste Minimization, Recordkeeping and Notice Requirements

A. Treatment facilities must test their wastes according to the frequency specified in their waste analysis plans, as required by LAC 33:V.1519 (for permitted TSDs) or 4313 (for interim status facilities). Such testing must be performed as provided in Paragraphs A.1-2 of this Section.

1. For wastes or contaminated soil with treatment standards expressed in the waste extract (Toxicity Characteristic Leaching Procedure, TCLP), the owner or operator of the treatment facility must test an extract of the treatment residues, using Test Method 1311 (the TCLP described in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110) to assure that the treatment residues extract meets the applicable treatment standards.

2. For wastes or contaminated soil with treatment standards expressed as concentrations in the waste, the owner or operator of the treatment facility must test the

treatment residues (not an extract of such residues) to ensure that they meet the applicable treatment standards.

B. A one-time notice must be sent with the initial shipment of waste or contaminated soil to the land disposal facility. A copy of the notice must be placed in the treatment facility's file.

1. No further notification is necessary until such time that the waste or receiving facility changes, in which case a new notice must be sent and a copy placed in the treatment facility's file.

2. The one-time notice must include these requirements:

a. EPA Hazardous Waste Numbers and Manifest Numbers of the first shipment;

b. the waste is subject to the LDRs. The constituents of concern for F001-F005, and F039, and underlying hazardous constituents in characteristic wastes, unless the waste will be treated and monitored for all constituents. If all constituents will be treated and monitored, there is no need to put them all on the LDR notice;

c. the notice must include the applicable wastewater/nonwastewater category (see LAC 33:V.2203.A) and subdivisions made within a waste code based on waste-specific criteria (such as D003 reactive cyanide);

d. waste analysis data (when available);

e. for contaminated soil subject to LDRs as provided in LAC 33:V.2236.A, the constituents subject to treatment as described in LAC 33:V.2236.D and the following statement:

"This contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and [is subject to/complies with] the soil treatment standards as provided by LAC 33:V.2236.C"; and

f. a certification statement is needed (see applicable Section for exact wording).

C. The treatment facility must submit a one-time certification signed by an authorized representative with the initial shipment of waste or treatment residue of a restricted waste to the land disposal facility. The certification must state:

"I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification. Based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the treatment process has been operated and maintained properly so as to comply with the treatment standards specified in LAC 33:V.2223 without impermissible dilution of the prohibited waste. I am aware there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

A certification is also necessary for contaminated soil and it must state:

"I certify under penalty of law that I have personally examined and am familiar with the treatment technology and

ENVIRONMENTAL QUALITY

operation of the treatment process used to support this certification and believe that it has been maintained and operated properly so as to comply with treatment standards specified in LAC 33:V.2236 without impermissible dilution of the prohibited wastes. I am aware there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.”

1. A copy of the certification must be placed in the treatment facility’s on-site files. If the waste or treatment residue changes, or the receiving facility changes, a new certification must be sent to the receiving facility, and a copy placed in the file.

2. Debris excluded from the definition of hazardous waste under LAC 33:V.109.Hazardous Waste.6 (i.e., debris treated by an extraction or destruction technology provided by LAC 33:V.2299.Appendix, Table 8, and debris that the administrative authority has determined does not contain hazardous waste), however, is subject to the notification and certification requirements of LAC 33:V.2246.E rather than the certification requirements of this Subsection.

3. For wastes with organic constituents having treatment standards expressed as concentration levels, if compliance with the treatment standards is based in whole or in part on the analytical detection limit alternative specified in LAC 33:V.2223, the certification, signed by an authorized representative, must state the following.

“I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification. Based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the nonwastewater organic constituents have been treated by incineration in units operated in accordance with LAC 33:V.Chapter 31 or Chapter 43.Subchapter N, or by combustion in fuel substitution units operating in accordance with applicable technical requirements, and combustion units as specified in LAC 33:V.2299.Appendix, Table 3. I have been unable to detect the nonwastewater organic constituents despite having used best good-faith efforts to analyze for such constituents. I am aware that there are significant penalties for submitting a false certification, including the possibility of fines and imprisonment.”

4. For characteristic wastes that are subject to the treatment standards in LAC 33:V.2223 (other than those expressed as a required method of treatment), or LAC 33:V.2236 that contain underlying hazardous constituents as defined in LAC 33:V.2203; if these wastes are treated on-site to remove the hazardous characteristic, and are then sent off-site for treatment of underlying hazardous constituents, the certification must state the following.

“I certify under penalty of law that the waste has been treated in accordance with the requirements of LAC 33:V.2223 or 2236 to remove the hazardous characteristic. This decharacterized waste contains underlying hazardous constituents that require further treatment to meet treatment standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.”

5. For characteristic wastes that contain underlying hazardous constituents as defined LAC 33:V.2203 that are treated on-site to remove the hazardous characteristic and to

treat underlying hazardous constituents to levels in LAC 33:V.2233 Universal Treatment Standards, the certification must state the following.

“I certify under penalty of law that the waste has been treated in accordance with the requirements of LAC 33:V.2223 to remove the hazardous characteristic and that underlying hazardous constituents, as defined in LAC 33:V.2203 have been treated on-site to meet the LAC 33:V.2233 Universal Treatment Standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.”

D. If the waste or treatment residue will be further managed at a different treatment or storage or disposal facility, the treatment, storage, or disposal facility sending the waste or treatment residue off-site must comply with the notice and certification requirements applicable to generators in LAC 33:V.2245.B and C.

E. Where the wastes are recyclable materials used in a manner constituting disposal subject to the provisions in LAC 33:V.4139.B-D regarding treatment standards and prohibition levels, the owner or operator of a treatment facility (i.e., the recycler) must, for the initial shipment of waste, prepare a one-time certification described in Subsection C of this Section and a one-time notice that includes the information listed in Subsection B of this Section (except the manifest number). The certification and notification must be placed in the facility’s on-site files. If the waste or the receiving facility changes, a new certification and notification must be prepared and placed in the on-site files. In addition, the recycling facility must also keep records of the name and location of each entity receiving the hazardous waste-derived product.

F. Except where the owner or operator is disposing of any waste that is a recyclable material used in a manner constituting disposal in accordance with LAC 33:V.4139.A.2-4, the owner or operator of any land disposal facility disposing of any waste subject to prohibitions under this Chapter must do the following:

1. he must have copies of the notice and certification specified in either Subsection B, C, D, or E of this Section; and

2. he must test the waste or an extract of the waste or treatment residue developed using Test Method 1311 (the Toxicity Characteristic Leaching Procedure, described in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110) to ensure that the wastes or treatment residues comply with the applicable treatment standards set forth in LAC 33:V.2223-2233. Such testing must be performed according to the frequency specified in the facility’s waste analysis plan, as required by LAC 33:V.1519 or 4313.

G. All treatment, storage, and disposal facilities shall develop and retain a waste minimization plan on site. The plan shall be submitted to the administrative authority within 30 days of receipt of request. The plan shall include ongoing and proposed waste minimization projects and tentative beginning dates for proposed projects.

H. Certification. Each waste minimization plan must be certified by a Louisiana registered professional engineer (PE).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 15:378 (May 1989), amended LR16:1057 (December 1990), LR 17:658 (July 1991), LR 21:266, 267 (March 1995), LR 21:1334 (December 1995), LR 22:22 (January 1996), LR 22:820 (September 1996), LR 23:566 (May 1997), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:670 (April 1998), LR 24:1730 (September 1998), LR 25:449 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:282 (February 2000), LR 26:2478 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2459 (October 2005), LR 32:607 (April 2006), LR 33:2110 (October 2007), LR 34:997 (June 2008), LR 34:1897 (September 2008).

Subchapter B. Hazardous Waste Injection Restrictions

§2249. Purpose, Scope, and Applicability

A. This Subchapter identifies hazardous wastes that are prohibited from disposal into Class I hazardous waste injection wells and defines those circumstances under which a waste, otherwise prohibited from injection, may be injected.

B. The requirements of LAC 33:V.Chapter 22.Subchapter B apply to owners or operators of Class I hazardous waste injection wells used to inject hazardous waste.

C. Wastes otherwise prohibited from injection may continue to be injected:

1. if an extension from the effective date of a prohibition has been granted in accordance with LAC 33:V.2253 with respect to such wastes; or

2. if an approval has been granted in response to a petition filed under LAC 33:V.2271, or a determination has been made under LAC 33:V.2273, to allow injection of prohibited wastes with respect to those wastes and wells covered by the petition; or

3. if the waste is generated by a very small quantity generator, as defined in LAC 33:V.1009.

D. Wastes that are hazardous only because they exhibit a hazardous characteristic, and which are otherwise prohibited under LAC 33:V.Chapter 22.Subchapter B are not prohibited from land disposal if the wastes:

1. are disposed into a nonhazardous injection well, defined under LAC 43:XVII.203.C, and do not exhibit any prohibited characteristic of hazardous waste specified in LAC 33:V.Chapter 49 at the point of injection at the well head; or

2. do not exhibit any prohibited characteristics of hazardous waste specified in LAC 33:V.4903 at the point of injection at the well head and are disposed into a hazardous

injection well, defined under LAC 43:XVII.203.C, that receives only nonprohibited hazardous wastes.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1800 (October 1999), LR 27:712 (May 2001), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:938 (July 2020).

§2251. Dilution Prohibited as a Substitute for Treatment

A. The prohibition of LAC 33:V.2207 shall apply to owners or operators of Class I hazardous waste injection wells.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996).

§2253. Procedures for Case-by-Case Extensions to an Effective Date

A. The owner or operator of a Class I hazardous waste injection well may submit an application to the Office of Environmental Services for an extension of the effective date of any applicable prohibition established under LAC 33:V.Chapter 22.Subchapter A according to the procedures of LAC 33:V.2239.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2479 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2460 (October 2005), LR 33:2110 (October 2007).

§2255. Waste Analysis

A. Generators of hazardous wastes that are disposed into Class I injection wells, under LAC 33:V.2271, must comply with the applicable requirements of LAC 33:V.2245. Owners or operators of Class I hazardous waste injection wells must comply with the applicable requirements of LAC 33:V.2247.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1800 (October 1999).

§2257. Waste-Specific Prohibitions—Solvent Wastes

A. Effective August 8, 1988, the spent solvent wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers F001, F002, F003, F004, and F005 are prohibited from underground injection unless the solvent waste is a solvent-water mixture or solvent-containing sludge

ENVIRONMENTAL QUALITY

containing less than 1 percent total F001-F005 solvent constituents listed in LAC 33:V.2257, Table A.

B. Effective August 8, 1990, all spent F001-F005 solvent wastes containing less than 1 percent total F001-F005 solvent constituents listed in LAC 33:V.2257, Table A are prohibited from injection.

C. Effective July 20, 1991, all spent F002 and F005 wastes containing solvent constituents listed in LAC 33:V.2257, Table B are prohibited from underground injection.

D. The requirements of LAC 33:V.2257.A-C do not apply if:

1. the wastes meet or are treated to meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A; or

2. an approval has been granted in response to a petition under LAC 33:V.2271, or a determination made under LAC:V.2273; or

3. during the period of extension of the applicable effective date, if an extension has been granted under LAC 33:V.2253.

1. the wastes meet or are treated to meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A;

2. an approval has been granted in response to a petition under LAC 33:V.2271, or a determination made under LAC 33:V.2273; or

3. during the period of extension of the applicable effective date, if an extension has been granted under LAC 33:V.2253.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1801 (October 1999).

§2261. Waste-Specific Prohibitions—California List Wastes

A. Effective August 8, 1988, liquid hazardous wastes listed in LAC 33:V.2261.B containing polychlorinated biphenyls at concentrations greater than or equal to 50 ppm or halogenated organic compounds at concentrations greater than or equal to 10,000 mg/kg are prohibited from underground injection.

B. Effective August 8, 1990, the following hazardous wastes are prohibited from underground injection:

1. liquid hazardous wastes, including free liquids associated with any solid or sludge, containing free cyanides at concentrations greater than or equal to 1,000 mg/L; and

2. liquid hazardous wastes, including free liquids associated with any solid or sludge, containing the following metals (or elements) or compounds of these metals (or elements) at concentrations greater than or equal to those specified below:

Arsenic and/or compounds (as As)	500 mg/L
Cadmium and/or compounds (as Cd)	100 mg/L
Chromium (VI) and/or compounds (as Cr VI)	500 mg/L
Lead and/or compounds (as Pb)	500 mg/L
Mercury and/or compounds (as Hg)	20 mg/L
Nickel and/or compounds (as Ni)	134 mg/L
Selenium and/or compounds (as Se)	100 mg/L
Thallium and/or compounds (as Tl)	130 mg/L

3. liquid hazardous waste having a pH less than or equal to 2.0; and

4. hazardous wastes containing halogenated organic compounds in total concentration less than 10,000 mg/kg but greater than or equal to 1,000 mg/kg.

C. The requirements of LAC 33:V.2261.A and B do not apply if:

1. the wastes meet or are treated to meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A;

Table A	
Acetone	Methylene chloride
N-Butyl alcohol	Methylene chloride (from the pharmaceutical industry)
Carbon disulfide	Methyl ethyl ketone
Carbon tetrachloride	Methyl isobutyl ketone
Chlorobenzene	Nitrobenzene
Cresols and Cresylic acid	Pyridine
Cyclohexanone	Tetrachloroethylene
1,2-Dichlorobenzene	Toluene
Ethyl acetate	1, 1, 1-Trichloroethane
Ethyl benzene	1, 2, 2-Trichloro-1, 2, 2-trifluoroethane
Ethyl Ether	Trichloroethylene
Isobutanol	Trichlorofluoromethane
Methanol	Xylene

Table B	
Benzene	2-Nitropropane
2-Ethoxyethanol	1, 1, 2-Trichloroethane

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1800 (October 1999).

§2259. Waste-Specific Prohibitions—Dioxin-Containing Wastes

A. Effective August 8, 1988, the dioxin-containing wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers F020, F021, F022, F023, F026, F027, and F028 are prohibited from underground injection.

B. The requirements of LAC 33:V.2259.A do not apply if:

2. an approval has been granted in response to a petition under LAC 33:V.2271, or a determination made under LAC 33:V.2273; or

3. during the period of extension of the applicable effective date, if an extension has been granted under LAC 33:V.2253.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1801 (October 1999).

§2263. Waste-Specific Prohibitions—First Third Wastes

A. Effective January 1, 1991, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers F006, F008, F009, F019, K001, K004, K008, K015, K016 (at concentrations greater than or equal to 1 percent), K017, K018, K019, K020, K021 (nonwastewaters generated by the process described in the waste listing description and disposed of after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K021 (wastewaters), K022, K024, K030, K031, K035, K036 (nonwastewaters generated by the process described in the waste listing description and disposed of after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K037, K044, K045, nonexplosive K046 (nonwastewaters), K046 (reactive nonwastewaters and all wastewaters), K047, K048, K049, K050, K051, K052, K060 (nonwastewaters generated by the process described in the waste listing description and disposed of after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K060 (wastewaters), K061, non-CaSO₄ K069 (nonwastewaters generated by the process described in the waste listing description and disposed of after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K069 (CaSO₄ nonwastewaters and all wastewaters), K071, K073, K083, K084, K085, K086, K087, K099, K101 (high arsenic nonwastewaters), K102 (high arsenic nonwastewaters), K103, K106, P001, P004, P005, P010, P011, P012, P015, P016, P018, P020, P030, P036, P037, P039, P041, P048, P050, P058, P059, P063, P068, P069, P070, P071, P081, P082, P084, P087, P089, P092, P094, P097, P102, P105, P108, P110, P115, P120, P122, P123, U007, U009, U010, U012, U016, U018, U019, U022, U029, U031, U036, U037, U041, U043, U044, U046, U050, U051, U053, U061, U063, U064, U066, U067, U074, U077, U078, U086, U089, U103, U105, U108, U115, U122, U124, U129, U130, U133, U134, U137, U151, U154, U155, U157, U158, U159, U171, U177, U180, U185, U188, U192, U200, U209, U210, U211, U219, U220, U221, U223, U226, U227, U228, U237, U238, U248, and U249 are prohibited from underground injection.

B. Effective August 8, 1990, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers K062 and K104 are prohibited from underground injection.

C. Effective June 7, 1991, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers

K016 (at concentrations less than 1 percent) are prohibited from underground injection.

D. Effective June 8, 1991, the waste specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Number F007 and the wastes specified in LAC 33:V.Chapter 49 as K011 (nonwastewaters) and K013 (nonwastewaters) are prohibited from underground injection.

E. Effective May 8, 1992, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers K011 (wastewaters), K013(wastewaters), and K014 are prohibited from underground injection.

F. The requirements of LAC 33:V.2263.A-E do not apply if:

1. the wastes meet or are treated to meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A;

2. an approval has been granted in response to a petition under LAC 33:V.2271, or a determination made under LAC 33:V. 2273; or

3. during the period of extension of the applicable effective date, if an extension has been granted under LAC 33:V.2253.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1801 (October 1999).

§2265. Waste-Specific Prohibitions—Second Third Wastes

A. Effective January 1, 1991, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers F010, F011, F012, F024, K009 (nonwastewaters), K010, K025 (nonwastewaters generated by the process described in the waste listing description and disposed of after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K025 (wastewaters), K027, K028, K029 (nonwastewaters), K038, K039, K040, K041, K042, K043, K095, K096, K097, K098, K105, K113, K114, K115, K116, P002, P003, P007, P008, P014, P026, P027, P029, P040, P043, P044, P049, P054, P057, P060, P062, P066, P067, P072, P074, P085, P098, P104, P106, P107, P111, P112, P113, P114, U002, U003, U005, U008, U011, U014, U015, U020, U021, U023, U025, U026, U028, U032, U035, U047, U049, U057, U058, U059, U060, U062, U070, U073, U080, U083, U092, U093, U094, U095, U097, U098, U099, U101, U106, U107, U109, U110, U111, U114, U116, U119, U127, U128, U131, U135, U138, U140, U142, U143, U144, U146, U147, U149, U150, U161, U162, U163, U164, U165, U168, U169, U170, U172, U173, U174, U176, U178, U179, U189, U193, U196, U203, U205, U206, U208, U213, U214, U215, U216, U217, U218, U235, U239, and U244 are prohibited from underground injection.

B. Effective June 8, 1991, the waste specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Number

K009 (wastewaters) is prohibited from underground injection.

C. The requirements of LAC 33:V.2265.A and B do not apply if:

1. the wastes meet or are treated to meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A;

2. an approval has been granted in response to a petition under LAC 33:V.2271, or a determination made under LAC 33:V.2273; or

3. during the period of extension of the applicable effective date, if an extension has been granted under LAC 33:V.2253.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1801 (October 1999).

§2267. Waste-Specific Prohibitions—Third Third Wastes

A. Effective January 1, 1991, the wastes specified in LAC 33:V.Chapter 49 as F039 (wastewaters), K002, K003, K005, K006, K007, K026, K032, K033, K034, K036 (wastewaters), K093, K094, K100 (wastewaters), K100 (generated by the process described in the waste listing description and disposed of after August 17, 1989, and not generated in the course of treating wastewater forms of these wastes), P006, P009, P013, P017, P022, P023, P024, P028, P031, P033, P034, P038 (wastewaters), P042, P045, P046, P047, P051, P056, P064, P065 (wastewaters), P073, P075, P076, P077, P078, P088, P093, P095, P096, P099, P101, P103, P116, P118, P119, U001, U004, U006, U017, U024, U027, U030, U033, U034, U038, U039, U042, U045, U048, U052, U055, U056, U068, U071, U072, U075, U076, U079, U081, U082, U084, U085, U087, U088, U090, U091, U096, U102, U112, U113, U117, U118, U120, U121, U123, U125, U126, U132, U136, U141, U145, U148, U152, U153, U156, U160, U166, U167, U181, U182, U183, U184, U186, U187, U190, U191, U194, U197, U201, U204, U207, U222, U225, U234, U236, U240, U243, U246, and U247 and the following wastes identified as hazardous based on a characteristic alone designated as D001, D004 (wastewaters), D005, D006, D008 (except for lead materials stored before secondary smelting), D009 (wastewaters), D010, D011, D012, D013, D014, D015, D016, and D017 and newly listed F025 are prohibited from underground injection.

B. Effective January 1, 1991, mixed radioactive/hazardous wastes specified in LAC 33:V.2215, 2217, or 2219 that are radioactive and hazardous wastes are prohibited from underground injection. This effective date does not apply to the wastes listed in LAC 33:V.2261 that were prohibited from underground injection on August 8, 1990.

C. Effective May 8, 1992, the wastes specified in LAC 33:V.Chapter 49 as EPA Hazardous Waste Numbers F039 (nonwastewaters), P038 (nonwastewaters), P065 (nonwastewaters), and the wastes identified as hazardous based on a characteristic alone, designated as D002 (wastewaters and nonwastewaters), D003 (wastewaters and nonwastewaters), D004 (nonwastewaters), D007 (wastewaters and nonwastewaters), D008 (lead materials stored before secondary smelting), and D009 (nonwastewaters) are prohibited from underground injection. These effective dates do not apply to the wastes listed in LAC 33:V.2261 that were prohibited from underground injection on August 8, 1990.

D. The requirements of LAC 33:V.2267.A-C do not apply if:

1. the wastes meet or are treated to meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A;

2. an approval has been granted in response to a petition under LAC 33:V.2271, or a determination made under LAC 33:V.2273; or

3. during the period of extension of the applicable effective date, if an extension has been granted under LAC 33:V.2253.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1801 (October 1999), amended by the Office of the Secretary, Legal Division, LR 39:2491 (September 2013).

§2269. Waste-Specific Prohibitions—Newly Listed Wastes

A. Effective September 20, 1995, the wastes specified as EPA Hazardous Waste Numbers F037, F038, K107, K108, K109, K110, K111, K112, K117, K118, K123, K124, K125, K126, K131, K132, K136, K141, K142, K143, K144, K145, K147, K148, K149, K150, K151, U328, U353, and U359 are prohibited from underground injection.

B. Effective September 19, 1995, the wastes specified as D001 (High TOC Subcategory as specified at LAC 33:V.2299.Appendix, Table 2) and in LAC 33:V.4903.E as EPA Hazardous Waste Numbers D012, D013, D014, D015, D016 and D017 are prohibited from underground injection.

C. The requirements of LAC 33:V.2269.A do not apply if:

1. the wastes meet or are treated to meet the applicable treatment standards specified in LAC 33:V.Chapter 22.Subchapter A;

2. an exemption or an approval has been granted in response to a petition under LAC 33:V.2271, or a determination made under LAC 33:V.2273; or

3. during the period of extension of the applicable effective date, if an extension has been granted under LAC 33:V.2253.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 25:1801 (October 1999).

§2271. Exemptions to Allow Land Disposal of a Prohibited Waste by Deep Well Injections

A. Any person seeking an exemption to allow land disposal by deep well injection of a prohibited hazardous waste in a particular injection well or wells must submit a petition to the Office of Environmental Services that does the following.

1. The petition must show that no other economically and environmentally reasonable alternative to disposal into an injection well is available. No exemption shall be granted to a generator for the land disposal of a waste stream if the waste stream can reasonably be eliminated or significantly reduced through waste reduction.

2. The petition must demonstrate to a reasonable degree of certainty that the waste shall be permanently confined as required by R.S. 30:2193(A) and 2193(E)(2)(d) and for the purposes of this Section, permanent confinement means that there will be no migration of hazardous constituents from the injection zone for as long as the wastes remain hazardous. Migration prohibited by this Section includes migration into the air, land or waters of the state where a discharge is not permitted.

B. A petition submitted pursuant to this Section must apply to land disposal of the specific prohibited waste into a specific injection well or wells described in the showing and demonstration and will not apply to any other prohibited waste at that injection well or wells or to that specific prohibited waste at any other injection well.

C. To comply with Paragraph A.1 of this Section, the petitioner must show the following.

1. The petitioner must show that he or she has made a good-faith effort, using economically and technically feasible and environmentally sound methods, to provide for use, reuse, reclamation, or other recycling of waste in a manner other than for a use constituting disposal.

2. For each waste stream, the petitioner must show that he or she has a program or plan in effect to reduce the volume and toxicity of the waste he or she generates and that he or she has sought out the best technology available to reduce the toxicity, corrosiveness, virulent, or infectious character, or volume of the waste and that the waste cannot be further reduced through production modifications, nor can the waste or specific constituents of the waste be reclaimed or reused. The plan shall include:

a. a schedule of implementation and anticipated reductions in quantity and toxicity;

b. a list of technical process reductions considered and those rejected and the reasons for the rejections;

c. an analysis of the impact of the reduction program or plan on all operations of the facility affecting the environment, including air and water discharges; and

d. each waste reduction program or plan must be certified by a Louisiana licensed professional engineer (PE).

3. The petitioner must sign and present to the administrative authority the following certification.

“I certify under penalty of law that I have personally examined and am familiar with the information submitted in this waste reduction plan and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.”

4. The petitioner must submit a report describing in detail the efforts undertaken since 1984 to reduce the volume and toxicity of waste generated. The report shall provide data indicating the change in volume and toxicity of waste actually achieved during each year in comparison to previous years, to the extent that such information is available. The report shall also document, for each hazardous waste stream proposed for disposal in a land disposal unit, a Waste Reduction Analysis (WRA) showing that the petitioner has considered the economic and technical feasibility of alternative disposal methods in the following order: reduction, recycling, treatment, and disposal. The WRA must include:

a. an analysis of alternatives considered;

b. the costs of alternatives considered;

c. an assessment of the impact on other environmental programs of the facility, including impacts on air and water discharges; and

d. a description of the availability of alternate capacity for use of alternative technologies.

D. The demonstration required in LAC 33:V.2271.A.2 must include sufficient information to assure the administrative authority of the following.

1. The hydrogeological and geochemical conditions at the sites and the physiochemical nature of the waste stream(s) are such that one of the following reliable predictions can be made.

a. Fluid movement conditions are such that the injected fluids will not migrate within 10,000 years, either:

i. vertically upward out of the injection zone; or

ii. laterally within the injection zone, to a point of discharge or interface with an underground source of drinking water (USDW).

b. If the injected fluids do migrate out of the injection zone or to a point of discharge or interface with a USDW within 10,000 years, the fluid will no longer be

ENVIRONMENTAL QUALITY

hazardous because of attenuation, transformation, or immobilization of hazardous constituents within the injection zone by hydrolysis, chemical interactions, or other means.

2. Any migration due to diffusion shall be accounted for in the demonstration required under Subparagraph D.1.a of this Section.

3. For each well the petitioner has done the following.

a. The petitioner has demonstrated that the injection well's area of review includes at least the 2-mile radius around the bore hole. The administrative authority may specify a larger area of review on the basis of the calculated cone of influence around the well.

b. Using a protocol acceptable to the administrative authority, the petitioner has located, identified, and ascertained the conditions of all wells within the injection well's area of review (as specified in Subparagraph D.2.a of this Section) that penetrate the injection zone or the confining zone.

c. The petitioner has submitted a corrective action plan that meets the substantive requirements of Subsection V of this Section; its implementation shall become a condition of petition approval.

d. The petitioner has submitted the results of pressure and radioactive tracer tests performed within one year prior to submission of the petition that may demonstrate the mechanical integrity of the well's long string casing, injection tube, annular seal, and bottom hole cement. In cases where the petition has not been approved or denied within one year after the initial demonstration of mechanical integrity, the administrative authority may require the owner or operator to perform the tests again and submit the results of the new tests.

E. A demonstration under LAC 33:V.2271.D.1.a shall identify the strata within the injection zone which will confine fluid movement above the injection interval and include a showing that this strata is free of known transmissive faults or fractures and that there is a confining zone above the injection zone.

F. A demonstration under LAC 33:V.2271.D.1.b shall identify the strata within the injection zone where waste transformation will be accomplished and include a showing that this strata is free of known transmissive faults or fractures and that there is a confining zone above the injection zone.

G. A demonstration may include information that:

1. treatment methods, the implementation of which shall become a condition of approval, will be used to reduce the toxicity or mobility of the wastes; or

2. a monitoring plan, the implementation of which shall become a condition of petition approval, will be used to enhance confidence in one or more aspects of the demonstration.

