Subject: STROHL LDRPS DR/BC Planning Software

In accordance with the revised OIT POL 011 (Disaster Recovery/Business Continuation Planning), agencies are required to utilize the STROHL LDRPS DR/BC planning software that is provided and hosted by OIT. Use of the STROHL LDRPS product will allow plan rollups that could be used during disaster situations by GOHSEP. OIT is providing the hardware, applications software and hosting facility. Therefore, there will be no cost to the agencies for the use of this product set. However, agencies will be responsible for any costs associated with professional services related to plan development.

Specific Strohl product training via the web will also be available at no charge to the agencies. Additionally, Strohl provides free product training at their home office in Pennsylvania. However, the agencies must provide travel funding should they elect to use this service.

Please note the attached link that details specifications related to use and configuration of the Strohl LDRPS software.
