

## DECLARATION OF EMERGENCY

### Department of Agriculture and Forestry Office of Agriculture and Environmental Sciences

Emerald Ash Borer Quarantine (LAC 7:XV.167)

In accordance with the emergency provisions of the Administrative Procedure Act, R.S. 49:953(B), and the authority of the state entomologist pursuant to R.S. 3:1652, and in order to avoid a lapse in coverage until a permanent rule is in effect, notice is hereby given that Department of Agriculture and Forestry is adopting these emergency regulations establishing a quarantine in Caddo Parish for the following pest: Emerald Ash Borer (“EAB”), *Agilus planipennis* Fairmaire. The state entomologist has determined that EAB has been found in Caddo Parish and may be prevented, controlled, or eradicated by quarantine.

EAB poses an imminent peril to the health and welfare of Louisiana forests, commercial and private forestry/wood product industries, and nursery growers due to its ability to infest ash trees. In 2013, the wholesale value of woody ornamental sales for nursery growers in the state was \$62.6 million, a portion of which is comprised of sales of ash trees (Louisiana State University AgCenter 2013 Louisiana Summary, Agriculture and Natural Resources). Louisiana’s forests and forestry/wood products industries generated an output industry production value of \$10.86 billion in 2012, a portion of which is comprised of ash trees and ash tree products (Louisiana State University AgCenter publication 3367-G, 2015). Sales of ash firewood by retail and wholesale suppliers to private individuals also are important to the state’s economy.

Natural spread of EAB is limited to relatively short distances. However, without restriction, EAB can spread through human-assisted means over long distances via infested ash nursery stock, ash logs/timber and cut firewood. Once an ash tree is infested, it experiences twig dieback and tree decline. Tree death occurs within a few years. Failure to prevent, control, or eradicate this pest threatens to damage Louisiana’s commercial ash tree nursery industry, and over time this pest poses a threat to destroy the majority of ash in our state, both commercial and residential. The loss of the state’s commercial nursery-grown ash trees, forestry/wood ash products and even residential ash trees would be devastating to the state’s economy and to its private citizens. The quarantine established by this emergency regulation is necessary to prevent the spread of EAB to all areas in Louisiana where ash may exist, outside of the current areas where this pest has been found.

For these reasons, the presence of EAB in Louisiana presents an imminent peril to the health, safety and welfare of Louisiana’s citizens and forests, the state’s commercial and private forestry/wood product industries, and nursery growers. As a result of this imminent peril, the Department of Agriculture and Forestry, Office of Forestry and Office of Agricultural and Environmental Sciences, hereby exercises its full and plenary power pursuant to R.S. 3:1652 to deal with crop and fruit pests and contagious and infectious crop and fruit diseases by imposing the quarantines set out in these emergency regulations.

This Rule shall have the force and effect of law upon signature and will remain in effect 120 days, unless renewed

by the commissioner of agriculture and forestry or until permanent rules are promulgated in accordance with law.