H. Any person who has been granted an exemption pursuant to this Section may submit a petition to the Office of Environmental Services for reissuance of the exemption to include an additional prohibited waste or wastes or to modify any conditions placed on the exemption by the administrative authority. The administrative authority may reissue the exemption if the petitioner complies with the requirements of Subsections A-F of this Section.

I. Any person who has been granted an exemption pursuant to this Section may submit a petition to the Office of Environmental Services to modify an exemption to include an additional nonprohibited hazardous waste or wastes. The administrative authority may grant the modification if he or she determines, to a reasonable degree of certainty, that the additional waste or wastes will behave hydraulically and chemically in a manner similar to previously included wastes and that it will not interfere with the containment capability of the injection zone.

J. Information submitted in support of the exemption petition must meet the following criteria.

1. All waste analysis and any new testing performed by the petitioner should be accurate and reproducible and performed in accordance with quality assurance standards.

2. Estimation techniques shall be appropriate, and EPA-certified test protocols shall be used when available and appropriate.

3. Predictive models shall have been verified and validated; shall be appropriate for the specific site, waste streams, and injection conditions of the operation; and shall be calibrated for existing sites where sufficient data are available.

4. An approved quality assurance and quality control plan shall address all aspects of the demonstration.

5. Reasonably conservative values shall be used whenever values taken from the literature or estimated on the basis of known information are used instead of site-specific measurements.

6. An analysis shall be performed to identify and assess aspects of the demonstration that contribute significantly to uncertainty. The petitioner shall conduct a sensitivity analysis to determine the extent to which significant uncertainty may affect the demonstration. The demonstration shall then be based on conservative assumptions identified in the analysis.

K. Any petitioner under LAC 33:V.2271.D.1.a shall provide sufficient site-specific information to support the demonstration, such as:

1. thickness, porosity, permeability, and extent of the various strata in the injection zone;

2. thickness, porosity, permeability, extent, and continuity of the confining zone;

3. hydraulic gradient in the injection zone;

4. hydrostatic pressure in the injection zone; and

5. geochemical conditions of the site.

L. In addition to the information in LAC 33:V.2271.K, any petitioner under LAC 33:V.2271.D.1.b shall provide sufficient waste-specific information to ensure reasonably reliable predictions about the waste transformation. The petitioner shall provide the information necessary to support the demonstration, such as:

1. a description of the chemical processes or other means that will lead to waste transformation; and
2. results of laboratory experiments verifying the waste transformation.

M. Any petition submitted to the administrative authority pursuant to this Section shall include the following components:

1. an identification of the specific waste or wastes and the specific injection well or wells for which the demonstration will be made;
2. a waste analysis to describe fully the chemical and physical characteristics of the subject wastes;
3. such additional information as is required by the administrative authority to support the petition under this Section; and
4. this statement signed by the petitioner or a duly authorized representative:

“I certify under penalty of law that I have personally examined and am familiar with the information submitted for this petition and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.”

N. Ambient Monitoring

1. Based on a site-specific assessment of the potential for fluid movement from the well or injection zone, and on the potential value of monitoring wells to detect such movement, the administrative authority shall require the owner or operator to develop a monitoring program. At a minimum, the administrative authority shall require annual monitoring of the pressure build-up in the injection zone, including, at a minimum, a shutdown of the well for a time sufficient to conduct a valid observation of the pressure fall off curve.

2. The owner or operator shall include all of the following requirements in his or her monitoring program.

a. Continuous monitoring for pressure changes in the first aquifer overlying the confining zone shall be addressed. The owner or operator shall, on a quarterly basis, sample the aquifer and analyze for constituents specified by the administrative authority.

b. The use of indirect, geophysical techniques shall be required to determine the position of the waste front, the water quality in a formation designated by the administrative authority, or to provide other site-specific data.

c. Periodic monitoring of the groundwater quality in the first aquifer overlying the injection zone shall be required.

d. Periodic monitoring of the groundwater quality in the lowermost USDW shall be required.

e. Additional monitoring may be necessary to determine whether fluids are moving into or between USDWs.

3. The administrative authority may exempt the owner or operator from any requirements in Paragraph N.2 of this Section which he or she deems to be unnecessary or not feasible, or which pose undue risks.

O. The administrative authority may require seismicity monitoring when he or she has reason to believe that the injection activity could cause seismic disturbances.

P. The administrative authority shall provide public notice and an opportunity for public comment in accordance with the procedures in LAC 33:V.Chapter 7.Subchapter C, and §2243, of the intent to approve or deny a petition. The administrative authority shall provide public notice of the final decision on a petition.

Q. If an exemption is granted it will apply only to the underground injection of the specific prohibited waste or wastes identified in the petition into a Class I hazardous waste injection well or wells specifically identified in the petition unless the exemption is modified or reissued pursuant to LAC 33:V.2271.H or I.

R. Whenever the administrative authority determines that the basis for approval of a petition may no longer be valid, he or she shall require a new demonstration in accordance with this Section.

S. Termination of an Approved Petition

1. The administrative authority may terminate an exemption granted under this Section for the following causes:

- a. noncompliance by the petitioners with any condition of the exemption;
- b. the petitioner’s failure in the petition or during the review and approval to disclose fully all relevant facts, or the petitioner’s misrepresentation of any relevant facts at any time; or
- c. a determination that new information shows that the basis for approval of the petition is no longer valid;

d. should a petition be terminated pursuant to this Section for the reason that it has been determined that a technologically and economically feasible alternative to underground injection exists, the administrative authority may provide for a compliance schedule authorizing continued injection for the amount of time reasonably necessary to construct and/or implement such alternative.

2. The administrative authority shall terminate an exemption granted under this Section for the following causes:

ENVIRONMENTAL QUALITY

a. the petitioner's willful withholding during the review and approval of the petition of facts directly and materially relevant to the administrative authority's decision on the petition;

b. a determination that there has been migration from the injection zone or the well that is not in accordance with the terms of the exemption, except that the administrative authority may at his or her discretion decide not to terminate where:

i. the migration resulted from a mechanical failure of the well that can be corrected promptly through a repair to the injection well itself or from an undetected well or conduit that can be plugged promptly; and

ii. the requirements of LAC 33:V.2271.V are satisfied.

3. The administrative authority shall follow the procedures in LAC 33:V.323 in terminating any exemption under this Section.

T. Whenever the owner or operator obtains evidence that injected wastes may have been released into an unauthorized zone, he or she must do the following.

1. The owner or operator shall immediately cease injection of waste fluids, and:

a. notify the Office of Environmental Compliance in the manner provided in LAC 33:I.3923 within 24 hours of obtaining such evidence;

b. take all necessary steps to identify and characterize the extent of any release;

c. comply with any remediation plan specified by the administrative authority;

d. implement any remediation plan approved by the administrative authority; and

e. where such release is into a USDW currently serving as a water supply, place a notice in a newspaper of general circulation.

2. The administrative authority may allow the operator to resume injection prior to completing cleanup action if the owner or operator demonstrates that the injection operation will not endanger strata containing waters of the state where a discharge is not permitted.

U. Term of the Exemption

1. The term of an exemption granted under this Section shall be a maximum of five years from the date of approval.

2. The administrative authority may re-issue an exemption every five years after the initial petition approval, based on the submittal and review of all demonstrations stipulated in LAC 33:V.2271.C and Z.

3. At least once every 10 years, the administrative authority will require re-issuance of the exemptions based on a full technical review of each petition. The department will coordinate the timing of the review with the Department of

Natural Resources (DNR) so that the petition review will coincide with DNR's UIC re-permitting review process.

4. The term of the exemption granted shall expire under the following conditions:

a. upon the revocation or denial of a Department of Natural Resources final permit; or

b. upon the termination of an EPA exemption; or

c. when the volume limit of waste to be land disposed during the term of petition is reached.

5. The permittee shall submit a request to the Office of Environmental Services for reissuance of the exemption at least 180 days prior to the end of the term. If the applicant submits a timely and technically complete application, and the administrative authority, through no fault of the applicant, fails to act on the application for reissuance on or before the expiration date of the existing exemption, the permittee may, with the written approval of the administrative authority, continue to operate under the terms and conditions of the existing exemption which shall remain in effect until final action on the application is taken by the administrative authority.

V. Corrective Action for Wells in the Area of Review

1. The petitioner shall submit a plan to the Office of Environmental Assessment outlining the protocol used to:

a. identify all wells penetrating the confining zone or injection zone within the area of review; and

b. determine whether wells are adequately completed or plugged.

2. The petitioner shall identify the location of all wells within the area of review that penetrate the injection zone or the confining zone and shall submit the following information to the administrative authority:

a. a tabulation of all wells within the area of review that penetrate the injection zone or the confining zone; and

b. a description of each well or type of well and any records of its plugging or completion.

3. For wells that the administrative authority determines are improperly plugged, completed, or abandoned, or for which plugging or completion information is unavailable, the applicant shall also submit a plan consisting of such steps or modifications as are necessary to prevent movement of fluids into strata containing waters of the state where a discharge is not permitted. Where the plan is adequate, the administrative authority shall incorporate it into the exemption as a condition. Where the administrative authority's review indicates that the petitioner's plan is inadequate (based at a minimum on the factors in Paragraph 5 of this Subsection), the administrative authority shall:

a. require the applicant to revise the plan;

b. prescribe a plan for corrective action as a condition of the exemption; or

c. deny the exemption.

4. Requirements

a. For existing hazardous waste injection wells, any exemption issued requiring corrective action other than pressure limitations shall include a compliance schedule requiring any corrective action accepted or prescribed under Paragraph V.3 of this Section. Any such compliance schedule shall provide for compliance no later than two years after issuance of the exemption and shall require observance of appropriate pressure limitations under Subparagraph V.4.c of this Section until all other corrective action measures have been implemented.

b. For new hazardous waste injection wells, no owner or operator may begin injection until all corrective actions required under this Section have been taken.

c. The administrative authority may require pressure limitations in lieu of plugging. If pressure limitations are used in lieu of plugging, the administrative authority shall require as a condition of the exemption that injection pressure be so limited that pressure in the injection zone at the site of any improperly completed or abandoned well within the area of review would not be sufficient to drive fluids into strata containing waters of the state where a discharge is not permitted.

5. In determining the adequacy of corrective action proposed by the applicant under Subsection V of this Section and in determining the additional steps needed to prevent fluid movement into strata containing waters of the state where a discharge is not permitted, the administrative authority shall consider the following criteria and factors:

- a. nature and volume of injected fluid;
- b. nature of native fluids or by-products of injection;
- c. geology;
- d. hydrology;
- e. history of the injection operations;
- f. completion and plugging procedures in effect at the time the well was closed;
- g. closure procedures in effect at the time the well was closed;
- h. hydraulic connections with USDWs;
- i. reliability of the procedures used to identify abandoned wells; and
- j. any other factors which might affect the movement of fluids into strata containing waters of the state where a discharge is not permitted.

W. Emergency Variance

1. During the petition review process, the applicant is required to comply with all prohibitions on land disposal under this Chapter, unless a petition for an exemption has been approved by the EPA, and the administrative authority grants an emergency variance. If EPA has approved the exemption, the land disposal of the waste may continue for

up to one year under an emergency variance issued by the administrative authority until the administrative authority makes a decision on the petition for exemption. The administrative authority may extend an emergency variance beyond one year; however, such approval is solely based on the agency's inability to review the petition during the first one-year variance. The administrative authority shall either grant or deny the petition within the extended emergency variance period, no later than June 1, 1995, for petitions submitted prior to June 1, 1992. After the administrative authority issues a decision on the exemption, the waste may be land disposed only in accordance with the provision of the exemption.

2. If the exemption decision is vacated and/or remanded by a court on judicial review, the emergency variance shall be automatically reinstated and shall remain in effect until final action on the remand is taken by the administrative authority and any subsequent appeal process has been completed.

X. The petition granted by the administrative authority does not relieve the petitioner from compliance with all other applicable regulations.

Y. Liquid hazardous wastes containing PCBs at concentrations greater than or equal to 50 ppm are not eligible for an exemption under this Section.

Z. As a condition of the exemption, the petitioner must submit a report to the Office of Environmental Services by March 1 of each calendar year during the term of the exemption, describing in detail the efforts undertaken during the preceding calendar year to reduce the volume and toxicity of the waste generated. The report shall provide data indicating the change in volume and toxicity of waste actually achieved during the year in comparison to previous years.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 22:22 (January 1996), amended LR 23:299 (March 1997), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2479 (November 2000), LR 30:1674 (August 2004), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2460 (October 2005), LR 33:2110 (October 2007), amended by the Office of the Secretary, Legal Division, LR 38:2756 (November 2012), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 43:2138 (November 2017).

§2273. Petition for Determinations Concerning No Alternatives to Land Disposal of a Prohibited Waste by Deep Well Injection

A. To the extent that the administrative authority has previously determined, through the issuance of an exemption under LAC 33:V.2271 or otherwise under LAC 33:V.Chapter 22, that no economically and environmentally reasonable alternatives to injection exist to the land disposal of a particular hazardous waste by injection well(s), such determination shall satisfy the requirement of and be deemed the determination by the administrative authority for

ENVIRONMENTAL QUALITY

purposes of R.S. 30:2193(G)(3). A formal petition in accordance with Subsection C of this Section may, but need not, be filed by the owner or operator of the injection well. The land disposal of the hazardous waste subject to the exemption shall be deemed to be excluded from the requirements of R.S. 30:2193(A-F), LAC 33:V.2205-2271, and any conditions of such exemption. The provisions set forth in Subsections D-L of this Section shall be applicable to such determination.

B. This Section is intended to provide the requirements to implement the exclusion provision set forth in R.S. 30:2193(G)(1)-(3). The implementation of this exclusion requires a determination from the administrative authority that there are no economically reasonable and environmentally sound alternatives to the land disposal of a hazardous waste by injection well. The requirements of R.S. 30:2193(A-F) and LAC 33:V.2205-2271 shall not apply to the land disposal of a hazardous waste by injection well excluded under R.S. 30:2193(G)(1)-(3).

C. Any person seeking a determination of no alternatives must submit a petition to the Office of Environmental Services that does the following:

1. the petition must show that such land disposal has been exempted by the United States Environmental Protection Agency (EPA) from land disposal prohibitions contained in the Resource Conservation and Recovery Act, 42 U.S.C. 6901 et seq.;

2. the petition must show that a permit has been issued for such injection well or wells by the Louisiana Department of Natural Resources, Office of Conservation, in accordance with Title 30. Subtitle I. Chapter 1 of the Louisiana Revised Statutes of 1950 and the Safe Drinking Water Act, 42 U.S.C. 300(f) et seq.;

3. the petition must show that for the injected hazardous waste there are no economically reasonable and environmentally sound alternatives to disposal into an injection well. The petition submitted in accordance with this Subsection must include:

- a. an analysis of alternatives considered for technical feasibility;

- b. an analysis of technically feasible alternatives, if any, showing whether any are economically reasonable;

- c. an assessment of the impact of those economically reasonable alternatives considered, if any, on other environmental programs and permits of the facility, including impacts on air and water discharges; and

- d. where applicable and appropriate, a description of the available capacity of economically reasonable and environmentally sound alternative technologies; and

4. the petition must include:

- a. a waste characterization that describes the chemical and physical characteristics of the wastes being or to be injected;

- b. a copy of the decision by the EPA exempting the land disposal from the prohibitions contained in the Resource Conservation and Recovery Act, 42 U.S.C. 6901 et seq., if issued;

- c. a copy of the permit issued for such injection well or wells by the Louisiana Department of Natural Resources, Office of Conservation, in accordance with Title 30. Subtitle I. Chapter 1 of the Louisiana Revised Statutes of 1950 and the Safe Drinking Water Act, 42 U.S.C. 300(f), et seq., if issued;

- d. such additional information as is required by the administrative authority to support the petition under this Section; and

- e. this statement signed by a duly authorized representative:

“I certify under penalty of law that I have personally examined and am familiar with the information submitted for this petition and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.”

D. Following a determination under this Section, the owner or operator of the injection well must submit a report to the administrative authority, by March 1 of each calendar year during the term of the determination, describing in detail the efforts undertaken during the preceding calendar year to identify any economically reasonable and environmentally sound alternatives to disposal into an injection well for any hazardous waste injected on site.

E. Except as otherwise provided in this Section, if a hazardous waste not subject to an existing determination is to be injected, a petition that addresses such hazardous waste must be submitted to the Office of Environmental Services and a determination of no alternatives be made prior to this waste being injected. The provisions contained in Subsection J of this Section, shall apply with respect to such hazardous waste.

1. If such hazardous waste is substantially similar in potential alternative technologies to a hazardous waste subject to an existing determination under this Section issued to the same owner or operator, a new petition is not necessary, and such hazardous waste shall be included within that determination upon the owner or operator providing notice to the administrative authority. The notice must include a brief showing that the alternatives determination for the existing hazardous waste is applicable to such hazardous waste.

2. If the administrative authority determines that the condition of Paragraph E.1 of this Section is not satisfied, the administrative authority shall require the owner or operator of the injection well to submit a petition under Subsection C of this Section that addresses such hazardous waste. In this circumstance such hazardous waste may be injected pending a final decision by the administrative authority on the petition.

F. If a new injection well(s) is to be used to inject a hazardous waste subject to an existing approved determination under this Section, a new petition is not necessary, provided the owner or operator submits a notice to the Office of Environmental Services. The notice shall include a copy of the EPA exemption approval for the new well(s) and a copy of the permit issued by the Louisiana Department of Natural Resources, Office of Conservation for the new well(s).

G. The administrative authority shall provide public notice and an opportunity for public comment, in accordance with the procedures in LAC 33:V.2243, of the intent to approve or deny a petition for no-alternatives determination. The administrative authority shall provide public notice of the final decision on such a petition.

H. Whenever the administrative authority determines that the basis for a determination may no longer be valid, the administrative authority may require a new petition in accordance with this Section.

I. Termination of a No-Alternatives Determination

1. The administrative authority may terminate a determination granted under this Section for any of the following causes:

- a. noncompliance by the facility with any condition of the determination;
- b. the facility’s failure in the petition or during the review and determination to disclose fully all relevant facts or the facility’s misrepresentation of any relevant facts at any time;
- c. a determination that new information shows the basis for a determination of the petition is no longer valid;
- d. upon the denial or termination of a Louisiana Department of Natural Resources, Office of Conservation final permit; or
- e. upon the denial or termination of an EPA exemption for injection.

2. Should a determination be terminated because an economically reasonable and environmentally sound alternative exists, the administrative authority shall issue a compliance schedule authorizing continued injection for the amount of time reasonably necessary to construct and/or implement such alternative.

3. If during the review and determination of the petition, the facility willfully withholds facts directly and materially relevant to the decision, the administrative authority may terminate the determination.

4. The administrative authority shall follow the procedures in LAC 33:V.323 in terminating any determination under this Section.

J. If a petition has been submitted in accordance with this Section and the EPA and the Louisiana Department of Natural Resources, Office of Conservation have approved the land disposal of prohibited waste by injection well, the land disposal of the waste by injection well may continue until the administrative authority makes a decision on the petition.

K. If a no-alternatives determination is vacated and/or remanded, the land disposal of the waste by injection well may continue until final action on the remand is taken by the administrative authority and all subsequent administrative and/or judicial appeal processes have been completed.

L. Term of the No-Alternatives Determination

1. The term of a determination granted under this Section shall be a maximum of 10 years from the date of the determination.

2. The petitioner shall submit a petition to the Office of Environmental Services for reissuance of a determination at least 180 days prior to the end of the term. If the petitioner submits a timely and technically complete petition and the administrative authority, through no fault of the petitioner, fails to act on the petition for reissuance on or before the expiration date of the existing determination, the petitioner may, with the written approval of the administrative authority, continue to operate under the terms and conditions of the existing determination, which shall remain in effect until final action on the petition is taken by the administrative authority and all subsequent administrative and/or judicial appeal processes have been completed.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 25:1801 (October 1999), amended LR 26:2479 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2460 (October 2005), LR 33:2110 (October 2007), amended by the Office of the Secretary, Legal Division, LR 38:2756 (November 2012).

Table 2. Treatment Standards for Hazardous Wastes

Waste Code	Waste Description and Treatment/Regulatory Subcategory ¹	Regulated Hazardous Constituent		Wastewaters	Non-Wastewaters
		Common Name	CAS ² Number	Concentration in mg/L ³ ; or Technology Code ⁴	Concentration in mg/kg ⁵ unless noted as "mg/L TCLP" or Technology Code ⁴
	pozzolanic stabilization, nor do they include organo-lead materials that can be incinerated and stabilized as ash.) (NOTE: This subcategory consists of nonwastewaters only.)				
D009 ⁹	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain greater than or equal to 260 mg/kg total mercury that also contain organics and are not incinerator residues (High Mercury-Organic Subcategory)	Mercury	7439-97-6	NA	IMERC; or RMERC
	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain greater than or equal to 260 mg/kg total mercury that are inorganic, including incinerator residues and residues from RMERC (High Mercury-Inorganic Subcategory)	Mercury	7439-97-6	NA	RMERC
	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain less than 260 mg/kg total mercury and that are residues from RMERC only (Low Mercury Subcategory)	Mercury	7439-97-6	NA	0.20 mg/L TCLP and meet LAC 33:V.2233 standards ⁸
	All other nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxicity characteristic leaching procedure (TCLP) in SW846; and contain less than 260 mg/kg total mercury and that are not residues from RMERC (Low Mercury Subcategory)	Mercury	7439-97-6	NA	0.025 mg/L TCLP and meet LAC 33:V.2233 standards ⁸
	All D009 wastewaters	Mercury	7439-97-6	0.15 and meet LAC 33:V.2233 standards ⁸	NA
	Elemental mercury contaminated with radioactive materials (Note: This subcategory consists of nonwastewaters only.)	Mercury	7439-97-6	NA	AMLGM
	Hydraulic oil contaminated with Mercury Radioactive Materials Subcategory (NOTE: This subcategory consists of nonwastewaters only.)	Mercury	7439-97-6	NA	IMERC
	Radioactively contaminated mercury-containing batteries (NOTE: This subcategory consists of nonwastewaters only.)	Mercury	7439-97-6	NA	Macroencapsulation, in accordance with LAC 33:V.2230
D010 ⁹	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for selenium based on the toxicity characteristic leaching procedure (TCLP) in SW846	Selenium	7782-49-2	0.82 and meet LAC 33:V.2233 standards ⁸	5.7 mg/L TCLP and meet LAC 33:V.2233 standards ⁸
D011 ⁹	Wastes that exhibit, or are expected to exhibit, the characteristic of toxicity for silver based on the toxicity characteristic leaching procedure (TCLP) in SW846	Silver	7440-22-4	0.43 and meet LAC 33:V.2233 standards ⁸	0.14 mg/L TCLP and meet LAC 33:V.2233 standards ⁸
	Radioactively contaminated silver-containing batteries (NOTE: This subcategory consists of nonwastewaters only.)	Silver	7440-22-4	NA	Macroencapsulation, in accordance with LAC 33:V.2230
D012 ⁹	Wastes that are TC for Endrin based on the TCLP in SW846 Method 1311.	Endrin	72-20-8	BIODG; or CMBST	0.13 and meet LAC 33:V.2233 standards ⁸
		Endrin aldehyde	7421-93-4	BIODG; or CMBST	0.13 and meet LAC 33:V.2233 standards ⁸
D013 ⁹	Wastes that are TC for Lindane based on the TCLP in SW846 Method 1311.	alpha-BHC	319-84-6	CARBN; or CMBST	0.066 and meet LAC 33:V.2233 standards ⁸
		beta-BHC	319-85-7	CARBN; or CMBST	0.066 and meet LAC 33:V.2233 standards ⁸
		delta-BHC	319-86-8	CARBN; or CMBST	0.066 and meet LAC 33:V.2233 standards ⁸
		gamma-BHC (Lindane)	58-89-9	CARBN; or CMBST	0.066 and meet LAC 33:V.2233 standards ⁸
D014 ⁹	Wastes that are TC for Methoxychlor based on the TCLP in SW846 Method 1311.	Methoxychlor	72-43-5	WETOX or CMBST	0.18 and meet LAC 33:V.2233 standards ⁸

ENVIRONMENTAL QUALITY

Table 2. Treatment Standards for Hazardous Wastes					
Waste Code	Waste Description and Treatment/Regulatory Subcategory ¹	Regulated Hazardous Constituent		Wastewaters	Non-Wastewaters
		Common Name	CAS ² Number	Concentration in mg/L ³ ; or Technology Code ⁴	Concentration in mg/kg ⁵ unless noted as "mg/L TCLP" or Technology Code ⁴
D015 ⁹	Wastes that are TC for Toxaphene based on the TCLP in SW846 Method 1311.	Toxaphene	8001-35-2	BIODG or CMBST	2.6 and meet LAC 33:V.2233 standards ⁸
D016 ⁹	Wastes that are TC for 2,4-D (2,4-Dichlorophenoxyacetic acid) based on the TCLP in SW846 Method 1311.	2,4-D (2,4-Dichlorophenoxyacetic acid)	94-75-7	CHOXD, BIODG, or CMBST	10 and meet LAC 33:V.2233 standards ⁸
D017 ⁹	Wastes that are TC for 2,4,5-TP (Silvex) based on the TCLP in SW846 Method 1311.	2,4,5-TP (Silvex)	93-72-1	CHOXD or CMBST	7.9 and meet LAC 33:V.2233 standards ⁸
D018 ⁹	Wastes that are TC for Benzene based on the TCLP in SW846 Method 1311 and that are managed in non-CWA/non-CWA equivalent/ non-Class I SDWA systems only.	Benzene	71-43-2	0.14 and meet LAC 33:V.2233 standards ⁸	10 and meet LAC 33:V.2233 standards ⁸
D019 ⁹	Wastes that are TC for Carbon tetrachloride based on the TCLP in SW846 Method 1311.	Carbon tetrachloride	56-23-5	0.057 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D020 ⁹	Wastes that are TC for Chlordane based on the TCLP in SW846 Method 1311.	Chlordane (alpha and gamma isomers)	57-74-9	0.0033 and meet LAC 33:V.2233 standards ⁸	0.26 and meet LAC 33:V.2233 standards ⁸
D021 ⁹	Wastes that are TC for Chlorobenzene based on the TCLP in SW846 Method 1311.	Chlorobenzene	108-90-7	0.057 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D022 ⁹	Wastes that are TC for Chloroform based on the TCLP in SW846 Method 1311.	Chloroform	67-66-3	0.046 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D023 ⁹	Wastes that are TC for o-Cresol based on the TCLP in SW846 Method 1311.	o-Cresol	95-48-7	0.11 and meet LAC 33:V.2233 standards ⁸	5.6 and meet LAC 33:V.2233 standards ⁸
D024 ⁹	Wastes that are TC for m-Cresol based on the TCLP in SW846 Method 1311.	m-Cresol (difficult to distinguish from p-cresol)	108-39-4	0.77 and meet LAC 33:V.2233 standards ⁸	5.6 and meet LAC 33:V.2233 standards ⁸
D025 ⁹	Wastes that are TC for p-Cresol based on the TCLP in SW846 Method 1311.	p-Cresol (difficult to distinguish from m-cresol)	106-44-5	0.77 and meet LAC 33:V.2233 standards ⁸	5.6 and meet LAC 33:V.2233 standards ⁸
D026 ⁹	Wastes that are TC for Cresols (Total) based on the TCLP in SW846 Method 1311.	Cresol-mixed isomers (Cresylic acid) (sum of o-, m-, and p-cresol concentrations)	1319-77-3	0.88 and meet LAC 33:V.2233 standards ⁸	11.2 and meet LAC 33:V.2233 standards ⁸
D027 ⁹	Wastes that are TC for p-Dichlorobenzene based on the TCLP in SW846 Method 1311.	p-Dichlorobenzene (1,4-Dichlorobenzene)	106-46-7	0.090 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D028 ⁹	Wastes that are TC for 1,2-Dichloroethane based on the TCLP in SW846 Method 1311.	1,2-Dichloroethane	107-06-2	0.21 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D029 ⁹	Wastes that are TC for 1,1-Dichloroethylene based on the TCLP in SW846 Method 1311.	1,1-Dichloroethylene	75-35-4	0.025 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D030 ⁹	Wastes that are TC for 2,4-Dinitrotoluene based on the TCLP in SW846 Method 1311.	2,4-Dinitrotoluene	121-14-2	0.32 and meet LAC 33:V.2233 standards ⁸	140 and meet LAC 33:V.2233 standards ⁸
D031 ⁹	Wastes that are TC for Heptachlor based on the TCLP in SW846 Method 1311.	Heptachlor	76-44-8	0.0012 and meet LAC 33:V.2233 standards ⁸	0.066 and meet LAC 33:V.2233 standards ⁸
		Heptachlor epoxide	1024-57-3	0.016 and meet LAC 33:V.2233 standards ⁸	0.066 and meet LAC 33:V.2233 standards ⁸
D032 ⁹	Wastes that are TC for Hexachlorobenzene based on the TCLP in SW846 Method 1311.	Hexachlorobenzene	118-74-1	0.055 and meet LAC 33:V.2233 standards ⁸	10 and meet LAC 33:V.2233 standards ⁸
D033 ⁹	Wastes that are TC for Hexachlorobutadiene based on the TCLP in SW846 Method 1311.	Hexachlorobutadiene	87-68-3	0.055 and meet LAC 33:V.2233 standards ⁸	5.6 and meet LAC 33:V.2233 standards ⁸
D034 ⁹	Wastes that are TC for Hexachloroethane based on the TCLP in SW846 Method 1311.	Hexachloroethane	67-72-1	0.055 and meet LAC 33:V.2233 standards ⁸	30 and meet LAC 33:V.2233 standards ⁸
D035 ⁹	Wastes that are TC for Methyl ethyl ketone based on the TCLP in SW846 Method 1311.	Methyl ethyl ketone	78-93-3	0.28 and meet LAC 33:V.2233 standards ⁸	36 and meet LAC 33:V.2233 standards ⁸
D036 ⁹	Wastes that are TC for Nitrobenzene based on the TCLP in SW846 Method 1311.	Nitrobenzene	98-95-3	0.068 and meet LAC 33:V.2233 standards ⁸	14 and meet LAC 33:V.2233 standards ⁸
D037 ⁹	Wastes that are TC for Pentachlorophenol based on the TCLP in SW846 Method 1311.	Pentachlorophenol	87-86-5	0.089 and meet LAC 33:V.2233 standards ⁸	7.4 and meet LAC 33:V.2233 standards ⁸
D038 ⁹	Wastes that are TC for Pyridine based on the TCLP in SW846 Method 1311.	Pyridine	110-86-1	0.014 and meet LAC 33:V.2233 standards ⁸	16 and meet LAC 33:V.2233 standards ⁸
D039 ⁹	Wastes that are TC for Tetrachloroethylene based on the TCLP in SW846 Method 1311.	Tetrachloroethylene	127-18-4	0.056 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D040 ⁹	Wastes that are TC for Trichloroethylene based on the TCLP in SW846 Method 1311.	Trichloroethylene	79-01-6	0.054 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
D041 ⁹	Wastes that are TC for 2,4,5-Trichlorophenol based on the TCLP in SW846 Method 1311.	2,4,5-Trichlorophenol	95-95-4	0.18 and meet LAC 33:V.2233 standards ⁸	7.4 and meet LAC 33:V.2233 standards ⁸
D042 ⁹	Wastes that are TC for 2,4,6-Trichlorophenol based on the TCLP in SW846 Method 1311.	2,4,6-Trichlorophenol	88-06-2	0.035 and meet LAC 33:V.2233 standards ⁸	7.4 and meet LAC 33:V.2233 standards ⁸
D043 ⁹	Wastes that are TC for Vinyl chloride based on the TCLP in SW846 Method 1311.	Vinyl chloride	75-01-4	0.27 and meet LAC 33:V.2233 standards ⁸	6.0 and meet LAC 33:V.2233 standards ⁸
F001, F002, F003, F004, and F005	F001, F002, F003, F004 and/or F005 solvent wastes that contain any combination of one or more of the following spent solvents: acetone, benzene, n-butyl alcohol, carbon disulfide, carbon tetrachloride, chlorinated fluorocarbons, chlorobenzene, o-cresol, m-cresol, p-cresol, cyclohexanone,	Acetone	67-64-1	0.28	160
		Benzene	71-43-2	0.14	10
		n-Butyl alcohol	71-36-3	5.6	2.6

