

Extend the Reach of Your Resources

Help Your Community Prepare and Respond with a Web-based, Citizen-Provided Access and Functional Needs Registry

Rave Prepare, the leading access and functional needs registry, is proven to help emergency managers understand the individual needs in their community and enable more targeted communication before, during, and after a disaster.

- Automatically validates data to keep information up to date and prevents it from ever going stale.
- Collect citizen provided registry data online for easy analysis, planning, and emergency response.
- Give access to unlimited administrators across agencies to send the right actionable message to each individual based on their need or location.

USE CASES

POWER OUTAGES

Rapidly identify and locate individuals who have critical medical dependencies on electricity, such as ventilators, kidney dialysis, or medications requiring refrigeration.

EVACUATIONS

Locate those individuals who require assistance due to mobility limitations or transportation challenges and plan for any necessary transportation resources.

TRANSPORTATION INTERRUPTIONS

Determine which residents have critical needs such as kidney dialysis, home healthcare, and in-home oxygen requirements that will go unmet during a sustained transportation disruption.

SHELTER RESOURCE PLANNING

Obtain important information such as language spoken in advance of a disaster to provide resources the community will need during an incident requiring emergency sheltering.

ONLINE ACCESS AND FUNCTIONAL NEEDS REGISTRY

With Rave Prepare, residents submit medical information and access or functional needs through an online portal. During an incident, emergency managers can easily identify residents in need of assistance, communicate with them, and assign resources to send help. Rave Prepare enables you to plan ahead and proactively respond to disasters and other emergencies.

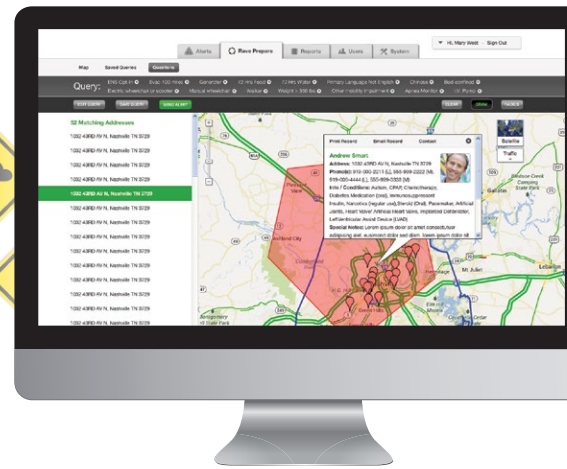

AUTOMATICALLY VALIDATED ONLINE DATABASE

Collecting, updating, and managing registry information is expensive, time-consuming, and resource intensive. With Rave Prepare, information is provided and kept current by your residents. Because Rave Prepare leverages Smart911, a national database providing additional data for 9-1-1, individuals can use one online portal to sign up for Smart911 and opt-in to provide additional information to emergency managers. Because the database is national in scope, it facilitates interoperability on the local, regional, and national levels.

Residents provide any information they wish to share during emergency planning, response, and recovery efforts.

Emergency managers can customize and add questions, categories, or other data input fields to collect specific information for their jurisdiction.

Information is stored in secure data centers where emergency managers can access it for better emergency planning and response. The information can be easily exported for use by other systems such as mass notifications or for tasks in incident management tools such as WebEOC.

TARGETED TWO-WAY COMMUNICATIONS

When an emergency occurs, leverage Rave Prepare's interactive maps to send targeted alerts based on needs and location.

Send the right actionable message to each individual rather than a broadcast notification. For example, you could send a poll question by text, email, and voice to your at-risk segment to determine their need and ask for a response. You can then generate a report to see the categorized responses each paired with the respondent's real-time location.

With unlimited administrators, all departments can leverage internal and external notifications for shift call outs, office closings, weather notifications and more. For routine internal communications, you can easily segment into unlimited groups (department, location, or any criteria you choose) and fully utilize Rave's unlimited text, voice and email messaging.

"Rave's database and interactive maps help our dispatchers easily and rapidly identify, communicate, and proactively assist those who most need our help."

THOMAS M. VALDEZ
DEPUTY DIRECTOR OTTAWA COUNTY (MI) 911