Table 2. Treatment Standards for Hazardous Wastes

Waste Code	Waste Description and Treatment/Regulatory Subcategory ¹	Regulated Hazardous Constituent		Wastewaters	Non-Wastewaters	
		Common Name	CAS ² Number	Concentration in mg/L ³ ; or Technology Code ⁴	Concentration in mg/kg ⁵ unless noted as "mg/L TCLP" or Technology Code ⁴	
	o-dichlorobenzene, 2-ethoxyethanol, ethyl acetate, ethyl benzene, ethyl ether, isobutyl alcohol, methanol, methylene chloride, methyl ethyl ketone, methyl isobutyl ketone, nitrobenzene, 2-nitropropane, pyridine, tetrachloroethylene, toluene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, 1,1,2-trichloro- 1,2,2-trifluoroethane, trichloroethylene, trichloromonofluoromethane, and/or xylenes (except as specifically noted in other subcategories). See further details of these listings in LAC 33:V.4901.B, Table 1.	Carbon disulfide	75-15-0	3.8	NA	
		Carbon tetrachloride	56-23-5	0.057	6.0	
		Chlorobenzene	108-90-7	0.057	6.0	
		o-Cresol	95-48-7	0.11	5.6	
		m-Cresol (difficult to distinguish from p-cresol)	108-39-4	0.77	5.6	
		p-Cresol (difficult to distinguish from m-cresol)	106-44-5	0.77	5.6	
		Cresol-mixed isomers (Cresylic acid) (sum of o-, m-, and p-cresol concentrations)	1319-77-3	0.88	11.2	
		Cyclohexanone	108-94-1	0.36	NA	
		o-Dichlorobenzene	95-50-1	0.088	6.0	
		Ethyl acetate	141-78-6	0.34	33	
		Ethyl benzene	100-41-4	0.057	10	
		Ethyl ether	60-29-7	0.12	160	
		Isobutyl alcohol	78-83-1	5.6	170	
		Methanol	67-56-1	5.6	NA	
		Methylene chloride	75-9-2	0.089	30	
		Methyl ethyl ketone	78-93-3	0.28	36	
		Methyl isobutyl ketone	108-10-1	0.14	33	
		Nitrobenzene	98-95-3	0.068	14	
		Pyridine	110-86-1	0.014	16	
		Tetrachloroethylene	127-18-4	0.056	6.0	
		Toluene	108-88-3	0.080	10	
		1,1,1-Trichloroethane	71-55-6	0.054	6.0	
		1,1,2-Trichloroethane	79-00-5	0.054	6.0	
		1,1,2-Trichloro-1,2,2-trifluoroethane	76-13-1	0.057	30	
		Trichloroethylene	79-01-6	0.054	6.0	
		Trichloromonofluoromethane	75-69-4	0.020	30	
		Xylenes-mixed isomers (sum of o-, m-, and p-xylene concentrations)	1330-20-7	0.32	30	
		F003 and/or F005 solvent wastes that contain any combination of one or more of the following three solvents as the only listed F001-5 solvents: carbon disulfide, cyclohexanone, and/or methanol (see LAC 33:V.2223.F)	Carbon disulfide	75-15-0	3.8	4.8 mg/L TCLP
			Cyclohexanone	108-94-1	0.36	0.75 mg/L TCLP
			Methanol	67-56-1	5.6	0.75 mg/L TCLP
F005 solvent waste containing 2-Nitropropane as the only listed F001-5 solvent.	2-Nitropropane	79-46-9	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST		
F005 solvent waste containing 2-Ethoxyethanol as the only listed F001-5 solvent.	2-Ethoxyethanol	110-80-5	BIODG; or CMBST	CMBST		
F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	Cadmium	7440-43-9	0.69	0.11 mg/L TCLP		
	Chromium (Total)	7440-47-3	2.77	0.60 mg/L TCLP		
	Cyanides (Total) ⁷	57-12-5	1.2	590

Table 2. Treatment Standards for Hazardous Wastes					
Waste Code	Waste Description and Treatment/Regulatory Subcategory ¹	Regulated Hazardous Constituent		Wastewaters	Non-Wastewaters
		Common Name	CAS ² Number	Concentration in mg/L ³ ; or Technology Code ⁴	Concentration in mg/kg ⁵ unless noted as "mg/L TCLP" or Technology Code ⁴
				or CARBN	
P128	Mexacarbate ¹⁰	Mexacarbate	315-18-4	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P185	Tirpate ¹⁰	Tirpate	26419-73-8	0.056; or CMBST, CHOXD, BIODG or CARBN	0.28; or CMBST
P188	Physostigmine salicylate ¹⁰	Physostigmine salicylate	57-64-7	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P189	Carbosulfan ¹⁰	Carbosulfan	55285-14-8	0.028; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P190	Metolcarb ¹⁰	Metolcarb	1129-41-5	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P191	Dimetilan ¹⁰	Dimetilan	644-64-4	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P192	Isolan ¹⁰	Isolan	119-38-0	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P194	Oxamyl ¹⁰	Oxamyl	23135-22-0	0.056; or CMBST, CHOXD, BIODG or CARBN	0.28; or CMBST
P196	Manganese dimethyldithiocarbamate ¹⁰	Dithiocarbamates (total)	NA	0.028; or CMBST, CHOXD, BIODG or CARBN	28; or CMBST
P197	Formparanate ¹⁰	Formparanate	17702-57-7	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P198	Formetanate hydrochloride ¹⁰	Formetanate hydrochloride	23422-53-9	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P199	Methiocarb ¹⁰	Methiocarb	2032-65-7	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P201	Promecarb ¹⁰	Promecarb	2631-37-0	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P202	m-Cumenyl methylcarbamate ¹⁰	m-Cumenyl methylcarbamate	64-00-6	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P203	Aldicarb sulfone ¹⁰	Aldicarb sulfone	1646-88-4	0.056; or CMBST, CHOXD, BIODG or CARBN	0.28; or CMBST
P204	Physostigmine ¹⁰	Physostigmine	57-47-6	0.056; or CMBST, CHOXD, BIODG or CARBN	1.4; or CMBST
P205	Ziram ¹⁰	Dithiocarbamates (total)	NA	0.028; or CMBST, CHOXD, BIODG or CARBN	28; or CMBST
U001	Acetaldehyde	Acetaldehyde	75-07-0	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U002	Acetone	Acetone	67-64-1	0.28	160
U003	Acetonitrile	Acetonitrile	75-05-8	5.6	CMBST
		Acetonitrile; alternate ⁶ standard for nonwastewaters only	75-05-8	NA	38
U004	Acetophenone	Acetophenone	98-86-2	0.010	9.7
U005	2-Acetylaminofluorene	2-Acetylaminofluorene	53-96-3	0.059	140
U006	Acetyl chloride	Acetyl Chloride	75-36-5	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U007	Acrylamide	Acrylamide	79-06-1	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U008	Acrylic acid	Acrylic acid	79-10-7	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U009	Acrylonitrile	Acrylonitrile	107-13-1	0.24	84
U010	Mitomycin C	Mitomycin C	50-07-7	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U011	Amitrole	Amitrole	61-82-5	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST

ENVIRONMENTAL QUALITY

Table 2. Treatment Standards for Hazardous Wastes

Waste Code	Waste Description and Treatment/Regulatory Subcategory ¹	Regulated Hazardous Constituent		Wastewaters	Non-Wastewaters
		Common Name	CAS ² Number	Concentration in mg/L ³ ; or Technology Code ⁴	Concentration in mg/kg ⁵ unless noted as "mg/L TCLP" or Technology Code ⁴
U012	Aniline	Aniline	62-53-3	0.81	14
U014	Auramine	Auramine	492-80-8	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U015	Azaserine	Azaserine	115-02-6	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U016	Benz(c)acridine	Benz(c)acridine	225-51-4	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U017	Benzal chloride	Benzal chloride	98-87-3	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U018	Benz(a)anthracene	Benz(a)anthracene	56-55-3	0.059	3.4
U019	Benzene	Benzene	71-43-2	0.14	10
U020	Benzenesulfonyl chloride	Benzenesulfonyl chloride	98-09-9	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U021	Benzidine	Benzidine	92-87-5	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U022	Benzo(a)pyrene	Benzo(a)pyrene	50-32-8	0.061	3.4
U023	Benzotrichloride	Benzotrichloride	98-07-7	CHOXD; CHRED; CARBN; BIODG; or CMBST	CHOXD; CHRED; or CMBST
U024	bis(2-Chloroethoxy)methane	bis(2-Chloroethoxy)methane	111-91-1	0.036	7.2
U025	bis(2-Chloroethyl)ether	bis(2-Chloroethyl)ether	111-44-4	0.033	6.0
U026	Chlornaphazine	Chlornaphazine	494-03-1	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U027	bis(2-Chloroisopropyl)ether	bis(2-Chloroisopropyl)ether	39638-32-9	0.055	7.2
U028	bis(2-Ethylhexyl)phthalate	bis(2-Ethylhexyl)phthalate	117-81-7	0.28	28
U029	Methyl bromide (Bromomethane)	Methyl bromide (Bromomethane)	74-83-9	0.11	15
U030	4-Bromophenyl phenyl ether	4-Bromophenyl phenyl ether	101-55-3	0.055	15
U031	n-Butyl alcohol	n-Butyl alcohol	71-36-3	5.6	2.6
U032	Calcium chromate	Chromium (Total)	7440-47-3	2.77	0.60 mg/L TCLP
U033	Carbon oxyfluoride	Carbon oxyfluoride	353-50-4	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U034	Trichloroacetaldehyde (Chloral)	Trichloroacetaldehyde (Chloral)	75-87-6	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U035	Chlorambucil	Chlorambucil	305-03-3	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U036	Chlordane	Chlordane (alpha and gamma isomers)	57-74-9	0.0033	0.26
U037	Chlorobenzene	Chlorobenzene	108-90-7	0.057	6.0
U038	Chlorobenzilate	Chlorobenzilate	510-15-6	0.10	CMBST
U039	p-Chloro-m-cresol	p-Chloro-m-cresol	59-50-7	0.018	14
U041	Epichlorohydrin (1-Chloro-2,3-epoxypropane)	Epichlorohydrin (1-Chloro-2,3-epoxypropane)	106-89-8	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U042	2-Chloroethyl vinyl ether	2-Chloroethyl vinyl ether	110-75-8	0.062	CMBST
U043	Vinyl chloride	Vinyl chloride	75-01-4	0.27	6.0
U044	Chloroform	Chloroform	67-66-3	0.046	6.0
U045	Chloromethane (Methyl chloride)	Chloromethane (Methyl chloride)	74-87-3	0.19	30
U046	Chloromethyl methyl ether	Chloromethyl methyl ether	107-30-2	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U047	2-Chloronaphthalene	2-Chloronaphthalene	91-58-7	0.055	5.6
U048	2-Chlorophenol	2-Chlorophenol	95-57-8	0.044	5.7
U049	4-Chloro-o-toluidine hydrochloride	4-Chloro-o-toluidine hydrochloride	3165-93-3	(WETOX or CHOXD) fb CARBN; or CMBST	CMBST
U050	Chrysene	Chrysene	218-01-9	0.059	3.4
U051	Creosote	Naphthalene	91-20-3	0.059	5.6
		Pentachlorophenol	87-86-5	0.089	7.4
		Phenanthrene	85-01-8	0.059	5.6
		Pyrene	129-00-0	0.067	8.2
		Toluene	108-88-3	0.080	10
		Xylenes-mixed isomers (sum of o-, m-, and p-xylene concentrations)	1330-20-7	0.32	30
		Lead	7439-92-1	0.69	0.75 mg/L TCLP
U052	Cresols (Cresylic acid)	o-Cresol	95-48-7	0.11	5.6
		m-Cresol (difficult to distinguish from p-cresol)	108-39-4	0.77	5.6
		p-Cresol (difficult to distinguish from m-cresol)	106-44-5	0.77	5.6

Table 2. Treatment Standards for Hazardous Wastes					
Waste Code	Waste Description and Treatment/Regulatory Subcategory ¹	Regulated Hazardous Constituent		Wastewaters	Non-Wastewaters
		Common Name	CAS ² Number	Concentration in mg/L ³ ; or Technology Code ⁴	Concentration in mg/kg ⁵ unless noted as "mg/L TCLP" or Technology Code ⁴

¹The waste descriptions provided in this table do not replace waste descriptions in LAC 33:V.Chapter 49. Descriptions of Treatment/Regulatory Subcategories are provided, as needed, to distinguish between applicability of different standards.

²CAS means Chemical Abstract Services. When the waste code and/or regulated constituents are described as a combination of a chemical with its salts and/or esters, the CAS number is given for the parent compound only.

³Concentration standards for wastewaters are expressed in mg/L and are based on analysis of composite samples.

⁴All treatment standards expressed as a Technology Code or combination of Technology Codes are explained in detail in LAC 33:V.2299.Appendix, Table 3. Technology Codes and Descriptions of Technology-Based Standards.

⁵Except for Metals (EP or TCLP) and Cyanides (Total and Amenable) the nonwastewater treatment standards expressed as a concentration were established, in part, based upon incineration in units operated in accordance with the technical requirements of LAC 33:V.Chapter 31, LAC 33:V.Chapter 43.Subpart N, or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in LAC 33:V.2223.E. All concentration standards for nonwastewaters are based on analysis of grab samples.

⁶Where an alternate treatment standard or set of alternate standards has been indicated, a facility may comply with this alternate standard, but only for the Treatment/Regulatory Subcategory or physical form (i.e., wastewater and/or nonwastewater) specified for that alternate standard.

⁷Both Cyanides (Total) and Cyanides (Amenable) for nonwastewaters are to be analyzed using Method 9010C or 9012B, found in *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110, with a sample size of 10 grams and a distillation time of one hour and 15 minutes.

⁸These wastes, when rendered nonhazardous and then subsequently managed in CWA or CWA-equivalent systems, are not subject to treatment standards. (See LAC 33:V.2201.G.4 and G.5.)

⁹These wastes, when rendered nonhazardous and then subsequently injected in a Class I SDWA well, are not subject to treatment standards. (See LAC 33:V.Chapter 22.Subchapter B.)

¹⁰The treatment standards for this waste may be satisfied by either meeting the constituent concentrations in this table or by treating the waste by the specified technologies: combustion, as defined by the technology code CMBST at LAC 33:V.2299.Appendix, Table 3, for nonwastewaters; and biodegradation, as defined by the technology code BIODG, carbon adsorption, as defined by the technology code CARBN, chemical oxidation, as defined by the technology code CHOXD, or combustion, as defined as technology code CMBST at LAC 33:V.2299.Appendix, Table 3, for wastewaters.

¹¹For these wastes, the definition of CMBST is limited to:
 (1) combustion units operating under LAC 33:V.Chapter 30,
 (2) combustion units permitted under LAC 33:V.Chapter 31, or
 (3) combustion units operating under LAC 33:V.Chapter 43.Subchapter N, which have obtained a determination of equivalent treatment from EPA under 40 CFR 268.42(b).

¹²Disposal of K175 wastes that have complied with all applicable LAC 33:V.2223 treatment standards must also be macroencapsulated in accordance with LAC 33:V.2299.Appendix, Table 8 unless the waste is placed in: (1) a RCRA Subtitle C monofill containing only K175 wastes that meet all applicable LAC 33:V.2223 treatment standards; or (2) a dedicated RCRA Subtitle C landfill cell in which all other wastes being disposed are at a pH less than or equal to 6.0.

NOTE: NA—not applicable.

Table 3. Technology Codes and Description of Technology-Based Standards	
Technology Code	Description of Technology-Based Standard

	media (i.e., solid or liquid)—venting can be accomplished

Table 3. Technology Codes and Description of Technology-Based Standards	
Technology Code	Description of Technology-Based Standard
	through physical release utilizing valves/piping; physical penetration of the container; and/or penetration through detonation.
AMLGM	Amalgamation of liquid, elemental mercury contaminated with radioactive materials utilizing inorganic reagents such as copper, zinc, nickel, gold, and sulfur that result in a nonliquid, semi-solid amalgam and thereby reducing potential emissions of elemental mercury vapors to the air.
BIODG	Biodegradation of organics or nonmetallic inorganics (i.e., degradable inorganics that contain the elements of phosphorus, nitrogen, and sulfur) in units operated under either aerobic or anaerobic conditions such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (e.g., Total Organic Carbon can often be used as an indicator parameter for the biodegradation of many organic constituents that cannot be directly analyzed in wastewater residues).
CARBN	Carbon adsorption (granulated or powdered) of nonmetallic inorganics, organometallics, and/or organic constituents, operated such that a surrogate compound or indicator parameter has not undergone breakthrough (e.g., Total Organic Carbon can often be used as an indicator parameter for the adsorption of many organic constituents that cannot be directly analyzed in wastewater residues). Breakthrough occurs when the carbon has become saturated with the constituent (or indicator parameter) and substantial change in adsorption rate associated with that constituent occurs.
CHOXD	Chemical or electrolytic oxidation utilizing the following oxidation reagents (or waste reagents) or combinations of reagents: (1) hypochlorite (e.g., bleach), (2) chlorine, (3) chlorine dioxide, (4) ozone or UV (ultraviolet) light assisted ozone, (5) peroxides, (6) persulfates, (7) perchlorates, (8) permanganates, and/or (9) other oxidizing reagents of equivalent efficiency, performed in units operated such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (e.g., Total Organic Carbon can often be used as an indicator parameter for the oxidation of many organic constituents that cannot be directly analyzed in wastewater residues). Chemical oxidation specifically includes what is commonly referred to as alkaline chlorination.
CHRED	Chemical reduction utilizing the following reducing reagents (or waste reagents) or combinations of reagents: (1) sulfur dioxide; (2) sodium, potassium, or alkali salts of sulfites, bisulfites, metabisulfites, and polyethylene glycols (e.g., NaPEG and KPEG); (3) sodium hydrosulfide; (4) ferrous salts; and/or (5) other reducing reagents of equivalent efficiency, performed in units operated such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (e.g., Total Organic Halogens can often be used as an indicator parameter for the reduction of many halogenated organic constituents that cannot be directly analyzed in wastewater residues). Chemical reduction is commonly used for the reduction of hexavalent chromium to the trivalent state.
CMBST	High temperature organic destruction technologies, such as combustion in incinerators, boilers, or industrial furnaces operated in accordance with the applicable requirements of LAC 33:V.Chapter 30 or 31 or 41, and 43.Subchapter N, and in other units operated in accordance with applicable technical operating requirements; and certain non-combustive technologies, such as the Catalytic Extraction Process.
DEACT	Deactivation to remove the hazardous characteristics of a waste due to its ignitability, corrosivity, and/or reactivity.
FSUBS	Fuel substitution in units operated in accordance with applicable technical operating requirements.
HLVIT	Vitrification of high-level mixed radioactive wastes in units

Table 3. Technology Codes and Description of Technology-Based Standards	
Technology Code	Description of Technology-Based Standard
	in compliance with all applicable radioactive protection requirements under control of the Nuclear Regulatory Commission.
IMERC	Incineration of wastes containing organics and mercury in units operated in accordance with the technical operating requirements of LAC 33:V.Chapter 31 and LAC 33:V.4513 through 4521. All wastewater and nonwastewater residues derived from this process must then comply with the corresponding treatment standards per waste code with consideration of any applicable subcategories (e.g., High or Low Mercury Subcategories).
INCIN	Incineration in units operated in accordance with the technical operating requirements of LAC 33:V.Chapter 31 and LAC 33:V.4513-4521.
LLEXT	Liquid-liquid extraction (often referred to as solvent extraction) of organics from liquid wastes into an immiscible solvent for which the hazardous constituents have a greater solvent affinity, resulting in an extract high in organics that must undergo either incineration, reuse as a fuel, or other recovery/reuse and a raffinate (extracted liquid waste) proportionately low in organics that must undergo further treatment as specified in the standard.
MACRO	Macroencapsulation with surface coating materials such as polymeric organics (e.g., resins and plastics) or with a jacket of inert inorganic materials to substantially reduce surface exposure to potential leaching media. Macroencapsulation specifically does not include any material that would be classified as a tank or container according to LAC 33:V.109.
NEUTR	Neutralization with the following reagents (or waste reagents) or combinations of reagents: (1) acids, (2) bases, or (3) water (including wastewaters) resulting in a pH greater than 2 but less than 12.5 as measured in the aqueous residuals.
NLDBR	No land disposal based on recycling.
POLYM	Formation of complex high-molecular weight solids through polymerization of monomers in high-TOC D001 nonwastewaters that are chemical components in the manufacture of plastics.
PRECP	Chemical precipitation of metals and other inorganics as insoluble precipitates of oxides, hydroxides, carbonates, sulfides, sulfates, chlorides, fluorides, or phosphates. The following reagents (or waste reagents) are typically used alone or in combination: (1) lime (i.e., containing oxides and/or hydroxides of calcium and/or magnesium), (2) caustic (i.e., sodium and/or potassium hydroxides), (3) soda ash (i.e., sodium carbonate), (4) sodium sulfide, (5) ferric sulfate or ferric chloride, (6) alum, or (7) sodium sulfate. Additional flocculating, coagulation, or similar reagents/processes that enhance sludge dewatering characteristics are not precluded from use.
RBERY	Thermal recovery of Beryllium.
RCGAS	Recovery/reuse of compressed gases including techniques such as reprocessing of the gases for reuse/resale, filtering/adsorption of impurities, remixing for direct reuse or resale, and use of the gas as a fuel source.
RCORR	Recovery of acids or bases utilizing one or more of the following recovery technologies: (1) distillation (i.e., thermal concentration), (2) ion exchange, (3) resin or solid adsorption, (4) reverse osmosis, and/or (5) incineration for the recovery of acid. Note: This does not preclude the use of other physical phase separation or concentration techniques such as decantation, filtration (including ultrafiltration), and centrifugation, when used in conjunction with the above listed recovery technologies.
RLEAD	Thermal recovery of lead in secondary lead smelters.
RMERC	Retorting or roasting in a thermal processing unit capable of volatilizing mercury and subsequently condensing the volatilized mercury for recovery. The retorting or roasting unit (or facility) must be subject to one or more of the

ENVIRONMENTAL QUALITY

Table 3. Technology Codes and Description of Technology-Based Standards	
Technology Code	Description of Technology-Based Standard
	following: (1) a National Emissions Standard for Hazardous Air Pollutants (NESHAP) for mercury, (2) a Best Available Control Technology (BACT) or a Lowest Achievable Emission Rate (LAER) standard for mercury imposed pursuant to a Prevention of Significant Deterioration (PSD) permit, or (3) a state permit that establishes emission limitations (within meaning of Section 302 of the Clean Air Act) for mercury. All wastewater and nonwastewater residues derived from this process must then comply with the corresponding treatment standards per waste code with consideration of any applicable subcategories (e.g., High or Low Mercury Subcategories).
RMETL	Recovery of metals or inorganics utilizing one or more of the following direct physical/removal technologies: (1) ion exchange, (2) resin or solid (i.e., zeolites) adsorption, (3) reverse osmosis, (4) chelation/solvent extraction, (5) freeze crystallization, (6) ultrafiltration, and/or (7) simple precipitation (i.e., crystallization). Note: This does not preclude the use of other physical phase separation or concentration techniques such as decantation, filtration (including ultrafiltration), and centrifugation, when used in conjunction with the above listed recovery technologies.
ROGRS	Recovery of organics utilizing one or more of the following technologies: (1) distillation, (2) thin film evaporation, (3) steam stripping, (4) carbon adsorption, (5) critical fluid extraction, (6) liquid-liquid extraction, (7) precipitation/crystallization (including freeze crystallization), or (8) chemical phase separation techniques (i.e., addition of acids, bases, demulsifiers, or similar chemicals). Note: This does not preclude the use of other physical phase separation techniques such as decantation, filtration (including ultrafiltration), and centrifugation, when used in conjunction with the above listed recovery technologies.
RTHRM	Thermal recovery of metals or inorganics from nonwastewaters in units defined in LAC 33:V.109 under the definition of "industrial furnaces."
RZINC	Resmelting for the purpose of recovery of zinc in high-temperature metal recovery units.
STABL	Stabilization with the following reagents (or waste reagents) or combinations of reagents: (1) Portland cement, or (2) lime/pozzolans (e.g., fly ash and cement kiln dust)—this does not preclude the addition of reagents (e.g., iron salts, silicates, and clays) designed to enhance the set/cure time and/or compressive strength, or to overall reduce the leachability of the metals or inorganics.
SSTRP	Steam stripping of organics from liquid wastes utilizing direct application of steam to the wastes operated such that liquid and vapor flow rates, as well as temperature and pressure ranges, have been optimized, monitored, and maintained. These operating parameters are dependent upon the design parameters of the unit such as the number of separation stages and the internal column design. This results in a condensed extract high in organics that must undergo either incineration, reuse as a fuel, or other recovery/reuse, and an extracted wastewater that must undergo further treatment as specified in the standard.
WETOX	Wet air oxidation performed in units operated such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (e.g., Total Organic Carbon can often be used as an indicator parameter for the oxidation of many organic constituents that cannot be directly analyzed in wastewater residues).
WTRRX	Controlled reaction with water for highly reactive inorganic or organic chemicals with precautionary controls for protection of workers from potential violent reactions as well as precautionary controls for potential emissions of toxic/ignitable levels of gases released during the reaction.

NOTE 1: When a combination of these technologies (i.e., a treatment train) is specified as a single treatment standard,

the order of application is specified in Table 2 by indicating the five-letter technology code that must be applied first, then the designation "fb" (an abbreviation for "followed by"), then the five-letter technology code for the technology that must be applied next, and so on.

NOTE 2: When two or more technologies (or treatment trains) are specified as alternative treatment standards, the five-letter technology codes (or the treatment trains) are separated by a semicolon (;) with the last technology preceded by the word "or." This indicates that any one of these BDAT technologies or treatment trains can be used for compliance with the standard.

Table 4. Reserved.

Table 5. Metal Bearing Wastes Prohibited From Dilution in a Combustion Unit ¹ According to LAC 33:V.2207.C.1	
Waste Code	Waste Description
D004	Toxicity Characteristic for Arsenic
D005	Toxicity Characteristic for Barium
D006	Toxicity Characteristic for Cadmium
D007	Toxicity Characteristic for Chromium
D008	Toxicity Characteristic for Lead
D009	Toxicity Characteristic for Mercury
D010	Toxicity Characteristic for Selenium
D011	Toxicity Characteristic for Silver
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum
F007	Spent cyanide plating bath solutions from electroplating operations
F008	Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process
F009	Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process
F010	Quenching bath residues from oil baths from metal heat treating operations where cyanides are used in the process
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations
F012	Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive conversion coating process
K002	Wastewater treatment sludge from the production of chrome yellow and orange pigments
K003	Wastewater treatment sludge from the production of molybdate orange pigments
K004	Wastewater treatment sludge from the production of zinc yellow pigments
K005	Wastewater treatment sludge from the production of chrome green pigments
K006	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated)
K007	Wastewater treatment sludge from the production of iron blue pigments
K008	Oven residue from the production of chrome oxide green pigments
K061	Emission control dust/sludge from the primary production of steel in electric furnaces
K069	Emission control dust/sludge from secondary lead smelting
K071	Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used
K100	Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting
K106	Sludges from the mercury cell processes for making chlorine
P010	Arsenic acid H ₃ AsO ₄
P011	Arsenic oxide As ₂ O ₅
P012	Arsenic trioxide

Waste Code	Waste Description
P013	Barium cyanide
P015	Beryllium
P029	Copper cyanide Cu(CN)
P074	Nickel cyanide Ni(CN) ₂
P087	Osmium tetroxide
P099	Potassium silver cyanide
P104	Silver cyanide
P113	Thallic oxide
P114	Thallium (I) selenite
P115	Thallium (I) sulfate
P119	Amonium vanadate
P120	Vanadium oxide V ₂ O ₅
P121	Zinc cyanide
U032	Calcium chromate
U145	Lead phosphate
U151	Mercury
U204	Selenious acid
U205	Selenium disulfide
U216	Thallium (I) chloride
U217	Thallium (I) nitrate

¹ A combustion unit is defined as any thermal technology subject to LAC 33:V.Chapter 30 or Chapter 31 and Chapter 43.Subchapter N.

Hazardous waste with the following EPA hazardous waste codes may not be placed in lab packs under the alternative lab pack treatment standards of LAC 33:V.2227.C.

Thallium	7440-28-0	1.4	0.20 mg/L TCLP
Vanadium ⁵	7440-62-2	4.3	1.6 mg/L TCLP
Zinc ⁵	7440-66-6	2.61	4.3 mg/L TCLP

¹CAS means Chemical Abstract Services. When the waste code and/or regulated constituents are described as a combination of a chemical with its salts and/or esters, the CAS number is given for the parent compound only.

²Concentration standards for wastewaters are expressed in mg/L and are based on analysis of composite samples.

³Except for Metals (EP or TCLP) and Cyanides (Total and Amenable) the nonwastewater treatment standards expressed as a concentration were established, in part, based upon incineration in units operated in accordance with the technical requirements of LAC 33:V.Chapter 31 or LAC 33:V.Chapter 43.Subchapter N or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in LAC 33:V.2223. All concentration standards for nonwastewaters are based on analysis of grab samples.

⁴Both Cyanides (Total) and Cyanides (Amenable) for nonwastewaters are to be analyzed using Method 9010C or 9012B, found in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110, with a sample size of 10 grams and a distillation time of one hour and 15 minutes.

⁵These constituents are not “underlying hazardous constituents” in characteristic wastes, according to the definition at LAC 33:V.2203.A.

⁶Reserved.

⁷This constituent is not an underlying hazardous constituent as defined at LAC 33:V.2203 because its UTS level is greater than its TC level, thus a treated selenium waste would always be characteristically hazardous, unless it is treated to below its characteristic level.

⁸This standard is temporarily deferred for soil exhibiting a hazardous characteristic due to D004-D011 only.

NOTE: NA—not applicable.

Table 8. Alternative Treatment Standards for Hazardous Debris ¹		
Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
A. Extraction Technologies		
1. Physical Extraction		
a. Abrasive Blasting: Removal of contaminated debris surface layers using water and/or air pressure to propel a solid media (e.g., steel shot, aluminum oxide grit, plastic beads).	Glass, Metal, Plastic, Rubber: Treatment to a clean debris surface. ³ Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Removal of at least 0.6 cm of the surface layer; treatment to a clean debris surface. ³	All Debris: none
b. Scarification, Grinding, and Planing: Process utilizing striking piston heads, saws, or rotating grinding wheels such that contaminated debris surface layers are removed.	Same as above	Same as above
c. Spalling: Drilling or chipping holes at	Same as above	Same as above

ENVIRONMENTAL QUALITY

Table 8. Alternative Treatment Standards for Hazardous Debris ¹		
Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
appropriate locations and depths in the contaminated debris surface and applying a tool which exerts a force on the sides of those holes such that the surface layers are removed. The surface layer removed remains hazardous debris subject to the debris treatment standards.		
d. Vibratory Finishing: Process utilizing scrubbing media, flushing fluid, and oscillating energy such that hazardous contaminants or contaminated debris surface layers are removed. ⁴	Same as above	Same as above
e. High-Pressure Steam and Water Sprays: Application of water or steam sprays of sufficient temperature, pressure, residence time, agitation, surfactants, and detergents to remove hazardous contaminants from the debris surfaces or to remove contaminated debris surface layers.	Same as above	Same as above
2. Chemical Extraction		
a. Water Washing and Spraying: Application of water sprays or water baths of sufficient temperature, pressure, residence time, agitation, surfactants, acids, bases, and detergents to remove hazardous contaminants from the debris surfaces and surface pores or to remove contaminated debris surface layers.	All Debris: Treatment to a clean debris surface ³ . Brick, Pavement, Cloth, Concrete, Paper, Rock, Wood: Debris must be no more than 1.2 cm (1/2 in.) in one dimension (i.e. thickness limit ⁵) except that this thickness limit may be waived under an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ ; debris surfaces must be in contact with water solution for at least 15 minutes.	Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Contaminant must be soluble to at least 5 percent by weight in water solution or in emulsion; if debris is contaminated with a dioxin-listed waste ⁶ an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ must be obtained.
b. Liquid Phase Solvent Extraction: Removal of hazardous contaminants from debris surfaces and surface pores by applying nonaqueous liquid or liquid solution which causes the hazardous contaminants on contaminated debris to enter the liquid phase and be flushed away from the debris along with the liquid or liquid solution while using appropriate agitation, temperature, and residence time. ⁴	Same as above	Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Same as above, except that contaminant must be soluble to at least 5 percent by weight in the solvent.
c. Vapor Phase Solvent Extraction: Application of organic vapor using sufficient agitation, temperature, and residence time to cause hazardous contaminants on contaminated debris surfaces and surface pores to enter the vapor phase and be flushed away with the organic vapor. ⁴	Same as above, except that brick, cloth, concrete, paper, pavement, rock, and wood surfaces must be in contact with the organic vapor for at least 60 minutes.	Same as above

Table 8. Alternative Treatment Standards for Hazardous Debris ¹		
Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
3. Thermal Extraction		
a. High Temperature Metals Recovery: Application of sufficient heat, residence time, mixing, fluxing agents, and/or carbon in smelting, melting, or refining furnace to separate metals from debris.	For refining furnaces, treated debris must be separated from treatment residues using simple physical or mechanical means ⁹ , and, prior to further treatment, such residuals must meet the waste-specific treatment standards for organic compounds in waste contaminating the debris.	Debris contaminated with a dioxin-listed waste ⁵ : Obtain an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ .
b. Thermal Desorption: Heating in an enclosed chamber under either oxidizing or nonoxidizing atmospheres at sufficient temperature and residence time to vaporize hazardous contaminants from contaminated surfaces and surface pores and to remove the contaminants from the heating chamber in a gaseous exhaust gas. ⁷	All Debris: Obtain an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ ; treated debris must be separated from treatment residues using simple physical or mechanical means ⁹ , and, prior to further treatment, such residue must meet the waste-specific treatment standards for organic compounds in waste contaminating the debris. Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Debris must be no more than 10 cm (4 in.) in one dimension (i.e. thickness limit ⁵), except that this thickness limit may be waived under an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ .	All Debris: Metals other than mercury.
B. Destruction Technologies		
1. Biological Destruction (Biodegradation): Removal of hazardous contaminants from debris surfaces and surface pores in an aqueous solution and biodegradation of organic or nonmetallic inorganic compounds (i.e. inorganics that contain phosphorus, nitrogen, or sulfur) in units operated under either aerobic or anaerobic conditions.	All Debris: Obtain an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ ; treated debris must be separated from treatment residues using simple physical or mechanical means ⁹ , and, prior to further treatment, such residue must meet the waste-specific treatment standards for organic compounds in waste contaminating the debris. Brick, Cloth, Concrete, Paper, Rock, Wood: Debris must be no more than 1.2 cm (2 in.) in one dimension (i.e. thickness limit ⁵), except that this thickness limit may be waived under an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ .	All Debris: Metals contaminants.
2. Chemical Destruction		
a. Chemical Oxidation: Chemical or electrolytic oxidation utilizing the following oxidation reagents (or waste reagents) or combination reagents- (1) hypochlorite (i.e. bleach); (2) chlorine; (3) chlorine dioxide; (4) ozone or UV	Same as above	All Debris: Metals contaminants.

Table 8. Alternative Treatment Standards for Hazardous Debris ¹		
Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
(ultraviolet light) assisted ozone; (5) peroxides; (6) persulfates; (7) perchlorates; (8) permanganates; and/or (9) other oxidizing reagents of equivalent efficiency ⁴ . Chemical oxidation specifically includes what is referred to as alkaline chlorination.		
b. Chemical Reduction: Chemical reaction utilizing the following reagents (or waste reagents) or combination of reagents: (1) sulfur dioxide; (2) sodium, potassium, or alkali salt of sulfites, bisulfites, and metabisulfites, and polyethylene glycols (e.g. NaPEG and KPEG); (3) sodium hydrosulfide; (4) ferrous salts; and/or (5) other reducing agents of equivalent efficiency. ⁴	Same as above	Same as above
3. Thermal Destruction: Treatment in an incinerator operating in accordance with LAC 33:V.Chapter 31 or Chapter 43.Subchapter N; a boiler or industrial furnace operating in accordance with LAC 33:V.Chapter 30, or other thermal treatment unit operated in accordance with LAC 33:V.Chapter 32, or Chapter 43.Subchapter O, but excluding for purposes of these debris treatment standards Thermal Desorption units.	Treated debris must be separated from treatment residuals using simple physical or mechanical means ⁹ and, prior to further treatment, such residue must meet the waste-specific treatment standards for organic compounds in the waste contaminating the debris.	Brick, Concrete, Glass, Pavement, Rock: Metals other than mercury, except that there are no metal restrictions for vitrification. Debris contaminated with a dioxin-listed waste ⁵ : Obtain an "Equivalent Technology" approval under LAC 33:V.2228.B ⁸ , except that this requirement does not apply to vitrification.
C. Immobilization Technologies		
1. Macroencapsulation: Application of surface-coating materials such as polymeric organics (e.g. resins and plastics) or use a jacket of inert inorganic materials to substantially reduce surface exposure to potential leaching media.	Encapsulating material must completely encapsulate debris and must be resistant to degradation by the debris and its contaminants and materials into which it may come into contact after placement (leachate, other waste, microbes).	None
2. Microencapsulation: Stabilization of the debris with the following reagents (or waste reagents) such that the leachability of the hazardous contaminants is reduced: (1) Portland cement; and/or (2) lime/pozzolons (e.g. fly ash and cement kiln dust). Reagents (e.g. iron salts, silicates, and clays) may be added to enhance the set/cure time and/or compressive strength or to reduce the leachability of the hazardous constituents. ⁵	Leachability of the hazardous contaminants must be reduced.	None

Table 8. Alternative Treatment Standards for Hazardous Debris ¹		
Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
3. Sealing: Application of an appropriate material which adheres tightly to the debris surface to avoid exposure of the surface to potential leaching media. When necessary to effectively seal the surface, sealing entails pretreatment of the debris surface to remove foreign matter and to clean and roughen the surface. Sealing materials include epoxy, silicone, and urethane compounds, but paint may not be used as a sealant.	Sealing must avoid exposure of the debris surface to potential leaching media and sealant must be resistant to degradation by the debris and its contaminants and materials into which it may come into contact after placement (leachate, other waste, microbes).	None

ENDNOTE: ¹ Hazardous debris must be treated by either these standards or the waste-specific treatment standards for the waste contaminating the debris. The treatment standards must be met for each type of debris contained in a mixture of debris types, unless the debris is converted into treatment residue as a result of the treatment process. Debris treatment residuals are subject to the waste-specific treatment standards for the waste contaminating the debris.

ENDNOTE: ² Contaminant restriction means that the technology is not BDAT for that contaminant. If debris containing a restricted contaminant is treated by the technology, the contaminant must be subsequently treated by the technology for which it is not restricted in order to be land disposed (and excluding from Subtitle C regulation).

ENDNOTE: ³ Clean debris surface means the surface, when viewed without magnification, shall be free of all visible contaminated soil and hazardous waste except that residual staining from soil and waste consisting of light shadows, slight streaks, or minor discolorations and soil and waste in cracks, crevices, and pits may be present provided that such staining and waste and soil in cracks, crevices, and pits shall be limited to no more than 5 percent of each square inch of surface area.

ENDNOTE: ⁴ Acids, solvents, and chemical reagents may react with some debris and contaminants to form hazardous compounds. For example, acid washing of cyanide-contaminated debris could result in the formation of hydrogen cyanide. Some acids may also react violently with some debris and contaminants, depending on the concentration of the acid and the type of debris and contaminants. Debris treaters should refer to the safety precautions specified in the Material Safety Data Sheets for various acids to avoid applying an incompatible acid to a particular debris/contaminant combination. For example, concentrated sulfuric acid may react violently with certain organic compounds, such as acrylonitrile.

ENDNOTE: ⁵ If reducing the particle size of debris to meet the treatment standards results in material that no longer meets the 60-mm minimum particle size limit for debris, such material is subject to the waste-specific treatment standards for the waste contaminating the material, unless the debris has been cleaned and separated from contaminated soil and waste prior to size reduction. At a minimum, simple physical or mechanical means must be used to provide such cleaning and separation of nondebris materials to ensure that the debris surface is free of caked soil, waste, or nondebris materials.

ENDNOTE: ⁶ Dioxin-listed wastes are EPA Hazardous Waste Numbers F020, F021, F022, F023, F026, and F027.

ENDNOTE: ⁷ Thermal desorption is distinguished from thermal destruction in that the primary purpose of thermal desorption is to volatilize contaminants and to remove them from the treatment chamber for subsequent destruction or other treatment.

ENVIRONMENTAL QUALITY

ENDNOTE: ⁸ The demonstration “Equivalent Technology” under LAC 33:V.2228.B must document that the technology treat appropriate contaminants to the level equivalent to that required by the performance and design and operating standards for other technologies in this table such that residual levels of hazardous contaminants will not pose a hazard to human health and the environment absent management controls.

ENDNOTE: ⁹ Any soil, waste, and other nondebris material that remains on the debris surface (or remains mixed with the debris) after treatment is considered a treatment residual that must be separated from the debris using, at a minimum, simple physical or mechanical means. Examples of simple physical or mechanical means are vibratory or trommel screening or water washing. The debris surface need not be cleaned to a “clean debris surface” as defined in endnote 3 when separating treated debris from residue; rather, the surface must be free of caked soil, waste, or other nondebris material. Treatment residuals are subject to the waste-specific treatment standards for the waste contaminating the debris.

Table 9. List of Halogenated Organic Compounds (HOCs) Regulated under LAC 33:V.2215	
In determining the concentration of HOCs in a hazardous waste for purposes of the LAC 33:V.2215 land disposal prohibition, EPA has defined the HOCs that must be included in a calculation as any compounds having a carbon-halogen bond that are listed in the table below.	
I. Volatiles	
1.	Bromodichloromethane
2.	Bromomethane
3.	Carbon Tetrachloride
4.	Chlorobenzene
5.	2-Chloro-1,3-butadiene
6.	Chlorodibromomethane
7.	Chloroethane
8.	2-Chloroethyl vinyl ether
9.	Chloroform

6.	Aroclor 1254
7.	Aroclor 1260
8.	PCBs not otherwise specified
VI. Dioxins and Furans	
1.	Hexachlorodibenzo-p-dioxins
2.	Hexachlorodibenzofuran
3.	Pentachlorodibenzo-p-dioxins
4.	Pentachlorodibenzofuran
5.	Tetrachlorodibenzo-p-dioxins

Chapter 23. Waste Piles

§2301. Applicability

A. The regulations in this Subpart apply to owners and operators of facilities that store or treat hazardous waste in piles, except as specified in LAC 33:V.1501.

B. The regulations in this Subpart do not apply to owners or operators of waste piles that are closed with wastes left in place. Such waste piles are subject to regulations as specified in LAC 33:V.Chapter 25 (Landfills).

C. The owner or operator of any waste pile that is inside or under a structure that provides protection from precipitation so that neither run-off nor leachate is generated is in compliance with LAC 33:V.Chapter 33 (Groundwater Protection) provided that:

1. the waste pile is designed as specified in LAC 33:V.2303.A and is inspected as required by LAC 33:V.2307 on a quarterly basis (or less often with the approval of the administrative authority);

2. liquids or materials containing free liquids are not placed in the pile;

3. the pile is protected from surface water run-off by the structure or in some other manner;

4. the pile, where necessary, is designed and operated to control dispersal of the waste by wind or by means other than wetting; and

5. the pile will not generate leachate through decomposition or other reactions.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1107 (June 1998).

§2303. Design and Operating Requirements

A. A waste pile (except for the portion of the waste pile in operation prior to date of issuance of the hazardous waste permit) must have:

1. a synthetic liner that is designed, constructed, and installed to prevent any migration of wastes out of the pile into the adjacent subsurface soil, or groundwater or surface water at any time during the active life (including the closure period) of the waste pile. The liner may be constructed of materials that may allow waste to migrate into the liner itself (but not into the adjacent subsurface soil or, groundwater or surface water) during the active life of the facility. The liner must be:
 - a. constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed,

- a. constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed,

6.	Tetrachlorodibenzofuran
7.	2,3,7,8-Tetrachlorodibenzo-p-dioxin

Facility Name ¹ and Address	Waste Code	See Also	Regulated Hazardous Constituent	Wastewaters	Nonwastewaters
				Concentration (mg/L) (Notes)	Concentration (mg/Kg) (Notes)
Craftsman Plating and Tinning Corp. Chicago, IL	F006	Table 2	Cyanides (Total)	1.2 ⁽²⁾	1800 ⁽⁴⁾
			Cyanides (amenable)	0.86 ⁽²⁾ and ⁽³⁾	30 ⁽⁴⁾
			Cadmium	1.6	NA
			Chromium	0.32	NA

			Chromium	0.32	NA
			Nickel	0.44	NA

¹A facility may certify compliance with these treatment standards according to provisions in LAC 33:V.2245 and 2247.

²Cyanide Wastewater Standards for F006 are based on analysis of composite samples.

³These facilities must comply with 0.86 mg/L for amenable cyanides in the wastewater exiting the alkaline chlorination system. These facilities must also comply with LAC 33:V.2245.D for appropriate monitoring frequency consistent with the facilities' waste analysis plan.

⁴Cyanide nonwastewaters are analyzed using SW-846 Method 9010C or 9012B, sample size 10 grams, distillation time, 1 hour and 15 minutes.

[NOTE: NA means Not Applicable.]

Appendix VII, Table 1, Effective Dates of Surface Disposed Wastes (Non-Soil and Debris) Regulated in the LDRs, of 40 CFR 268, published July 1, 2012, is hereby incorporated by reference.
--

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2001 et. seq., and specifically R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:1057 (December 1990), amended LR 17:658 (July 1991), LR 21:266 (March 1995), LR 22:22 (January 1996), LR 22:834 (September 1996), LR 23:566 (May 1997), LR 24:301 (February 1998), LR 24:670 (April 1998), LR 24:1732 (September 1998), LR 25:451 (March 1999), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:282 (February 2000), LR 27:295 (March 2001), LR 29:322 (March 2003), LR 30:1682 (August 2004), amended by the Office of the Secretary, Legal Affairs Division, LR 32:828 (May 2006), LR 32:1843 (October 2006), LR 34:625 (April 2008), LR 34:1014 (June 2008), LR 38:777 (March 2012), amended by the Office of the Secretary, Legal Division, LR 39:2487, 2492 (September 2013), amended by the Office of the Secretary, Legal Division, LR 43:1145 (June 2017), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 44:41 (January 2018).

ENVIRONMENTAL QUALITY

climatic conditions, the stress of installation, and the stress of daily operations;

b. placed upon a foundation or base capable of providing support to the liner and resistant to pressure gradients above and below the liner in order to prevent failure of the liner due to settlement, compression, or uplift; and

c. installed to cover all surrounding earth likely to be in contact with the waste or leachate; and

2. a leachate collection and removal system immediately above the liner that is designed, constructed, maintained, and operated to collect and remove leachate from the pile. The administrative authority will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed 30 centimeters (1 foot). The leachate collection and removal system must be constructed of materials that are:

a. chemically resistant to the waste managed in the pile and the leachate expected to be generated;

b. of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and any equipment used at the pile; and

c. designed and operated to function without clogging through the scheduled closure of the waste pile.

B. The owner or operator may be exempted from the requirements of LAC 33:V.2303.A if the administrative authority finds, based on a demonstration by the owner or operator, that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents into the groundwater or surface water at any future time. In deciding whether to grant an exemption, the administrative authority will consider:

1. the nature and quantity of the wastes;

2. the proposed alternate design and operation;

3. the hydrogeologic setting of the facility, including attenuating capacity and thickness of the liners and soils present between the pile, and groundwater or surface water; and

4. all other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to groundwater or surface water.

C. The owner or operator of each new waste pile unit, each lateral expansion of a waste pile unit, and each replacement of an existing waste pile unit must install two or more liners and a leachate collection and removal system above and between such liners.

1. The liner system must include:

a. a top liner designed and constructed of materials (e.g., a geomembrane) to prevent the migration of hazardous constituents into such liner during the active life and post-closure care period; and

b. a composite bottom liner consisting of at least two components. The upper component must be designed and constructed of materials (e.g., a geomembrane) to prevent the migration of hazardous constituents into such component during the active life and post-closure care period. The lower component must be designed and constructed of materials to minimize the migration of hazardous constituents if a breach in the upper component were to occur. The lower component must be constructed of at least 3 feet (91 cm) of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} cm/sec. The administrative authority may require additional liner design requirements based on the location of the waste pile in relation to drinking water aquifers.

2. The liners must comply with LAC 33:V.2303.A.1.a-c.

3. The leachate collection and removal system immediately above the top liner must be designed, constructed, operated, and maintained to collect and remove leachate from the waste pile during the active life and post-closure care period. The administrative authority will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed 1 foot (30 cm). The leachate collection and removal system must comply with LAC 33:V.2303.C.4.c-d.

4. The leachate collection and removal system between the liners (and immediately above the bottom composite liner in the case of multiple leachate collection and removal systems) is also a leak detection system. This leak detection system must be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner which are likely to be exposed to waste or leachate during the active life and post-closure care period. The requirements for a leak detection system in this Section are satisfied by installation of a system that is, at a minimum:

a. constructed with a bottom slope of 2 percent or more;

b. constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-2} cm/sec or more and a thickness of 12 inches (30.5 cm) or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} m²/sec or more;

c. constructed of materials that are chemically resistant to the waste managed in the waste pile and the leachate expected to be generated and that are of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and equipment used at the waste pile;

d. designed and operated to minimize clogging during the active life and post-closure care period; and

e. constructed with sumps and liquid removal methods (e.g., pumps) of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit must have its own sump(s). The design of each sump and removal system

must provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed from the sump.

5. The owner or operator shall collect and remove pumpable liquids in the leak detection system sumps to minimize the head on the bottom liner.

6. The owner or operator of a leak detection system that is not located completely above the seasonal high water table must demonstrate that the operation of the leak detection system will not be adversely affected by the presence of groundwater.

D. The administrative authority may approve alternative design or operating practices to those specified in LAC 33:V.2303.C if the owner or operator demonstrates to the administrative authority that such design and operating practices, together with location characteristics:

1. will prevent the migration of any hazardous constituent into the groundwater or surface water at least as effectively as the liners and leachate collection and removal systems specified in LAC 33:V.2303.C; and

2. will allow detection of leaks of hazardous constituents through the top liner at least as effectively.

E. LAC 33:V.2303.C does not apply to monofills that are granted a waiver by the administrative authority in accordance with LAC 33:V.2903.L.

F. The owner or operator of any replacement waste pile unit is exempt from LAC 33:V.2303.C if:

1. the existing unit was constructed in compliance with the design standards of Section 3004(o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and

2. there is no reason to believe that the liner is not functioning as designed.

G. The owner or operator must design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portion of the pile during peak discharge from at least a 24-hour, 25-year storm.

H. The owner or operator must design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

I. Collection and holding facilities (e.g., tanks or basins) associated with run-on and run-off control systems must be emptied or otherwise managed expeditiously after storms to maintain design capacity of the system.

J. If the pile contains any particulate matter which may be subject to wind dispersal, the owner or operator must cover or otherwise manage the pile to control wind dispersal. Wetting of the waste pile for control of particulate matter is not allowed unless the waste pile is equipped with a leachate collection system equivalent to LAC 33:V.2303.A.2.

K. The owner or operator of a double-lined waste pile is subject to regulation under LAC 33:V.Chapter 33 and the following conditions.

1. The pile must be underlain by two liners which are designed and constructed in a manner that prevents the migration of liquids into or out of the space between the liners. Both liners must meet all the specifications of LAC 33:V.2303.A.1.

2. A leak detection system must be designed, constructed, maintained, and operated between the liners to detect any migration of liquids into the space between the liners.

3. The pile must have a leachate collection and removal system above the top liner that is designed, constructed, maintained, and operated in accordance with LAC 33:V.2303.A.2.

4. If liquid leaks into the leak detection system, the owner or operator must:

a. notify the Office of Environmental Services of the leak in writing within seven days after detecting the leak; and

b. within a period of time specified in the permit, remove accumulated liquid, repair or replace the liner which is leaking to prevent the migration of the liquids through the liner, and obtain a certification from a qualified engineer that, to the best of his knowledge and opinion, the leak has been stopped.

L. The administrative authority will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this Section are satisfied.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 20:1000 (September 1994), LR 21:266, 267 (March 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2480 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2111 (October 2007), LR 34:997 (June 2008).

§2304. Action Leakage Rate

A. The administrative authority shall approve an action leakage rate for waste pile units subject to LAC 33:V.2303.C or D. The action leakage rate is the maximum design flow rate that the leak detection system (LDS) can remove without the fluid head on the bottom liner exceeding 1 foot. The action leakage rate must include an adequate safety margin to allow for uncertainties in the design (e.g., slope, hydraulic conductivity, thickness of drainage material), construction, operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions (e.g., the action leakage rate must consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.).

B. To determine if the action leakage rate has been exceeded, the owner or operator must convert the weekly

flow rate from the monitoring data obtained under LAC 33:V.2309.C to an average daily flow rate (gallons per acre per day) for each sump. Unless the administrative authority approves a different calculation, the average daily flow rate for each sump must be calculated weekly during the active life and closure period.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995).

§2305. Exemptions

A. There are no exemptions from the groundwater protection requirements in LAC 33:V.Chapter 33 except as provided in LAC 33:V.3301.C.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 20:1000 (September 1994).

§2306. Response Actions

A. The owner or operator of waste pile units subject to LAC 33:V.2303.C or D must have an approved response action plan before receipt of waste. The response action plan must set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan must describe the actions specified in LAC 33:V.2306.B.

B. If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator must:

1. notify the Office of Environmental Services in writing of the exceedance within seven days of the determination;
2. submit a preliminary written assessment to the Office of Environmental Services within 14 days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;
3. determine to the extent practicable the location, size, and cause of any leak;
4. determine whether waste receipt should cease or be curtailed, whether any waste should be removed from the unit for inspection, repairs, or controls, and whether or not the unit should be closed;
5. determine any other short-term and long-term actions to be taken to mitigate or stop any leaks; and
6. within 30 days after the notification that the action leakage rate has been exceeded, submit to the Office of Environmental Services the results of the analyses specified in LAC 33:V.2306.B.3-5, of actions taken, and of remedial actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator must submit to the administrative

authority a report summarizing the results of any remedial actions taken and actions planned.

C. To make the leak and/or remediation determinations in LAC 33:V.2306.B.3-5, the owner or operator must:

1. assess the sources of liquids and amounts of liquids by source;
2. conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the sources of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and
3. assess the seriousness of any leaks in terms of potential for escaping into the environment; or
4. document why such assessments are not needed.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2480 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2111 (October 2007), LR 34:1897 (September 2008).

§2307. Inspection of Synthetic Liners

A. The facility must provide the Office of Environmental Services with 30 days advance notice of the initial liner installation to allow the administrative authority the opportunity to inspect the liner and its installation.

B. The liner must be inspected on a regular basis by removing the waste pile. The facility must notify the Office of Environmental Services at least 30 days prior to the inspection to allow the administrative authority the opportunity to inspect the liner. If deterioration, a crack, or other condition is identified that is causing or could cause a leak, the owner or operator must:

1. notify the administrative authority of the condition in writing within seven days after detecting the condition; and
2. repair or replace the liner and foundation or base and obtain a certification from an independent qualified engineer that, to the best of his knowledge and opinion, the liner and foundation or base have been repaired and leakage will not occur; or
3. if a detection monitoring program pursuant to LAC 33:V.3317 has already been established in the permit (to be complied with only if a leak occurs), comply with that program and any other applicable requirements of LAC 33:V.Chapter 33 within the period of time specified in the permit.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Environmental Assessment, Environmental Planning

Division, LR 26:2480 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2111 (October 2007).

§2309. Monitoring and Inspection

A. During construction or installation, liners (except in the case of existing portions of piles exempt from LAC 33:V.2303.A), and cover systems (e.g., membranes, sheets, or coatings) must be inspected for uniformity, damage, imperfections (e.g., holes, cracks, thin spots, or foreign materials). Immediately after construction or installation:

1. synthetic liners and covers must be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters; and
2. soil-based and admixed liners and covers must be inspected for imperfections including lenses, cracks, channels, root holes, or other structural non-uniformities that may cause an increase in the permeability of the liner or cover.

B. While a waste pile is in operation, it must be inspected weekly and after storms to detect evidence of any of the following:

1. deterioration, malfunctions, or improper operation of run-on and run-off control systems;
2. proper functioning of wind dispersal control systems, where present;
3. the presence of leachate in and proper functioning of leachate collection and removal systems, where present. Leachate must be disposed of properly; and
4. the presence of liquids in leak detection system.

C. An owner or operator required to have a leak detection system under LAC 33:V.2303.C must record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 18:1256 (November 1992), LR 20:1000 (September 1994), LR 21:266 (March 1995), amended by the Office of the Secretary, Legal Affairs Division, LR 33:1626 (August 2007).

§2311. Special Requirements for Ignitable or Reactive Waste

A. Ignitable or reactive waste must not be placed in a waste pile unless the waste and the pile satisfy all applicable requirements of LAC 33:V.Chapter 22, and:

1. the waste is treated, rendered, or mixed before or immediately after placement in the pile so that:
 - a. the resulting waste, mixture, or dissolution of material no longer meets the description of ignitable or reactive waste under the characteristics of ignitability or reactivity in LAC 33:V.4903.B or D; and

b. the general requirements for ignitable, reactive, or incompatible wastes as specified in LAC 33:V.1517.B are met; or

2. the waste is managed in such a way that it is protected from any material or conditions which may cause it to ignite or react.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 16:1057 (December 1990), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1898 (September 2008).

§2313. Special Requirements for Incompatible Wastes

A. Incompatible wastes, or incompatible wastes and materials must not be placed in the same pile, unless LAC 33:V.1517.B or 4321 for interim status facilities is complied with.

B. A pile of hazardous waste that is incompatible with any waste or other stored nearby in containers, other piles, open tanks, or surface impoundments must be separated from the other materials, or protected from them by means of a dike, berm, wall, or other device.

C. Hazardous waste must not be piled on the same base where incompatible wastes or materials were previously piled, unless the base has been decontaminated sufficiently to ensure compliance with LAC 33:V.1517.B or 4321 for interim status facilities.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2315. Closure and Post-Closure Care

A. At closure, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless LAC 33:V.109.Hazardous Waste.6 applies.

B. If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in Subsection A of this Section, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, he must either:

1. close the facility and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills as specified in LAC 33:V.2521; or
2. perform a risk assessment to demonstrate that closure with the remaining contaminant levels is protective of human health and the environment in accordance with

LAC 33:I.Chapter 13. Any such risk assessment is subject to approval by the administrative authority and must demonstrate that post-closure care is not necessary to adequately protect human health and the environment.

C. The owner or operator of a waste pile that does not comply with the liner requirements of LAC 33:V.2303.A.1 and is not exempt under LAC 33:V.2301.C and 2303.B must:

1. include in the closure plan for the pile under LAC 33:V.3511 a plan for complying with LAC 33:V.2315.A and a contingent plan for complying with LAC 33:V.2315.B in case all contaminated subsoils cannot be practicably removed at closure; and

2. prepare a contingent post-closure plan under LAC 33:V.3523 for complying with LAC 33:V.2315.B in case all contaminated subsoils cannot be practicably removed at closure.

D. The cost estimates calculated under LAC 33:V.3705 and 3709 for closure and post-closure care of a pile subject to this Section must include the cost of complying with the contingent closure plan and the contingent post-closure plan, but are not required to include the cost of expected closure under LAC 33:V.2315.A.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 18:1256 (November 1992), amended by the Office of the Secretary, LR 24:2245 (December 1998).

§2317. Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

A. Hazardous wastes F020, F021, F022, F023, F026, and F027 must not be placed in waste piles that are not enclosed (as defined in LAC 33:V.2301.C) unless the owner or operator operates the waste pile in accordance with a management plan for these wastes that is approved by the administrative authority pursuant to the standards set out in this Subsection, and in accord with all other applicable requirements of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37. The factors to be considered are:

1. the volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

2. the attenuative properties of underlying and surrounding soils or other materials;

3. the mobilizing properties of other materials co-disposed with these wastes; and

4. the effectiveness of additional treatment, design, or monitoring techniques.

B. The administrative authority may determine that additional design, operating, and monitoring requirements are necessary for piles managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the

possibility of migration of these wastes to groundwater, surface water, or air so as to protect human health and the environment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:220 (March 1990), amended LR 20:1000 (September 1994), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:938 (July 2020).

Chapter 24. Hazardous Waste Munitions and Explosives Storage

§2401. Applicability

A. The requirements of this Chapter apply to owners or operators who store munitions and explosive hazardous wastes, except as LAC 33:V.1501 provides otherwise.

[NOTE: Depending on explosive hazards, hazardous waste munitions and explosives may also be managed in other types of storage units, including containment buildings (LAC 33:V.Chapter 18), tanks (LAC 33:V.Chapter 19), or containers (LAC 33:V.Chapter 21). See LAC 33:V.5309 for storage of waste military munitions.]

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1739 (September 1998).

§2403. Design and Operating Standards

A. Hazardous waste munitions and explosives storage units must be designed and operated with containment systems, controls, and monitoring that:

1. minimize the potential for detonation or other means of release of hazardous waste, hazardous constituents, hazardous decomposition products, or contaminated runoff to the soil, groundwater, surface water, and atmosphere;

2. provide a primary barrier, which may be a container (including a shell) or tank, designed to contain the hazardous waste;

3. for wastes stored outdoors, provide that the waste and containers will not be in standing precipitation;

4. for liquid wastes, provide a secondary containment system that assures that any released liquids are contained and promptly detected and removed from the waste area or vapor detection system that assures that any released liquids or vapors are promptly detected and an appropriate response taken (e.g., additional containment, such as overpacking or removal from the waste area); and

5. provide monitoring and inspection procedures that assure the controls and containment systems are working as designed and that releases that may adversely impact human health or the environment are not escaping from the unit.

B. Hazardous waste munitions and explosives stored under this Chapter may be stored in one of the following.

1. Earth-covered magazines, must be:
 - a. constructed of waterproofed, reinforced concrete or structural steel arches, with steel doors that are kept closed when not being accessed;
 - b. designed and constructed as follows:
 - i. to be of sufficient strength and thickness to support the weight of any explosives or munitions stored and any equipment used in the unit;
 - ii. to provide working space for personnel and equipment in the unit; and
 - iii. to withstand movement activities that occur in the unit; and
 - c. located and designed, with walls and earthen covers that direct an explosion in the unit in a safe direction, so as to minimize the propagation of an explosion to adjacent units and to minimize other effects of any explosion.
2. Above-ground magazines must be located and designed so as to minimize the propagation of an explosion to adjacent units and to minimize other effects of any explosion.
3. Outdoor or open storage areas must be located and designed so as to minimize the propagation of an explosion to adjacent units and to minimize other effects of any explosion.

C. Hazardous waste munitions and explosives must be stored in accordance with a standard operating procedure specifying procedures to ensure safety, security, and environmental protection. If these procedures serve the same purpose as the security and inspection requirements of LAC 33:V.1507, the preparedness and prevention procedures of LAC 33:V.1511, and the contingency plan and emergency procedures requirements of LAC 33:V.1513, then these procedures will be used to fulfill those requirements.

D. Hazardous waste munitions and explosives must be packaged to ensure safety in handling and storage.

E. Hazardous waste munitions and explosives must be inventoried at least annually.

F. Hazardous waste munitions and explosives and their storage units must be inspected and monitored as necessary to ensure the explosives' safety and to ensure that there is no migration of contaminants out of the unit.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1739 (September 1998).

§2405. Closure and Post-Closure Care

A. At closure of a magazine or unit that stored hazardous waste under this Chapter, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components, contaminated subsoils, and structures and equipment contaminated with waste and

manage them as hazardous waste unless LAC 33:V.109.*Hazardous Waste*.6 applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for magazines or units must meet all of the requirements specified in LAC 33:V.Chapters 35 and 37, except that the owner or operator may defer closure of the unit as long as it remains in service as a munitions or explosives magazine or storage unit.

B. If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in Subsection A of this Section, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, he or she must close the facility and perform post-closure care in accordance with the closure and post-closure requirements that apply to landfills (LAC 33:V.2521).

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Waste Services, Hazardous Waste Division, LR 24:1740 (September 1998).

Chapter 25. Landfills

§2501. Applicability

A. The regulations in this Chapter apply to owners and operators of facilities that dispose of hazardous waste in landfills, except as specified in LAC 33:V.1501.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1107 (June 1998).

§2503. Design and Operating Requirements

A. Any landfill that is not covered by LAC 33:V.2503.K or 4512.A must have a liner system for all portions of the landfill (except for existing portions of such landfill). The liner system must have:

1. a liner that is designed, constructed, and installed to prevent any migration of wastes out of the landfill to the adjacent subsurface soil, or groundwater or surface water throughout the active life (including the closure period) of the landfill. The liner, at a minimum, must consist of a synthetic liner laid on top of a permanent barrier at the bottom and along the sides of the landfill. The liner must be constructed of materials that prevent wastes from passing into the liner during the active life of the facility. The liner must be installed to cover all surrounding earth likely to be in contact with the waste or leachate. The liner must be:

- a. constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with waste or leachate to which they are exposed, climatic

ENVIRONMENTAL QUALITY

conditions, the stress of installation, and the stress of daily operation;

b. placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift;

c. be resistant to the action of the elements, contents placement (including equipment used to place contents), and chemical action of the contents by means protecting the integrity of the barrier; and

d. the permanent barrier shall be at least 3 feet of recompacted clay with a permeability of 1×10^{-7} cm/sec or less and so designed and operated as to prevent endangering any fresh-water aquifer by the migration of contaminants from the facility, or equivalent system acceptable to administrative authority; and

2. a leachate collection and removal system immediately above the synthetic liner that is designed, constructed, maintained and operated to collect and remove leachate from the landfill. The administrative authority will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed 30 centimeters (1 foot). The leachate collection and removal system must be designed and operated to function without clogging through the scheduled closure of the landfill and constructed of materials that are:

a. chemically resistant to the waste managed in the landfill and the leachate expected to be generated; and

b. of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and any equipment used at the landfill.

B. Unless the permittee demonstrates to the administrative authority that the first permeable zone in which groundwater monitoring would occur is not a potable water aquifer, a leachate detection system shall be provided. A permanent barrier of at least 3 feet of recompacted clay with a permeability of 1×10^{-7} cm/sec or less shall be installed below the leachate detection system, which is located immediately under the liner system as required by LAC 33:V.2503.A unless an equivalent system is acceptable to the administrative authority.

C. The owner or operator of any replacement landfill unit is exempt from LAC 33:V.2503.L if:

1. the existing unit was constructed in compliance with the design standards of Section 3004(o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and

2. there is no reason to believe that the liner is not functioning as designed.

D. The owner or operator must design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portion of the landfill during peak discharge from a 24-hour, 25-year storm.

E. The owner or operator must design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

F. Collection and holding facilities (e.g., tanks or basins) associated with run-on and run-off control systems must be emptied or otherwise managed expeditiously after storms to maintain the design capacity of the system. Collected material must be disposed of properly.

G. If the landfill contains any particulate matter which may be subject to wind dispersal, the owner or operator must cover or otherwise manage the landfill to control wind dispersal. Wetting of the landfill for control of particulate matter is not allowed unless the landfill is equipped with a leachate collection system equivalent to LAC 33:V.2503.A.2.

H. The administrative authority will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this Section are satisfied.

I. If noxious gases are generated, (or have the potential to be generated), the administrative authority may specifically require a gas collection and control system.

J. Accumulated rainfall and groundwater must be removed from the active portions of landfills in a timely manner.

K. Materials That May Be Landfilled

1. Materials that may be landfilled using clay encapsulation in compliance with the permit, any order of the assistant secretary, and state or federal regulations, if they meet the following criteria:

a. the material does not contain free liquid, except for laboratory packs;

b. the content of the metals listed in LAC 33:V.4903.D as amended does not exceed 50 percent;

c. the free cyanide content does not exceed 500 ppm;

d. the phenol concentration does not exceed 5 percent;

e. the PCB content does not exceed 50 ppm;

f. any leachate that would be produced can be handled by the facility with existing technology;

g. halogenated solvents content does not exceed 5 percent, i.e., waste streams numbers F001, F002, K016, K019, K029, K030, K085, K095, K096, P028, U025, U037, U044, U048, U070, U071, U072, U076, U077, U078, U079, U080, U083, U084, U131, U184, U207, U208, U209, U210, U226, U227, and U228;

h. nonhalogenated solvents content does not exceed 10 percent, i.e., waste streams numbers F003, F004, F005, F009, K025, U019, U056, U159, U220, and U239;

i. the material is not a confined gas;

j. it is not an infectious waste as defined in LAC 33:V.109;

k. it is not an ignitable waste as described in LAC 33:V.4903.B;

l. it is not a corrosive waste as characterized by the pH limits in LAC 33:V.4903.C;

m. it is not a reactive waste as described in LAC 33:V.4903.D;

n. it is not a radioactive waste as defined by the Radiation Protection regulations (LAC 33:XV); and

o. it is not a listed hazardous waste as defined in LAC 33:V.Chapter 49 and it is not banned from land disposal as set forth in LAC 33:V.Chapter 22.

2. Permittees may request approval for landfilling of wastes which do not meet the criteria on a case-by-case basis. Such a request must include specific data on how such waste does not meet the criteria, documentation on why high technology destruction/detoxification is not practicable, and provide risk assessment information as to why such landfilling will not endanger public health or the environment.

3. The administrative authority may authorize changes, up to double the specified value, on the following materials listed in LAC 33:V.2503.J.1: metals, free cyanide, phenol, halogenated solvents, and nonhalogenated solvents.

L. The owner or operator of each new landfill unit on which construction commenced after January 29, 1992, each lateral expansion of a landfill unit on which construction commenced after July 29, 1992, and each replacement of an existing landfill unit that was to commence reuse after July 29, 1992, must have installed two or more liners and a leachate collection and removal system above and between such liners. *Construction commences* is as defined in LAC 33:V.109.*Existing Facilities*.

1. The liner system must include:

a. a top liner designed and constructed of materials (e.g., a geomembrane) to prevent the migration of hazardous constituents into such liner during the active life and post-closure care period; and

b. a composite bottom liner consisting of at least two components. The upper component must be designed and constructed of materials (e.g., a geomembrane) to prevent the migration of hazardous constituents into such component during the active life and post-closure care period. The lower component must be designed and constructed of materials to minimize the migration of hazardous constituents if a breach in the upper component were to occur. The lower component must be constructed of at least 3 feet (91 cm) of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} cm/sec. The administrative authority may require additional liner design requirements based on the location of the landfill in relation to drinking water aquifers.

2. The liners must comply with LAC 33:V.2503.A.1.a-d.

3. The leachate collection and removal system immediately above the top liner must be designed, constructed, operated, and maintained to collect and remove leachate from the landfill during the active life and post-closure care period. The administrative authority will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed 1 foot (30 cm). The leachate collection and removal system must comply with LAC 33:V.2503.L.4.c-d.

4. The leachate collection and removal system between the liners (and immediately above the bottom composite liner in the case of multiple leachate collection and removal systems) is also a leak detection system. This leak detection system must be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner which are likely to be exposed to waste or leachate during the active life and post-closure care period. The requirements for a leak detection system in this Section are satisfied by installation of a system that is, at a minimum:

a. constructed with a bottom slope of 2 percent or more;

b. constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-2} cm/sec or more and a thickness of 12 inches (30.5 cm) or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} m²/sec or more;

c. constructed of materials that are chemically resistant to the waste managed in the landfill and the leachate expected to be generated and are of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and equipment used at the landfill;

d. designed and operated to minimize clogging during the active life and post-closure care period; and

e. constructed with sumps and liquid removal methods (e.g., pumps) of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit must have its own sump(s). The design of each sump and removal system must provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed.

5. The owner or operator shall collect and remove pumpable liquids in the leak detection system sumps to minimize the head on the bottom liner.

6. The owner or operator of a leak detection system that is not located completely above the seasonal high water table must demonstrate that the operation of the leak detection system will not be adversely affected by the presence of groundwater.

M. The administrative authority may approve alternative design or operating practices to those specified in

ENVIRONMENTAL QUALITY

LAC 33:V.2503.L if the owner or operator demonstrates to the administrative authority that such design and operating practices, together with location characteristics:

1. will prevent the migration of any hazardous constituent into the groundwater or surface water at least as effectively as the liners and leachate collection and removal systems specified in LAC 33:V.2503.L; and

2. will allow detection of leaks of hazardous constituents through the top liner at least as effectively.

N. The double liner requirements set forth in LAC 33:V.2503.L may be waived by the administrative authority for any monofill under the following circumstances:

1. the monofill contains only hazardous wastes from foundry furnace emission controls or metal casting molding sand, and such wastes do not contain constituents which would render the wastes hazardous for reasons other than the Toxicity Characteristic in LAC 33:V.4903.E (Hazardous Waste Numbers D004 through D017 only); and

2. the monofill meets the criteria of either LAC 33:V.2503.M.2.a or b below:

a. the monofill:

i. has at least one liner for which there is no evidence that such liner is leaking;

ii. is located more than 1/4 mile from an underground source of drinking water (as that term is defined in LAC 33:V.109); and

iii. is in compliance with generally applicable groundwater monitoring requirements for facilities with permits;

b. the owner or operator demonstrates that the monofill is located, designed, and operated so as to assure that there will be no migration of any hazardous constituent into groundwater or surface water at any future time.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 16:220 (March 1990), LR 17:368 (April 1991), LR 17:658 (July 1991), LR 18:1256 (November 1992), LR 20:1000 (September 1994), LR 21:266, 267 (March 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2480 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 34:1898 (September 2008).

§2504. Action Leakage Rate

A. The administrative authority shall approve an action leakage rate for landfill units subject to LAC 33:V.2503.L or M. The action leakage rate is the maximum design flow rate that the leak detection system (LDS) can remove without the fluid head on the bottom liner exceeding 1 foot. The action leakage rate must include an adequate safety margin to allow for uncertainties in the design (e.g., slope, hydraulic conductivity, thickness of drainage material), construction,

operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions (e.g., the action leakage rate must consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.).

B. To determine if the action leakage rate has been exceeded, the owner or operator must convert the weekly or monthly flow rate from the monitoring data obtained under LAC 33:V.2507.D to an average daily flow rate (gallons per acre per day) for each sump. Unless the administrative authority approves a different calculation, the average daily flow rate for each sump must be calculated weekly during the active life and closure period and monthly during the post-closure care period when monthly monitoring is required under LAC 33:V.2507.D.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995).

§2505. Exemption

A. There are no exemptions from the groundwater protection requirements in LAC 33:V.Chapter 33.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2507. Monitoring and Inspection

A. The facility must provide the department with 30 days advanced notice of the times of installation to allow the administrative authority the opportunity to inspect the liner and installation.

B. During construction or installation, liners (except in the case of existing portions of landfills exempt from LAC 33:V.2503.A) and cover systems (e.g., membranes, sheets, or coatings) must be inspected for uniformity, damage, and imperfections (e.g., holes, cracks, thin spots, or foreign materials). Immediately after construction or installation:

1. synthetic liners and covers must be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters; and

2. soil-based and admixed liners and covers must be inspected for imperfections including lenses, cracks, channels, root holes, or other structural non-uniformities that may cause an increase in the permeability of the liner or cover.

C. While a landfill is in operation, it must be inspected weekly and after storms to detect evidence of any of the following:

COMMENT: The permit application must include a detailed inspection plan.

1. deterioration, malfunctions, or improper operation of run-on and run-off control systems;
2. the presence of liquids in leak detection systems;
3. proper functioning of wind dispersal control systems, where present; and
4. the presence of leachate in and proper functioning of leachate collection and removal systems, where present.

D. An owner or operator required to have a leak detection system under LAC 33:V.2503.L or M must record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

1. After the final cover is installed, the amount of liquids removed from each leak detection system sump must be recorded at least monthly. If the liquid level in the sump stays below the pump operating level for two consecutive months, the amount of liquids in the sumps must be recorded at least quarterly. If the liquid level in the sump stays below the pump operating level for two consecutive quarters, the amount of liquids in the sumps must be recorded at least semi-annually. If, at any time during the post-closure care period, the pump operating level is exceeded at units on quarterly or semi-annual recording schedules, the owner or operator must return to monthly recording of amounts of liquids removed from each sump until the liquid level again stays below the pump operating level for two consecutive months.

2. *Pump Operating Level*—a liquid level proposed by the owner or operator and approved by the administrative authority based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 21:266 (March 1995).

§2508. Response Actions

A. The owner or operator of landfill units subject to LAC 33:V.2503.L or M must have an approved response action plan before receipt of waste. The response action plan must set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan must describe the actions specified in LAC 33:V.2508.B.

B. If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator must:

1. notify the Office of Environmental Services in writing of the exceedance within seven days of the determination;
2. submit a preliminary written assessment to the Office of Environmental Services, within 14 days of the

determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;

3. determine to the extent practicable the location, size, and cause of any leak;

4. determine whether waste receipt should cease or be curtailed, whether any waste should be removed from the unit for inspection, repairs, or controls, and whether or not the unit should be closed;

5. determine any other short-term and long-term actions to be taken to mitigate or stop any leaks; and

6. within 30 days after the notification that the action leakage rate has been exceeded, submit to the Office of Environmental Services the results of the analyses specified in LAC 33:V.2508.B.3-5, the results of actions taken, and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator must submit to the administrative authority a report summarizing the results of any remedial actions taken and remedial actions planned.

C. To make the leak and/or remediation determinations in LAC 33:V.2508.B.3-5, the owner or operator must:

1. assess the sources of liquids and amounts of liquids by source;

2. conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the sources of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and

3. assess the seriousness of any leaks in terms of potential for escaping into the environment; or

4. document why such assessments are not needed.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2481 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2461 (October 2005), LR 33:2111 (October 2007), LR 34:1898 (September 2008).

§2509. Surveying and Recordkeeping

A. The owner or operator of a landfill must maintain the following items in the operating record:

1. on a map, the exact location and dimensions, including depth of each cell with respect to permanently surveyed benchmarks; and

2. the contents of each cell and the approximate location of each hazardous waste type within each cell.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2511. Special Requirements for Ignitable or Reactive Waste

A. Except as provided in LAC 33:V.2511.B and 2519, ignitable or reactive waste must not be placed in a landfill, unless the waste and landfill meet all applicable requirements of LAC 33:V.Chapter 22, and:

1. the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste in LAC 33:V.4903.B or D; and

2. LAC 33:V.1517.B is complied with.

B. Except for prohibited wastes subject to treatment standards in LAC 33:V.Chapter 22, ignitable wastes in containers may be landfilled without meeting the requirements of LAC 33:V.2511.A, provided that the wastes are disposed of in such a way that they are protected from any material or conditions which may cause them to ignite. At a minimum, ignitable wastes:

1. must be disposed of in non-leaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; and

2. must be covered daily with soil or other non-combustible material to minimize the potential for ignition of the wastes; and

3. must not be disposed of in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the waste.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:1057 (December 1990), LR 18:1256 (November 1992), LR 20:1000 (September 1994), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1740 (September 1998).

§2513. Special Requirements for Incompatible Wastes

A. Incompatible wastes, or incompatible wastes and materials, must not be placed in the same landfill cell, unless LAC 33:V.1517 is complied with or LAC 33:V.4321 for interim status facilities.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984).

§2515. Special Requirements for Bulk and Containerized Liquids

A. The placement of bulk or noncontainerized liquid hazardous waste or hazardous waste containing free liquids (whether or not sorbents have been added) in any landfill is prohibited.

B. Containers holding free liquids must not be placed in a landfill unless:

1. all free-standing liquids:

a. have been removed by decanting, or other methods;

b. have been mixed with sorbent or solidified so that the free-standing liquid is no longer present; or

c. have been otherwise eliminated; or

2. the container is very small such as an ampule; or

3. the container is designed to hold free liquids for use other than storage, such as a battery or capacitor; or

4. the container is a *lab pack* as defined in LAC 33:V.109 and is disposed of in accordance with LAC 33:V.2519.

C. To demonstrate the absence or presence of free liquids in either a containerized or a bulk waste, the following test must be used: Method 9095B (Paint Filter Liquids Test) as described in *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110.

D. The placement of any liquid which is not a hazardous waste in a landfill is prohibited unless the owner or operator of such landfill demonstrates to the administrative authority, or the administrative authority determines, that:

1. the only reasonably available alternative to the placement in such landfill is placement in a landfill or unlined surface impoundment, whether or not permitted or operating under interim status, which contains, or may reasonably be anticipated to contain, hazardous waste; and

2. placement in such owner's or operator's landfill will not present a risk of contamination of any *underground source of drinking water* or *groundwater* (as these terms are defined in LAC 33:V.109).

E. Sorbents used to treat free liquids to be disposed of in landfills must be nonbiodegradable. Nonbiodegradable sorbents are: materials listed or described in this Subsection; materials that pass one of the tests in Paragraph E.2 of this Section; or materials that are determined by the administrative authority to be nonbiodegradable through the petition process in LAC 33:I.Chapter 9.

1. Nonbiodegradable Sorbents. The following materials are nonbiodegradable sorbents:

a. inorganic minerals, other inorganic materials, and elemental carbon, such as aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite), vermiculites, zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; activated charcoal/activated carbon; or

b. high molecular weight synthetic polymers, such as polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene and tertiary butyl copolymers. This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

c. mixtures of these nonbiodegradable materials.

2. Tests for Nonbiodegradable Sorbents

a. The sorbent material is determined to be nonbiodegradable under ASTM Method G21-70 (1984a)-Standard Practice for Determining Resistance of Synthetic Polymer Materials to Fungi.

b. The sorbent material is determined to be nonbiodegradable under ASTM Method G22-76 (1984b)-Standard Practice for Determining Resistance of Plastics to Bacteria.

c. The sorbent material is determined to be nonbiodegradable under OECD test 301B: [CO₂ Evolution (Modified Sturm Test)].

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, in LR 10:200 (March 1984), amended LR 16:220 (March 1990), LR 20:1000 (September 1994), LR 21:266 (March 1995), LR 22:821 (September 1996), amended by the Office of the Secretary, LR 23:299 (March 1997), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:680 (April 1998), amended by the Office of the Secretary, Legal Affairs Division, LR 34:998 (June 2008).

§2517. Special Requirements for Containers

A. Unless they are very small, such as an ampule, containers must be either:

1. at least 90 percent full when placed in the landfill; or

2. emptied and crushed flat, shredded, or similarly reduced in volume to the maximum practical extent before burial in the landfill.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2519. Disposal of Small Containers of Hazardous Waste in Overpacked Drums (Lab Packs)

A. Lab packs may be placed in a landfill if the following requirements are met:

1. hazardous waste must be packaged in non-leaking inside containers. The inside containers must be designed and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the contained waste. Inside containers must be tightly and securely sealed. The inside containers must be of the size and type specified in the Louisiana Department of Public Safety (LDPS)

hazardous materials/hazardous waste regulations LAC 33:V.Subpart 2.Chapter 101 if those regulations specify a particular inside container for the waste;

2. the inside containers must be overpacked in an open head LDPS specification metal shipping container LAC 33:V.Subpart 2.Chapter 101 of no more than 416-liter (110-gallon) capacity and surrounded by, at a minimum, a sufficient quantity of sorbent material, determined to be nonbiodegradable in accordance with LAC 33:V.2515.E, to completely sorb all of the liquid contents of the inside containers. The metal outer container must be full after packing with inside containers and sorbent material;

3. the sorbent material used must not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers in accordance with LAC 33:V.1517;

4. incompatible wastes, as defined in LAC 33:V.109, must not be placed in the same outside container;

5. reactive wastes, other than cyanide- or sulfide-bearing waste, as defined in LAC 33:V.109, must be treated or rendered non-reactive prior to packaging in accordance with Paragraphs A.1, 2, 3, 4, and 6 of this Section. Cyanide- and sulfide- bearing reactive waste may be packed in accordance with Paragraphs A.1, 2, 3, 4, and 6 of this Section without first being treated or rendered non-reactive; and

6. such disposal is in compliance with the requirements of LAC 33:V.Chapter 22. Persons who incinerate lab packs according to the requirements in LAC 33:V.2227.C.1 may use fiber drums in place of metal outer containers. Such fiber drums must meet the LDPS specifications in LAC 33:V.Subpart 2.Chapter 101, and be overpacked according to the requirements in Paragraph A.2 of this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, in LR 10:200 (March 1984), amended LR 16:1057 (December 1990), LR 21:266 (March 1995), amended by the Office of the Secretary, Legal Affairs Division, LR 38:778 (March 2012).

§2521. Closure and Post-Closure Care

A. At final closure of the landfill or upon closure of any cell, the owner or operator must cover the landfill or cell with a final cover designed and constructed to:

1. provide long-term minimization of migration of liquids through the closed landfill;

2. function with minimum maintenance;

3. promote drainage and minimize erosion or abrasion of the cover;

4. accommodate settling and subsidence so that the cover's integrity is maintained; and

5. have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present.

B. After final closure, the owner or operator must comply with all post-closure requirements contained in LAC 33:V.3519-3527, including maintenance and monitoring throughout the post-closure care period (specified in the permit under LAC 33:V.3521.A.1). The owner or operator must:

1. maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events;

2. maintain and monitor the leak detection system in accordance with LAC 33:V.2503.L.4.d, 2503.L.5, and 2507.D, where such a system is present between double liner systems and comply with all other applicable leak detection system requirements of LAC 33:V.Subpart 1;

3. continue to operate the leachate collection and removal system until leachate is no longer detected;

4. maintain and monitor the groundwater monitoring system and comply with all other applicable requirements of LAC 33:V.Chapter 33;

5. prevent run-on and run-off from eroding or otherwise damaging the final cover; and

6. protect and maintain surveyed benchmarks used in complying with LAC 33:V.Chapter 33.

C. During the post-closure care period, if liquid leaks into a leak detection system installed under LAC 33:V.3305, the owner or operator must notify the Office of Environmental Services of the leak in writing within seven days after detecting the leak.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 20:1000 (September 1994), LR 21:266 (March 1995), LR 21:944 (September 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2481 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 33:2112 (October 2007).

§2523. Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

A. Hazardous Wastes F020, F021, F022, F023, F026, and F027 must not be placed in a landfill unless the owner or operator operates the landfill in accordance with a management plan for these wastes which is approved by the administrative authority pursuant to the standards set out in this Subsection, and in accordance with all other applicable requirements of LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37. The factors to be considered are:

1. the volume, physical and chemical characteristics of the wastes, including their potential to migrate through the soil or to volatilize or escape into the atmosphere;

2. the attenuative properties of underlying and surrounding soils or other materials;

3. the mobilizing properties of other materials codisposed with these wastes; and

4. the effectiveness of additional treatment, design or monitoring requirements.

B. The administrative authority may determine that additional design, operating and monitoring requirements are necessary for landfills containing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to groundwater, surface water, or air so as to protect human health and the environment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:220 (March 1990), amended LR 20:1000 (September 1994), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:938 (July 2020).

Chapter 26. Corrective Action Management Units and Special Provisions for Cleanup

§2601. Applicability of Corrective Action Management Unit (CAMU) Regulations

A. Except as provided in Subsection B of this Section, CAMUs are subject to the requirements of LAC 33:V.2603.

B. CAMUs that were approved before April 22, 2002, or for which substantially complete applications (or equivalents) were submitted to the department on or before November 20, 2000, are subject to the requirements in LAC 33:V.2602 for grandfathered CAMUs. CAMU waste, activities, and design shall not be subject to the standards in LAC 33:V.2603, so long as the waste, activities, and design remain within the general scope of the CAMU as approved.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:285 (February 2000), LR 28:1191 (June 2002), repromulgated LR 28:1580 (July 2002).

§2602. Grandfathered Corrective Action Management Units (CAMUs)

A. To implement remedies under LAC 33:V.3322 or RCRA Section 3008(h), or to implement remedies at a permitted facility that is not subject to LAC 33:V.3322, the administrative authority may designate an area at the facility as a CAMU under the requirements in this Section. CAMU

means an area within a facility that is used only for managing remediation wastes for implementing corrective action or cleanup at the facility. A CAMU must be located within the contiguous property under the control of the owner or operator where the wastes to be managed in the CAMU originated. One or more CAMUs may be designated at a facility.

1. Placement of remediation wastes into or within a CAMU does not constitute land disposal of hazardous wastes.

2. Consolidation or placement of remediation wastes into or within a CAMU does not constitute creation of a unit subject to minimum technology requirements.

B. The administrative authority may designate a regulated unit (as defined in LAC 33:V.3301.B) as a CAMU, or may incorporate a regulated unit into a CAMU, under the following conditions.

1. The regulated unit is closed or closing, meaning it has begun the closure process under LAC 33:V.3513 or 4383.

2. Inclusion of the regulated unit will enhance implementation of effective, protective, and reliable remedial actions for the facility.

3. The LAC 33:V.Chapters 33, 35, and 37 requirements and the unit-specific requirements of Chapters 17, 18, 19, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, and 43 that applied to that regulated unit shall continue to apply to that portion of the CAMU after incorporation into the CAMU.

C. The administrative authority shall designate a CAMU in accordance with the following.

1. The CAMU shall facilitate the implementation of reliable, effective, protective, and cost-effective remedies.

2. Waste management activities associated with the CAMU shall not create unacceptable risks to humans or to the environment resulting from exposure to hazardous wastes or hazardous constituents.

3. The CAMU shall include uncontaminated areas of the facility only if including such areas for the purpose of managing remediation waste is more protective than management of such wastes at contaminated areas of the facility.

4. Areas within the CAMU where wastes remain in place after closure of the CAMU shall be managed and contained so as to minimize future releases, to the extent practicable.

5. The CAMU shall expedite the timing of remedial activity implementation, when appropriate and practicable.

6. The CAMU shall enable the use, when appropriate, of treatment technologies (including innovative technologies) to enhance the long-term effectiveness of remedial actions by reducing the toxicity, mobility, or

volume of wastes that will remain in place after closure of the CAMU.

7. The CAMU shall, to the extent practicable, minimize the land area of the facility upon which wastes will remain in place after closure of the CAMU.

D. The owner/operator shall provide sufficient information to enable the administrative authority to designate a CAMU in accordance with the criteria in LAC 33:V.2603.

E. The administrative authority shall specify, in the permit or order, requirements for CAMUs, which include the following.

1. The areal configuration of the CAMU shall be provided.

2. Requirements for remediation waste management shall include the specification of applicable design, operation, and closure requirements.

3. Requirements for groundwater monitoring shall be sufficient to:

a. continue to detect and to characterize the nature, extent, concentration, direction, and movement of existing releases of hazardous constituents in groundwater from sources located within the CAMU; and

b. detect and subsequently characterize releases of hazardous constituents to groundwater that may occur from areas of the CAMU in which wastes will remain in place after closure of the CAMU.

4. Closure and post-closure requirements shall include the following:

a. closure of CAMUs, which shall:

i. minimize the need for further maintenance; and

ii. control, minimize, or eliminate, to the extent necessary to protect human health and the environment, for areas where wastes remain in place, post-closure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground, to surface waters, or to the atmosphere;

b. requirements for closure of CAMUs that shall include the following, as appropriate and as deemed necessary by the administrative authority, for a given CAMU:

i. requirements for excavation, removal, treatment, or containment of wastes;

ii. for areas in which wastes will remain after closure of the CAMU, requirements for capping of such areas; and

iii. requirements for removal and decontamination of equipment, devices, and structures used in remediation waste management activities within the CAMU;

ENVIRONMENTAL QUALITY

c. in establishing specific closure requirements for CAMUs under LAC 33:V.2603.E, the administrative authority shall consider the following factors:

- i. CAMU characteristics;
- ii. volume of wastes that remain in place after closure;
- iii. potential for releases from the CAMU;
- iv. physical and chemical characteristics of the waste;
- v. hydrological and other relevant environmental conditions at the facility that may influence the migration of any potential or actual releases; and
- vi. potential for exposure of humans and environmental receptors if releases were to occur from the CAMU; and

d. post-closure requirements, as necessary to protect human health and the environment, including for areas where wastes will remain in place, monitoring and maintenance activities, and the frequency with which such activities shall be performed, to ensure the integrity of any cap, final cover, or other containment system.

F. The administrative authority shall document the rationale for designating CAMUs and shall make such documentation available to the public.

G. Incorporation of a CAMU into an existing permit must be approved by the administrative authority according to the procedures for department-initiated permit modifications under LAC 33:V.323 or according to the permit modification procedures of LAC 33:V.321.C.

H. The designation of a CAMU does not change EPA's existing authority to address cleanup levels, media-specific points of compliance to be applied to remediation at a facility, or other remedy selection decisions.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 28:1191 (June 2002).

§2603. Corrective Action Management Units (CAMUs)

A. To implement remedies under LAC 33:V.3322 or RCRA Section 3008(h), or to implement remedies at a permitted facility that is not subject to LAC 33:V.3322, the administrative authority may designate an area at the facility as a CAMU under the requirements in this Section. CAMU means an area within a facility that is used only for managing CAMU-eligible wastes for implementing corrective action or cleanup at the facility. A CAMU must be located within the contiguous property under the control of the owner or operator where the wastes to be managed in the CAMU originated. One or more CAMUs may be designated at a facility.

1. Definition. *CAMU-Eligible Waste*—

a. all solid and hazardous wastes and all media (including groundwater, surface water, soils, and sediments) and debris that are managed for implementing cleanup. As-generated wastes (either hazardous or nonhazardous) from ongoing industrial operations at a site are not CAMU-eligible wastes;

b. wastes that would otherwise meet the description in Subparagraph A.1.a of this Section are not CAMU-eligible wastes when:

i. the wastes are hazardous wastes found during cleanup in intact or substantially intact containers, tanks, or other non-land-based units found above ground, unless the wastes are first placed in the tanks, containers, or non-land-based units as part of cleanup or the containers or tanks are excavated during the course of cleanup; or

ii. the administrative authority exercises the discretion in Paragraph A.2 of this Section to prohibit the wastes from management in a CAMU; and

c. notwithstanding Subparagraph A.1.a of this Section, when appropriate, as-generated nonhazardous waste may be placed in a CAMU when such waste is being used to facilitate treatment or the performance of the CAMU.

2. The administrative authority may prohibit, where appropriate, the placement of waste in a CAMU when the administrative authority has or receives information that such wastes have not been managed in compliance with applicable land disposal treatment standards of LAC 33:V.Chapter 22, applicable unit design requirements of Chapters 5, 18, 19, 21, 23, 24, 25, 27, 28, 29, 32, and 35, or applicable unit design requirements of Chapter 43 or that noncompliance with other applicable requirements of this Chapter likely contributed to the release of the waste.

3. Prohibition against Placing Liquids in CAMUs

a. The placement of bulk or noncontainerized liquid hazardous waste or free liquids contained in hazardous waste (whether or not sorbents have been added) in any CAMU is prohibited except when placement of such wastes facilitates the remedy selected for the waste.

b. The requirements in LAC 33:V.2515.B for placement of containers holding free liquids in landfills apply to placement in a CAMU except when placement facilitates the remedy selected for the waste.

c. The placement of any liquid that is not a hazardous waste in a CAMU is prohibited unless such placement facilitates the remedy selected for the waste or a demonstration is made in accordance with LAC 33:V.2515.D.

d. The absence or presence of free liquids in either a containerized or a bulk waste must be determined in accordance with LAC 33:V.2515.C. Sorbents used to treat free liquids in CAMUs must meet the requirements of LAC 33:V.2515.E.

4. Placement of CAMU-eligible wastes into or within a CAMU does not constitute land disposal of hazardous wastes.

5. Consolidation or placement of CAMU-eligible wastes into or within a CAMU does not constitute creation of a unit subject to minimum technology requirements.

B. The administrative authority may designate a regulated unit (as defined in LAC 33:V.3301.B) as a CAMU or may incorporate a regulated unit into a CAMU under the following conditions.

1. The regulated unit is closed or closing, meaning it has begun the closure process under LAC 33:V.3513 or 4383.

2. Inclusion of the regulated unit will enhance implementation of effective, protective, and reliable remedial actions for the facility.

3. The LAC 33:V.Chapters 33, 35, and 37 requirements and the unit-specific requirements of Chapters 17, 18, 19, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, and 43 that applied to the regulated unit shall continue to apply to that portion of the CAMU after incorporation into the CAMU.

C. The administrative authority shall designate a CAMU that will be used for storage and/or treatment only in accordance with Subsection F of this Section. The administrative authority shall designate all other CAMUs in accordance with the following.

1. The CAMU shall facilitate the implementation of reliable, effective, protective, and cost-effective remedies.

2. Waste management activities associated with the CAMU shall not create unacceptable risks to humans or to the environment resulting from exposure to hazardous wastes or hazardous constituents.

3. The CAMU shall include uncontaminated areas of the facility, only if including such areas for the purpose of managing CAMU-eligible waste is more protective than management of such wastes at contaminated areas of the facility.

4. Areas within the CAMU where wastes remain in place after closure of the CAMU shall be managed and contained so as to minimize future releases, to the extent practicable.

5. The CAMU shall expedite the timing of remedial activity implementation, when appropriate and practicable.

6. The CAMU shall enable the use, when appropriate, of treatment technologies (including innovative technologies) to enhance the long-term effectiveness of remedial actions by reducing the toxicity, mobility, or volume of wastes that will remain in place after closure of the CAMU.

7. The CAMU shall, to the extent practicable, minimize the land area of the facility upon which wastes will remain in place after closure of the CAMU.

D. The owner/operator shall provide sufficient information to enable the administrative authority to designate a CAMU in accordance with the criteria in this Section. This must include, unless not reasonably available, information on:

1. the origin of the waste and how it was subsequently managed (including a description of the timing and circumstances surrounding the disposal and/or release);

2. whether the waste was listed or identified as hazardous at the time of disposal and/or release; and

3. whether the disposal and/or release of the waste occurred before or after the land disposal requirements of LAC 33:V.Chapter 22 were in effect for the waste listing or characteristic.

E. The administrative authority shall specify, in the permit or order, requirements for CAMUs, which include the following.

1. The areal configuration of the CAMU shall be provided.

2. Except as provided in Subsection G of this Section, requirements for CAMU-eligible waste management shall include the specification of applicable design, operation, treatment, and closure requirements.

3. Minimum Design Requirements. CAMUs, except as provided in Subsection F of this Section, into which wastes are placed must be designed in accordance with the following.

a. Unless the administrative authority approves alternate requirements under Subparagraph E.3.b of this Section, CAMUs that consist of new, replacement, or laterally expanded units must include a composite liner and a leachate collection system that is designed and constructed to maintain less than a 30 cm depth of leachate over the liner. For purposes of this Section, *composite liner* means a system consisting of two components: the upper component must consist of a minimum 30 mil flexible membrane liner (FML), and the lower component must consist of at least a 2-foot layer of compacted soil with a hydraulic conductivity of no more than 1×10^{-7} cm/sec. FML components consisting of high density polyethylene (HDPE) must be at least 60 mil thick. The FML component must be installed in direct and uniform contact with the compacted soil component.

b. Alternate Requirements. The administrative authority may approve alternate requirements if:

i. the administrative authority finds that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents into the groundwater or surface water at least as effectively as the liner and leachate collection systems in Subparagraph E.3.a of this Section; or

ii. the CAMU is to be established in an area with existing significant levels of contamination, and the administrative authority finds that an alternative design, including a design that does not include a liner, would

prevent migration from the unit that would exceed long-term remedial goals.

4. Minimum Treatment Requirements. Unless the wastes will be placed in a CAMU for storage and/or treatment only in accordance with Subsection F of this Section, CAMU-eligible wastes that, absent this Section, would be subject to the treatment requirements of LAC 33:V.Chapter 22 and that the administrative authority determines contain principal hazardous constituents must be treated to the standards specified in Subparagraph E.4.c of this Section.

a. Principal hazardous constituents are those constituents that the administrative authority determines pose a risk to human health and the environment substantially higher than the cleanup levels or goals at the site.

i. In general, the administrative authority will designate as principal hazardous constituents:

(a). carcinogens that pose a potential direct risk from ingestion or inhalation, at the site, at or above 10^{-3} risk level; and

(b). non-carcinogens that pose a potential direct risk from ingestion or inhalation, at the site, an order of magnitude or greater over their reference dose.

ii. The administrative authority will also designate constituents as principal hazardous constituents, when appropriate, when risks to human health and the environment posed by the potential migration of constituents in wastes to groundwater are substantially higher than cleanup levels or goals at the site. When making such a designation, the administrative authority may consider such factors as constituent concentrations and fate and transport characteristics under site conditions.

iii. The administrative authority may also designate other constituents as principal hazardous constituents that the administrative authority determines pose a risk to human health and the environment substantially higher than the cleanup levels or goals at the site.

b. In determining which constituents are principal hazardous constituents, the administrative authority must consider all constituents that, absent this Section, would be subject to the treatment requirements in LAC 33:V.Chapter 22.

c. Waste that the administrative authority determines contains principal hazardous constituents must meet treatment standards determined in accordance with Subparagraph E.4.d or e of this Section.

d. Treatment Standards for Wastes Placed in CAMUs

i. For non-metals, treatment must achieve 90 percent reduction in total principal hazardous constituent concentrations, except as provided by Clause E.4.d.iii of this Section.

ii. For metals, treatment must achieve 90 percent reduction in principal hazardous constituent concentrations as measured in leachate from the treated waste or media (tested according to the TCLP) or 90 percent reduction in total constituent concentrations (when a metal removal treatment technology is used), except as provided by Clause E.4.d.iii of this Section.

iii. When treatment of any principal hazardous constituent to a 90 percent reduction standard would result in a concentration less than 10 times the Universal Treatment Standard for that constituent, treatment to achieve constituent concentrations less than 10 times the Universal Treatment Standard is not required. Universal Treatment Standards are identified in LAC 33:V.2299.Appendix, Table 7.

iv. For waste exhibiting the hazardous characteristic of ignitability, corrosivity, or reactivity, the waste must also be treated to eliminate these characteristics.

v. For debris, the debris must be treated in accordance with LAC 33:V.2230 or by methods described in or to levels established under Clauses E.4.d.i-iv or Subparagraph E.4.e of this Section, whichever the administrative authority determines is appropriate.

vi. Alternatives to TCLP. For metal-bearing wastes for which metals removal treatment is not used, the administrative authority may specify a leaching test other than the TCLP (Method 1311, EPA Publication SW-846, as incorporated by reference in LAC 33:V.110.C.3.e) to measure treatment effectiveness, provided the administrative authority determines that an alternative leach testing protocol is appropriate for use and that the alternative more accurately reflects conditions at the site that affect leaching.

e. Adjusted Standards. The administrative authority may adjust the treatment level or method in Subparagraph E.4.d of this Section to a higher or lower level, based on one or more of the following factors, as appropriate. The adjusted level or method must be protective of human health and the environment:

i. the technical impracticability of treatment to the levels or by the methods in Subparagraph E.4.d of this Section;

ii. the levels or methods in Subparagraph E.4.d of this Section would result in concentrations of principal hazardous constituents that are significantly above or below cleanup standards applicable to the site (established either site-specifically or promulgated under state or federal law);

iii. the views of the affected local community on the treatment levels or methods in Subparagraph E.4.d of this Section, as applied at the site, and for treatment levels, the treatment methods necessary to achieve these levels;

iv. the short-term risks presented by the on-site treatment method necessary to achieve the levels or treatment methods in Subparagraph E.4.d of this Section; and

v. the long-term protection offered by the engineering design of the CAMU and related engineering controls:

(a). when the treatment standards in Subparagraph E.4.d of this Section are substantially met and the principal hazardous constituents in the waste or residuals are of very low mobility;

(b). when cost-effective treatment has been used and the CAMU meets the RCRA Subtitle C liner and leachate collection requirements for new land disposal units at LAC 33:V.2503.L and M;

(c). when, after review of appropriate treatment technologies, the administrative authority determines that cost-effective treatment is not reasonably available, and the CAMU meets the RCRA Subtitle C liner and leachate collection requirements for new land disposal units at LAC 33:V.2503.L and M;

(d). when cost-effective treatment has been used and the principal hazardous constituents in the treated wastes are of very low mobility; or

(e). when, after review of appropriate treatment technologies, the administrative authority determines that cost-effective treatment is not reasonably available, the principal hazardous constituents in the wastes are of very low mobility, and either the CAMU meets or exceeds the liner standards for new, replacement, or laterally expanded CAMUs in Subparagraphs E.3.a and b of this Section or the CAMU provides substantially equivalent or greater protection.

f. The treatment required by the treatment standards must be completed prior to, or within a reasonable time after, placement in the CAMU.

g. For the purpose of determining whether wastes placed in CAMUs have met site-specific treatment standards, the administrative authority may, as appropriate, specify a subset of the principal hazardous constituents in the waste as analytical surrogates for determining whether treatment standards have been met for other principal hazardous constituents. This specification will be based on the degree of difficulty of treatment and analysis of constituents with similar treatment properties.

5. Except as provided in Subsection F of this Section, CAMUs shall have requirements for groundwater monitoring and corrective action that are sufficient to:

a. continue to detect and to characterize the nature, extent, concentration, direction, and movement of existing releases of hazardous constituents in groundwater from sources located within the CAMU;

b. detect and subsequently characterize releases of hazardous constituents to groundwater that may occur from areas of the CAMU in which wastes will remain in place after closure of the CAMU; and

c. provide notification to the administrative authority and corrective action as necessary to protect

human health and the environment from releases to groundwater from the CAMU.

6. Except as provided in Subsection F of this Section, CAMUs shall have the following closure and post-closure requirements:

a. closure of CAMUs, which shall:

i. minimize the need for further maintenance; and

ii. control, minimize, or eliminate, to the extent necessary to protect human health and the environment, for areas where wastes remain in place, post-closure escape of hazardous wastes, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground, to surface waters, or to the atmosphere;

b. requirements for closure of CAMUs that shall include the following, as appropriate and as deemed necessary by the administrative authority, for a given CAMU:

i. requirements for excavation, removal, treatment, or containment of wastes; and

ii. requirements for removal and decontamination of equipment, devices, and structures used in CAMU-eligible waste management activities within the CAMU;

c. in establishing specific closure requirements for CAMUs under this Subsection, the administrative authority shall consider the following factors:

i. CAMU characteristics;

ii. volume of wastes that remain in place after closure;

iii. potential for releases from the CAMU;

iv. physical and chemical characteristics of the waste;

v. hydrogeological and other relevant environmental conditions at the facility that may influence the migration of any potential or actual releases; and

vi. potential for exposure of humans and environmental receptors if releases were to occur from the CAMU;

d. cap requirements, as follows:

i. at final closure of the CAMU, for areas in which wastes will remain after closure of the CAMU, with constituent concentrations at or above remedial levels or goals applicable to the site, the owner or operator must cover the CAMU with a final cover designed and constructed to meet the following performance criteria, except as provided in Clause E.6.d.ii of this Section:

(a). provide long-term minimization of migration of liquids through the closed unit;

(b). function with minimum maintenance;

ENVIRONMENTAL QUALITY

(c). promote drainage and minimize erosion or abrasion of the cover;

(d). accommodate settling and subsidence so that the cover's integrity is maintained; and

(e). have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present; and

ii. the administrative authority may determine that modifications to Clause E.6.d.i of this Section are needed to facilitate treatment or the performance of the CAMU (e.g., to promote biodegradation); and

e. post-closure requirements as necessary to protect human health and the environment and to include, for areas where wastes will remain in place, monitoring and maintenance activities, and the frequency with which such activities shall be performed, to ensure the integrity of any cap, final cover, or other containment system.

F. CAMUs used for storage and/or treatment only are CAMUs in which wastes will not remain after closure. Such CAMUs must be designated in accordance with all of the requirements of this Section, except as follows.

1. CAMUs that are used for storage and/or treatment only and that operate in accordance with the time limits established in the staging pile regulations at LAC 33:V.2605.D.1.c, H, and I are subject to the requirements for staging piles at LAC 33:V.2605.D.1.a and b and 2, E, F, J, and K in lieu of the performance standards and requirements for CAMUs in Subsection C and Paragraphs E.3 - 6 of this Section.

2. CAMUs that are used for storage and/or treatment only and that do not operate in accordance with the time limits established in the staging pile regulations at LAC 33:V.2605.D.1.c, H, and I:

a. must operate in accordance with a time limit, established by the administrative authority, that is no longer than necessary to achieve a timely remedy selected for the waste; and

b. are subject to the requirements for staging piles at LAC 33:V.2605.D.1.a and b and 2, E, F, J, and K in lieu of the performance standards and requirements for CAMUs in Subsection C and Paragraphs E.4 and 6 of this Section.

G. CAMUs into which wastes are placed where all wastes have constituent levels at or below remedial levels or goals applicable to the site do not have to comply with the requirements for liners at Subparagraph E.3.a of this Section, requirements for caps at Subparagraph E.6.d of this Section, groundwater monitoring requirements at Paragraph E.5 of this Section or, for treatment and/or storage-only CAMUs, the design standards at Subsection F of this Section.

H. The administrative authority shall provide public notice and a reasonable opportunity for public comment before designating a CAMU. Such notice shall include the rationale for any proposed adjustments under Subparagraph

E.4.e of this Section to the treatment standards in Subparagraph E.4.d of this Section.

I. Notwithstanding any other provision of this Section, the administrative authority may impose additional requirements as necessary to protect human health and the environment.

J. Incorporation of a CAMU into an existing permit must be approved by the administrative authority according to the procedures for department-initiated permit modifications under LAC 33:V.323 or according to the permit modification procedures of LAC 33:V.321.C.

K. The designation of a CAMU does not change EPA's existing authority to address cleanup levels, media-specific points of compliance to be applied to remediation at a facility, or other remedy selection decisions.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 28:1192 (June 2002), amended LR 29:323 (March 2003), amended by the Office of the Secretary, Legal Affairs Division, LR 34:627 (April 2008), LR 34:1014 (June 2008), LR 38:779 (March 2012).

§2604. Temporary Units (TU)

A. For temporary tanks and container storage areas used to treat or store hazardous remediation wastes during remedial activities required under LAC 33:V.3322 or RCRA Section 3008(h), or at a permitted facility that is not subject to LAC 33:V.3322, the administrative authority may designate a unit at the facility as a temporary unit. A temporary unit must be located within the contiguous property under the control of the owner/operator where the wastes to be managed in the temporary unit originated. For temporary units, the administrative authority may replace the design, operating, or closure standard applicable to these units under LAC 33:V.Chapters 10, 11, 15-21, 23-29, 31-37, and 43 with alternative requirements which protect human health and the environment.

B. Any temporary unit to which alternative requirements are applied in accordance with LAC 33:V.2603.A shall be:

1. located within the facility boundary; and
2. used only for treatment or storage of remediation wastes.

C. In establishing standards to be applied to a temporary unit, the administrative authority shall consider the following factors:

1. length of time such unit will be in operation;
2. type of unit;
3. volumes of wastes to be managed;
4. physical and chemical characteristics of the wastes to be managed in the unit;
5. potential for releases from the unit;

6. hydrogeological and other relevant environmental conditions at the facility which may influence the migration of any potential releases; and

7. potential for exposure of humans and environmental receptors if releases were to occur from the unit.

D. The administrative authority shall specify in the permit or order the length of time which a temporary unit will be allowed to operate to be no longer than a period of one year. The administrative authority shall also specify the design, operating, and closure requirements for the unit.

E. The administrative authority may extend the operational period of a temporary unit once for no longer than a period of one year beyond that time originally specified in the permit or order, if the administrative authority determines that:

1. continued operation of the unit will not pose a threat to human health and the environment; and

2. continued operation of the unit is necessary to ensure timely and efficient implementation of remedial actions at the facility.

F. Incorporation of a temporary unit or a time-extension for a temporary unit into an existing permit shall be:

1. approved in accordance with the procedures for department-initiated permit modifications under LAC 33:V.323; or

2. requested by the owner/operator as a Class II modification according to the procedures under LAC 33:V.321.

G. The administrative authority shall document the rationale for designating a temporary unit and for granting time extensions for temporary units and shall make such documentation available to the public.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:266 (March 1995), amended LR 21:944 (September 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:285 (February 2000), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:938 (July 2020).

§2605. Staging Piles

[NOTE: This Section is written in a special format to make it easier to understand the regulatory requirements. Like other department and USEPA regulations, this establishes enforceable legal requirements. For this Section, *I* and *you* refer to the owner/operator.]

A. What is a staging pile? A staging pile is an accumulation of solid, non-flowing remediation waste (as defined in LAC 33:V.109) that is not a containment building and is used only during remedial operations for temporary storage at a facility. A staging pile must be located within the contiguous property under the control of the owner/operator

where the wastes to be managed in the staging pile originated. Staging piles must be designated by the administrative authority according to the requirements in this Section. For the purposes of this Section, storage includes mixing, sizing, blending, or other similar physical operations as long as they are intended to prepare the wastes for subsequent management or treatment.

B. When may I use a staging pile? You may use a staging pile to store hazardous remediation waste (or remediation waste otherwise subject to land disposal restrictions) only if you follow the standards and design criteria the administrative authority has designated for that staging pile. The administrative authority must designate the staging pile in a permit or, at an interim status facility, in a closure plan or order (consistent with LAC 33:V.4303.A.5 and B.5). The administrative authority must establish conditions in the permit, closure plan, or order that comply with Subsections D-K of this Section.

C. What information must I provide to get a staging pile designated? When seeking a staging pile designation, you must provide:

1. sufficient and accurate information to enable the administrative authority to impose standards and design criteria for your staging pile according to Subsections D-K of this Section;

2. certification by an independent, qualified professional engineer for technical data, such as design drawings and specifications, and engineering studies, unless the administrative authority determines, based on information that you provide, that this certification is not necessary to ensure that a staging pile will protect human health and the environment; and

3. any additional information the administrative authority determines is necessary to protect human health and the environment.

D. What performance criteria must a staging pile satisfy? The administrative authority must establish the standards and design criteria for the staging pile in the permit, closure plan, or order.

1. The standards and design criteria must comply with the following:

a. the staging pile must facilitate a reliable, effective, and protective remedy;

b. the staging pile must be designed so as to prevent or minimize releases of hazardous wastes and hazardous constituents into the environment, and minimize or adequately control cross-media transfer, as necessary to protect human health and the environment (for example, through the use of liners, covers, runoff/run-on controls, as appropriate); and

c. the staging pile must not operate for more than two years, except when the administrative authority grants an operating term extension under Subsection I of this Section (entitled “May I receive an operating extension for a staging pile?”). You must measure the two-year limit, or

ENVIRONMENTAL QUALITY

other operating term specified by the administrative authority in the permit, closure plan, or order, from the first time you place remediation waste into a staging pile. You must maintain a record of the date when you first placed remediation waste into the staging pile for the life of the permit, closure plan, or order, or for three years, whichever is longer.

2. In setting the standards and design criteria, the administrative authority must consider the following factors:

- a. length of time the pile will be in operation;
- b. volumes of wastes you intend to store in the pile;
- c. physical and chemical characteristics of the wastes to be stored in the unit;
- d. potential for releases from the unit;
- e. hydrogeological and other relevant environmental conditions at the facility that may influence the migration of any potential releases; and
- f. potential for human and environmental exposure to potential releases from the unit.

E. May a staging pile receive ignitable or reactive remediation waste? You must not place ignitable or reactive remediation waste in a staging pile unless:

1. you have treated, rendered, or mixed the remediation waste before you placed it in the staging pile so that:
 - a. the remediation waste no longer meets the definition of ignitable or reactive under LAC 33:V.4903.B or D; and
 - b. you have complied with LAC 33:V.1517.B; or
2. you manage the remediation waste to protect it from exposure to any material or condition that may cause it to ignite or react.

F. How do I handle incompatible remediation wastes in a staging pile? The term *incompatible waste* is defined in LAC 33:V.109. You must comply with the following requirements for incompatible wastes in staging piles:

1. you must not place incompatible remediation wastes in the same staging pile unless you have complied with LAC 33:V.1517.B;
2. if remediation waste in a staging pile is incompatible with any waste or material stored nearby in containers, other piles, open tanks, or land disposal units (for example, surface impoundments), you must separate the incompatible materials, or protect them from one another by using a dike, berm, wall, or other device; and
3. you must not pile remediation waste on the same base where incompatible wastes or materials were previously piled, unless the base has been decontaminated sufficiently to comply with LAC 33:V.1517.B.

G. Are staging piles subject to Land Disposal Restrictions (LDR) and Minimum Technological

Requirements (MTR)? No. Placing hazardous remediation wastes into a staging pile does not constitute land disposal of hazardous wastes or create a unit that is subject to the minimum technological requirements of RCRA 3004(o).

H. How long may I operate a staging pile? The administrative authority may allow a staging pile to operate for up to two years after hazardous remediation waste is first placed into the pile. You must use a staging pile no longer than the length of time designated by the administrative authority in the permit, closure plan, or order (the *operating term*), except as provided in Subsection I of this Section.

I. May I receive an operating extension for a staging pile?

1. The administrative authority may grant one operating term extension of up to 180 days beyond the operating term limit contained in the permit, closure plan, or order (see Subsection L of this Section for modification procedures). To justify to the administrative authority the need for an extension, you must provide sufficient and accurate information to enable the administrative authority to determine that continued operation of the staging pile:

a. will not pose a threat to human health and the environment; and

b. is necessary to ensure timely and efficient implementation of remedial actions at the facility.

2. The administrative authority may, as a condition of the extension, specify further standards and design criteria in the permit, closure plan, or order, as necessary, to ensure protection of human health and the environment.

J. What is the closure requirement for a staging pile located in a previously contaminated area?

1. Within 180 days after the operating term of the staging pile expires, you must close a staging pile located in a previously contaminated area of the site by removing or decontaminating all:

- a. remediation waste;
- b. contaminated containment system components; and
- c. structures and equipment contaminated with waste and leachate.

2. You must also decontaminate contaminated subsoils in a manner and according to a schedule that the administrative authority determines will protect human health and the environment.

3. The administrative authority must include the above requirements in the permit, closure plan, or order in which the staging pile is designated.

K. What is the closure requirement for a staging pile located in an uncontaminated area?

1. Within 180 days after the operating term of the staging pile expires, you must close a staging pile located in an uncontaminated area of the site according to

LAC 33:V.2315.A and 3507, or according to LAC 33:V.4379 and 4475.A.

2. The administrative authority must include the above requirement in the permit, closure plan, or order in which the staging pile is designated.

L. How may my existing permit (for example, RAP), closure plan, or order be modified to allow me to use a staging pile?

1. To modify a permit, other than a RAP, to incorporate a staging pile or staging pile operating term extension, either:

a. the administrative authority must approve the modification under the procedures for agency-initiated permit modifications in LAC 33:V.322; or

b. you must request a Class 2 modification under LAC 33:V.321.C.

2. To modify a RAP to incorporate a staging pile or staging pile operating term extension, you must comply with the RAP modification requirements under LAC 33:V.640 and 645.

3. To modify a closure plan to incorporate a staging pile or staging pile operating term extension, you must follow the applicable requirements under LAC 33:V.3511.C or 4381.C.

4. To modify an order to incorporate a staging pile or staging pile operating term extension, you must follow the terms of the order and the applicable provisions of LAC 33:V.4303.A.5 or B.5.

M. Is information about the staging pile available to the public? The administrative authority must document the rationale for designating a staging pile or staging pile operating term extension and make this documentation available to the public.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 26:285 (February 2000), amended LR 28:1196 (June 2002), amended by the Office of the Secretary, Legal Affairs Division, LR 34:998 (June 2008).

§2607. Disposal of CAMU-Eligible Wastes in Permitted Hazardous Waste Landfills

A. The administrative authority with regulatory oversight at the location where the cleanup is taking place may approve placement of CAMU-eligible wastes in hazardous waste landfills not located at the site from which the waste originated, without the wastes meeting the requirements of LAC 33:V.Chapter 22, if the conditions in Paragraphs A.1-3 of this Section are met.

1. The waste must meet the definition of CAMU-eligible waste in LAC 33:V.2603.A.1.

2. The administrative authority with regulatory oversight at the location where the cleanup is taking place

shall identify principal hazardous constituents in such waste, in accordance with LAC 33:V.2603.E.4.a and b, and require that such principal hazardous constituents are treated to any of the following standards specified for CAMU-eligible wastes:

a. the treatment standards under LAC 33:V.2603.E.4.d;

b. treatment standards adjusted in accordance with LAC 33:V.2603.E.4.e.i, iii, iv, or v.(a); or

c. treatment standards adjusted in accordance with LAC 33:V.2603.E.4.e.v.(b) when treatment has been used and that treatment significantly reduces the toxicity or mobility of the principal hazardous constituents in the waste, minimizing the short-term and long-term threat posed by the waste, including the threat at the remediation site.

3. The landfill receiving the CAMU-eligible waste must have a RCRA hazardous waste permit, meet the requirements for new landfills in LAC 33:V.Chapter 25, and be authorized to accept CAMU-eligible wastes. For the purposes of this requirement, *permit* does not include interim status.

B. The person seeking approval shall provide sufficient information to enable the administrative authority with regulatory oversight at the location where the cleanup is taking place to approve placement of CAMU-eligible waste in accordance with Subsection A of this Section. Information required by LAC 33:V.2603.D.1-3 for CAMU applications must be provided, unless it is not reasonably available.

C. The administrative authority with regulatory oversight at the location where the cleanup is taking place shall provide public notice and a reasonable opportunity for public comment before approving CAMU-eligible waste for placement in an off-site permitted hazardous waste landfill, consistent with the requirements for CAMU approval at LAC 33:V.2603.H. The approval must be specific to a single remediation.

D. Applicable hazardous waste management requirements in LAC 33:V. Chapters 5, 18, 19, 21, 23, 24, 25, 27, 28, 29, 32, and 35, including recordkeeping requirements to demonstrate compliance with treatment standards approved under this Section, for CAMU-eligible waste must be incorporated into the receiving facility permit through permit issuance or a permit modification, providing notice and an opportunity for comment and a hearing. Notwithstanding LAC 33:V.307.A, a landfill may not receive hazardous CAMU-eligible waste under this Section unless its permit specifically authorizes receipt of such waste.

E. For each remediation, CAMU-eligible waste may not be placed in an off-site landfill authorized to receive CAMU-eligible waste in accordance with Subsection D of this Section until the following additional conditions have been met.

1. The landfill owner/operator shall notify the administrative authority responsible for oversight of the landfill and persons on the facility mailing list, maintained in

accordance with LAC 33:V.717.A.1.e, of his or her intent to receive CAMU-eligible waste in accordance with this Section. The notice must identify the source of the remediation waste, the principal hazardous constituents in the waste, and treatment requirements.

2. Any comments from persons on the facility mailing list, including objections to the receipt of the CAMU-eligible waste, shall be provided to the administrative authority within 15 days of notification.

3. The administrative authority shall have the opportunity to object to the placement of the CAMU-eligible waste in the landfill for a period of 30 days after notification. The administrative authority may extend the review period an additional 30 days because of public concerns or insufficient information.

4. CAMU-eligible wastes shall not be placed in the landfill until the administrative authority has notified the facility owner/operator that he or she does not object to its placement.

5. If the administrative authority objects to the placement or does not notify the facility owner/operator that he or she has chosen not to object, the facility shall not receive the waste, notwithstanding LAC 33:V.307.A, until the objection has been resolved or the owner/operator obtains a permit modification in accordance with the procedures of LAC 33:V.321.C specifically authorizing receipt of the waste.

6. As part of the permit issuance or permit modification process of Paragraph D of this Section, the administrative authority may modify, reduce, or eliminate the notification requirements of this Subsection as they apply to specific categories of CAMU-eligible waste, based on minimal risk.

F. Generators of CAMU-eligible wastes sent off-site to a hazardous waste landfill under this Section must comply with the requirements of LAC 33:V.2245.D. Off-site facilities treating CAMU-eligible wastes to comply with this Section must comply with the requirements of LAC 33:V.2247.C, except that the certification must be with respect to the treatment requirements of Paragraph A.2 of this Section.

G. For the purposes of this Section only, the *design of the CAMU* in LAC 33:V.2603.E.4.e.v means design of the permitted RCRA Subtitle C landfill.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Environmental Assessment, Environmental Planning Division, LR 28:1196 (June 2002).

Chapter 27. Land Treatment

§2701. Applicability

A. The regulations in this Chapter apply to owners and operators of facilities that treat or dispose of hazardous waste in land treatment units, except as LAC 33:V.1501 provides otherwise.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1107 (June 1998).

§2703. Design and Operating Requirements

A. The owner or operator must design, construct, operate and maintain the unit to maximize the degradation, transformation, and immobilization of hazardous constituents in the treatment zone. The owner or operator must design, construct, operate, and maintain the unit in accordance with all design and operating conditions that were used in the treatment demonstration under LAC 33:V.2707. At a minimum, the administrative authority will specify the following in the facility permit:

1. the rate and method of waste application to the treatment zone;
2. measures to control soil pH;
3. measures to enhance microbial or chemical reactions (e.g., fertilization, tilling); and
4. measures to control the moisture content of the treatment zone.

B. The owner or operator must design, construct, operate, and maintain the treatment zone to minimize run-off of hazardous constituents during the active life of the land treatment unit.

C. The owner or operator must design, construct, operate, and maintain a run-on control system capable of preventing flow onto the treatment zone during peak discharge from at least a 24-hour, 25-year storm.

D. The owner or operator must design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

E. Collection and holding facilities (e.g., tanks or basins) associated with run-on and run-off control systems must be emptied or otherwise managed expeditiously after storms to maintain the design capacity of the system. Collected material must be disposed of properly.

F. If the treatment zone contains particulate matter which may be subject to wind dispersal, the owner or operator must manage the unit to control wind dispersal.

G. The owner or operator must inspect the unit weekly and after storms to detect evidence of:

1. deterioration, malfunctions, or improper operation of run-on and run-off control systems; and
2. improper functioning of wind dispersal control measures.

H. The administrative authority will specify in the facility permit how the owner or operator will design,

construct, operate and maintain the land treatment unit in compliance with this Section.

I. Landfarms shall be isolated from contact with public, private, irrigation, or livestock water supplies, both surface and underground. A permit application shall address the technical requirements of LAC 33:V.Chapters 15, 27, 33, 35, and 37.

J. Requirements

1. Soils shall be fine-grained with high clay or organic content (e.g., CL, OL, MH, CH, and OH under the Unified Soil Classification System).

2. Soils shall maintain a high cation exchange capacity to absorb metallic elements in the waste by natural (pH range of the soil) or artificial means (additives).

3. Landfarms shall be located in a hydrologic section where the historic high water table is at a safe depth below the zone of incorporation, or the water table at the site shall be controlled to a safe depth below this zone (see LAC 33:V.2705.C.2).

4. Topography shall provide for drainage to prevent ponding.

5. Land slope shall be controlled to prevent erosion.

6. Run-off shall be collected and contained and disposed of by irrigation through reapplication to the treatment zone during drought periods, evaporation, or treatment. Any discharge into the off-site environment shall be governed by a NPDES permit.

7. Groundwater monitoring systems shall be installed that meet with the approval of the administrative authority.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:684 (August 1990).

§2705. Treatment Program

A. An owner or operator subject to this Chapter must establish a land treatment program that is designed to ensure that hazardous constituents placed in or on the treatment zone are degraded, transformed, or immobilized within the treatment zone. The treatment program must include:

1. the wastes that are capable of being treated at the unit based on a demonstration under LAC 33:V.2707;

2. design measures and operating practices necessary to maximize the success of degradation, transformation, and immobilization processes in the treatment zone in accordance with LAC 33:V.2703.A; and

3. unsaturated zone monitoring provisions meeting the requirements of LAC 33:V.2711.

B. The administrative authority will specify in the facility permit the hazardous constituents that must be degraded, transformed, or immobilized under this Subpart.

Hazardous constituents are constituents identified in LAC 33:V.3105, Table 1 that are reasonably expected to be in or derived from waste placed in or on the treatment zone.

COMMENT: The permit application must list the hazardous constituents reasonably expected to be in, or derived from, the wastes to be land treated based on waste analysis performed pursuant to LAC 33:V.1519.

C. The administrative authority will specify the vertical and horizontal dimensions of the treatment zone in the facility permit. The treatment zone is the portion of the unsaturated zone below and including the land surface in which the owner or operator intends to maintain the conditions necessary for effective degradation, transformation, or immobilization of hazardous constituents. The maximum depth of the treatment zone must be:

1. no more than 1.5 meters (5 feet) from the initial soil surface; and

2. more than 1 meter (3 feet) above the seasonal high water table.

D. The administrative authority will specify in the facility permit the elements of the treatment program.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2707. Treatment Demonstration

A. For each waste that will be applied to the treatment zone, the owner or operator must demonstrate, prior to application of the waste, that hazardous constituents in the waste can be completely degraded, transformed, or immobilized in the treatment zone.

B. In making this demonstration, the owner or operator may use field tests, laboratory analyses, available data, or in the case of existing units, operating data. If the owner or operator intends to conduct field tests or laboratory analyses in order to make the demonstration required under LAC 33:V.2707.A, he must obtain a treatment or disposal permit as specified in LAC 33:V.305.D. The administrative authority will specify in this permit the testing, analytical, design, and operating requirements (including the duration of the tests and analyses, and in the case of field tests, the horizontal and vertical dimensions of the treatment zone, monitoring procedures, closure and clean-up activities) necessary to meet the requirements in LAC 33:V.2707.C.

C. Any field test or laboratory analysis conducted in order to make a demonstration under LAC 33:V.2707.A must:

1. accurately simulate the characteristics and operating conditions for the proposed land treatment unit including:

a. the characteristics of the waste (including the presence of constituents in LAC 33:V.3105, Table 1);

b. the climate in the area;

- c. the topography of the surrounding area;
- d. the characteristics of the soil in the treatment zone (including depth); and
- e. the operating practices to be used at the unit;

2. be likely to show that hazardous constituents in the waste to be tested will be completely degraded, transformed, or immobilized in the treatment zone of the proposed land treatment unit; and

3. be conducted in a manner that protects human health and the environment considering:

- a. the characteristics of the waste to be tested;
- b. the operating and monitoring measures taken during the course of the test;
- c. the duration of the test;
- d. the volume of waste used in the test;
- e. in the case of field tests, the potential for migration of hazardous constituents to groundwater or surface water.

D. Permits for Land Treatment Demonstrations Using Field Tests or Laboratory Analyses

1. For the purpose of allowing an owner or operator to meet the treatment demonstration requirements of LAC 33:V.2707, the administrative authority may issue a treatment demonstration permit. The permit must contain only those requirements necessary to meet the standards in LAC 33:V.2707.C. The permit may be issued either as a treatment or disposal permit covering only the field test or laboratory analyses, or as a two-phase facility permit covering the field tests or laboratory analyses and design, construction, operation and maintenance of the land treatment unit.

a. The administrative authority may issue a two-phase facility permit if he finds that, based on information submitted in Part II of the application, substantial, although incomplete or inconclusive, information already exists upon which to base the issuance of a facility permit.

b. If the administrative authority finds that not enough information exists upon which he can establish permit conditions to attempt to provide for compliance with all of the requirements of this Chapter, he must issue a treatment demonstration permit covering only the field test or laboratory analyses.

2. If the administrative authority finds that a phased permit may be issued, he will establish, as requirements in the first phase of the facility permit, conditions for conducting the field tests or laboratory analyses. These permit conditions will include design and operating parameters (including the duration of the tests or analyses and, in the case of field tests, the horizontal and vertical dimensions of the treatment zone), monitoring procedures, post-demonstration clean-up activities, and any other conditions which the administrative authority finds may be necessary under LAC 33:V.2707.C. The administrative

authority will include conditions in the second phase of the facility permit to attempt to meet all requirements of this Chapter pertaining to unit design, construction, operation and maintenance. The administrative authority will establish these conditions in the second phase of the permit based upon the substantial but incomplete or inconclusive information contained in the Part II application.

a. The first phase of the permit will be effective as provided in LAC 33:V.705.B.

b. The second phase of the permit will be effective as provided in LAC 33:V.2707.D.4.

3. When the owner or operator who has been issued a two-phase permit has completed the treatment demonstration, he must submit to the Office of Environmental Services a certification, signed by a person authorized to sign a permit application or report under LAC 33:V.507 and 509, that the field tests or laboratory analyses have been carried out in accordance with the conditions specified in phase one of the permit for conducting such tests or analyses. The owner or operator must also submit all data collected during the field tests or laboratory analyses within 90 days of completion of those tests or analyses unless the administrative authority approves a later date.

4. If the administrative authority determines that the results of the field tests or laboratory analyses meet the requirements of LAC 33:V.2707, he or she will modify the second phase of the permit to incorporate any requirements necessary for operation of the facility in compliance with this Chapter, based upon the results of the field tests or laboratory analyses.

a. This permit modification may proceed under LAC 33:V.321.C, or otherwise will proceed as a modification under LAC 33:V.323.B.2.c. If such modifications are necessary, the second phase of the permit will become effective only after those modifications have been made.

b. If no modifications of the second phase of the permit are necessary, the administrative authority will give notice of his or her final decision to the permit applicant and to each person who submitted written comments on the phased permit or who requested notice of the final decision on the second phase of the permit. The second phase of the permit then will become effective as specified in LAC 33:V.705.B.

c. If modifications under LAC 33:V.323.B are necessary, the second phase of the permit will become effective only after those modifications have been made.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 16:614 (July 1990), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2481 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2461 (October 2005), LR 33:2112 (October 2007).

§2709. Food-Chain Crops

A. No produce or food-chain crops may be allowed to grow on a landfarm. Additionally, grasses and other cover plants may not be used for grazing or hay production for domestic livestock.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste Division, Hazardous Waste Division, LR 10:200 (March 1984).

§2711. Unsaturated Zone Monitoring

An owner or operator subject to this Chapter must establish an unsaturated zone monitoring program to discharge the following responsibilities.

A. The owner or operator must monitor the soil and soil-pore liquid to determine whether hazardous constituents migrate out of the treatment zone.

1. The administrative authority will specify the hazardous constituents to be monitored in the facility permit. The hazardous constituents to be monitored are those specified under LAC 33:V.2705.B.

2. The administrative authority may require monitoring for principal hazardous constituents (PHCs) in lieu of the constituents specified under LAC 33:V.2705.B. PHCs are hazardous constituents contained in the wastes to be applied at the unit that are the most difficult to treat, considering the combined effects of degradation, transformation, and immobilization. The administrative authority will establish PHCs if he finds, based on waste analyses, treatment demonstrations, or other data, that effective degradation, transformation, or immobilization of the PHCs will assure treatment at least equivalent levels for the other hazardous constituents in the wastes.

B. The owner or operator must install an unsaturated zone monitoring system that includes soil monitoring using soil cores and soil-pore liquid monitoring using devices such as lysimeters. The unsaturated zone monitoring system must consist of a sufficient number of sampling points at appropriate locations and depths to yield samples that:

COMMENT: The permit application must also address the following:

- (1) Sampling equipment, procedures, and frequency;
- (2) Procedures for selecting sampling locations;
- (3) Analytical procedures;
- (4) Chain of custody control;
- (5) Procedures for establishing background values;
- (6) Statistical methods for interpreting results;
- (7) The justification for any hazardous constituents recommended for selection as principal hazardous constituents in accordance with the criteria for such selection in LAC 33:V.2711.A; and
- (8) A list of hazardous constituents reasonably expected to be in, or derived from, the wastes to be land treated based on waste analysis performed pursuant to LAC 33:V.1519.

1. represent background soil-pore liquid quality and the chemical makeup of soil that has not been affected by leakage from the treatment zone; and

2. indicate the quality of soil-pore liquid and the chemical makeup of the soil below the treatment zone.

C. The owner or operator must establish a background value for each hazardous constituent to be monitored under LAC 33:V.2711.A. The permit will specify the background values for each constituent or specify the procedures to be used to calculate the background values.

1. Background soil values may be based on a one-time sampling at a background plot having characteristics similar to those of the treatment zone.

2. Background soil-pore liquid values must be based on at least quarterly sampling for one year at a background plot having characteristics similar to those of the treatment zone.

3. The owner or operator must express all background values in a form necessary for the determination of statistically significant increases under LAC 33:V.2711.F.

4. In taking samples for the determination of all background values, the owner or operator must use an unsaturated zone monitoring system that complies with LAC 33:V.2711.B.1.

D. The owner or operator must conduct soil monitoring and soil-pore liquid monitoring immediately below the treatment zone. The administrative authority will specify the frequency and timing of soil and soil-pore liquid monitoring in the facility permit after considering the frequency, timing, and rate of waste application, and the soil permeability. The owner or operator must express the results of soil and soil-pore liquid monitoring in a form necessary for the determination of statistically significant increases under LAC 33:V.2711.F.

E. The owner or operator must use consistent sampling and analysis procedures that are designed to ensure sampling results that provide a reliable indication of soil-pore liquid quality and the chemical makeup of the soil below the treatment zone. At a minimum, the owner or operator must implement procedures and techniques for:

1. sample collection;
2. sample preservation and shipment;
3. analytical procedures; and
4. chain of custody control.

F. The owner or operator must determine whether there is a statistically significant change over background values for any hazardous constituent to be monitored under LAC 33:V.2711.A below the treatment zone each time he conducts soil monitoring and soil-pore liquid monitoring under LAC 33:V.2711.D.

1. In determining whether a statistically significant increase has occurred, the owner or operator must compare the value of each constituent, as determined under LAC 33:V.2711.D, to the background value for that constituent according to the statistical procedure specified in the facility permit under this Subsection.

ENVIRONMENTAL QUALITY

2. The owner or operator must determine whether there has been a statistically significant increase below the treatment zone within a reasonable time period after completion of sampling. The administrative authority will specify that time period in the facility permit after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of soil and soil-pore liquid samples.

3. The owner or operator must determine whether there is a statistically significant increase below the treatment zone using a statistical procedure that provides reasonable confidence that migration from the treatment zone will be identified. The administrative authority will specify a statistical procedure in the facility permit that he finds:

a. is appropriate for the distribution of the data used to establish background values; and

b. provides a reasonable balance between the probability of falsely identifying migration from the treatment zone and the probability of failing to identify real migration from the treatment zone.

G. If the owner or operator determines, pursuant to LAC 33:V.2711.F, that there is a statistically significant increase of hazardous constituents below the treatment zone, he must:

1. notify the Office of Environmental Services of this finding in writing within seven days. The notification must indicate what constituents have shown statistically significant increases;

2. within 90 days, submit to the Office of Environmental Services an application for a permit modification to modify the operating practices at the facility in order to maximize the success of degradation, transformation, or immobilization processes in the treatment zone.

H. If the owner or operator determines, pursuant to LAC 33:V.2711.F, that there is a statistically significant increase of hazardous constituents below the treatment zone, he may demonstrate that a source other than regulated units caused the increase or that the increase resulted from an error in sampling, analysis, or evaluation. While the owner or operator may make a demonstration under this Subsection in addition to, or in lieu of, submitting a permit modification application under LAC 33:V.2711.G.2, he is not relieved of the requirement to submit a permit modification application within the time specified in LAC 33:V.2711.G.2 unless the demonstration made under this Subsection successfully shows that a source other than regulated units caused the increase or that the increase resulted from an error in sampling, analysis, or evaluation. In making a demonstration under this Subsection, the owner or operator must:

1. notify the Office of Environmental Services in writing within seven days of determining a statistically significant increase below the treatment zone that he intends to make a determination under this Subsection;

2. within 90 days, submit a report to the Office of Environmental Services demonstrating that a source other than the regulated units caused the increase or that the increase resulted from error in sampling, analysis, or evaluation;

3. within 90 days, submit to the Office of Environmental Services an application for a permit modification to make any appropriate changes to the unsaturated zone monitoring program at the facility; and

4. continue to monitor in accordance with the unsaturated zone monitoring program established under this Section.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2481 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2461 (October 2005), LR 33:2112 (October 2007).

§2713. Recordkeeping

A. The owner or operator must include hazardous waste application dates, application rates, quantities and locations of each hazardous waste placed in the facility in the operating record required under LAC 33:V.1529.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2715. Special Requirements for Ignitable or Reactive Waste

A. The owner or operator must not apply ignitable or reactive waste to the treatment zone unless the waste and the treatment zone meet all applicable requirements of LAC 33:V.Chapter 22, and:

1. the waste is immediately incorporated into the soil so that:

a. the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under LAC 33:V.4903.B or D; and

b. LAC 33:V.1517 or 4321 for interim status facilities is complied with; or

2. the waste is managed in such a way that it is protected from any material or conditions which may cause it to ignite or react.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 10:496 (July 1984), LR 16:1057 (December 1990), LR 18:1256 (November 1992), LR 20:1000 (September 1994).

§2717. Special Requirements for Incompatible Wastes

A. The owner or operator must not place incompatible wastes, or incompatible wastes and materials in or on the same treatment zone, unless LAC 33:V.1517 or LAC 33:V.4321 for interim status facilities is complied with.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984).

§2719. Closure and Post-Closure Care

A. During the closure period, the owner or operator must:

1. continue all operations (including pH control) necessary to maximize degradation, transformation, or immobilization of hazardous constituents within the treatment zone as required under LAC 33:V.2703.A, except to the extent such measures are inconsistent with LAC 33:V.2719.A.8;

2. continue all operations in the treatment zone to minimize run-off of hazardous constituents as required under LAC 33:V.2703.B;

3. maintain the run-on control system required under LAC 33:V.2703.C;

4. maintain the run-off management system required under LAC 33:V.2703.D;

5. control wind dispersal of particulate matter if required under LAC 33:V.2703.F;

6. continue to comply with any prohibitions or conditions concerning growth of food-chain crops under LAC 33:V.2709;

7. continue unsaturated zone monitoring in compliance with LAC 33:V.2711, except that soil-pore liquid monitoring may be terminated 90 days after the last application of waste to the treatment zone; and

8. establish a vegetative cover on the portion of the facility being closed at such time that the cover will not substantially impede degradation, transformation, or immobilization of hazardous constituents in the treatment zone. The vegetative cover must be capable of maintaining growth without extensive maintenance.

B. For the purpose of complying with LAC 33:V.3517, when closure is completed, the owner or operator may submit to the Office of Environmental Services certification by an independent, qualified soil scientist, in lieu of an independent, qualified professional engineer, that the facility has been closed in accordance with the specifications in the approved closure plan.

C. During the post-closure care period, the owner or operator must:

1. continue all operations (including pH control) necessary to enhance degradation and transformation and sustain immobilization of hazardous constituents in the

treatment zone to the extent that such measures are consistent with other post-closure care activities;

2. maintain a vegetative cover over closed portions of the facility;

3. maintain the run-on control system required under LAC 33:V.2703.C.;

4. maintain the run-off management system required under LAC 33:V.2703.D;

5. control wind dispersal of particulate matter if required under LAC 33:V.2703.F;

6. continue to comply with any prohibitions or conditions concerning growth of food-chain crops under LAC 33:V.2709; and

7. continue unsaturated zone monitoring in compliance with LAC 33:V.2711, except that soil-pore liquid monitoring may be terminated 90 days after the last application of waste to the treatment zone.

D. The owner or operator is not subject to regulation under Paragraph A.8 and Subsection C of this Section if the administrative authority finds that the level of hazardous constituents in the treatment zone soil does not exceed the background value of those constituents by an amount that is statistically significant when using the test specified in Paragraph D.3 of this Section. The owner or operator may submit such a demonstration to the Office of Environmental Services at any time during the closure or post-closure care periods. For the purposes of this Subsection:

1. the owner or operator must establish background soil values and determine whether there is a statistically significant increase over those values for all hazardous constituents specified in the facility permit under LAC 33:V.2705.B:

a. background soil values may be based on a one-time sampling of a background plot having characteristics similar to those of the treatment zone;

b. the owner or operator must express background values and values for hazardous constituents in the treatment zone in a form necessary for the determination of statistically significant increases under LAC 33:V.2719.D.3;

2. in taking samples used in the determination of background and treatment zone values, the owner or operator must take samples at a sufficient number of sampling points and at appropriate locations and depths to yield samples that represent the chemical makeup of soil that has not been affected by leakage from the treatment zone and the soil within the treatment zone, respectively;

3. in determining whether a statistically significant increase has occurred, the owner or operator must compare the value of each constituent in the treatment zone to the background value for that constituent using a statistical procedure that provides reasonable confidence that the constituent presence in the treatment zone will be identified. The owner or operator must use a statistical procedure that:

a. is appropriate for the distribution of the data used to establish background values; and

b. provides a reasonable balance between the probability of falsely identifying a hazardous constituent presence in the treatment zone and the probability of failing to identify a real presence in the treatment zone;

4. the owner or operator is not subject to regulation under LAC 33:V.Chapter 33 if the administrative authority finds that the owner or operator satisfies LAC 33:V.2719.D and if unsaturated zone monitoring under LAC 33:V.2711 indicates that hazardous constituents have not migrated beyond the treatment zone during the active life of the land treatment unit.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended LR 14:790 (November 1988), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2482 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2461 (October 2005), LR 33:2112 (October 2007), LR 34:999 (June 2008).

§2723. Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026 and F027

A. Hazardous Wastes F020, F021, F022, F023, F026, and F027 must not be placed in a land treatment unit unless the owner or operator operates the facility in accordance with a management plan for these wastes that is approved by the administrative authority pursuant to the standards set out in this Subsection, and in accordance with all other applicable requirements of the LAC 33:V.Chapters 10, 11, 15, 17, 19, 21, 23, 25, 27, 28, 29, 31, 32, 33, 35, and 37. The factors to be considered are:

1. the volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

2. the attenuative properties of underlying and surrounding soils or other materials;

3. the mobilizing properties of other materials codisposed with these wastes; and

4. the effectiveness of additional treatment, design, or monitoring techniques.

B. The administrative authority may determine that additional design, operating, and monitoring requirements are necessary for land treatment facilities managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to groundwater, surface water, or air so as to protect human health and the environment.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 16:220 (March 1990), amended LR 20:1000 (September 1994), amended by the Office of the Secretary,

Legal Affairs and Criminal Investigations Division, LR 46:938 (July 2020).

Chapter 28. Drip Pads

§2801. Applicability

A. The requirements of this Chapter apply to owners or operators of facilities that use new or existing drip pads to convey treated wood drippage, precipitation, and/or surface water run-on to an associated collection system. Existing drip pads are those constructed before December 6, 1990 and those for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 6, 1990. All other drip pads are new drip pads.

B. The owner or operator of any drip pad that is inside or under a structure that provides protection from precipitation so that neither runoff nor run-on is generated is not subject to regulation under LAC 33:V.2805.F or G, as appropriate.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 18:1375 (December 1992), amended LR 21:944 (September 1995).

§2803. Assessment of Existing Drip Pad Integrity

A. For each *existing drip pad* as defined in LAC 33:V.2801, the owner or operator must evaluate the drip pad and determine that it meets all of the requirements of this Chapter, except the requirements for liners and leak detection systems of LAC 33:V.2805.C. No later than the effective date of this rule, the owner or operator must obtain and keep on file at the facility a written assessment of the drip pad, reviewed and certified by an independent, qualified professional engineer that attests to the results of the evaluation. The assessment must be reviewed, updated and re-certified annually until all upgrades, repairs, or modifications necessary to achieve compliance with all of the standards of LAC 33:V.2805 are complete. The evaluation must document the extent to which the drip pad meets each of the design and operating standards of LAC 33:V.2805, except the standards for liners and leak detection systems, specified in LAC 33:V.2805.C, and must document the age of the drip pad to the extent possible, to document compliance with Subsection B of this Section.

B. The owner or operator must develop a written plan for upgrading, repairing, and modifying the drip pad to meet the requirements of LAC 33:V.2805.C and submit the plan to the Office of Environmental Services no later than two years before the date that all repairs, upgrades, and modifications will be complete. This written plan must describe all changes to be made to the drip pad in sufficient detail to document compliance with all the requirements of LAC 33:V.2805 and must document the age of the drip pad to the extent possible. The plan must be reviewed and certified by an independent, qualified professional engineer.

C. Upon completion of all upgrades, repairs, and modifications, the owner or operator must submit to the

Office of Environmental Services the as-built drawings for the drip pad together with a certification by an independent, qualified professional engineer attesting that the drip pad conforms to the drawings.

D. If the drip pad is found to be leaking or unfit for use, the owner or operator must comply with the provisions of LAC 33:V.2805.N or close the drip pad in accordance with LAC 33:V.2809.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 18:1375 (December 1992), amended LR 21:944 (September 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2482 (November 2000), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2462 (October 2005), LR 33:2112 (October 2007), LR 34:999 (June 2008).

§2804. Design and Installation of New Drip Pads

A. Owners and operators of new drip pads must ensure that the pads are designed, installed, and operated in accordance with LAC 33:V.2804.A.1 or 2.

1. All of the requirements of LAC 33:V.2805 (except LAC 33:V.2805.A.4 and B), 2807, and 2809 must be met.

2. All of the requirements of LAC 33:V.2805 (except LAC 33:V.2805.C), 2807, and 2809 must be met.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 21:944 (September 1995).

§2805. Design and Operating Requirements

Owners and operators of drip pads must ensure that the pads are designed, installed, and operated in accordance with Subsection A or C of this Section.

A. Drip pads must:

1. be constructed of non-earthen materials, excluding wood and non-structurally supported asphalt;

2. be sloped to free-drain treated wood drippage, rain and other waters, or solutions of drippage and water or other wastes to the associated collection system;

3. have a curb or berm around the perimeter;

4. have a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second, e.g., existing concrete drip pads must be sealed, coated, or covered with a surface material with a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second such that the entire surface on which drippage occurs or across which it may run is capable of containing such drippage and mixtures of drippage and precipitation, materials, or other wastes while being routed to an associated collection system. This surface material must be maintained free of cracks and gaps that could adversely affect its hydraulic conductivity, and the material must be chemically compatible with the preservatives that contact the drip pad. The requirements of

this provision apply only to existing drip pads and those drip pads for which the owner or operator elects to comply with LAC 33:V.2805 (except LAC 33:V.2805.C), 2807, and 2809 instead of LAC 33:V.2805 (except LAC 33:V.2805.A.4 and B), 2807, and 2809; and

5. be of sufficient structural strength and thickness to prevent failure due to physical contact, climatic conditions, the stress of daily operations, e.g., variable and moving loads such as vehicle traffic, movement of wood, etc.

NOTE: The administrative authority will generally consider applicable standards established by professional organizations generally recognized by the industry such as the American Concrete Institute (ACI) or the American Society of Testing Materials (ASTM) in judging the structural integrity requirement of this Subsection.

B. The owner or operator must obtain and keep on file at the facility a written assessment of the drip pad, reviewed and certified by an independent, qualified professional engineer that attests to the results of the evaluation. The assessment must be reviewed, updated, and recertified annually. The evaluation must document the extent to which the drip pad meets the design and operating standards of this Section, except for Subsection C of this Section.

C. If an owner or operator elects to comply with all of the requirements of LAC 33:V.2805 (except LAC 33:V.2805.A.4 and B), 2807 and 2809 instead of LAC 33:V.2805 (except LAC 33:V.2805.C), 2807, and 2809, the drip pad must have:

1. a synthetic liner installed below the drip pad that is designed, constructed, and installed to prevent leakage from the drip pad into the adjacent subsurface soil or groundwater or surface water at any time during the active life (including the closure period) of the drip pad. The liner must be constructed of materials that will prevent waste from being absorbed into the liner and to prevent releases into the adjacent subsurface soil or groundwater or surface water during the active life of the facility. The liner must be:

a. constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or drip pad leakage to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation (including stresses from vehicular traffic on the drip pad);

b. placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression or uplift; and

c. installed to cover all surrounding earth that could come in contact with the waste or leakage; and

2. a leakage detection system immediately above the liner that is designed, constructed, maintained and operated to detect leakage from the drip pad. The leakage detection system must be:

a. constructed of materials that are:

ENVIRONMENTAL QUALITY

i. chemically resistant to the waste managed in the drip pad and the leakage that might be generated;

ii. of sufficient strength and thickness to prevent collapse under the pressures exerted by overlaying materials and by any equipment used at the drip pad;

b. designed and operated to function without clogging through the scheduled closure of the drip pad; and

c. designed so that it will detect the failure of the drip pad or the presence of a release of hazardous waste or accumulated liquid at the earliest practicable time; and

3. a leakage collection system immediately above the liner that is designed, constructed, maintained, and operated to collect leakage from the drip pad such that it can be removed from below the drip pad. The date, time, and quantity of any leakage collected in this system and removed must be documented in the operating log.

D. Drip pads must be maintained such that they remain free of cracks, gaps, corrosion, or other deterioration that could cause hazardous waste to be released from the drip pad.

NOTE: See LAC 33:V.2805.N for remedial action required if deterioration or leakage is detected.

E. The drip pad and associated collection system must be designed and operated to convey, drain, and collect liquid resulting from drippage or precipitation in order to prevent runoff.

F. Unless protected by a structure, as described in LAC 33:V.2801.B, the owner or operator must design, construct, operate and maintain a run-on control system capable of preventing flow onto the drip pad during peak discharge from at least a 24-hour, 25-year storm, unless the system has sufficient excess capacity to contain any runoff that might enter the system.

G. Unless protected by a structure or cover, as described in LAC 33:V.2801.B, the owner or operator must design, construct, operate and maintain a runoff management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

H. The drip pad must be evaluated to determine that it meets the requirements of Subsections A-G of this Section, and the owner or operator must obtain a statement from an independent, qualified professional engineer certifying that the drip pad design meets the requirements of this Section.

I. Drippage and accumulated precipitation must be removed from the associated collection system as necessary to prevent overflow onto the drip pad.

J. The drip pad surface must be cleaned thoroughly at least once every seven days such that accumulated residues of hazardous waste or other materials are removed, using an appropriate and effective cleaning technique, including but not limited to, rinsing, washing with detergents or other appropriate solvents, or steam cleaning. The owner or operator must document the date and time of each cleaning and the cleaning procedure used in the facility's operating

log. The owner/operator must determine if the residues are hazardous in accordance with LAC 33:V.1005 and if so must manage them in accordance with LAC 33:V.Subpart 1.

K. Drip pads must be operated and maintained in a manner to minimize tracking of hazardous waste or hazardous waste constituents off the drip pad as a result of activities by personnel or equipment.

L. After being removed from the treatment vessel, treated wood from pressure and nonpressure processes must be held on the drip pad until drippage has ceased. The owner or operator must maintain records sufficient to document that all treated wood is held on the pad following treatment in accordance with this requirement.

M. Collection and holding units associated with run-on and run-off control systems must be emptied or otherwise managed as soon as possible after storms to maintain design capacity of the system.

N. Throughout the active life of the drip pad and as specified in the permit, if the owner or operator detects a condition that may have caused or has caused a release of hazardous waste, the condition must be repaired within a reasonably prompt period of time following discovery, in accordance with the following procedures.

1. Upon detection of a condition that may have caused or has caused a release of hazardous waste (e.g., upon detection of leakage in the leak detection system), the owner or operator must:

a. enter a record of the discovery in the facility operating log;

b. immediately remove the portion of the drip pad affected by the condition from service;

c. determine what steps must be taken to repair the drip pad and clean up any leakage from below the drip pad, and establish a schedule for accomplishing the repairs; and

d. within 24 hours after discovery of the condition, notify the Office of Environmental Compliance in accordance with LAC 33:I.3923 and, within 10 working days, provide written notice to the Office of Environmental Compliance using the procedures provided in LAC 33:I.3925.B and C, including a description of the steps that will be taken to repair the drip pad and clean up any leakage, and the schedule for accomplishing this work.

2. The administrative authority will review the information submitted, make a determination regarding whether the pad must be removed from service completely or partially until repairs and cleanup are complete, and notify the owner or operator of the determination and the underlying rationale in writing.

3. Upon completing all repairs and cleanup, the owner or operator must notify SPOC in writing and provide a certification, signed by an independent qualified, registered professional engineer, that the repairs and cleanup have been completed according to the written plan submitted in accordance with Subparagraph N.1.d of this Section.

O. Should a permit be necessary, the administrative authority will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this Section are satisfied.

P. The owner or operator must maintain, as part of the facility operating log, documentation of past operating and waste handling practices. This must include identification of preservative formulations used in the past, a description of drilage management practices, and a description of treated wood storage and handling practices.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 18:1375 (December 1992), amended LR 21:266 (March 1995), LR 21:944 (September 1995), amended by the Office of Environmental Assessment, Environmental Planning Division, LR 26:2482 (November 2000), LR 30:1674 (August 2004), amended by the Office of the Secretary, Legal Affairs Division, LR 31:2462 (October 2005), LR 33:2113 (October 2007), LR 34:627 (April 2008), LR 34:999 (June 2008), amended by the Office of the Secretary, Legal Affairs and Criminal Investigations Division, LR 46:939 (July 2020).

§2807. Inspections

A. During construction or installation, liners and cover systems (e.g., membranes, sheets, or coatings) must be inspected for uniformity, damage, and imperfections (e.g., holes, cracks, thin spots, or foreign materials). Immediately after construction or installation, liners must be inspected and certified as meeting the requirements of LAC 33:V.2805 by an independent, qualified professional engineer. The certification must be maintained at the facility as part of the facility operating record. After installation, liners and covers must be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters.

B. While a drip pad is in operation, it must be inspected weekly and after storms to detect evidence of any of the following:

1. deterioration, malfunctions or improper operation of run-on and run-off control systems;
2. the presence of leakage in and proper functioning of leak detection system;
3. deterioration or cracking of the drip pad surface.

NOTE: See LAC 33:V.2805.N for remedial action required if deterioration or leakage is detected.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 18:1375 (December 1992), amended LR 21:944 (September 1995), amended by the Office of the Secretary, Legal Affairs Division, LR 34:999 (June 2008).

§2809. Closure

A. At closure, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components (pad, liners, etc.), contaminated subsoils,

and structures and equipment contaminated with waste and leakage, and manage them as hazardous waste.

B. If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in Subsection A of this Section, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, he must either:

1. close the facility and perform post-closure care in accordance with closure and post-closure care requirements that apply to landfills (LAC 33:V.2521). For permitted units, the requirement to have a permit continues throughout the post-closure period. In addition, for the purpose of closure, post-closure, and financial responsibility, such a drip pad is then considered to be a landfill, and the owner or operator must meet all of the requirements for landfills specified in LAC 33:V.Chapters 35 and 37; or

2. perform a risk assessment to demonstrate that closure with the remaining contaminant levels is protective of human health and the environment in accordance with LAC 33:I.Chapter 13. Any such risk assessment is subject to approval by the administrative authority and must demonstrate that post-closure care is not necessary to adequately protect human health and the environment.

C. The owner or operator of an existing drip pad, as defined in LAC 33:V.2801, that does not comply with the liner requirements of LAC 33:V.2805.C.1 must:

1. include in the closure plan for the drip pad under LAC 33:V.3511 both a plan for complying with LAC 33:V.2809.A and a contingent plan for complying with LAC 33:V.2809.B in case not all contaminated subsoils can be practicably removed at closure; and

2. prepare a contingent post-closure plan under LAC 33:V.3523 for complying with LAC 33:V.2809.B in case not all contaminated subsoils can be practicably removed at closure.

D. The cost estimates calculated under LAC 33:V.3511 and 3709 for closure and post-closure care of a drip pad subject to this Paragraph must include the cost of complying with the contingent closure plan and the contingent post-closure plan, but are not required to include the cost of expected closure under LAC 33:V.2809.A.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 18:1375 (December 1992), amended LR 21:944 (September 1995), amended by the Office of the Secretary, LR 24:2246 (December 1998).

Chapter 29. Surface Impoundments

§2901. Applicability

A. The regulations in this Subpart apply to owners and operators of facilities that use surface impoundments to treat,

store, or dispose of hazardous waste except as LAC 33:V.1501 provides otherwise.

COMMENT: All surface impoundments used to store hazardous waste, including short-term storage (90 days or less), must have a TSD permit.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2180 et seq.

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Solid and Hazardous Waste, Hazardous Waste Division, LR 10:200 (March 1984), amended by the Office of Waste Services, Hazardous Waste Division, LR 24:1107 (June 1998).

§2903. Design and Operating Requirements

COMMENT: The permit applicant must submit detailed plans and specifications accompanied by an engineering report that must collectively include the information itemized and address the following in addition to the design and operating requirements:

- (1) a description of the proposed maintenance and repair procedures;
- (2) a description of the operating procedures that will ensure compliance with this Section; and
- (3) a certification by a qualified engineer that states that the facilities comply with the applicable design requirements in this Section. The owner or operator of a new facility must submit a statement by a qualified engineer that he will provide such a certification upon completion of construction in accordance with the plans and specifications.

A. Any surface impoundment that is not covered by LAC 33:V.2903.I must have a liner for all portions of the impoundment (except for the portion of the surface impoundment in operation prior to date of issuance of the hazardous waste permit) and must have a liner designed, constructed, and installed to prevent any migration of wastes out of the impoundment to the adjacent subsurface soil or groundwater or surface water at any time during the active life (including the closure period) of the impoundment. The liner, at a minimum, must consist of a synthetic liner laid on top of a permanent barrier at the bottom and along the sides of the surface impoundment that will cover all surrounding earth likely to be in contact with the waste or leachate. The liner may be constructed of materials that may allow wastes to migrate into the liner (but not into the adjacent subsurface soil or groundwater or surface water) during the active life of the facility, provided that the impoundment is closed in accordance with LAC 33:V.2911.A. For impoundments that will be closed in accordance with LAC 33:V.2911.C.1, the liner must be constructed of materials that can prevent wastes from migrating into the liner during the active life of the facility. The liner must be:

1. constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation;

2. placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift;

3. the permanent barrier shall be 3 feet of clay with a permeability of 1×10^{-7} cm/sec or less and so designed and operated as to prevent endangering any freshwater aquifer by the migration of contaminants from the facility, or an equivalent system acceptable to the administrative authority; and

4. the synthetic liner shall be resistant to action of elements and the planned contents of the impoundment or the basin for a period of time not less than the estimated life of the operation;

COMMENT: The permit application must include a bond warranty or other demonstration satisfactory to the administrative authority for liners for which historical performance data is not available.

5. the synthetic liner must be installed to cover all surrounding earth likely to be in contact with the waste or leachate.

B. The owner or operator will be exempted from the requirements of LAC 33:V.2903.A if the administrative authority finds, based on a demonstration by the owner or operator, that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents (see LAC 33:V.3307) into the groundwater or surface water at any future time. In deciding whether to grant an exemption, the administrative authority will consider:

1. the nature and quantity of the wastes;
2. the proposed alternate design and operation;
3. the hydrogeologic setting of the facility, including the attenuating capacity and thickness of the liners and soils present between the impoundment and groundwater or surface water; and
4. all other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to groundwater or surface water.

C. The owner or operator of any replacement surface impoundment unit is exempt from LAC 33:V.2903.J if:

1. the existing unit was constructed in compliance with the design standards of Sections 3004.(o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and
2. there is no reason to believe that the liner is not functioning as designed.

D. A surface impoundment must be designed, constructed, maintained and operated to prevent overtopping resulting from normal or abnormal operations, overfilling, wind and wave action, rainfall, run-on, malfunctions of level controllers, alarms and other equipment, and human error.

E. The surface impoundment must have dikes that are designed, constructed, and maintained with sufficient structural integrity to prevent massive failure of the dikes. In ensuring structural integrity, it must not be presumed that the liner system will function without leakage during the active life of the unit.

F. The administrative authority will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this Section are satisfied.

G. Surface run-off within the site utilized shall be impounded on the site and treated as necessary to comply with NPDES discharge permit requirements.

H. Surface run-off outside the site (limits of hazardous waste facilities or, when part of an industrial complex, the limits of company property used for company operations) shall be diverted and prevented from entry into the site.

I. The owner or operator of a double lined surface impoundment is subject to regulation under LAC 33:V.Chapter 33 and the following conditions:

1. the impoundment (including its underlying liners) must be located entirely above the seasonal high water table;

2. the impoundment must be underlain by two liners which are designed and constructed in a manner that prevents the migration of liquids into or out of the space between the liners. Both liners must meet all the specifications of LAC 33:V.2903;
